					168,728.03	

The WITNESS. If I may be permitted, if no questions are to be asked me in regard to these reports, I would like to give my evidence in regard to a statement that was made about Mr. Worth being drunk and confined thereby to his house during the season of 1889 at Fort Washington, Md.

The CHAIRMAN. Yes, sir; you may make your statement.

The WITNESS. It has been my custom at different times, generally once a month, or at the end of each month and at the end of the season, to go down to that station to pay off the men. I remember distinctly that at one time during the season of 1889 I went down there to pay off the men and I found Mr. Worth sick in bed. I did not see him at first. Usually when I go down he is at the boat to meet me. He was sick in bed, and I went to the office there and paid off the men. On the completion of my duties Mrs. Worth very kindly gave me dinner, and after dinner I went up to see Mr. Worth, whom I found sick in bed. He informed me then that he had been out on the river a few nights before and had gotten wet and caught cold. To me he looked like a man who was going to have chills and fever, but his appearance was entirely foreign to any idea that he had been drinking. He conversed with me and I could not detect in any way that such a thing was possible.

By the CHAIRMAN:

Q. Was that immediately after a trip to the city at night with fish?—A. I think it was; yes, sir. He told me he had come up here late at night, and I think he said a storm came up and it rained, and he told me that he had gotten wet, and I think it affected his bowels very much, and he was confined to his bed, how long I do not know. I say I was only down there a short while and during that time I conversed with him and his appearance was entirely foreign in every way to that of a man who had either been drinking or was under the influence of liquor.

By Senator SQUIRE:

Q. In looking over these tables I find here is the total amount of pay, I see, to S. P. Bartlett, agent in charge of the Mississippi basin, \$1,800. I suppose that means for the entire year. Then here the rate of pay is \$1.50.—A. That is an error of the copyist. It should be \$150 a month. Most of these are very carefully revised.

Q. Here is another one the same way—Charles G. Aikens, superintendent of stations, total amount \$1,800 a year, at a rate of a dollar and a half per month.—A. That is just like the other. It should be \$150 a month.

By the CHAIRMAN:

Q. Since you were before the committee the last time, have you thought of anything within your knowledge which would have a bearing upon the general scope of this inquiry upon which you can testify?—A. To tell the truth, Mr. Chairman, I have been so busy looking after this other work that I have not had any opportunity to give it much thought.

Q. Do you remember a Mr. Harris who was employed two or three years ago for a short time at the Fort Washington station?

The WITNESS. Z. V. Harris?

The CHAIRMAN. Yes, sir.

A. He was employed during this last year, 1889.

Q. For a short time?—A. For a short time only.

Q. During the season of the shad work?—A. Yes, sir; on the Potomac River at Fort Washington.

Q. Did you ever have an opportunity of observing his habits?—A. No, sir; I have not. I have only seen him perhaps three times in all.

Q. He was not employed this year?—A. No, sir.

Q. Do you know any reason why he was not employed this year?—A. I do not know the reason why he was not employed this year. I suppose he did not apply for work. With those men at Fort Washington it is not permanent employment, they are employés for the time. We have had some men for years who have come on for these short periods; but they are not positions that men who by reason of their ability and general character could obtain permanent positions as a rule would take. The pay is so small.

Q. And they are not very eagerly sought after?—A. No, sir; they are not very eagerly sought after.

Q. Do you know of any diversion of the funds of the Fish Commission being made from any special appropriation to other uses than those to which the money was appropriated?—A. No, sir; I do not.

Q. Is Mr. Walter, of New York, who did some work upon the yacht, a particular friend of yours?—A. No, sir; I have only met him a few times. I met him down at Wood's Holl. I was introduced to him by Mr. Reeves, who was then a naval engineer attached to the Commission.

At 12 o'clock m. the committee adjourned until to-morrow at 12 o'clock m.

WASHINGTON, D. C., *July 17, 1890.*

The subcommittee met at 12 o'clock m., pursuant to adjournment.
Present: Senator Stockbridge (chairman).

TESTIMONY OF HENRY C. FORD.

HENRY C. FORD, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your name?—A. Henry C. Ford.

Q. Where do you reside?—A. Logan Square, Philadelphia.

Q. Have you any connection at present with fish cultural work either official or otherwise?—A. I am the president of the Pennsylvania Fish Commission. I am likewise treasurer of the American Fisheries Society.

Q. Are you a member of any prominent associations which are actively interested in such matters?—A. I am treasurer of the American Fisheries Society and likewise chairman of the executive committee of the Pennsylvania Protective Fisheries Association, which is composed of a great many of the leading citizens of Philadelphia who are interested in such work.

Q. What general measures has Pennsylvania taken in regard to fish cultural matters?—A. I can answer that by saying that we have three hatcheries in the State, two for carp and one for pike-perch, and then we have a carp hatchery for distribution among the farmers. We also have had laws passed in reference to fish protection throughout the State.

Q. Has there been any co-operation in these matters between the Pennsylvania State Commission and the United States Fish Commission?—A. Yes, sir. I think our present efficiency is owing very largely to the assistance of the United States Fish Commission. In our Erie hatchery, where we hatch white fish for the Great Lakes, we have re-

quested the eggs from the United States Fish Commission, and we have likewise sent men to assist in collecting them, and they have collected them, and after impregnating the eggs sent them to our hatchery at Erie.

In regard to the Delaware River, they have furnished us the shad fry, hatched the shad fry, and we have taken them to the headwaters

Q. And distributed them?—A. Yes, sir.

Q. And that saved expense to the United States Fish Commission?—

A. Yes, sir; at our own expense.

I should like to make a few remarks in reference to that after you get through with your questions.

Q. Are you personally acquainted with the shad fisheries of the Delaware River?—A. I am probably better acquainted with that, being in my own State and in my own particular district, than with any other work.

Q. Is it in a flourishing condition?—A. It is in a very flourishing condition now. The catch of shad last year was the largest for thirty years past. The catch of shad in the Delaware River had gradually fallen away, and about five years ago the U. S. Fish Commission sent the *Fish-hawk* into the river to commence to hatch the young fry. That was before Colonel McDonald was Commissioner. The fry were then dumped overboard into the tide water, and, in my judgment, they might just as well have been dropped on this floor.

I am very fond of fishing. I am pretty brown now. I have just come from the mountains. I am acquainted with shad, and I understand about it, and so I suggested that the shad fry should be sent to the headwaters of the Delaware River. I told Colonel McDonald that I thought he would find very gratifying results from that course of conduct. For the last four years they have been handed to us. We furnished the cars and transportation and cans, and everything of that sort at the expense of the Commission. They have been run over to Jersey City, and from there along the line of the New York, Lake Erie and Western road where it strikes the Delaware and put into the river at different places.

Q. Do you notice results from that already? A. Yes, sir. The shad run up there to spawn in April, May, and June and the young fish do not go down to sea from the latter part of July to the 1st of October. The shad became very poor in the Delaware River and a number of fisheries were abandoned and a great many other fishermen thought of abandoning more. This was the first return of two years, and there was quite a marked increase, but this year the increase has been enormous, and, as I said, the largest number of shad have been caught in the Delaware this year for thirty years. The estimated value last year was \$350,000. This year \$800,000.

Q. Do you attribute that to the change of policy?—A. Yes, sir. The fishermen hardly knew what to do with their fish. Seventy-five thousand were brought into Philadelphia in one day, and in traveling through the West some time ago I saw a sign of "Shad from the Delaware," in Cleveland, Cincinnati, and Chicago, and the price of shad has been very materially cheaper.

Q. Do you consider that the natural conditions of the river are such as to warrant the belief that the shad might exist as abundantly there as in former times if their numbers were increased by artificial means?—

A. I do, very decidedly. The Delaware is a boundary stream between the States of New York, New Jersey, and Pennsylvania, in the upper

headwaters. Every other interior river is obstructed. They are all dammed, the Potomac by the slackwater navigation by the Chesapeake and Ohio Canal; the Susquehanna has been dammed up by canal navigation, but the Delaware is a boundary stream. By a treaty of 1783 between the States of Pennsylvania and New Jersey no law could be passed in one State affecting the river unless concurred in by legislative action in the other, and it has been kept free. Tide-water ends at Trenton, and for 200 miles above tide-water shad are caught to day.

Q. So that the conditions of the Delaware are particularly favorable?—A. More so than any other river on the coast.

Q. Do you consider that the United States Fish Commission was justified in taking measures to restock that river with shad?—A. Yes, sir, decidedly; not only for Pennsylvania but for the general public outside of Pennsylvania.

Q. How long has it been engaged in such work?—A. They have been stocking the river, I think, for about five years. The original way of stocking was to dump the fish over into tide-water, and they were not sent up to the headwaters of the river.

Q. Do you consider that the *Fish Hawk* was adequate to the needs of the river?—A. I do not think the *Fish Hawk* was adequate to the needs of the river as a hatchery would have been. The *Fish Hawk* was likely to have been ordered away on other service, and there was no assurance that if we had a deposit one year that we would have the next.

Q. Do you know anything about the recent establishment of a shore station in the Delaware River?—A. I requested Colonel McDonald for our Pennsylvania Fish Commission to establish a permanent hatchery on the Delaware River. We were prepared to offer him a place in Pennsylvania, that is, at the expense of the Government. We would try to make what terms we could. I had the city of Chester in my mind. I thought that Gloucester was a much better place as being more in the center of the shad fisheries, and a place where they could get the spawn more readily.

Q. Gloucester, N. J.?—A. Yes, sir. And then again our New Jersey and Pennsylvania commissions are very desirous to work together, and I felt, for that reason, more like conceding the point to them.

Q. Do you think that good judgment was used in selecting the site?—A. I think very good judgment. Colonel Gay came to ask my views on the subject, and he and I went to Gloucester and selected the site there.

Q. Can you state why this locality was selected in preference to any other?—A. On account of its accessibility, in order to obtain the spawn of the fish, and on account of its good railway communication. Then, again, it was a good point from which to distribute fish.

Q. Would any other locality have offered better advantages in any other way?—A. I do not know. We should have liked to have had it in Pennsylvania, but we waived the point on account of the superior facilities over there.

Q. Do you know that any special inducements were offered for the establishment of the station at its present place?—A. I do. When I went with Colonel Gay to Gloucester I saw Mr. Thompson, who is the proprietor of a very large fishery at Gloucester, and he told Mr. Gay that if the fishery were established there by the United States Commission that he would give them the building; that he would build the building without any expense to the Government.

Q. And give the ground?—A. Yes, sir; and I thought it was such a liberal offer and so much more liberal than we were prepared to make that I advised him to accept it.

Q. Was title to the property given to the Commission or only the use of the property?—A. I think the use of the property for a series of years.

Q. What would have been the cost to the Government for the building of a station at the place entirely at its expense?—A. Mr. Thompson said that the contract price for the building was about \$1,800. I suppose the cost would have been about the same to the Government.

Q. Do you think that the United States Fish Commission is open to criticism on account of having accepted this offer of Mr. W. J. Thompson and the accommodations he has furnished?—A. I can not say that they are open to any criticism. I think they made a very good bargain.

Q. It has been stated by some witnesses before the committee that the Gloucester station was an objectionable station on account of its proximity to some hotel and beer garden, and so on.—A. Gloucester is a place of great resort that way for a good many people from Philadelphia, who go down there for their plank-shad dinner and drink their beer, and so on, but the hatchery I do not think is troubled by any parties of that kind. It is rather remote from that. It is just a little back from the river, and the general course of the people is along the beach. I do not think that would be an objection.

Q. Please give us your general impression as to the suitability of the station for the purposes for which it was intended. Do you think the location is a good one?—A. Yes, sir. There is a very large shad hatchery there and a net over a mile long makes a haul twice a day. There is a shad fishery about a mile and a half or a mile below there and almost every mile or so down the river for 10 miles. They have no trouble about getting the fish spawn. That is a very great thing.

Q. Has the United States Commission received any aid from the Pennsylvania commission in respect to the shad work at that station or to any of its propagating work?—A. I have said that we distributed the fish.

Q. That saved the United States Fish Commission the expense of distribution?—A. Yes, sir.

Q. Can you form any idea as to how much expense is saved to the United States Fish Commission by the distribution by the Pennsylvania commission?—A. Well I can not give the exact figures. They would vary every year—probably eight hundred or a thousand dollars.

Q. Are you acquainted with John Gay, of the United States Fish Commission?—A. I am.

Q. How long have you known him?—A. About eight or nine years.

Q. Was he ever connected with fish cultural work in Pennsylvania?—A. He was president of the fish commission before I became the chairman of the commission.

Q. Did he show particular aptitude for fish cultural work, and did he attain prominence in the same?—A. He was the first fish commissioner to bring the Pennsylvania commission out of the slough. The fish commissioners formerly did not pay much attention to the subject. It was merely a complimentary appointment by the governor, and not to men who had knowledge of the subject—not much at any rate. They would meet sometimes and have a good dinner, but paid no particular attention to fish propagation. Colonel Gay did differently. He built new hatcheries. The Erie hatchery was built by him. The hatchery at Allentown was built by him. The hatchery at Corry was built by him.

Q. Do you consider that his experiences in such matters have been sufficient to justify Colonel McDonald in appointing him to his present

position?—A. I do not think he could have had a better man, or one better versed in fish cultural methods than Colonel Gay.

Q. In his conduct of fish cultural work in Pennsylvania did he exhibit, in your judgment, a proper combination of practical skill and theoretical knowledge such as is required in the management and supervision of such an enterprise?—A. He did; very decidedly.

Q. Have you any knowledge that fish hatcheries or other buildings required for the Pennsylvania commission were constructed under his supervision or official control?—A. The Erie hatchery, the Corry and the Allentown hatcheries were constructed under his supervision.

Q. Were they successfully operated; that is, do they fully serve the purpose for which they were built?—A. Yes, sir. In fact, we have made a larger output than the New York commission this year. We have made a larger output from four hatcheries than New York has from twelve.

Q. How long has Mr. Gay been connected with fish cultural work?—A. I should think about eight years; perhaps longer.

Q. Are you familiar with the equipment of the fish hatchery at Erie, Pa.?—A. I am.

Q. What type of hatching jars are used in it?—A. The McDonald hatching jar.

Q. What are the merits of the McDonald jars as compared with the Chase jar or other devices of this kind?—A. I think it is a superior jar for the hatching of whitefish. At a meeting of the American Fisheries Society at Put-in-Bay, the 15th of last May, the different methods were collated and brought before the society. We find out what the percentage of loss in hatching is, and we also learn a great deal there in regard to fish culture that we can adopt and use in hatcheries. The fish commission of Wisconsin was giving an account of hatching pike perch in the Chase jar, and they stated that they lost 50 per cent. I, very fortunately, had received from Mr. Buller, superintendent of the Corry hatchery, who, by the way, we had loaned to the United States Fish Commission to hatch out pike perch the preceding winter at the Sandusky hatchery. We sent him out there. Colonel Gay made a request for him to go there. He is thoroughly versed in that work. Well, he stated that in the McDonald jar the percentage of loss was from 5 to 10 per cent. only, and we exemplified that in hatching fifteen millions of pike perch in the Erie hatchery this last spring, and our loss was only 8 per cent. I had his letter, and I showed it to the commission. They could hardly believe it at first; that it was impossible. They did not think the percentage could be so small.

Q. What was the percentage of whitefish hatched at this hatchery last season?—A. I think from about 95 to 97 per cent. We hatched about fifteen million all together.

Q. At the Erie hatchery?—A. Yes, sir.

Q. Was this considered a successful result?—A. Very successful.

Q. Which is the most economical hatching-jar used in your work at Erie, having in consideration the price of the jar and the expense of operating it?—A. I think the McDonald jar is, very decidedly. It does not use so much water, and we have to pay for the water. We have to pay the water company for water, and it makes a very material difference.

Q. Have you hatched any pike-perch at the Erie hatchery?—A. Yes, sir; we hatched fifteen million this spring. Those we put mostly into Lake Erie, but we brought some East with which to stock our larger rivers.

Q. What success did you meet with?—A. Very great success, about 95 per cent. The eggs are glutinous and will not hatch so well. There is a feature in the McDonald jar. It forces the water faster——

Q. Have you any knowledge of the business methods and the management of the Fish Commission at this Washington station?—A. I have often been on here, and seen the operation of it, and I have thought that it has been conducted in a very energetic and capable manner; in fact, I have kept myself posted in regard to the work of the United States Fish Commission throughout the country, and I have seen a very great expansion in it since Colonel McDonald has been Commissioner.

Q. He pursues the same general policy as Professor Baird did, but has put it upon a more systematic basis and enlarged it?—A. The difference between Professor Baird and Colonel McDonald is this: Baird was more of a scientific man. He liked more scientific results. The finding of a new fish, or a shell or fossil was more to him than the practical work of hatching and distributing fish. Of course he was a very able man. McDonald, I think, is more practical.

Q. You speak of Colonel McDonald as a more practical man than Professor Baird. Now is he sufficiently accomplished in scientific work so that that branch of the service would not suffer under his administration?—A. I think so, very decidedly. I do not think there is a fish found in the United States but what he can give you the Latin designation of it and the number of bones in it and the fins.

Q. So that in your judgment he combines both those qualities?—A. Yes, sir.

Q. I will ask you in a general way whether you consider the work of the United States Fish Commission, working as it does in connection with the State commissions, as a very important work?—A. I think it is a very important thing. Now the State commissions, as a general thing, do not receive very large appropriations from their legislatures, and the aid that the United States Fish Commission can extend to them in the way of giving them eggs is a very important work.

Q. Do the various State commissions work in harmony with the United States Commission?—A. I have yet to hear the first inharmonious expression from the president of any State fish commission in regard to the matter. In the American Fishery Society, of which I am treasurer, and of which Mr. Blackford of New York is president, there was a universal expression of condemnation on the attempt to change the autonomy of this department, among all the commissioners, without exception, without regard to politics or anything of the kind. Our commission is Republican. We have one Democrat on the commission. The importance of the work is such that we rather ignore anything of that kind. The work of providing food fishes for the masses of the people and of increasing their number is of such importance that while of course we would like to have it of our own political complexion, still politics are not considered.

Q. Colonel McDonald is a Democrat?—A. I believe he is.

Q. Have you any information or knowledge of his being apparently influenced in the administration of his duties in any way by his political views?—A. Now, I can tell you one instance. I asked him in regard to that. I saw expressions in the papers and so on, and I said to him: "If it is not impertinent for me to ask it, I would like to know the political complexion of your employés here in Washington." He said, "Certainly, I shall be very happy to answer." He went over the list, and he had to call in a great many to ask them what their politics was; but about three-fourths were Republicans.

Q. And he did not know himself?—A. He did not know himself what the politics of a great many of them was. That satisfied me that the charges were groundless.

Q. How much does the Pennsylvania fish commission receive in appropriations?—A. Thirty-five thousand dollars last year. Part of that was for an additional hatchery. We will require \$50,000 next year.

Q. What was the price of shad in Philadelphia last year?—A. Two years ago from sixteen to eighteen dollars a hundred.

Q. How much was it this year?—A. From six to eight dollars a hundred. Now the people get the benefit of that.

Q. How many white fish did you plant in Lake Erie?—A. Fifteen million.

Q. This last year?—A. Last year. Colonel Gay first started that.

Q. Has that reduced the price of fish?—A. About one-third.

Q. How many brook trout did you hatch and distribute in your State?—A. Two million five hundred thousand this year, that is to say nothing about lake trout and other varieties of trout.

Q. Do you remember the number of shad?—A. I think this last year we put about four millions of shad fry in the upper waters of the Delaware, which we received from the United States Commission.

At 12.30 o'clock p. m. the subcommittee adjourned until to-morrow at 10 o'clock a. m.

WASHINGTON, D. C., *July 18, 1890.*

The subcommittee met at 10 o'clock a. m.

Present, Senator Stockbridge (chairman).

TESTIMONY OF MARSHALL McDONALD.

MARSHALL McDONALD, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What are your relations to the United States Fish Commission?—

A. I am Commissioner of Fish and Fisheries.

Q. When were you appointed?—A. I was appointed January 23, 1888.

The CHAIRMAN. I have a list of questions here presented to the committee by Mr. Frank Blaisdell. They are quite voluminous, and I will furnish you a copy of these questions, and will give you such time as you may desire in which to prepare your answers in writing to the questions.

The WITNESS. Yes, sir.

The CHAIRMAN. And you will please indicate to the chairman of the committee when you have them prepared and are ready to respond, and we will hold a session for that purpose.

The WITNESS. Yes, sir. Meanwhile I am prepared to go on with the investigation outside of these questions, that is, to take up in their systematic way the questions of appointments, expenditures, and so on.

The CHAIRMAN. Have you those prepared in writing?

The WITNESS. Yes, sir.

The CHAIRMAN. If you will submit them, giving a heading for each statement, we will receive them now.

The WITNESS. I respectfully submit for the information of the Committee of Investigation the following lists and tabulations relating

to changes in the personnel and increases in the number of personnel during the administration of the present Commissioner :

A. List of salaried employes of the U. S. Fish Commission on January 1, 1888, as reported under Senate Mis. Doc. No. 88, Fiftieth Congress, giving their names, positions, and annual compensation.

B. List of salaried employes of the U. S. Fish Commission, as shown by the pay-rolls of May, 1890, giving (a) names, (b) date of first employment, (c) compensation at that time, (d) position occupied at that time, (e) present position, (f) present compensation.

C. List of persons in the regular service of the Fish Commission on January 1, 1888, but who are not now in its service, giving (a) names, (b) position, (c) annual compensation, (d) explanatory column of remarks.

D. Table showing "The Organization and Personnel of the Permanent Force of the U. S. Commission, as constituted January 1, 1888."

E. Organization and personnel of the U. S. Commission of Fisheries as now constituted June 1, 1890. The entire personnel is grouped under the four divisions under which the work of the Commission falls, and for convenience of comparison those persons who were on the regular rolls of the Commission January 1, 1888, are indicated by a (*); those who were in the regular service of the Commission, but not continuously employed, and therefore classed as temporary employes, are indicated by a (†); those without designation of any kind are original appointments of the present Commissioner.

F. List of appointments made by the present Commissioner of Fisheries during his incumbency of office, giving names, positions, salaries, and reasons for appointments.

G. Classification and comparison of expenditures on account of salaries of permanent employes, as shown by the pay-roll of January 1, 1888, and June 1, 1890.

H. Number of permanent employes in the service of the Commission January 1, 1888, and June 1, 1890, arranged under the respective divisions of the work.

A.—List of salaried employes of the United States Fish Commission, January 1, 1888, as reported under Senate Miscellaneous Document No. 88, Fiftieth Congress.

	Name.	Position.	Annual compensation.
1	J. H. Kidder	Assistant Commissioner	\$3,000
2	M. McDonald	Chief, division of distribution	2,800
3	Herbert A. Gill	Disbursing agent	2,200
4	Charles W. Smiley	Chief, division of records	2,000
5	J. Paul Wilson	Chief, division of property	2,000
6	C. E. Gorham	Civil engineer and draughtsman	1,800
7	Edward Hayes	Stenographer to Commissioner	1,800
8	J. J. O'Connor	Clerk, division of distribution	1,800
9	Anthony C. Addison	Clerk, office of accounts	1,320
10	J. J. Corridon	Clerk, office of Commissioner	1,200
11	Charles W. Scudder	Clerk, division of records	1,080
12	H. P. Jerrell	do	1,000
13	Miss J. L. Rockwell	do	840
14	E. S. Tennent	Clerk, division of property	828
15	Edward C. Bryan	Clerk to Commissioner	780
16	E. I. Rogers	Draughtsman	900
17	L. D. Terrell	Clerk, division of distribution	720
18	Clarence E. Latimer	Clerk, division of records	840
19	Miss A. W. Smith	Clerk, office of accounts	660
20	F. P. Fennell	Clerk, division of distribution	600
21	Miss Anne C. Lincoln	Clerk, division of property	600
22	S. J. Hare	Janitor of office	720
23	Washington Robinson	do	720
24	George E. Butler	Messenger, office of accounts	540
25	M. N. Tune	Janitor of office	540
26	William H. Brittain	Messenger	300

A.—List of salaried employes of the United States Fish Commission, etc.—Continued.

	Name.	Position.	Annual compensation.
27	Albert J. Stoerzer	Messenger	\$300
28	Charles B. Jarvis	do	240
29	Mrs. A. L. Stimpson	Janitrix	240
30	Wm. M. Kemball	Messenger	180
31	Chas. G. Atkins	Superintendent Maine and Wood's Holl stations	2,400
32	Wm. O. Buck	Foreman, Maine stations	900
33	John Maxwell	Machinist, Wood's Holl station	1,200
34	John Jansen	Carpenter, Wood's Holl, Mass., station	900
35	Patrick Barry	Laborer, Wood's Holl, Mass., station	480
36	Anders Solvin	do	480
37	Fred Mather	Fish-culturist, Cold Spring Harbor, N. Y.	500
38	W. de C. Ravenel	Superintendent Havre de Grace, Md., station	1,500
39	Geo. J. Griffith	Cook, Havre de Grace, Md., station	480
40	James A. Peters	do	480
41	S. G. Worth	Fish-culturist	1,500
42	Alexander Jones	do	540
43	Geo. A. Seagle	Superintendent Wytheville, Va., station	900
44	R. Edward Earll	Assistant in charge statistical inquiry	2,200
45	W. A. Wilcox	Clerk, Washington, D. C.	1,500
46	Hugh M. Smith	do	960
47	George H. Tolbert	Fish-culturist	900
48	D. W. Kenly	do	840
49	Richard Dana	Assistant hatchery, Gloucester, Mass.	720
50	H. B. Shorter	Cook, Gloucester, Mass.	540
51	J. F. Ellis	Captain of car	1,200
52	George H. H. Moore	do	1,200
53	Newton Simmons	do	1,200
54	Richard Rathbun	Assistant, Washington, D. C.	2,200
55	T. H. Bean	Ichthyologist, Washington, D. C.	2,100
56	Leslie A. Lee	Assistant, <i>Albatross</i>	1,800
57	A. E. Verrill	Assistant, New Haven, Conn.	1,500
58	Thomas Lee	Assistant and naturalist, <i>Albatross</i>	1,440
59	Peter Parker	Assistant, Washington, D. C.	900
60	Charles H. Townsend	Assistant, <i>Albatross</i>	1,200
61	V. N. Edwards	Collector, Wood's Holl, Mass.	720
62	H. H. Stromberger	Clerk, <i>Albatross</i>	720
63	Dennis M. Cole	Preparator, <i>Albatross</i>	600
64	Miss K. J. Bush	Clerk, New Haven, Conn., station	540
65	Miss C. E. Bush	do	480
66	Thomas Watkins	Janitor and messenger, Washington, D. C.	480
67	Sarah Joyce	Recorder river temperature, Fort Washington, Md.	60
68	Geo. A. Jones	Laborer, Wytheville, Va., station	600
69	W. K. Hancock	Messenger, Wytheville, Va., station	240
70	Wm. P. Seal	In charge aquaria, central station, Washington, D. C.	1,500
71	Wm. F. Page	Superintendent of hatchery, central station	1,200
72	J. E. Brown	General assistant, central station	1,200
73	W. R. Sauerhoff	Machinist, central station	960
74	W. H. Morgan	Laborer, central station	600
75	Wm. Maynard	Watchman, central station	540
76	Robert Timbers	Laborer, central station	540
77	Rudolph Hessel	Superintendent carp ponds, central station	1,800
78	Z. H. Goldsmith	Foreman carp ponds, central station	840
79	Thomas Curtin	Watchman and laborer, central station	660
80	W. L. Conway	do	540
81	Richard Lynch	Watchman, ponds, central station	180
82	Frank N. Clark	Superintendent, Michigan stations	2,200
83	Seymour Bower	Assistant superintendent, Michigan stations	1,500
84	M. S. Root	Foreman, Northville, Mich., station	900
85	S. P. Wires	Foreman, Alpena, Mich., station	900
86	H. D. Dean	Assistant, Northville, Mich., station	600
87	Frank S. Harmon	Clerk, Northville, Mich., station	600
88	E. A. Tulian	Assistant, Alpena, Mich., station	240
89	Livingston Stone	Superintendent, Pacific coast stations	2,000
90	Loren W. Green	Assistant superintendent, Pacific coast stations	1,440
91	Reuben G. Green	Laborer, Pacific coast stations	660
92	Robert Radcliff	do	360
93	E. M. Robinson	Fish-culturist	960
94	William P. Sauerhoff	do	960

* (1) Under *administration*, June, 1890, is included Dr. T. H. Bean, ichthyologist and editor, who, in 1888, was included under scientific inquiry. (2) Under *administration*, June 1, 1890, is also included S. F. Denton, skilled artist; work of this kind in 1888, and prior thereto, was done by temporary employes, who do not appear upon the list of regular employes, though an equivalent expenditure was incurred.

† In 1888, and prior thereto, the work of distribution was performed by temporary employes and occupied but a portion of the year; only the car-captains were carried upon the regular rolls. With the increase and diversification of this work it has been made continuous, and the increase of fifteen in the personnel of distribution in 1890, as shown above, is due to this fact. The temporary employes of 1888 constitute a part of the permanent or regular force of 1890.

The WITNESS. I respectfully submit and ask to be incorporated in my evidence data relating to the increased appropriations and alleged extravagance of expenditures on the part of the present Commissioner of Fish and Fisheries.

The statements are as follows:

For the fiscal year ending June 30, 1887, the appropriations on account of propagation and distribution were as follows:

Propagation of food-fishes.....	\$130,000.00
Maintenance of ponds and distribution.....	45,000.00
Total.....	175,000.00

During this year there were no separate appropriations, as at present, for the inquiry in regard to food-fishes, and for collecting the statistics of the fisheries. The expenses incurred for these objects were charged against the general appropriation for propagation and distribution.

For the fiscal year 1887, these expenses were as follows:

Collection and arrangement of statistics.....	\$5,536.90
Scientific inquiry	7,514.66
Total	13,051.56

Deducting from the amount of the appropriations for propagation and distribution of food-fishes	175,000.00
The amount applied to inquiry and statistics.....	13,051.56

We have remaining a balance of..... 161,948.44
To provide for the expenses of the general administration and for the propagation and distribution of food fishes.

For the fiscal year ending June 30, 1890, the appropriations on account of propagation and distribution were as follows:

Salary of the commissioner	5,000.00
Propagation of food-fishes.....	130,000.00
Appropriation for Neosho station continued.....	5,000.00
Appropriation for Neosho station (deficiency).....	20,000.00
Distribution of food fishes.....	35,000.00

Making a total of..... 195,000.00
and an increase of \$33,051.56 in those items of the appropriation which are applied.

(1) To the expenses of the general administration.

(2) To propagation of food-fishes.

(3) To the distribution of food-fishes.

The expenses of the general administration for the fiscal years 1887 and 1890 were about the same.

The increase above indicated of \$33,051.56 was applied to the increased expenses of distribution and to the maintenance of the additional stations which have been established since 1887, and have been in active operation during the fiscal year just closed.

A comparison of the conditions and results of the fish cultural work for the years 1887 and 1890 will furnish the committee the data by which to arrive at a just conclusion as to the character and efficiency of the administration of the present commissioner.

First as to the distribution of food-fishes.

In 1887, the distribution service was a temporary service occupying only a portion of the year. The personnel consisted of temporary employes, with the exception of the three car-captains, who were carried on the permanent rolls and received salaries of \$100 per month each. The cost of the service of distribution of food-fishes for 1887, as given in my report to Congress, Mis. Doc. No. 88, first session, Fiftieth Congress, was as follows:

Distribution of salmon and trout	\$3,764.19
Distribution of whitefish	1,585.73
Distribution of shad	10,701.97
Distribution of carp	8,463.72
Collection and distribution of native trout and bass.....	373.88
Distribution, general construction, equipment, repairs, etc	444.03

Making a total of..... 25,333.52

The total distribution of eggs, fry, and yearling fish for the season of 1887 was 210,625,000. The total mileage of car and messenger service, 87,396 miles.

The cost of the service of distribution for the fiscal year ending June 30, 1890, will consume the entire amount appropriated to this purpose, viz: \$35,000.

The total distribution of eggs, fry, and yearling fish for the fiscal year 1890 was 333,929,000. The total mileage of the car and messenger service, 125,321 miles.

Comparing the distribution service of 1887 with that of 1890, we have in 1890 increases as follows:

In expenditures	\$9,666.48
In mileage of car and messengers.....miles..	37,925
In number of eggs, fry, and yearling fish distributed	123,304,000

In further explanation of the work of distribution of food-fishes, I respectfully submit the following tables. These are compiled from the reports of the superintendents of stations furnishing the eggs and fish for distribution, and from the report of the messengers employed in making the distribution. The original reports upon which the compilations are based are on file in the offices of the Commission and are accessible to the committee for verification. The tables referred to are as follows:

- Table showing distribution of eggs and fish for the fiscal year ending June 30, 1887.
- Table showing distribution of eggs and fish for fiscal year ending June 30, 1888.
- Table showing distribution of eggs and fish for fiscal year ending June 30, 1889.
- Table showing distribution of fish and eggs for fiscal year ending June 30, 1890.
- Summary of distribution and mileage from July 1, 1886, to June 30, 1890, arranged by years and species.

The work of distribution in 1890 included the collection and distribution of the indigenous fishes of the Mississippi Valley, a work which had not been inaugurated in 1887, and which cost for the fiscal year ending June 30, 1890, \$7,311.

Distribution of eggs and fish from January 1, 1886, to June 30, 1887.

Species.	Eggs.	Fish.	Total.
Salmonidæ:			
Atlantic salmon.....	754,000	446,588	1,200,588

Now, as to the propagation of food-fishes and the maintenance of fish-cultural stations.

The increased appropriation in 1890 over 1887 in the items for propagation and distribution of food-fishes being \$33,051.56 and the increased expenses of distribution being, as above stated, \$9,666.48, we have a balance of only \$23,385.08, for the maintenance of the additional stations established since the close of the fiscal year, 1887, and in active operation during the fiscal year ending June 30, 1890.

In this connection the following comparison between the fish-cultural operations of the fiscal years 1887 and 1890 will enable your committee to determine whether the present commissioner has exercised care and economy in regulating and controlling the expenditures of the Commission:

During the fiscal year ending June 30, 1887, there were twelve fish-hatching stations in active operation, viz:

- | | |
|--|--|
| 1. Schoodic Station, Grand Lake Stream, Maine. | 6. Fort Washington Station, Potomac River, Maryland. |
| 2. Craig's Brook Station, Maine. (Brook Station, Penobscot Station, auxiliary to Craig's.) | 7. Central Station, Washington, D. C. |
| 3. Wood's Holl Station, Massachusetts. | 8. Carp Ponds, Washington, D. C. |
| 4. Cold Spring Harbor Station, New York. | 9. Wytheville Station, Virginia. |
| 5. Battery Island, Susquehanna River, Maryland. | 10. Northville Station, Michigan. |
| | 11. Alpena Station, Michigan. |
| | 12. McCloud River Trout Ponds, California. |

The production of eggs and fry from these twelve stations, including also the shad-hatching work of the Fish Hawk on the Delaware River, was, in round numbers, 259,000,000.

During the fiscal year ending June 30, 1890, the number of fish-hatching stations in active operation was twenty-one, as follows:

- | | |
|---|--|
| 1. Craig's Brook station, Maine. | 10. Central station, Washington, D. C. |
| 2. Schoodic station, Grand Lake Stream, Maine. | 11. Carp ponds, Washington, D. C. |
| 3. Green Lake station, Maine. | 12. Wytheville station, Virginia. |
| 4. Ten-Pound Island station, Gloucester, Mass. | 13. Alpena station, Michigan. |
| 5. Wood's Holl station, Massachusetts. | 14. Northville station, Michigan. |
| 6. Cold Spring Harbor station, New York. | 15. Sandusky station, Ohio. |
| 7. Gloucester City station, New Jersey. | 16. Duluth station, Minnesota. |
| 8. Battery Island station, Susquehanna River, Maryland. | 17. Baird Salmon station, McCloud River, California. |
| 9. Fort Washington station, Potomac River, Maryland. | 18. Fort Gaston station, California. |
| | 19. Clackamas station, Oregon. |
| | 20. Leadville station, Colorado. |
| | 21. Neosho station, Missouri. |

Of the twelve stations in operation during the fiscal year 1887, one was discontinued, viz., the trout-breeding station at Baird, Cal. The eleven remaining stations have been operated during the fiscal year ending June 30, 1890, and ten additional stations, as follows:

- | | |
|--|---|
| 1. Green Lake station, Maine. | 6. Baird Salmon station, McCloud River, California. |
| 2. Ten Pound Island station, Gloucester, Mass. | 7. Fort Gaston station, California. |
| 3. Gloucester City station, New Jersey. | 8. Clackamas station, Oregon. |
| 4. Sandusky station, Ohio. | 9. Leadville station, Colorado. |
| 5. Duluth station, Minnesota. | 10. Neosho station, Missouri. |

And the production of eggs, fry, and yearling fish for the fiscal year 1890, 358,000,000.

Collating and comparing the data relating to the fish-cultural operations of 1887 and 1890, we have the following summary:

Number of stations operated:

In 1887	12
In 1890	21

An increase of..... 9

Production of eggs, fry, and yearling fish:

In 1887	259,000,000
In 1890	358,000,000

An increase of..... 99,000,000

Amount available for the propagation of food-fishes and for the general administration:

In 1887	\$136,614.92
In 1890 (including salary of Commissioner)	160,000.00

We have, as above stated, an increase of \$23,385.08 for the maintenance of the nine additional stations operated during this fiscal year, or an average allotment per station of \$2,598.34.

The actual cost of the maintenance of the additional stations during the fiscal year 1890 was as follows:

Gloucester City station, New Jersey	\$2,133.09
Green Lake station, Maine	1,170.97
Ten-Pound Island station, Massachusetts	4,851.05
Sandusky station, Ohio	3,740.05
Duluth station, Minnesota	8,998.49
Baird Salmon station, California	6,899.56
Fort Gaston station, California	2,580.58
Clackamas station, Oregon	6,543.73
Leadville station, Colorado	3,603.17
Neosho station, Missouri	4,738.47

Total	45,259.16
-------------	-----------

Deducting from this the cost of maintenance of the Baird trout-breeding station, which was discontinued in 1888, and the cost of watchman at St. Jerome, aggregating	4,300.28
--	----------

We have an actual increase of expenditures on account of additional stations maintained in 1890, of	40,958.88
And an average cost per station of	4,550.92

The difference between the actual cost of the maintenance of these additional stations and the increase in the appropriations available for this purpose, amounting to \$17,613.80, represents the reduction of expenses effected by a compact organization of the work of the commission, and by improvements in methods and facilities for carrying it on.

In further explanation of the statements made in regard to propagation and maintenance of stations I respectfully submit the following table, which is a comparative statement of production of eggs and fish at the stations of the U. S. Fish Commission for the fiscal years 1887 and 1890, arranged by stations and species:

Comparative statement of production at the stations of the U. S. Fish Commission for the fiscal years 1886-'87 and 1889-'90.

The WITNESS. In connection with that I submit a digest of appropriations for the fiscal years 1887, 1888, 1889, and 1890, the same being classified so as to show—

By the CHAIRMAN:

Q. You give the special appropriations?—A. Yes, sir; all the appropriations, and this digest indicates when any new stations have come in and the increase in connection with them.

The digest is as follows:

Digest of appropriations for the fiscal years 1887, 1888, 1889, 1890.

	1887.	1888.	1889.	1890.
Compensation of commissioner	None.	\$1, 840. 68	\$5, 000. 00	\$5, 000. 00
Rent of offices	\$2, 040. 00	2, 040. 00	2, 500. 00	
Propagation of food-fishes (general item)	130, 000. 00	130, 000. 00	130, 000. 00	130, 000. 00
Propagation of food-fishes (deficiency item)			3, 000. 00	20, 000. 00
Propagation food-fishes. (Maintenance Neosho station)			5, 000. 00	5, 000. 00
Maintenance of ponds and distribution of food-fishes	45, 000. 00	45, 000. 00	31, 180. 00	35, 000. 00
Total for general administration, propagation, and distribution	177, 040. 00	178, 880. 68	176, 680. 00	195, 000. 00
Maintenance of vessels:				
General items	45, 000. 00	45, 000. 00	43, 900. 00	43, 900. 00
Deficiency			10, 000. 00	10, 000. 00
Special appropriations	27, 500. 00	11, 500. 00		
Total vessels	72, 500. 00	56, 500. 00	53, 900. 00	53, 900. 00
Division of inquiry. (Inquiry respecting food-fishes.)			20, 000. 00	20, 000. 00
Division of fisheries and statistics			10, 000. 00	10, 000. 00
New stations and permanent improvements to stations:				
Fish hatchery, Duluth, Minn	10, 000. 00		4, 000. 00	
Fish hatchery, Columbia River, Oregon		10, 000. 00		
Fish hatchery, Neosho, Mo			8, 000. 00	
Quarters building, Baird, Cal				4, 000. 00
Fish hatchery, Lake County, Colo				15, 000. 00
Fish hatchery, Lake Erie, Ohio				20, 000. 00
Fish hatcheries, Craig's Brook and Reed's Pond, Maine				11, 000. 00
Drainage of carp-ponds, Washington, D. C		5, 000. 00		
Total new stations	\$10, 000. 00	\$15, 000. 00	\$12, 000. 00	\$50, 000. 00
Damages to schooners <i>S. O. Wave</i> and <i>Champion</i>			937. 60	

The WITNESS. I submit also in connection with the inquiry in regard to the administration of Fort Washington station, a statement of the financial and other operations of the hauling seine run at Fort Washington station by the U. S. Fish Commission, covering the seasons of 1888, 1889, and 1890. This discusses that whole question and shows the disposition of the money, and shows a saving by the operation of the seine.

The statement is as follows:

Statement of the financial and other operations of the hauling seine run at Fort Washington station, Maryland, by the U. S. Fish Commission in the collection of shad eggs.

[For the Commissioner. By S. G. Worth¹, superintendent. June, 1890.]

Year of operations.	No. days fishing.	No. employés.	Whole No. shad caught.	Whole No. herring caught.	No. shad sold by commission merchants.	No. herrings sold by commission merchants.	Amount cash received from commission sales of shad.	Amount of cash received from commission sales of herrings.	Net price of shad, each.	No. of shad sold on the shore.
1888.....	51	13	11, 212	52, 441	10, 615	9, 058	\$780.34	\$32.51	0.73	58
1889.....	42	15	6, 217	132, 862	5, 724	74, 575	438.36	139.17	0.76	160
1890.....	² 40	15	4, 606	72, 738	3, 828	23, 493	281.30	46.39	0.73	385
.....			22, 035	258, 041	20, 167	³ 107, 126	⁴ 1, 500 00	⁴ 218.07	7.45	603

Year of operations.	Amount cash received on shore sales of shad.	Shad unmarketable and used on the shore. (Number.)	Number herrings sold on the shore.	Amount cash received on shore sales of herrings.	No. herrings unmarketable and allowed to the seine crew.	Whole amount cash or proceeds received from season's catch of fish.	Amount seine earnings paid for services and boat hire, on vouchers. (To crew.)	Amount seine earnings paid out, on voucher, for equipment and minor travel.	Amount seine earnings unexpended.	Amount appropriation paid to operate seine (mostly equipment).
1888....	\$6.60	539	30, 233	\$90.60	13, 150	\$910.05	\$797.50	\$68.38	\$44.17	\$340.44
1889....	20.85	333	51, 287	165.53	7, 000	763.91	693.07	46.47	24.37	⁵ 544.68
1890....	43.27	⁶ 393	49, 245	119.52	(⁷)	490.48	517.75		27.27	324.47
	70.72	⁸ 1, 265	130, 765	375.65	⁹ 20, 150	2, 164.44	2, 008.32	114.85	¹⁰ 41.27	1, 209.59

¹ S. G. Worth has been in charge seasons 1888, 1889, and 1890.

² In 1888, eleven seine-haulers; in 1889, 12 seine-haulers; in 1890, also one horse, one captain, one mender and one scow-tender.

³ But few bunch fish are caught and the amount sales is included in herrings.

⁴ Returns made by W. E. Stuart and R. A. Golden, Washington, D. C., Theo. Ballenger of Alexandria, Va.

⁵ Entire new seine and hauling lines (\$352.68) bought this season.

⁶ Seventy-eight lost in settlements, 174 were cut, and 141 uncollected for.

⁷ Short catch crew paid for their herrings.

⁸ Twenty spawn-takers and hatchery attendants, consume what shad they want during the season of forty to fifty days.

⁹ Some caught when there was neither market, boat, nor shore customers; sometimes crew make an extra haul.

¹⁰ Impracticable to accumulate a considerable surplus, as any excess in earnings is absorbed in prolonged fishing operations. More employés too, have been taken on to promote efficiency and raise work in grade.

THE COST OF EGGS.

Year.	Seine eggs.			Other eggs.			
	No. eggs produced.	Amount appropriation money paid out to obtain eggs.	Cost, out of the appropriation, of eggs per million.	Number taken (<i>i. e.</i> , outside of seine, or by usual method).	Amount appropriation, money paid out to obtain other eggs.	Cost, out of the appropriation per million.	Financial gain arising from use of seine (in addition to the acquisition of 50,000,000 eggs).
1888.....	22, 657, 000	\$340.44	\$15.03	58, 520, 000	\$4, 835.27	\$82.62	\$1, 531.39
1889.....	17, 738, 000	544.68	30.70	40, 495, 000	3, 638.41	89.79	1, 048.14
1890.....	10, 262, 000	324.47	31.62	24, 603, 000	2, 093.79	85.10	548.81
Total or average.....	50, 657, 000	1, 209.59	23.87	123, 618, 000	10, 567.47	85.48	3, 128.34

Comparative statement of egg production.

THREE SEASONS.

	1885.	1886.	1887.	Total
Entire production	22, 576, 000	36, 362, 000	59, 435, 000	118, 373, 000
Seine production	7, 280, 000	11, 848, 000	20, 956, 000	40, 084, 000

The WITNESS. I also wish to submit—I have it here in shape—a statement in regard to Mr. Rogers, one of the gentlemen who makes complaint—

Q. The Draughtsman?—A. Yes, sir; who makes complaint that he has not received compensation, or that promises have not been fulfilled.

The statement is as follows:

E. I. Rogers: Entry into service, March 20, 1886, as apprentice messenger in distribution service, at \$45 a month.

Paid March, 1886, as apprentice messenger	\$17. 42
Paid April, 1886, as apprentice messenger.....	45. 00
Paid May, 1886, as apprentice messenger.....	45. 00
Paid June 1 to 15, 1886, as apprentice messenger	22. 50
Paid June 16 to 30, 1886, as draughtsman, \$2 a day.....	26. 00
Paid July 1 to 5, 1886, as draughtsman, \$2 a day	8. 00
Paid July 26 to August 31, 1886, as apprentice messenger, \$45 a month.....	53. 71
Paid November, 1886, as apprentice messenger, \$45 a month	45. 00
Paid December, 1886, as apprentice messenger, \$45 a month.....	45. 00
Paid January 1 to July 31, 1887, as draughtsman, \$60 a month.....	360. 00
Paid August 1, 1887, to February 29, 1888, as inspector of construction of outlet sewer at carp ponds, Washington, D. C., at \$75 a month.....	525. 00
Paid March 1 to June 30, 1888, as draughtsman, at \$60 a month.....	240. 00
Paid July 1, 1888, to June 30, 1890, as draughtsman, at \$75 a month, except part of October, 1888 (furloughed).....	

By the CHAIRMAN:

Q. Will you please state to the committee the facts as to the employment and services rendered by Mr. E. I. Rogers?—A. Mr. Rogers entered the service of the Fish Commission in March, 1886, and this table gives a history of his employment since that time up to the present date, which paper I submit, from which it appears, contrary to the statement made by Mr. Rogers before the committee, that since I have been Commissioner he has been advanced from \$60 to \$75 per month.

Q. I think he stated that.—A. No, sir; he stated that he never had any advance except one given to him by Mr. Ferguson. He had, prior to my administration, a temporary increase of pay from August 1 to February 29, 1888, at which time he was serving as inspector upon some Government work that was in progress at the carp pond. At the conclusion of that work his pay was increased to \$60 and continued at that until the 30th of June, 1888, when I advanced his compensation to \$75 a month; that is in 1888. In October, 1888, having based my action upon reports of his intemperance and neglect of duty, I directed the chief clerk to discharge him, which was done, and subsequently he was, on October 27, reinstated on entering upon a pledge before a notary public of total abstinence for the period of five years from date. The whole correspondence relating to that matter I respectfully submit and ask to be made a part of my evidence.

The correspondence is as follows:

[Telegram.]

U. S. COMMISSION OF FISH AND FISHERIES,
Wood's Holl, Mass., October 2, 1888.

J. J. O'CONNOR,
U. S. Fish Commission, Washington, D. C.:

Relieve Mr. Rogers from duty in connection with engineer office, taking necessary steps to continue proper custody of the records and property. Instructions and orders by to-day's mail.

M. McDONALD.

U. S. COMMISSION OF FISH AND FISHERIES,
Wood's Holl, Mass., October 2, 1888.

E. I. ROGERS,
In charge Engineer Office, Washington, D. C.:

SIR: I have instructed the chief clerk to relieve you from duty in connection with the engineer office of the Commission. You are granted leave of absence, with pay, for fifteen days from and including October 1. You will have the opportunity to tender your resignation to take effect on and after October 15; failing to do this, I shall feel constrained to discharge you from the service of the U. S. Fish Commission.

You are fully aware of the circumstances which constrained me to put you in charge of the engineer office, and of the embarrassment and discredit to which the Government service has been subjected by the irregular habits of some of its employés. In placing you in charge of the records and property of the engineer office I assigned you to a position which did not require expert attainments to fill. It did and does require diligence, faithfulness, and regularity in the discharge of duties. These you have failed to give. The list of property which you were directed to make some weeks ago, and which should have been completed in a few days of diligent and steady work, has not been furnished, and you have reported to the chief clerk that it will require some weeks to complete the same. Meanwhile I have official information that you have been drinking; that you have brought liquor into the office and offered the same to employés, and that you have been in your office so far under the influence of liquor as to be incapable of the discharge of your duties.

I regret these things both on account of my kindly feelings to yourself and my warm personal relations to your friends, but I can not permit personal considerations to dominate my obligations as an officer of the Government.

Very truly yours,

M. McDONALD,
Commissioner.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., October 2, 1888.

E. I. ROGERS, Esq.,
U. S. Fish Commission, Washington, D. C.:

DEAR SIR: I am directed by the Commissioner to notify you that your services in connection with the engineer office will be discontinued after this date. You will please turn over to me the list (as far as prepared) called for some time ago, of maps and other drawing equipment now in the office.

Very respectfully,

J. J. O'CONNOR,
Chief Clerk.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., October 10, 1888.

Mr. ROGERS:

DEAR SIR: Pending further and fuller consideration of the matter, you are granted leave of absence, without pay, from and after October 15. In doing this I am influenced by no purpose to reconsider my determination to make a change in the engineer office; nor do I see that there will be any occasion for your services as a draughtsman. Whether it will be possible to provide a position for you in the clerical work is extremely doubtful. It is probable that your friends may be able to get you a position under the Architect of the Treasury, Colonel Fréret. I should advise you to make every effort to do so. The messenger service is distasteful to you and unsuitable for you every way. Should you in this emergency turn resolutely to business, take up what comes to your hand, pursue it assiduously and live temperately, you will certainly make for yourself a career and a home. If you continue in Government service, with a meager salary, supplying only your personal wants, you will be worse off every year of your life and grow morbid with discouragement. If you choose to enter business, take it up in a fair-minded way and pursue it diligently, you have certainly friends who will be interested in and work for your advance. I have been greatly concerned about you and have a true interest in your welfare, but I tell you frankly I can no longer permit personal sympathies or solicitation of friends weigh against my obligations as an officer of the Government.

Very truly yours,

M. McDONALD,
Commissioner.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., October 30, 1888.

E. I. ROGERS, Esq.,

U. S. Fish Commission, Washington, D. C.:

DEAR SIR: After full consideration of the matter in all of its relations, I have determined to restore you to duty in the Fish Commission, to take effect Nov. 1, 1888. You will be assigned to the same position previously filled by you, viz, the custody of the records, maps, and property of the engineer office of the Commission, and will be called upon to make such drawings or tracings as may be needed from time to time. You will report direct to the chief clerk, and all issues made of duplicates and all work done will be under authority issuing from the office of the Commissioner.

Very respectfully,

M. McDONALD,
Commissioner.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., October 4, 1888.

Hon. MARSHALL McDONALD,

Wood's Holl, Mass.:

DEAR SIR: Your letter of the 2d instant received, and I am very much grieved to receive the same.

I acknowledge that I was under the influence of liquor as has been reported to you and will take an oath that I will not touch any intoxicating drink for any term of years you may designate, if you will extend the same mercy to me that you have granted to others in the Commission. I beg of you to give me a chance for my manhood as it would break my mother's heart if I were discharged for drinking.

I bought a bottle of sourmash whisky for Colonel Fréret of the Treasury, with whom I have been boarding in the country, and at whose house in town I am now staying, and ask two gentlemen in the office if they had ever tasted it as I never had myself. I tasted it, and they did not.

I am willing to fill any position you may be pleased to put me in, and trusting this may find favor in your eyes, not so much for myself as for the one who loves me most—my mother,

I remain, most respectfully,

E. INGRAHAM ROGERS.

Inclosed I send you my pledge for five years.

CITY OF WASHINGTON, *District of Columbia*, ss:

Edward I. Rogers, personally known to me, came this day, and, upon his oath, swore that he would for five years from this date abstain from all alcoholic and maltic liquors as a beverage.

E. I. ROGERS.

Subscribed and sworn to before me this 5th day of October, 1888.

[SEAL.]

JOHN J. LINNEY,
Notary Public.

At 11 o'clock a. m. the subcommittee adjourned to meet at the call of the chairman.

WASHINGTON, D. C., *July 23, 1890.*

The subcommittee met at 10 o'clock a. m., pursuant to call of the chairman.

Present: Senators Stockbridge (chairman), Squire, and Blodgett.

The CHAIRMAN. Here are some papers, contracts, specifications, vouchers, etc., relating to the fish hatchery at Put-in-Bay, Lake Erie, which can go into the record.

The papers are as follows:

in full of the above account.

\$1,081.82.

GEORGE E. GASCOYNE.

[Indorsement on back.]

No. 34. U. S. Commission of Fish and Fisheries, fish hatchery, Lake Erie. Date
of account, June 3, 1890; name, George E. Gascoyne; amount, \$1,081.82; when paid,
June 12, 1890.

Correct.—A. C. Addison, examiner.

I hereby certify that the articles mentioned were delivered] [services mentioned
were rendered].—Geo. E. David.

The charges in this bill are just and reasonable, and the articles or services were
required by the United States Commission of Fish and Fisheries, and the public exi-
gency necessitated their immediate delivery or performance.—W. B. Bayley.

Approved.—M. McDonald, U. S. Commissioner of Fish and Fisheries.

ON ACCOUNT OF EXPENSES OF FISH HATCHERY, LAKE ERIE.

The United States to Geo. E. Gascoyne, Dr.

1890.		
July 1.	For material furnished and labor performed on the fish hatchery at Put-in Bay, Ohio, in accordance with his contract of October 25, 1889	\$1,900.00
	Less 20 per cent	380.00
		1,520.00
	Amount of contract	9,977.24
	Payment Dec. 11, 1889	\$800
	Payment Jan. 23, 1890	1,600
	Payment Feb. 8, 1890	800
	Payment May 6, 1890	3,200
	Present payment	1,520
		7,920.00
		2,057.24

Received at Put-in Bay, Ohio, of Herbert A. Gill, disbursing agent U. S. Fish Commission, this 16th day of July, 1890, fifteen hundred and twenty dollars — cents, in full of the above account.

\$1,520.00.

GEORGE E. GASCOYNE.

[Indorsement on back.]

No. 35. U. S. Commission of Fish and Fisheries, fish hatchery, Lake Erie. Date of account, July 1st, 1890; name, Geo. E. Gascoyne; amount, \$1,520.00; when paid, July 16, 1890.

Correct.—H. A. Gill, examiner.

I hereby certify that the articles mentioned were delivered] [services mentioned were rendered].—Geo. E. David.

The charges in this bill are just and reasonable, and the articles or services were required by the United States Commission of Fish and Fisheries, and in accordance with contract, and approved.—M. McDonald, U. S. Commissioner of Fish and Fisheries.

ADVERTISEMENT, INSTRUCTIONS FOR BIDDERS AND SPECIFICATIONS FOR BUILDING A FISH HATCHERY, ETC., FOR THE UNITED STATES FISH COMMISSION AT PUT-IN BAY, LAKE ERIE.

Advertisement.—Proposals for building fish hatchery, etc.

OFFICE U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., Sept., 6, 1889.

Sealed proposals for the construction of a fish hatchery at Put-in Bay, Lake Erie, will be received at this office up to 12 o'clock, noon, of October 10, 1889, when they will be opened in the presence of attending bidders. Specifications, plans, forms of proposals, etc., can be seen at the offices of Henry Douglass, State Fish Hatchery, Sandusky, Ohio; George D. Mussey, Secretary State Fish Commission, Detroit, Michigan, and Edward E. Schwabe, Beckman building, 204 Superior street, Cleveland.

MARSHALL McDONALD,
Commissioner.

Instructions for bidders.

(1) The proposed building is to be constructed on a U. S. Government reservation at Put-in Bay, Lake Erie.

(2) Each copy of proposal must be accompanied by a guaranty executed by two sufficient and responsible guarantors, in accordance with and on the forms prescribed. The guarantors must jointly justify in the sum of one thousand five hundred dollars (\$1,500.00). A proposal unaccompanied by such guaranty will not be considered.

(3) The affidavits of justification on the back of the bidders guaranty must be taken before some official or person authorized by the laws of the United States, State or Territory to administer oaths.

(4) The certificate following the justification is to be given under seal, if any, by some *civil official* of the *United States*.

(5) Each signature of bidders and guarantors shall have attached a seal of wax or wafer, and shall be attested by at least one witness for each signature, which must be written in full.

The residence of each signer must be given, with number, street, city or town, and State.

(6) No person who, as a contractor, has failed to satisfactorily perform any contract with the United States, or as a surety has failed to abide by a bond for the performance of any contract or a guaranty with a proposal, will be accepted as guarantor.

(7) A firm will not be accepted as guarantor, nor a partner for a copartner, or for a firm of which he is a member.

An officer of a corporation will not be accepted as guarantor for such corporation.

(8) All blanks in the forms of proposals and guaranty must be filled, prices must be written in words as well as expressed in figures.

(9) Additional copies of this form will be furnished on application.

(10) Alterations by erasure or interlineations must be explained or noted in the proposal over the signature of the bids.

(11) When firms bid, the individual names of the members of the firm should be written out and signed in full; but the signers may, if they choose, describe themselves in addition as doing business under a given name and style as a firm.

(12) Reasonable grounds for supposing that any bidder is interested in more than one bid for the same item will cause the rejection of all bids in which he is interested.

(13) The United States reserves the right to reject any and all bids, or parts of bids; also to disregard the bid of any failing contractor or bidder known as such to the United States.

(14) The bidder must satisfy the United States of his ability to furnish the materials and to perform the work for which he bids. Lack of evidence as to ability to furnish plant, materials, and to properly construct the proposed building will be sufficient cause for the rejection of any bid.

(15) Within five (5) days after he has been notified of the acceptance of his bid, the successful bidder will be required to enter into a written contract with the United States, accompanied by a bond for the same amount as the total sum of the bidder's offer for the entire work, executed by the bidder as principal and two sufficient and responsible persons as bondsmen.

Each bondsman will be required to qualify in the full amount of the bond.

(16) Payment on account of contracts can only be made to principals. Assignments and powers of attorney to collect moneys from the United States are not recognized.

(17) Transfers of contracts, or of interests in contracts, are prohibited by law.

(18) One copy each of the advertisement, instructions for bidders, and specifications must be attached to each proposal and be considered a part of it.

(19) Bidders are expected to familiarize themselves with the location of the proposed building, and to make their own estimate of the facilities and difficulties attending its construction. Claims for extra compensation based upon the contractor's ignorance on the above points will not be considered.

(20) The proposal and guaranties must be placed in an envelope, sealed and marked "Proposal for fish hatchery at Put-in Bay, Lake Erie," and inclosed in another envelope, addressed to "Marshall McDonald, U. S. Commissioner of Fish and Fisheries, Washington, D. C."

(21) No proposals can be received by telegraph, and none will be received after the time stated in the advertisement.

Specification of materials to be provided and work to be done for and in the construction of a fish hatchery for the U. S. Fish Commission at Put-in Bay, Lake Erie.

ART. 1. The whole is to be done in accordance with these specifications and accompanying plans, prepared by the Architect of the U. S. Fish Commission, and no deviation therefrom will be permitted unless authority in writing shall be first obtained from the authorized agent of the U. S. Fish Commission. Any change of plans, etc., involving any difference in cost from that prepared by the original contract must be agreed upon by the parties to this contract, and state in writing the difference in price from that originally agreed upon.

ART. 2. Should it be deemed desirable during the construction of the proposed building to make any additions to, or to do any extra work not contemplated or provided for by these plans and specifications, an agreement in writing stating the nature and cost of such addition or extra work to be entered into between the U. S. Commissioner of Fish and Fisheries and the contractor, before such work is commenced. No claim for extra work or materials, excepting as above specified, will be considered.

ART. 3. The work will be under the direction of the architect or other agent of the U. S. Fish Commission, and all materials and workmanship must be satisfactory to him before payment therefor will be made.

ART. 4. In case any misunderstanding should arise between the agent of the Government in charge and the contractor as to the meaning or intention of any portion of these plans and specifications, the decision of the U. S. Commissioner of Fish and Fisheries upon said disputed point or points will be considered correct, and will be final.

ART. 5. The United States will not be liable for any injury occurring to the contractor's employees or plant, or loss occurring to the contractor or damage to the building caused in any manner before the final completion and acceptance of the building.

ART. 6. The work to be commenced within fifteen (15) days after the signing of the contract, and it is to be carried forward until bad weather sets in, when the work will be stopped and not resumed until spring. The building to be completed and ready for occupancy, according to the terms of the specifications, by the 15th day of June, 1890.

ART. 7. No extension of time, for whatever cause, for the completion of the contract for this work shall be asked for or granted, except under the implied and understood condition that the contractor shall be charged with, and shall pay to the United States, the sum of fifteen dollars (\$15.00) per day for each and every day that the building is not completed and ready for occupancy after the time specified. Said penalty shall be deducted from any amounts due the contractor on account of this work at the discretion of the U. S. Commissioner of Fish and Fisheries.

ART. 8. Any failure to commence work within the specified time, or to prosecute it thereafter at the rate and in the manner required, will be considered as allowing the United States to await the contract and declare a forfeiture of all reserved percentages and other dues, or as allowing the United States, at the option of the U. S. Commissioner of Fish and Fisheries, to carry on the work, at the expense of the contractor, and as rendering him and his bondsman liable for any increase of cost over that proposed and agreed upon.

ART. 9. In case the lowest price be named by two or more bidders these bidders must agree between themselves within twenty-four (24) hours after notification as to who shall have the award. If the question be not thus settled within the time stated and the Commissioner of Fish and Fisheries so informed, he may select either of them to do the work at his discretion at said price.

ART. 10. Payment for the work done will be made after the end of each month when the progress and character of the work are satisfactory, but not otherwise.

ART. 11. Twenty per centum of the amount due will be retained until the final completion and acceptance of the work by the U. S. Commissioner of Fish and Fisheries. Within thirty days thereafter final payment for the work will be made.

ART. 12. The "instructions for bidders," as far as they may be applicable, are to be considered essential parts of these specifications.

ART. 13. The tools, scaffolding, etc., used by the contractor must be suitable for the work and satisfactory to the agent in charge.

ART. 14. The contractor shall furnish all necessary plant, materials, and labor. He shall allow the agent of the Fish Commission in charge of the work full access to all parts of the work at all times, and shall give the agent any assistance which he may need.

ART. 15. All materials furnished for the work must be first-class of their kind, and satisfactory to the agent in charge; any materials not satisfactory will be condemned and must be removed from the location of the work, and be not again brought upon the ground.

ART. 16. All workmanship must be neat and first-class, and any work not so must be corrected immediately upon the request of the agent in charge.

ART. 17. The contractor must give his personal superintendence to the work during its progress and see that the building is constructed in the most careful manner, and according to the true intent and meaning of the drawings and these specifications, all of which are attached to the contract, and form a part thereof.

ART. 18. All lumber and timber used to be free from sap, to be well seasoned, of the qualities hereinafter mentioned, and of white pine.

ART. 19. The building will be erected under the supervision and to the entire satisfaction of such person or persons as may be designated by the Government. No advantage may be taken of any omission in these specifications or accompanying draw-

ings, as full explanations and detail drawings will be given to the contractor for any part of the work not sufficiently understood.

FOUNDATIONS.

ART. 20. The foundation walls to be built as shown in plans, to be eighteen (18) inches in thickness, and of necessary height, which is to be hereafter determined. The walls are to be of rubble masonry, the stones as large as can be used to advantage, and to be laid, where underground, in best quality hydraulic cement mortar, and above ground in mortar composed of half hydraulic cement mortar and half lime mortar. The stones must be well bedded and bonded together, and all joints filled solid with mortar and thoroughly slushed and chinked.

ART. 21. Build the piers and foundations for posts in hatchery and engine-room where shown in plan. The walls and piers to have a footing-course two feet in width. The faces of the walls are to be smooth enough to present a good appearance, and the joints are to be well filled and neatly pointed up.

ART. 22. The amount of stone-work which will be required is not exactly known, and bidders will state the price per cubic foot for which they will build it as per specifications. Measurement of the quantity of masonry actually laid will only be allowed.

ART. 23. The excavations for walls and trenches to be made as directed by the agent in charge, and payment will be made by the cubic yard for the amount removed.

ART. 24. The excavated material to be deposited where directed by the agent in charge, and payment will be made by the cubic yard for the amount removed.

ART. 25. A brick trench to contain the main suction pipes for engine-room, and 8-inch terra cotta sewer pipe will be built in center of hatchery, 3 feet wide by $2\frac{1}{2}$ feet deep, extending from a point 6 feet inside of engine-room across the hatchery and under office.

ART. 26. The sides and bottom of trench to be of brick, the side walls to be 9 inches thick and bottom of trench to be one brick thick, well bedded in cement. The sides and bottom to be laid in cement mortar. The ends of the trench are not to be bricked up. Cast-iron corrugated covering-plates are to be provided and set over this trench the entire length, with the exception of the part under office, these plates to be 2 feet wide by 3 feet 6 inches long, $\frac{1}{2}$ -inch thick, with two ribs $\frac{1}{2}$ -inch thick running lengthwise, the ribs to be $1\frac{1}{2}$ inches deep in center, and to feather out at ends so as to leave 3-inch bearing-surface for plates on each end of ribs. On top of the brick walls of trench in hatching room and engine-room will be placed a stringer of 4" x 6" hard pine, these stringers to have a piece $\frac{1}{2}$ " x 3" cut out of them, as shown on drawing to let the ends of iron covering plates of trench fit neatly into them. These stringers to be firmly bedded in cement on top of brick walls.

FLOOR OF HATCHERY.

ART. 27. The floor of hatchery is to be of asphalt. It consists of 6 inches of hydraulic cement concrete, with a wearing surface of bituminous mastic laid in two coats, respectively $\frac{1}{2}$ and 2 inches thick when compressed. Pine stringers 4" x 6" will be bedded in this floor where shown on plan to serve as foundation for hatching tables. These stringers to be laid true and level; the top face of the ends at the center of hatchery floor to be level with the top dressing of concrete.

ART. 28. The floor will be laid with this asphalt pavement in such a manner that there will be sufficient incline from both ends of the hatchery to the center so as to drain off all water. The center of hatchery to be at least 4 inches higher than ends, and suitable gutters laid at ends to carry off water.

Provide and place in position in a neat and workmanlike manner a brick skirting around hatchery floor of selected smooth hard burnt bricks, one brick in height; the bricks to be set on edge and laid in cement; to be well and evenly laid, so that the base-board will fit close on top of the brick skirting, the bricks to be painted a light Venetian red color.

OFFICE FLOOR.

ART. 29. The floor is to be double, the first to be of ordinary matched flooring, but without large or loose knots or knot holes.

ART. 30. The top floor to be best quality matched flooring of narrow width; between the floors extra heavy sized building paper is to be laid.

FLOORING OF BED-ROOM, TANK-ROOM, AND STORE-ROOM.

ART. 31. These rooms will have double flooring, the lower flooring to be of good hemlock boards, not over four inches wide, matched, planed on one side to an even

thickness, and blind-nailed; the upper flooring will be of first quality rift hard pine, $1\frac{1}{2}$ inches thick, not over 4 inches wide, matched and blind-nailed. The flooring of water closets on first floor will be made same as office.

FLOOR OF ENGINE-ROOM.

ART. 32. The floor will be laid with smooth hard burnt brick culled, laid in 2 inches of mortar.

COAL-SHED.

ART. 33. The coal-shed will not be finished off on the inside; the floor joists to be three inches by twelve inches placed sixteen inches apart on centers and to be covered with ordinary matched flooring without large or loose knots or knot-holes, the floor to be well nailed and closely laid.

BRICK-WORK.

ART. 34. All the brick used in the building, except for fire-place and hearth, to be of best hard common brick, to be carefully culled for the facing of chimneys above roof, and all to be new, well shaped, and of uniform size. All to be laid wet except in freezing weather, with joints thoroughly flushed up with mortar, and all well bonded. All brick-work to be afterwards plastered is to have rough joints, other work to have the joints neatly struck, and all work visible outside of the house to be washed down after completion with muriatic acid.

ART. 35. Build the chimneys as shown on the drawing of hard brick in mortar made with one part cement to two parts lime, to underside of roof boarding; above roof to be of selected brick, formed according to drawing, and laid in mortar made with equal parts of lime and cement, colored with Venetian red to a light red color and the upper course to be laid in clear cement. The brick work of chimneys to be kept in all cases at least one inch clear of any wood-work.

ART. 36. Plaster flues smoothly inside to top, and clean out as completed, and plaster the outside of each chimney from first floor to underside of roof boarding. Build in lead flashings.

ART. 37. Turn 4-inch trimmer arch on centers to fire place in office, to be 2 feet wide by the length of breast, level up with cement, concrete, or brick-work to receive hearths. Build fire-place in office of good selected brick, with hearth of 20 inches width and length as shown, all laid in red mortar and neatly painted. The fire-place to be built in the best manner, with $\frac{1}{2}$ by 2 inch chimney bars, 8 inches longer than the openings, which will be square. Hearth to have oak border.

FRAMING.

ART. 38. Sills: Sills and girders, 6 x 8 inches lapped and pinned at the corners and intersections.

ART. 39. Wall-plates: Wall-plates for all walls 4 x 6 inches, joined together in the same way as described for sills.

ART. 40. Floor joists to be 3 x 12 inches, placed 16 inches on centers.

ART. 41. Ceiling joists and collar beams will be 2 x 8 inches. Porch-joists will be of best well seasoned dry white pine.

ART. 42. All other framing timber to be of good sound pine, free from large knots and shakes.

ART. 43. The house is to be all framed, braced and pinned in the best and strongest manner, and perfectly true and plumb. No wood-work to be placed within 1 inch of the outside of any chimneys and no nails to be driven into any chimney.

ART. 44. Piazza floor to be framed with 6 x 8 inch stuff, which will carry 2 x 8 inch floor joists, 16 inches on centers, with a fall of 1 inch towards front. The finished post of piazza to stand upon the floor, tenon 4 inches long into the girder and the plates to be framed into it and pinned. Under side of piazza roof will be sheathed with seven-eighths inch clear white pine, $2\frac{1}{2}$ inches wide, tongued and grooved and beaded with neat return mouldings. The under side of roof of tank-room to be also sheathed in a similar manner.

ART. 45. Scantling, etc.: Studs of outer walls of main building to be 3 x 6 inches; corner posts, 6 x 6 inches, with 2 x 4 inch pieces spiked on their interior angles; all to be in full lengths. All corner posts, doors, and window studs to be well braced diagonally. Heads to be framed into all window and door openings of the same size as adjacent studding.

ART. 46. Bridging. The floors over office, over center of main building, and over engine room to be bridged as shown, with a straight continuous row of double herring-bone cross-bridging of $1\frac{1}{2}$ x 3 inch pieces, cut in and nailed with two nails at each end of each piece.

ART. 47. There will be a truss roof of 32 feet span to main building.

ART. 48. Eight trusses will be required to be built as shown. They are to be built of good, sound, well-seasoned lumber. The beams to be dressed on the three sides as they show in the hatching-room, and to be chamfered. They must be free from large or decayed knots and present a good appearance.

ART. 49. Brackets are to be provided and placed under each of these trusses as shown on plan. The purlines for the truss roof of the building to be four inches by six inches. All to be securely fastened. The rafters for the other parts of the building to be 2 x 8 inches, 16 inches on centers, notched on the plate and spiked; hip and valley rafters 3 x 10 inches; ridge-pole of main hatchery building to be 4 x 12 inches; and other ridge-pole to be 2 inches by 10 inches.

ART. 50. The collar-beams to be 2 x 8 inches. The corner-posts and every third stud will be fastened to sills and plates by $\frac{1}{4}$ x $1\frac{1}{2}$ -inch iron straps of sufficient lengths, spiked on in the most thorough manner. The large window posts and sills and cap timbers to be 6 x 6 inches, well braced and bolted together. The entire framework to be properly constructed by mortising, notching, and lapping in the most workmanlike manner, by bracing, tying, and spiking all parts together, making the building as firm and strong as possible.

ART. 51. Roofing: Cover all the roofs, including piazza and outbuildings, with good pine boards, planed on one side to an even thickness, and well nailed to every rafter one thickness of pine tarred felt paper, nailing strips and shingle with first quality * * * 18-inch pine shingles, laid $4\frac{1}{2}$ inches to the weather, and nailed with two galvanized nails to each shingle. Form dormers, &c., as shown on drawings. Build wide counter flashings of 4 pound lead into joints of the chimneys; shingle in wide zinc fastenings to turn up against the brick work as high as the counter flashings, will allow; then turn down the counter-flashing, dress close, and cement perfectly tight against the brick-work. Shingle in wide zinc flashings in valleys and around dormers.

ART. 52. Walls: Inclose the walls with good pine boards, put on diagonally, planed one side to an even thickness, each board to be driven up closely and nailed to each stud, with best quality resin-sized water-proof sheathing-paper, held in place by strips of pine 2 inches wide and $\frac{1}{2}$ inch thick, over this the lower story up to belt course is to be covered with tongue and grooved clap-boards; corner boards $1\frac{1}{2}$ inch stuff and 6 inches wide. A base-board water-table is to be put around the building on the first sheathing, twelve inches deep by two inches thick and beveled upper outside edge.

ART. 53. All the upper portion of buildings to be shingled with the best quality of * * * 18-inch sawed pine shingles, laid $5\frac{1}{2}$ inches to the weather, and nailed with two galvanized nails to each shingle.

ART. 54. Where there are no corner boards the shingles will be lapped at the corners.

ART. 55. Put strips of zinc 3 inches wide around all window and door casings throughout, running under casings and clapboards or shingles.

ART. 56. Outside steps: Outside steps to have seven-eighths inch pine risers and $1\frac{1}{4}$ -inch rift hard pine treads with rounded nosings returned at the ends, to be supported on 2-inch by 12-inch spruce strings. Twelve inches on centers, the outer strings to be planed or cased, and the foot of the strings to be notched upon a 4-inch piece, supported by two short red-cedar posts.

ART. 57. Other outside finish: All other outside finish to be of good, thoroughly seasoned white pine, in strict accordance with elevations and drawings, all leaded where necessary to make it water-tight.

ART. 58. Priming: All outside finish must be primed before putting up or immediately afterwards, and all work warped or cracked must be replaced.

INTERIOR FINISH.

ART. 59. Grounds and furrings: Put on grounds for seven-eighths inch plastering on walls of hatchery, walls and ceilings of office portion and walls and ceilings of engine-room and store-room over head. Cross-fur all ceilings in rooms to be plastered with 1-inch by 2-inch strips, 12-inches on centers; set grounds for wainscot 4 feet high in hatchery and 3 feet 4 inches high in office, engine-room, store-room, and bedroom over the office and tank-room. Lath and plaster the above rooms, two coats in the best manner, all studdings, partitions, furrings, and ceilings, carrying the plastering to the floor everywhere. Walls of engine-room to have a rough-cast finish. Laths to be of the best seasoned pine, free from knots, barks, or stains, all laid three-eighths inch apart, and breaking joints every six courses, and over all door and window-heads. The first coat of plaster to be best quality lime and clean sharp sand, well mixed with a half bushel of best long cattle or goat's hair to each cask of lime, thoroughly worked and slacked, at least one week before using in a sheltered place. All to be well trowelled, straightened with a straight edge, and made perfectly true, and brought well up to the ground.

ART. 60. The skim coat to be of the best quality lime, slacked at least one week before using, and washed beached sand, and well floated.

ART. 61. Point up with lime and hair mortar around outside door and window-frames; clear away and remove all rubbish from the premises after the second coat of plaster is on; clean the mortar off of the floors and sweep out the building and leave all ready for the wood finish. Patch up and repair all the plastering at the completion of the building and leave all perfect. The walls of office, bed-room, hatchery, and store-room to be tinted with a light drab color.

ART. 62. Ceiling of hatching room: The hatching room will be ceiled with narrow (not over 4 inches wide) beaded seven-eighths inch wainscot stuff. The ceiling to be divided into squares between the trusses by flat moulding. Between the trusses at the sides and ends of the hatching room there will be a board fitted finished with $1\frac{1}{2}$ inch molding at top and bottom.

ART. 63. The uprights for support of tanks on second floor to be finished on four sides and horizontal beams also finished. The uprights and horizontal pieces to be chamfered.

ART. 64. The girders under tank-room to be finished on three sides showing from hatchway room and edges chamfered. The ceiling under tank-room will be ceiled the same as the truss-roof. On each side of tank-room floor looking down into hatchery there will be a neat railing 4 feet high. There will be a board fitted against the ends of flooring and joists of tank-room floor showing from hatchery, to be finished and have $1\frac{1}{2}$ inch return moulding at top and bottom ends. The post and girder in engine-room will be finished and have edges chamfered.

ART. 65. Base-boards: The base-boards will be seven-eighths inch thick, with moulding on top; to be 8 inches high in first story.

SCUTTLE.

ART. 66. Make scuttle in south slope of roof of hatchery building, over tank-room, 18 x 24 inches. Combing to be 3 inches high and covered with tin and double flashed. Scuttle to be tin covered. All tin painted two coats of paint on top and one coat underside before placing in position. A suitable ladder is to be provided of sufficient length to reach from floor of tank-room to scuttle-hole.

DOORS.

ART. 67. All doors to be of clear pine, well made, and of size specified.

ART. 68. The outside engine-room door to be double, made of two-inch plank, with diagonal matched and beaded sheathing, set in a rebated plank frame 2 inches thick. Each door to be hung on stout strap galvanized hinges. To have good mortise lock with imitation bronze trimmings, and also to be provided with foot and chain bolts and additional inside bolt.

There will be also one outside door to engine-room 4 feet wide, 2 inches thick, and 8 feet high, and to have a movable transom with light of glass 16 inches high; door to have six panels, as shown on plan.

ART. 69. There will be three outside doors to hatchery building, each 4 feet wide, 2 inches thick, and 8 feet high, each door to have a movable transom, with light of glass 16 inches high. These doors to be made as shown on plan, and to each have six panels.

ART. 70. The outside office door to be 2 inches thick, 3 feet 6 inches wide, and 8 feet high, moulded on both sides and to have five panels, a stationary transom to be put over door having light of glass 16 inches high. This light of glass to have neatly lettered on it the word "office" in gold letters shaded black.

ART. 71. The outside doors of office and hatchery building to be hung on figured imitation bronze hinges and have good outside lever locks with night latch, and to have imitation bronze knobs and escutcheons.

ART. 72. The door leading from office to hatchery will be 2 inches thick, 3 feet wide, and 8 feet high; to have five panels as shown on drawing, the upper two panels to be clear glass. The doors to water-closet under front stairway of office and of water-closet leading from engine-room to be each 2 feet 8 inches wide by 6 feet 8 inches high by $1\frac{1}{2}$ inches thick, and to be similar to other first story doors.

ART. 73. There will be a door 3 feet 6 inches wide, 2 inches thick, and 8 feet high leading from engine-room to coal-shed.

ART. 74. There will also be a door 3 feet 6 inches wide, 2 inches thick, and 8 feet high, leading from engine room to hatchery building.

ART. 75. This door to be made similar to the other doors. On second story there will be one door leading from bed-room to tank-room and one door leading from store-room to tank-room; each to be 2 feet 8 inches by $1\frac{1}{2}$ inches thick by 6 feet 8 inches high, to have 4 panels, each moulded. Each door to have a swing top light or transom 10 inches high.

ART. 76. All of the inside doors to be hung on plain black japanned $3\frac{1}{2}$ inches loose joint butts. Mortise locks and black knobs with imitation bronze trimmings.

ART. 77. The door casings of architraves to be 5 inches wide, seven-eighths inch thick, and with beaded face and square blocks with turned rosettes at upper corners. All doors to have hard wood sill four inches thick.

ART. 78. All doors and frames to be well made of clear stock and first-class in all respects. All doors to have good mortise locks, black knobs, and imitation bronze trimmings.

ART. 79. There will be an outside door to coal-shed. This door to be double made of two-inch plank with diagonal matched and beaded sheathing set in a rebated plank frame 2 inches thick. Each door to be hung on stout strap galvanized hinges. To have good mortise lock with imitation bronze trimmings, and also to be provided with foot and chain bolts and additional inside bolt.

ART. 80. The outside doors to engine-room and coal-shed to have stationary transom lights over doors, glass to be 16 inches high.

ART. 81. There will be three slat doors provided and hung in water-closets.

WINDOWS AND WINDOW FRAMES.

ART. 82. Provide and set all windows and frames of the size and shape shown on plans. Glaze all sash in lights as shown on drawings and as directed, with best double thick American sheet-glass, all well bedded, puttied, and sprigged, and all to be left clean, whole, and perfect at completion of building. The window frames to have seven-eighths inch pine pulley stiles, best steel axle capped brass-faced pulleys and best shoe-thread sash line, the beads and pulley stiles to be of hard pine; 2 inch clear pine sashes in lights as shown, with moulded sash bars and counter-checked meeting rails where double. All sash bars to be seven-eighths inch thick. Windows to have boxed frames.

ART. 83. The small window in office building in front under roof will be hinged at bottom so as to open outward, to have strong japanned iron fastenings. Provide all sliding sash with plain bronzed sash locks of approved pattern.

STAIRS.

ART. 84. Provide materials and build the stairs where shown on plans. The stairs will be three feet wide, to have open-string moulded nosing, returned at the ends and carried around well-room; seven-eighths inch risers and 1 and three-eighths inch treads housed into the wall sides; simple balusters and hand-rail; balusters 1 and three-fourths inches square, two to a tread; rail 2 and three-fourths by $3\frac{1}{2}$ inches, balusters and rail carried around well-room, and to finish with half post against the wall. The post at the foot of the stairs to be 6 inches by 6 inches square turned. The strings to be 2 x 12 inches, of pine, 12 inches on centers. All to be thoroughly wedged, blocked, and glued in the best manner and left clean and perfect.

ART. 85. Provide a step-ladder long enough to reach from second story to attic over front of office building.

ART. 86. Provide and set in the office a neat hard wood chimney-piece with mantel worth twenty dollars. The design of which to be first submitted to the commissioner for his approval.

COMBING AND CRESTING.

ART. 87. Provide and set the combing and cresting for ridges and peaks of roof as shown on plans.

FLAG-STAFF.

ART. 88. Provide and set a flag-staff of spruce in front of office building as shown on plan; to be 25 feet long, six inches diameter at heel and three inches at head.

ART. 89. The points of the compass and finials to be of wrought iron and gilded. The flag-staff is to be painted three coats of white lead, and the ball on top of staff to be gilded.

EAVES.

ART. 90. The rafters are all to project 2 feet from the outside sheathing. The eaves to be finished with a moulded ogee wooded gutter of suitable shape and five inches width. Under the eaves to be fitted a neat moulding. Every care must be taken to make the boxing of the eaves neat, tight, and strong.

DOWN-SPOUTS.

ART. 91. Provide and put up proper tin down-spouts $2\frac{1}{2}$ inches diameter with suitable connecting goose-necks 2 inches diameter to the wooden gutters. These down-spouts will be six in number, and two small ones for porch of office one for coal shed.

DRAINS.

ART. 92. Drains: Provide and set in ground six inch terra-cotta drain-pipes as shown on plan, to have close joints and make connections with these drains to the down spouts and make one connection with each of the open drains at each end of hatchery floor to these terra-cotta drain-pipes, by means of a 2-inch cast-iron pipe through the wall.

TANKS.

ART. 94. Provide and place in position, as shown in plans, two cedar tanks; the mean diameter of each to be twelve feet. The height of staves to be 8 feet 6 inches. Under where the tanks are to stand a zinc lining is to be placed of No. 15 gauge; a wrought-iron drain-pipe three-fourths inch diameter is to run from one end of each pan and connect with the overflow pipe. The moulding forming the edges of drip-pan to be $2\frac{1}{2}$ inches high.

ART. 95. The staves to be 2 inches thick and the bottom $2\frac{1}{2}$ inches thick when dressed. Each tank to have six hoops; the three upper to be $2\frac{1}{2}$ inches by one-eighth inch iron and the three lower hoops to be three by three-sixteenths inch iron. To be of the best American wrought iron, with cast-iron lugs riveted on and set up with one three-fourths inch bolt through the lugs. Proper scantling to be provided for the support of the bottom of the tank to keep the staves from resting on the floor.

ART. 96. These tanks are to be made first class in all respects, and will be filled and tested before being accepted. The tanks are to be painted two coats on the outside of pure lead and linseed oil and drab paint.

TANK SUPPORT.

ART. 97. Provide the necessary lumber and build the tank supports, as shown on plans. All the lumber to be selected stock, sound and straight, and free from all defects; all parts of the supports showing in hatchery to be planed and edges chamfered. The frame-work is all to be mortised and tenoned, and fastened with hard wood trenails.

ART. 98. Blinds: Provide and hang inside blinds, to have movable slats to center fold, to the windows in the office and bed-room.

PLUMBING.

ART. 99. The contractor is to provide and lay an 8-inch terra-cotta sewer-pipe in center of main trench; commencing from the inner end of collecting tank and extending out to the outside of middle pier of wharf. From inner end of collecting tank this 8-inch pipe to be reduced to a 4-inch terra-cotta pipe to extend to the boiler room so as to connect with the boiler-blow. The 8-inch terra-cotta pipe to be provided with four 8" x 5" tees (terra cotta) for the purpose of connecting with the tank overflow pipes. These tees to be located as shown on plans.

ART. 100. Provide three of Demorest's Hygeia water-closets, with traps, and set where shown on plans. Fit up the closets under stairs in office with neat cabinet work and wainscot the room. Use enameled iron slop safes for water-closets.

ART. 101. Provide and place in position, one corner urinal under stairs of office, as shown on drawing, and one urinal in water-closet leading from engine-room. A "one-gallon flushing tank to be provided and placed over each water-closet. Each closet to be provided with a nickel-plated chain and pull.

ART. 102. Provide and set a washstand in office, under stairs, as shown on drawing. Silver-plated cocks and plugs, supply $\frac{1}{2}$ inch for water, and to have $1\frac{1}{4}$ -inch lead waste-pipes for basins to run into soil-pipes of water-closets.

ART. 103. Provide and set in engine-room a cast-iron sink, enamel lined, on brackets. To have back, and nickel faucet.

ART. 104. To be Mott's Eastlake pattern, 48" x 23" x 9" deep. Make all the necessary water connections to water-closets, urinals, wash-basin, and sink, from the tanks in the second story. All pipes should be laid with sufficient fall to secure thorough drainage.

ART. 105. Lay extra heavy 4-inch cast-iron soil-pipes, connecting with all water-closets and the 8-inch terra-cotta sewer-pipe at a point under the office. Make all connections of the water-closets, urinals, and sinks to these 4-inch soil-pipes by means of suitable Y's, bends, &c., as shown on plans.

ART. 106. Place $2\frac{1}{2}$ -inch cast-iron ventilating pipes in each of the water-closets. Carry the same through the walls of the building to 16 inches above the roof, and flash and make water-tight around the pipe where it passes through the roof.

PAINTING.

ART. 107. Outside. Oil piazza floors and treads of steps two coats. Paint shingles of roof two coats of dark red roofing paint.

The outside of walls of buildings to be painted two coats of a warm yellow tint, to be mixed of yellow ocher and Venitian red, with a very large proportion of yellow used and a very small proportion of the red. The belts, corner-boards, casings, and trimmings generally, the soffits of eaves, the outside of all outside doors will be painted two coats of dark olive-green. Posts and rails and balusters of piazza will be painted two coats of very dark olive-green.

ART. 108. The outside of all sashes will be painted three coats of very dark olive green. Properly prepare all wood-work for painting and oiling by rubbing down, puttying, etc. All floors, steps, and stairs to be oiled two coats.

ART. 109. All interior wood-work will be finished with three coats of hard oil, and will be rubbed down with oil and pumice-stone after each coat. The stiles of doors to be stained slightly darker than panels, mouldings, of wainscoting, etc.; also chamfered edges of roof trusses, etc., to be stained darker.

WOODEN PIER.

ART. 110. A wooden pier is to be constructed in front of the hatchery building 18 ft. wide and to be built as shown on plan. All of the timber to be sound pine, free from splits, shakes, decay, rotten knots, and all other defects tending to impair durability or strength.

ART. 111. All outside timber to be 8" x 8", ties 6" x 8", running across each other and bolted together. Ties in shore crib well distributed from ends and front. All timbers to be firmly drift-bolted together with seven-eighths inch iron blunt-pointed drift-bolts, the bolts running through three timbers each. The top or cap stringers are to be 6 inches by 12 inches, scarfed and bolted together.

ART. 112. Framing must be done accurately, and care taken in handling not to chip off the edge or split the dove-tails. In framing timber no stick must be cut so as to fall easily in place, but on the contrary, each stick will be required to be mauled into place.

ART. 113. To prevent splitting while bolting timber, plank, and joists must be bored to receive the bolts. Boring for bolting will in no case be allowed of the same diameter as bolts, but always slightly less.

ART. 114. The cribs are to be framed and built as shown on plan, and to the entire satisfaction of the agent in charge, and to be placed in position as required by him, then to be filled with stone and covered with superstructure.

ART. 115. The bottom planking of cribs to be 3 inches by 12 inches. All top planking to be 2 inches thick and not less than 10 inches wide, well spiked to each sleeper or joist. The joists to be 3 inches by 12 inches, spaced about 20 inches from center to center, or as near that as space will allow; except through the center of the pier immediately under the flooring and extending the whole length of the pier, there will be left a space 3 feet wide in the clear, and 12 inches deep; this space to be occupied by two 6-inch suction pipes, and one 8-inch terra cotta drain pipe. The bottom to be made tight enough to hold such non-conducting material as may be used to prevent the freezing of the pipes.

ART. 116. Four white oak round piles 10 inches in diameter to be furnished and placed in position, as shown on plan.

ART. 117. The shore crib to be covered with joists, planking, etc., same as other cribs, and all to be filled to lower side of joists with stone.

ART. 118. Three white oak round fenders, each 12 inches in diameter to be furnished and placed in position, as shown on plan, and each to be securely fastened to crib.

ART. 119. A fence will be built on pier, as shown on plan; the posts to be 4 inches by 4 inches, and 3 feet 6 inches high, to have chamfered edges and pointed tops, the rails of fence to be 2 inches by 4 inches. The material of fence to be white pine. The fence to be painted two coats of paint, of color to correspond with color of hatchery.

ART. 120. Provide and put up proper lightning conductors with branches, copper points, and proper ground connections. The conductors are to be four in number, to be located at the extremities of the peak of main roof and center wing roof. The conductors to be properly insulated.

Proposal for building a fish hatchery at Put in Bay, Lake Erie.

PUT-IN BAY, O., Oct. 4, 1889.

MARSHALL McDONALD, Esq.,

U. S. Commissioner of Fish and Fisheries, Washington, D. C.:

SIR: In accordance with your advertisement of September 6th, 1889, inviting proposals for building a fish hatchery at Put-in Bay, Lake Erie, and subject to all the conditions and requirements thereof, and of your specifications, copies of both of which are hereto attached, and so far as they relate to this proposal are made a part of it, we (or) I propose to build a fish hatchery at Put-in Bay, Lake Erie, according to the specifications, at the following prices:

For the entire superstructure, including chimneys and plumbing, water-closets and sinks, with connections, tanks, with support and pier, nine thousand nine hundred and seventy-seven dollars and twenty-four cents (\$9,977.24).

For the stone masonry for foundations and basement walls, including furnishing the materials and placing same, per cubic foot actual measurement of work laid, eleven and one-half cents (\$0.11½).

For excavation for walls, trench, &c., including placing and grading, per cubic yard, measured in the cut, ——— cents (\$0.00).

The foregoing include all the materials and labor required for the work, we (or) I make this proposal with a full knowledge of the kind, quality, and quantity of the materials and labor required, and if it is accepted will, after receiving written notice of such acceptance, enter into contract within the time designated in the specifications, with good and sufficient sureties for the faithful performance thereof.

GEORGE E. GASCOYNE.

GUARANTY.

We, Valentine Doller, of Put-in Bay, in the State of Ohio, and Philip Vroman, of Put-in Bay, in the State of Ohio, hereby guarantee and bind ourselves and each of us, our and each of our heirs, executors, and administrators, to the effect that if the bid of George E. Gascoyne, herewith accompanying, dated October 4th, 1889, for building fish hatchery at Put-in Bay, Lake Erie, shall be accepted in whole or in part within sixty (60) days from the date of the opening of proposals, the said bidder, George E. Gascoyne, will, within five (5) days after being notified of such acceptance, enter into a contract with the United States in accordance with the terms and conditions and specifications, and will give bond with good and sufficient sureties for the faithful and proper fulfillment of the same. And in case the said bidder shall fail to enter into contract within the said five days with the proper officer of the United States and furnish good and sufficient bond for the faithful performance of the same in accordance with the terms of said bid and specifications, we and each of us hereby stipulate and guarantee and bind ourselves and each of us, our and each of our heirs, executors, and administrators, to pay unto the United States the difference in money between the amount of the bid of said bidder, and the amount for which the proper officer of the United States may contract with another party for the work by the said bid, if the latter amount be in excess of the former for the whole period covered by the proposal, not exceeding the sum of fifteen hundred dollars (\$1,500.00).

VALENTINE DOLLER, [SEAL.]
 PHILIP VROMAN. [SEAL.]

Witnesses:

GEORGE WHITNEY,

GEORGE WHITNEY.

Dated October 4th, 1889.

JUSTIFICATION OF THE GUARANTORS.

STATE OF OHIO, *County of Ottawa, ss:*

I, Valentine Doller, one of the guarantors named in the written guarantee, do hereby swear that I am personally worth the sum of one thousand five hundred dollars (\$1,500.00) over and above all my debts and liabilities.

VALENTINE DOLLER.

Before me.
 [SEAL.]

CLINTON IDLER,
Notary Public.

STATE OF OHIO, *County of Ottawa, ss:*

I, Philip Vroman, one of the guarantors named in the within guarantee, do hereby swear that I am personally worth the sum of one thousand five hundred dollars (\$1,500.00) over and above all my debts and liabilities.

CLINTON IDLER,
Notary Public.

Contract for building a fish hatchery, pier, etc., at Put-in-Bay, Ottawa County, Ohio.
(U. S. Statutes, 25, page 954.)

This agreement, made and entered into this 25th day of October, in the year eighteen hundred and eighty-nine A. D., by and between Marshall McDonald, United States Commissioner of Fish and Fisheries, acting for and in behalf of the United States of America of the first part, and George E. Gascoyne, of Put-in Bay, Ottawa County, Ohio, contractor, of the second part.

Witnesseth, that the said party of the second part has agreed, and by these presents does agree, with the said party of the first part, for the consideration hereinafter mentioned and contained, and in accordance with his proposal of the fourth day of October, 1889, and with the specifications and plans thereto annexed, and under the penalty expressed in a bond bearing even date with these presents and hereto annexed, all of which form a part of this contract, to furnish at his own cost and expense all the necessary materials and labor to construct and complete ready for use, in a good and first-class manner, the entire fish hatchery building, pier, and so forth (as mentioned in the plans and specifications hereinbefore referred to and forming part of this contract), at Put-in Bay, Ottawa County, State of Ohio, for the following sums: (1) for the entire superstructure, including chimneys and plumbing (water-closets and sinks with connections), tanks, with supports, and pier, nine thousand nine hundred and seventy-seven dollars twenty-four cents (\$9,977.24); (2) for the stone masonry for foundations and basement walls, including furnishing the materials and placing the same, per cubic foot actual measurement of work laid, eleven and one half cents (\$0.11½); (3) for excavations for walls, trenches, etc., including placing and grading (price for which was not given in proposal hereinbefore referred to), per cubic yard measured in the cut, for earth excavation, seventy cents (\$0.70), and rock excavations, six dollars (\$6.00).

And the said party of the first part, for and in behalf of the United States of America, hereby agrees to pay to the said party of the second part the sums of (1) nine thousand nine hundred and seventy-seven dollars twenty-four cents (\$9,977.24) for the entire superstructure, including chimneys and plumbing (water closets and sinks with connections), tanks, with supports, and pier; (2) eleven and one-half cents for each cubic foot actual measurement of stone masonry laid for foundations and basement walls, including the materials furnished therefor; and (3) seventy (\$0.70) cents for each cubic yard of earth excavation and six dollars (\$6.00) for each cubic yard of rock excavation, needed for walls, trenches, and so forth, payments to be made as the same shall become due him in accordance with the terms of this contract.

In witness whereof, the parties to these presents have hereunto set their hands and seals the day and date hereinbefore written.

THE UNITED STATES OF AMERICA,
By MARSHALL McDONALD,
U. S. Commissioner of Fish and Fisheries.
GEORGE E. GASCOYNE, *Contractor.*

Signed, sealed and delivered in the presence of J. J. O'Connor and Herbert A. Gill, as to Marshall McDonald; John Brown, jr., and Clinton Idler as to George E. Gascoyne.

(Executed in triplicate).

BOND OF INDEMNITY.

Know all men by these presents, that we, George E. Gascoyne, of Put-in Bay, Ottawa County, Ohio, as principal, and Valentine Doller, of Put-in Bay, Ohio, and Phillip Vroman, of Put-in Bay, Ohio, as sureties, are held and firmly bound unto the United States of America, in the sum of ten thousand dollars (\$10,000.00) lawful money of the United States of America, to be paid to the said United States of America, for which payment well and truly to be made, we bind ourselves, our heirs, executors, and administrators, jointly and severally, firmly by these presents.

Sealed with our seals and dated the 25th day of October, eighteen hundred and eighty-nine.

Whereas the said George E. Gascoyne has entered into a contract with the United States of America, by the United States Commissioner of Fish and Fisheries, bearing date the 25th of October, eighteen hundred and eighty-nine, for the construction of a fish-hatchery, pier, etc., at Put-in Bay, Ottawa County, Ohio:

Now the condition of this obligation is such that if the said George E. Gascoyne shall well and truly keep and perform all the terms and conditions of said contract on his part to be kept and performed, and shall indemnify and save harmless the said United States of America as therein stipulated, then this obligation to be of no effect, otherwise to remain in full force and virtue.

GEORGE E. GASCOYNE.
VALENTINE DOLLER.
PHILLIP VROMAN.

Signed and sealed in the presence of John Brown, jr., and Clinton Idler, Put-in Bay, Ohio.

JUSTIFICATION OF THE GUARANTORS.

STATE OF OHIO, *County of Ottawa*, ss:

I, Valentine Doller, of Put-in Bay, Ohio, one of the guarantors named in the foregoing bond of indemnity, do hereby swear that I am worth the sum of ten thousand dollars over and above all my just debts and liabilities for any cause whatever, to the best of my knowledge and belief.

VALENTINE DOLLER.

Subscribed and sworn to before me this 25th day of October, 1889, A. D.

CLINTON IDLER,
Notary Public.

STATE OF OHIO, *County of Ottawa*, ss:

I, Phillip Vroman, of Put-in Bay, Ohio, one of the guarantors named in the foregoing bond of indemnity, do hereby swear that I am worth the sum of ten thousand dollars over and above all my just debts and liabilities for any cause whatever, to the best of my knowledge and belief.

PHILLIP VROMAN.

Subscribed and sworn to before me this 25th day of October, 1889, A. D.

CLINTON IDLER,
Notary Public.

I certify that the above-named sureties are personally well known to me, and that they are sufficient for the penalty indicated in the foregoing bond.

GEO. DANIEL, P. M.,
Sandusky, Ohio, Erie County.

This certificate to be given by some U. S. official.

WASHINGTON, D. C., Dec. 30, 1889.

We, George E. Gascoyne, contractor for the erection of the buildings, etc., for the U. S. Fish Commission at Put-in Bay, Ohio, and George E. David, superintendent of construction on the part of the United States Fish Commission, hereby agree to the following changes in specifications and plans of said building, etc., the same to be made with the understanding that no claim for payment beyond the amount called for by this contract is to be made by the contractor, and that no claim for deduction from the amount of said contract is to be made on the part of the U. S. Fish Commission.

COAL-SHED.

The coal-shed to be enlarged to the following dimensions: 30' x 20' x 12" inside.

Framing: Sills, 6" x 8" pine; plates, 4" x 6" pine; two corner posts, 6" x 8" pine; studding, 3" x 6", set 16" from centre to centre; rafters, 2" x 6", set 24" from centre to centre. Sills to be lapped at the corner.

Roof: To be sheathed and covered with I. C. bright tin, well anchored to the sheathing and painted one coat of mineral paint on the underside and two on the outside. Inside of the room to be sheathed with 1" rough boards put on diagonally outside, to be sheathed diagonally with surface boards and then covered with building paper. The whole to be covered with $\frac{7}{8}$ " channel sliding. There will be a sliding door 4' x 4' x 2" put on the rear end of the house close to the top of building, hung on rollers, and to have loose planking put across the inside, this door to be used for storing coal. One window 2' x 3' hung on hinges and provided with a suitable spring catch, to be put in each side of the house sufficiently high to be above the coal level. There will be a tin gutter and down spout provided.

The house to have two coats of paint same color as main building.

Foundation walls: To be 12" wide on top, laid smooth where it shows above ground. The earth to be removed inside the building to the solid rock, and the rock to be merely leveled off so as to make a smooth floor. The cost of the superstructure to be five hundred (\$500.00) dollars, less the estimated cost of the original coal-house, two hundred and seventy-five (\$275.00) dollars, or two hundred and twenty-five (\$225.00) dollars (\$500—\$275 = \$225). The rock excavation to cost \$6.00 per cu. yd.; earth excavation, 70 cts. per cu. yd.; stone masonry, 11½ cts. per cu. ft.

GEO. E. GASCOYNE,

Contractor.

GEO. E. DAVID,

Sup't of construction, U. S. Fish Commission.

Approved:

M. McDONALD,

Commissioner.

We, George E. Gascoyne, contractor for the erection of the building, etc., for the U. S. Fish Commission at Put-in Bay, Ohio, and George E. David, superintendent of construction on the part of the United States Fish Commission, hereby agree to the following changes in the specifications and plans of said building, etc., the same to be made with the understanding that no claim for payment beyond the amount called for by the contract is to be made by the contractor, and that no claim for deduction from the amount of said contract is to be made on the part of the U. S. Fish Commission.

CHANGES IN SPECIFICATIONS.

1. Art. 31. Hemlock changed to pine.
2. Art. 33. Flooring of coal shed to be 2" instead of 1".
3. Art. 44. Porch posts to have iron spindles and sockets at foot, instead of being framed into the sills.
4. A door to be put in in place of the window in main building on the south side of the office.
5. Do away with "nailing strips" on the tarred paper of roof where shingles are used.
6. Put "holding down bolts" through the stringers for the iron plates of trench to rest on.
7. Raise the office floor 2" above the floor of main building.
8. Concrete the bottom of trench instead of laying a course of brick.
9. Have the middle pier out 11 feet from shore, so as to divide the space equally between the piers.
10. Instead of the 12" x 4" ridge pole, put in two 6" x 4" purlins at the peak of roof.
11. Move the office chimney so as to bring the fire-place in the center of the room.(?) Also build the chimney in boiler-house on a solid brick pier 1'x2'x8" and start the flue from where the boiler smoke duct enters the chimney.
12. Make a concrete finish around the bottom of wainscoting instead of brick.
13. Change the position of truss-rafters and space them so that there will be six instead of eight as shown in plans.
14. Make the roof-gutters of strips covered with tin instead of the wooden gutters as called for in the specifications.
15. Put two glass panels in the door between the office and main building. Make door-sills of 2" oak.
16. Use but one collar beam on rafters instead of two, and one vertical hanger.
17. Do away with the outside drains for down spouts.

18. Do not put in the 4" terra cotta drain pipe in the trench to boiler room, and which was to connect with the 8" drain.

19. Put in a 1½ inch pipe through the foundation walls at each corner of the building for the purpose of connecting the exhaust pipes from radiators.

20. The drain pipes at each end of the hatchery building to be laid inside the building.

GEO. E. GASCOYNE,
Contractor.

GEO. E. DAVID,
Supt. of Construction U. S. Fish Commission.

Approved.

M. McDONALD,
Commissioner.

Contract for erecting tables, troughs, and collecting tank with the connecting pipes for the United States fish hatchery, Put-in Bay, Lake Erie.

This agreement, made this first day of March, eighteen hundred and ninety, by and between Marshall McDonald, United States Commissioner of Fish and Fisheries, acting for and in behalf of the United States of America, of the first part, and George E. Gascoyne, Put-in Bay, county of Ottawa, State of Ohio, of the second part.

Witnesseth, that the said party of the second part, for the consideration hereinafter mentioned, as to be paid by the said party of the first part, hereby agree to furnish all the necessary materials and labor for and to properly construct and connect in accordance with the requirements of the accompanying plan and specifications, which are to be considered as forming part of this agreement, the tables, troughs, collecting tank, and connecting pipes, for the United States fish hatchery, at Put-in Bay, Ohio, the whole work to be subject to the approval of the agent of the United States before payment will be made.

And the said party of the first part hereby agrees to pay to the party of the second part on the completion of the work heretofore mentioned to be by him performed, the sum of nine hundred and twenty-seven dollars (\$927.00), when the same shall be certified by the agent of the United States in charge of the work as having been performed.

In witness whereof, the parties to these presents have hereunto set their hands and seals the day and year hereinbefore written.

THE UNITED STATES OF AMERICA,
By MARSHALL McDONALD,
U. S. Commissioner of Fish and Fisheries.
GEORGE E. GASCOYNE.

With presence of
W. B. BAYLEY.

ADVERTISEMENTS, INSTRUCTIONS FOR BIDDERS, AND SPECIFICATIONS, FOR ERECTING A STEAM AND WATER DISTRIBUTING PLANT IN THE BUILDING OF THE U. S. HATCHERY, PUT-IN BAY, LAKE ERIE.

Advertisement.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., January 2, 1890.

Sealed proposals for erecting a steam and water distributing plant in the building of the United States fish hatchery, Put-in Bay, Lake Erie, will be received at this office up to 12 o'clock, noon, February 10, 1890, when they will be opened in the presence of attending bidders. Specifications, plans, forms of proposals, etc., can be seen at the offices of Henry Douglass, State fish hatchery, Sandusky, Ohio; George D. Mussey, secretary State fish commission, Detroit, Michigan; Edward E. Schwabe, Beckman Building, 204 Superior street, Cleveland; and George E. David, U. S. Fish Commission, Put-in Bay, Lake Erie.

MARSHALL McDONALD,
Commissioner.

INSTRUCTIONS FOR BIDDERS.

(1) The plant is to be erected in the new Government fish hatchery at Put-in Bay, Lake Erie.

(2) Each copy of proposal must be accompanied by a guaranty executed by two sufficient and responsible guarantors, in accordance with and on the forms prescribed. The guarantors must jointly justify in the sum of one thousand dollars (\$1,000). A proposal unaccompanied by such guaranty will not be considered.

(3) The affidavits of justification on the back of the bidder's guaranty must be taken before some official or person authorized by the laws of the United States, State, or Territory, to administer oaths.

(4) The certificate following the justification, is to be given under seal, if any, by some *civil official* of the *United States*.

(5) Each signature of bidders and guarantors shall have attached a seal of wax or wafer, and shall be attested by at least one witness for each signature, which must be written in full.

The residence of each signer must be given with number, street, city or town, and State.

(6) No person who as a contractor has failed to satisfactorily perform any contract with the United States, or as surety has failed to abide by a bond for the performance of any contract or a guaranty with a proposal, will be accepted as guarantor.

(7) A firm will not be accepted as guarantor, nor a partner for a co-partner or for a firm of which he is a member.

An officer of a corporation will not be accepted as guarantor for such corporation.

(8) All blanks in the forms of proposals and guaranty must be filled; prices must be written in words as well as expressed in figures.

(9) Additional copies of this form will be furnished on application.

(10) Alterations by erasure or interlineations must be explained or noted in the proposal over the signature of the bids.

(11) When firms bid the individual names of the members of the firm should be written out and signed in full; but the signers may, if they choose, describe themselves in addition as doing business under a given name and style as a firm.

(12) Reasonable grounds for supposing that any bidder is interested in more than one bid for the same item will cause the rejection of all bids in which he is interested.

(13) The United States reserves the right to reject any and all bids, or parts of bids; also to disregard the bid of any failing contractor or bidder known as such to the United States.

(14) The bidder must satisfy the United States of his ability to furnish the materials and to perform the work for which he bids. Lack of evidence as to ability to furnish plant, materials, and to properly construct the same will be sufficient cause for the rejection of any bid.

(15) Within five (5) days after he has been notified of the acceptance of his bid, the successful bidder will be required to enter into a written contract with the United States, accompanied by a bond for the same amount as the total sum of the bidder's offer for the entire work, executed by the bidder as principal and two sufficient and responsible persons as bondsmen.

Each bondsman will be required to qualify in the full amount of the bond.

(16) Payment on account of contracts can only be made to principals. Assignments and powers of attorney to collect moneys from the United States are not recognized.

(17) Transfers of contracts or of interests in contracts are prohibited by law.

(18) One copy each of the advertisement, instructions for bidders, and specifications must be attached to each proposal and be considered a part of it.

(19) Bidders are expected to familiarize themselves with the location of the proposed plant and to make their own estimate of the facilities and difficulties attending its construction. Claims for extra compensation based upon the contractor's ignorance on the above points will not be considered.

(20) The proposal and guaranties must be placed in an envelope, sealed and marked "Proposal for the plant for fish hatchery at Put-in-Bay, Lake Erie," and inclosed in another envelope addressed to "Marshall McDonald, U. S. Commissioner of Fish and Fisheries, Washington, D. C."

(21) No proposals can be received by telegraph, and none will be received after the time stated in the advertisement.

Specifications for erecting a water-distribution and steam-heating plant in the building of the U. S. Fish Commission Station Put-in-Bay, Lake Erie, Ohio, 1889.

1. The whole is to be done in accordance with these specifications and accompanying plans prepared by the engineer of the U. S. Fish Commission, and no deviation therefrom will be permitted unless authority in writing shall be first obtained from

the authorized agent of the U. S. Fish Commission. Any change of plans, etc., involving any difference in cost from that prepared by the original contract, must be agreed upon by the parties to this contract, and state in writing the difference in price from that originally agreed upon.

2. Should it be deemed desirable during the construction of the proposed plant to make any additions to, or to do any extra work not contemplated or provided for by these plans and specifications, an agreement in writing, stating the nature and cost of such addition or extra work, to be entered into between the U. S. Commissioner of Fish and Fisheries and the contractor before such work is commenced. No claim for extra work or materials, excepting as above specified, will be considered.

3. The work will be under the direction of the inspector or other agent of the U. S. Fish Commission, and all materials and workmanship must be satisfactory to him before payment therefor will be made.

4. In case any misunderstanding should arise between the agent of the Government in charge and the contractor as to the meaning or intention of any portion of these plans and specifications the decision of the U. S. Commissioner of Fish and Fisheries upon said disputed point or points will be considered correct, and will be final.

5. The United States will not be liable for any injury occurring to the contractor's employés or plant, or loss occurring to the contractor, or damage to the plant caused in any manner, before the final completion and acceptance of the plant.

6. The plant must be erected, tested, and ready for use by the 1st day of August, 1890.

7. No extension of time for whatever cause for the completion of the contract for this work shall be asked for or granted, except under the implied and understood condition that the contractor shall be charged with, and shall pay to the United States the sum of fifteen dollars (\$15.00) per day for each and every day that the plant is not completed and ready for delivery, after the time specified. Said penalty shall be deducted from any amounts due the contractor on account of this work at the discretion of the U. S. Commissioner of Fish and Fisheries.

8. In case the lowest price be named by two or more bidders, these bidders must agree between themselves within twenty-four (24) hours after notification as to who shall have the award. If the question be not thus settled within the time stated and the Commissioner of Fish and Fisheries so informed, he may select either of them to do the work at his discretion at said price.

9. Payment for the work done will be made after the end of each month when the progress and character of the work are satisfactory, but not otherwise.

10. Twenty per centum of the amount due will be retained until the plant has been completed and tested by the contractor in the presence and to the satisfaction of the authorized agent of the U. S. Fish Commission. Within thirty days thereafter final payment for the work will be made.

11. The "Instructions for bidders," as far as they may be applicable, are to be considered essential parts of these specifications.

12. The tools, scaffolding, etc., used by the contractor must be suitable for the work and satisfactory to the agent in charge.

13. The contractor shall furnish all necessary plant, materials, and labor. He shall allow the agent of the Fish Commission in charge of the work full access to all parts of the work at all times, and shall give the agent any assistance which he may need.

14. All materials furnished for the work must be first class of their kind, and satisfactory to the agent in charge; any materials not satisfactory will be condemned and must be removed from the location of the work, and be not again brought upon the ground.

15. All workmanship must be neat and first-class, and any work not so must be corrected immediately upon the request of the agent in charge.

16. The contractor or his agent must give his personal superintendence to the work during its progress and see that the work is done in the most careful manner, and according to the true intent and meaning of the drawings and these specifications, all of which are attached to the contract, and form a part thereof.

17. The plant will be erected under the supervision of and to the entire satisfaction of such person or persons as may be designated by the Government. No advantage may be taken of any omission in these specifications or accompanying drawings, as a full explanation and detail drawings will be given to the contractor for any part of the work not sufficiently understood.

BOILERS.

18. Type: There will be two (2) cylindrical, 20 H. P. steel boilers with outside furnaces, cast-iron arched fronts, set in brick-work.

19. Diameter: Thirty-six (36) inches.

20. Length: Eleven (11) feet.

21. Grate surface: Furnaces thirty-six (36) inches wide, forty-two (42) inches long 10½ square feet.

22. Heating Surface: Three hundred (300) square feet.

23. Tubes: Each boiler to contain thirty (30) of the best American lap-welded tubes each 3 inches in diameter and 10 feet long. All tube holes to be properly spaced and their outer edges slightly rounded. The tubes to be expanded with a dudgeon expander. The ends of the tubes to be slightly flared over, not beaded.

24. Material: Material used to be of the best homogeneous open hearth steel with a tensile strength of 60,000 lbs. per square inch; elongation of twenty-five (25) per cent. with a reduction of area not less than forty-five (45) per cent. and must turn over and hammer down cold without fracture.

25. Thickness of metal: Of shell one-fourth inch, tube-plates three-eighths inch, steam dome three-eighths inch.

26. Steam dome: Twenty (20) inches diameter and twenty-two (22) inches high. To have a composition boss bolted on the centre of the head or a steel ring riveted on tapped for a 2½ inch steam pipe.

27. Hand holes: A hand hole of 4" x 6" in each head under the tubes and one in the front head above the tubes fitted with plate, guard, bolt and gaskets, and to have steel strengthening rings riveted on inside.

28. Bracing: The tube sheets in steam space to be braced with three 1½ inch longitudinal braces set up with a nut and washer on each side of the tube plates. The ends of braces to be up-set so that the section of metal through the head will be the same as through the body of the brace.

29. Dome: The heads of domes to be braced with three (3) 1-inch braces riveted to the side of the dome.

30. Workmanship: The boiler to be made in the best manner, the punching to be done with the utmost care, so that the holes will come fair; the edges of plates to be planed. All flanges to be properly turned and free from defects.

31. Riveting: Longitudinal seams and domes to be double riveted. All other seams to be single riveted. No seams to come where the flames impinge on the metal.

32. Castings: Two fronts with doors for access to the tubes, also furnace and ash-pit doors, with knobs and catches for the same; anchor bolts, 4 wall braces, tie rods dead plates, arch plates. One set of grate bars for each boiler with bearing bars lug plates and rollers clearing out doors, and frames for backs of boilers, and rear arch bars.

33. Fittings: Two (2) 2½-inch iron body safety-valves with composition seats and stems, and with levers and weights; two (2) steam gauges (6-inch dials); two (2) glass water gauges with shut-off cocks and guards; two (2) water columns with two sets of gauge cocks; two (2) 1-inch blow-off cocks; one injector with a capacity of at least 8 galls. of water per minute; two (2) 1-inch brass stop-valves; two (2) 1-inch brass check-valves.

34. Tests: When completed the boilers to be tested to a hydrostatic pressure of 150 lbs. per square inch, and before being accepted to be subjected to the inspection of the engineer of the Fish Commission.

35. Manner of setting: The boilers will be set as follows: Bottom of fronts to set up five inches above the floor level (which is two courses of brick). Front edges of moulding on bottom of front to set back two inches from front edge of brick. Ash pits under the grates to slope down from bottom of ash door to the floor level.

Rollers and plates to go under the rear brackets only.

The front brackets to rest down on the walls without rollers or plates. The inside walls to commence to taper from top of grates to a line five inches under the brackets to give a space of four inches between boiler and wall. The piers directly under the brackets to be carried up straight and to be four inches wider than the bottom of the bracket, giving a good surface for the bracket to rest on.

The inside walls should close into the boiler on a line five inches under the brackets, which is two courses of brick. The outside and inside walls to have an air space of three inches between them, and to have headers run from wall to wall every eighteen inches, but not tied together.

Fire-brick in the furnaces to be laid with a course of headers every five or six courses so that the walls can be taken out easily and repaired at any time.

36. Boiler brichen: The smoke boxes of both boilers to be connected to each other and to the vertical flue, as shown in the drawings, by a smoke pipe 18 inches diameter, increased to 22 inches from the union of the two boilers to the vertical flue, made of No. 14 iron; a damper to be provided for each boiler in the vertical section.

37. Main steam connections: Both boilers will be connected from the steam drums by 2½-inch steam pipes. Each boiler to be provided with a 2½-inch stop valve; both boilers to connect into one 3½-inch steam main, as shown in drawings; the steam pipe of each boiler to have a safety valve attached, in the manner shown in the drawing.

38. Injector: The steam for the injector to be taken from the top of each steam dome, by a separate connection.

The water supply for injector to be taken from the pipe leading from the main tank after passing through the feed-water heater.

39. Feed and blow: The feed and blow to be connected to the rear end of the boiler by one pipe. The $1\frac{1}{4}$ -inch blow pipe to be carried down through the trench to the lake, as shown in the drawings. The feed pipe to lead from the auxiliary steam pump.

40. Firing tools: One set of fire tools, consisting of 2 hose, 2 slice bars, and 1 pricker, to be provided.

41. Asbestos covering: The boilers above brick-work, also steam dome, to be covered with $2\frac{1}{2}$ inches of asbestos cement.

PUMPS.

42. Kind and capacity: Two No. 8 Davidson pressure-pumps, $14'' \times 8\frac{1}{4}'' \times 14''$, with a capacity of 600 galls. of water per minute, and one $4\frac{1}{2}'' \times 2'' \times 6''$, to be used for feeding the boilers, will be furnished by the Fish Commission, and will be delivered to the contractors in the building. The pumps will be erected where shown on the drawings.

43. Foundation: The large pumps to set on stone slabs $6'' \times 25'' \times 7' 6''$ laid on a brick foundation 12 inches above the floor.

44. Feed-pump: The small feed-pump to be set on a suitable foundation where shown in the drawing. Steam-pipe to be connected to the steam-pipe of one of the large pumps. The exhaust to lead into the main vertical exhaust-pipe, suction to be connected to the main tanks, through the feed water-heater, and to deliver the water to the back ends of both boilers through the boiler blow-pipes.

PIPES AND FITTINGS.

45. Pump steam-pipes: The steam-pipes, $2\frac{1}{2}$ inches diameter, will connect with the $3\frac{1}{2}$ -inch main, as shown in the drawing, and will be provided with a $2\frac{1}{2}$ -inch stop-valve near each pump.

46. Exhaust-pipes: The three-inch exhaust-pipes from each pump will connect to a 4-inch vertical exhaust-pipe, which will be carried up through the roof, as shown. The bottom end to be provided with a $\frac{3}{4}$ -inch drain-pipe and cock to connect with the boiler blow-pipe in the trench.

47. Three-inch exhaust-pipe to radiators: The exhaust of one pump will also connect with a 3-inch pipe leading from the boiler-room into and across the hatchery-room overhead, the radiators all to connect to this pipe so that the exhaust steam can be utilized for heating purpose. The exhaust-pipe on this pump will be provided with a Jenkin's "back-pressure valve" close to the vertical 4-inch exhaust-pipe; there will also be a 3-inch stop-valve on the 3-inch exhaust-pipe leading to radiators, by which means the exhaust steam from this pump can be turned into the vertical 4-inch pipe, or through the 3-inch pipe into the radiators at will.

48. Live steam connection with radiators: There will also be a two-inch pipe connection, with globe-valve, between the $3\frac{1}{2}$ -inch steam main in the boiler-room and the 3-inch exhaust-pipe in hatchery-room, so that live steam can be used on the radiators if desired.

49. Radiators: Four radiators with return bends, each made up of 9 lengths of $1\frac{1}{2}$ -inch pipe 16 ft. long, and located in the hatchery-room, as shown in the drawings, will be provided.

These radiators to be connected with the three-inch exhaust-pipe, where shown in the drawings, the pipes to pass through the foundation at each corner of the building and to connect with a 2''-pipe leading down to the lake. Each radiator to be provided with a $1\frac{1}{2}$ -inch stop-valve and all the pipes where visible to be bronzed. A similar radiator composed of 9 lengths 8 ft. long to be put up in office where indicated in the drawings, one in the bed-room above the office and one in the tank-room, all to be connected with the 3-inch exhaust-pipe. The condensed water of small radiators to be carried by a separate pipe through the trench to the open air under the wharf.

50. Feed-water heater: The exhaust steam from the other large pump will pass through a No. 4 National feed-water heater having a 1-inch coil, thence to the 4-inch vertical pipe. The coil to connect with the main water-tanks and also with the suction-pipe of feed-pump and injector.

51. Main suction-pipes: The large pumps will take their water supply through separate 6-inch wrought-iron pipes running in the trench across the building and under the floor of the wharf, as shown in the drawings, to the end of the wharf about 138 ft. from the pump, where the ends of pipes will drop into the water 4 ft. below the mean water level.

52. Strainer check-valve and air-chamber: Each pipe will be provided with a wrought-iron strainer and brass-mounted check-valve. An air-chamber on each suction-pipe, to be furnished by the Commission, will be fitted close to the pumps.

53. Delivery-pipes: A 5-inch wrought-iron pipe will deliver the water from each pump to the main distributing-tanks.

54. Fire-hose: To provide 100 feet of 2½-inch rubber fire-hose, in two sections, of 50 ft. each, with 2 brass-hose pipes and 2-spanners. Also 20 feet of 1-inch rubber hose with hose-pipe.

55. Fire-hose connections: One of these delivery-pipes will be provided with a straight way-valve, near the pump. From a T close to the valve reduced to 3½ inches, a 3½-inch pipe will lead through the partition into the hatchery-room; a "Y" connection with brass caps for two sections of 2½-inch rubber fire-hose will be placed on the end of the pipe, also a 3½-inch straight way-valve.

56. Ash hose. A connection to be made on the 1-inch pipe from main tanks before it connects with feed-water heater and carried to a convenient place near the boilers provided with valve and 1-inch hose connection, for the purpose of wetting down ashes.

57. Distributing-pipes: Each distributing-water tank will have a five-inch pipe connection through the bottom of the tank, the connection to be made with lock nuts and gaskets, on each side. Each tank will be provided with a five-inch straight way-valve under the floor; the pipe from each tank will then connect with one vertical 7-inch pipe, which will connect with the 5-inch horizontal distributing-pipes, leading towards each end of the building.

These pipes will also be provided with a 5-inch straight way-valve before connecting with the 5-inch cross-pipes.

The 5-inch cross-pipes will be fitted with T's reduced to 2 inches, into which five 2-inch pipes will fit; these pipes to run the whole length of the hatching tables at each end of the building.

Each of the 2-inch pipes will have 120 one-eighths inch brass pet-cocks (1,200 in all) of a pattern which will be furnished by the Commission, fitted as shown in the drawings. The outer ends of these pipes to be closed with a cap.

58. Hangers: All of the horizontal pipes in the hatchery-room to be suspended from the ceiling by strong and suitable hangers, so that the center of pipes will be 8 ft. from the floor.

59. Overflow and drain, main tanks: A five-inch overflow pipe to be connected close to the top of each distributing tank with lock-nuts and gaskets, the pipes to lead down the sides of the tanks, and to be connected with 2½-inch drain pipes, located close to the bottom of the tanks, the drain pipes to be connected to the tanks with lock-nuts and gaskets and to be provided with gate valves, the 5-inch overflow pipes to lead down and connect with the 8-inch sewer, as shown in the drawings.

60. Overflow and drain, collecting tank: There will be two 5-inch overflow pipes connected through the bottom of the collecting tank with lock-nuts and gaskets; these pipes to connect with the 8-inch sewer and to be carried up vertically inside the tank so that the top of the pipes will be 2½ inches lower than the top of the tank, the ends to be covered with wire-gauze, a 2½-inch drain pipe to be fitted to one end of the tank with lock nuts and gaskets, provided with a 2½-inch straight way valve, and to lead into one of the 5-inch overflow pipes from the main distributing tanks.

61. Material: All wrought iron pipes above 2" dia., to be lap-welded. Steam pipes connecting with the boilers to be "extra strong."

62. Valves: All valves to be of the iron body, brass mounted type. For the straight way valves either the Ludlow or Chapman valve can be used.

63. Drainage: The main steam-pipe from the boilers to be drained into the boiler blow-pipe by a ¾-inch pipe and cock.

64. Pipe-covering: All live steam-pipes in the boiler-room to be covered with ¼-inch sheet asbestos and hair felting, the whole to be covered with No. 1 canvas, neatly sewed on, and afterwards painted one coat of lead color. All water-pipes to be painted one coat of asphaltum.

The space under the flooring of wharf containing the two 6-inch suction pipes from the front of building to the end of wharf, to be filled with sawdust or any suitable material which will prevent the water from freezing in the pipes.

65. Material and labor: All the material and labor necessary for the erection of the plant complete and ready for use, in accordance with the foregoing specifications, to be furnished by the contractors, with the exception of the three steam pumps, which will be furnished by the Commission.

Proposal for erecting a steam and water distributing plant in the building of the U. S. Fish Hatchery, Put-in Bay, Lake Erie.

TOLEDO, OHIO, Jany. 30th, 1890.

MARSHALL McDONALD, Esq.,

U. S. Commissioner of Fish and Fisheries, Washington, D. C.:

SIR: In accordance with your advertisement of January 2, 1890, inviting proposals for erecting a steam and water distributing plant in the building of the U. S. Fish Hatchery at Put-in Bay, Lake Erie, and subject to all the conditions and re-

quirements of the instructions and specifications hereto attached, which so far as they relate thereto, are made a part of this proposal, we (or) I agree to furnish all labor and material and to erect said plant, for the sum of twenty-six hundred and fifty dollars (\$2,650.00).

DANIEL C. SHAW,
CORNELIUS KENDALL,
WM. HARDEE,
JOS. L. WOLCOTT,

Doing business under the firm name of Shaw, Kendall & Co.

Witnesses:

A. H. LANG.
E. S. LUDLOW.
S. S. COOKE.
J. H. BARR.

We (or) I make this proposal with a full knowledge of the kind, quality and quantity, of the materials and labor required, and if it is accepted, will after receiving written notice of such acceptance, enter into contract within the time designated in the specifications, with good and sufficient sureties for the faithful performance thereof.

DANIEL C. SHAW.

GUARANTY.

We, James L. Creswell, of Toledo, in the State of Ohio, and Edward McLeary, of Toledo, in the State of Ohio, hereby guarantee and bind ourselves, and each of us, our and each of our heirs, executors, and administrators to that effect, that if the bid of Shaw, Kendall & Co., herewith accompanying, dated Jany. 30th, 1890, for erecting a steam and water distributing plant in the building of the United States fish hatchery at Put-in Bay, Lake Erie, shall be accepted within sixty (60) days from the date of the opening of proposals, the said bidders, Shaw, Kendall & Co., will within five (5) days after being notified of such acceptance enter into a contract with the United States in accordance with the terms and conditions and specifications, and will give bond with good and sufficient sureties for the faithful and proper fulfillment of the same. And in case the said bidder shall fail to enter into contract within the said five (5) days with the proper officer of the United States and furnish good and sufficient bond for the faithful performance of the same in accordance with the terms of said bid and specifications, we and each of us hereby stipulate and guarantee, and bind ourselves and each of us, our and each of our heirs, executors, and administrators, to pay unto the United States the difference in money between the amount of the bid of said bidder, and the amount for which the proper officer of the United States may contract with another party for the said work, if the latter amount be in excess of the former, for the whole period covered by the proposal, not exceeding the sum of one thousand dollars (\$1,000.00).

Notary Public.

CERTIFICATE.

I, Wm. H. McLyman, do hereby certify that the guarantors named are personally known to me, and that to the best of my knowledge and belief each is pecuniarily worth, over and above all of his debts and liabilities, the sum stated in the accompanying affidavits subscribed by them.

WM. H. MCCLYMAN,
Collector.

Contract for erecting a steam and water distributing plant in the building of the United States fish hatchery, Put-in Bay, Ohio.

This agreement, made and entered into this 11th day of March, eighteen hundred and ninety, by and between Marshal McDonald, United States Commissioner of Fish and Fisheries, acting for and in behalf of the United States of America, of the first part, and Daniel C. Shaw, Cornelius Kendall, William Hardee, and James L. Wolcott, doing business under the firm name of Shaw, Kendall & Company, of the city of Toledo, County of Lucas, and State of Ohio, contractors of the second part,

Witnesseth, that the said parties of the second part have agreed, and by these presents do agree, with the said party of the first part, for the consideration hereinafter mentioned and contained, and in accordance with their proposal of the thirtieth day of January, 1890, and with the specifications and plans thereto annexed, and under the penalty expressed in a bond bearing even date with these presents, and hereto annexed, all of which form a part of this contract, to furnish at their own cost and expense all the necessary materials and labor to construct, erect, and complete ready for use, in a good and first-class manner, and to the satisfaction of the agent of the United States acting as inspector of the work, the steam and water distributing plant required for the United States fish hatchery at Put-in Bay, Ohio.

And the said party of the first part hereby covenants to pay to the said parties of the second part, as full consideration for the work to be by them performed, the sum of two thousand six hundred fifty dollars (\$2,650.00), as the same shall become due them in accordance with the terms of this contract.

In witness whereof the parties to these presents have hereunto set their hands and seals the day and year hereinbefore written.

THE UNITED STATES OF AMERICA,
By MARSHALL McDONALD,
U. S. Commissioner of Fish & Fisheries.

DANIEL C. SHAW,
CORNELIUS KENDALL,
WILLIAM HARDEE,
JOSEPH L. WOLCOTT,

Doing business under the firm name of Shaw, Kendall & Co.

BOND.

Know all men by these presents, that we, Daniel C. Shaw, Cornelius Kendall, William Hardee, and James L. Wolcott, doing business under the name of Shaw, Kendall and Company, of Toledo, county of Lucas, State of Ohio, as principals, and James L. Creswell, of Toledo, Ohio, and Samuel Z. Foster, of Toledo, Ohio, as sureties, are held and firmly bound to the United States of America in the sum of two thousand six hundred fifty (\$2,650.00) dollars, lawful money of the United States of America, to be paid to the said United States of America, for which payment well and truly to be made we bind ourselves, our heirs, executors, and administrators, jointly and severally, firmly by these presents.

Sealed with our seals, and dated the 11th day of March, A D eighteen hundred and ninety.

Whereas the said Daniel C. Shaw, Cornelius Kendall, William Hardee, and James L. Wolcott have entered into a contract with the United States of America, by the United States Commissioner of Fish and Fisheries, bearing date the 11th of March, eighteen hundred and ninety, for the construction and erection of a steam and water distributing plant in the U. S. Fish Hatchery at Put-in Bay, Ohio:

Now, the condition of this obligation is such that if the said Daniel C. Shaw, Cornelius Kendall, William Hardee, and James L. Wolcott shall well and truly keep all the terms and conditions of said contract on their part to be kept and performed, and shall indemnify and save harmless the said United States of America, then this obligation to be of no effect, otherwise to remain in full force and virtue.

DANIEL C. SHAW.	[SEAL.]
CORNELIUS KENDALL.	[SEAL.]
WILLIAM HARDEE.	[SEAL.]
JOSEPH L. WOLCOTT.	[SEAL.]
SAMUEL Z. FOSTER.	[SEAL.]
JAMES L. CRESWELL.	[SEAL.]

Signed and sealed in the presence of—

AUGUSTUS H. LANG.

J. W. CORWIN.

DANIEL MCKENNA.

JUSTIFICATION OF GUARANTORS.

STATE OF OHIO, *County of Lucas, ss:*

I, Samuel Z. Foster, of Toledo, Ohio, one of the guarantors named in the foregoing bond of indemnity, do hereby swear that I am worth the sum of two thousand six hundred fifty dollars over and above all my just debts and liabilities for any cause whatever to the best of my knowledge and belief.

SAMUEL Z. FOSTER.

Subscribed and sworn to before me this 11th day of March, A. D. 1890.

[SEAL.]

J. E. KINSELY,
Notary Public.

STATE OF OHIO, *County of Lucas, ss:*

I, James L. Creswell, of Toledo, Ohio, one of the guarantors named in the foregoing bond of indemnity, do hereby swear that I am worth the sum of two thousand six hundred fifty dollars over and above all my just debts and liabilities for any cause whatever to the best of my knowledge and belief.

JAMES L. CRESWELL.

Subscribed and sworn to before me this 11th day of March, A. D. 1890.

[SEAL.]

L. E. KINSELY,
Notary Public.

I certify that the above-named sureties are personally well known to me, and that they are sufficient for the penalty indicated in the foregoing bond.

GEO. E. LORENS,
Postmaster, Toledo.

This certificate to be given by some U. S. official.

Agreement to certain changes in location of steam-pumps for the Put-in Bay hatchery.

WASHINGTON, D. C., March 4, 1890.

We, Daniel C. Shaw, Cornelius Kendall, William Hardee, and James Wolcott, doing business under the firm name of Shaw, Kendall & Co., Toledo, Ohio, contractors for the erection of a steam and water distributing plant in the building of the U. S. fish hatchery at Put-in Bay, Lake Erie, Ohio, and W. B. Bayley, P. A. engineer, U. S. N., on the part of the Fish Commission, in conformity with article 2 of the specifications for the erection of the plant, hereby agree to change the location of the steam-pumps as indicated in the plan furnished by the Fish Commission, the cost of this change to be one hundred and fifty dollars (\$150.00), the same to be made with the

understanding that no claim for payment beyond the sum stated in this agreement is to be made by the contractors, and that no claim for deduction from the amount of said contract is to be made on the part of the U. S. Fish Commission.

SHAW, KENDALL & Co.,
Contractor.

W. B. BAYLEY,
P. A. Eng'r., U. S. N.

Approved:

M. McDONALD,
Commissioner.

The CHAIRMAN. Here are similar papers relating to the fish hatchery at Leadville, Colo.

The papers are as follows:

ADVERTISEMENT, INSTRUCTIONS FOR BIDDERS, AND SPECIFICATIONS FOR BUILDING A FISH HATCHERY, ETC., FOR THE UNITED STATES FISH COMMISSION NEAR LEADVILLE, COLORADO.

Advertisement.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., August 21, 1889.

RE-ADVERTISEMENT.—Sealed proposals will be received at this office until 12 o'clock noon, of Sept. 20, 1889, at which time they will be opened in the presence of attending bidders, for the construction of a fish hatchery on the Government reservation near Leadville, Colorado.

The right is reserved to reject any or all bids, or parts of bids.

Specifications, plans, blank proposals, and full information will be furnished on application to Messrs. H. M. Orohood, Denver, and R. E. Goodell, postmaster, Leadville.

MARSHALL McDONALD, Commissioner.

Proposal for building fish hatchery near Leadville, Colorado.

SEPTEMBER 13, 1889.

MARSHALL McDONALD, Esq.,

U. S. Commissioner Fish and Fisheries, Washington, D. C.:

SIR: In accordance with your advertisement of July 10th, 1889, inviting proposals for building a fish hatchery near Leadville, Colorado, and subject to all the conditions and requirements thereof, and of your specifications, copies of both of which are hereto attached, and so far as they relate to this proposal are made a part of it; we (or I) propose to build the fish hatchery near Leadville, Colorado, according to the specifications and plans prepared for the work, at the following prices:

For the entire work, both masonry and carpenters' work, including plumbing, painting, and concrete floor, with its necessary gutters and pipes all complete, twelve thousand six hundred and seventy-two (\$12,672) dollars.

For the masons' work alone, but including all excavations for the foundations and the concrete floor with its gutters, etc., and the necessary filling under the floor, seven thousand and sixty-two dollars (\$7,062.00), including plastering.

For the carpenters' work alone, but including plumbing and painting, five thousand six hundred and ten dollars (\$5,610.00).

For furnishing materials and filling up around the building to the required grade, thirty cents (\$0.30) cents per cubic yard.

For rubble-stone masonry laid from stone gathered on the premises, and used in the foundation, in excess of that shown on the plans, ten dollars (\$10.00) per cubic yard, of twenty-seven (27) cubic feet.

For furnishing and hanging inside blinds on all windows in the lower story (made as specified), should they be ordered by the agent in charge, four hundred and sixty-five dollars (\$465.00).

The foregoing prices include all the materials and labor necessary to do the work proposed. We, or I, do make this proposal with a full knowledge of the kind, quality, and quantity of the materials and labor required, and, if it is accepted, will, after receiving written notice of such acceptance, enter into contract within the time designated in the specifications, with good and sufficient sureties for the faithful performance thereof.

L. G. HUNT,
324 Elm street, Leadville, Colo.

Witness:

JOHN A. EWING.
J. A. DEAN.

Instructions for bidders.

(1) The proposed building is to be constructed on a Government reservation in Lake County, State of Colorado, five and one-half ($5\frac{1}{2}$) miles by good wagon road from Leadville and two miles from the nearest railroad station at Malta. A considerable saving in distance may be made by unloading the materials at the "race-track" on the railroad.

(2) Each copy of proposal must be accompanied by a guaranty executed by two sufficient and responsible guarantors in accordance with and on the forms prescribed. The guarantors must jointly justify in the sum of one thousand five hundred dollars (\$1,500.00).

A proposal unaccompanied by such guaranty will not be considered.

(3) The affidavits of justification on the back of the bidder's guaranty must be taken before some official or person authorized by the laws of the United States, State, or Territory to administer oaths.

(4) The certificate following the justification is to be given under seal (if any) by ~~some~~ *civil official* of the United States.

(5) Each signature of bidders and guarantors shall have attached a seal of wax or wafer, and shall be attested by at least one witness; when practicable, by a separate witness for each signature, which must be written in full. The residence of each signer must be given, with number, street, city or town, and State.

(6) No person who, as a contractor, has failed to satisfactorily perform any contract with the United States, or as surety has failed to abide by a bond for the performance of any contract or a guaranty, with a proposal, will not be accepted as guarantor.

(7) A firm will not be accepted as guarantor, nor a partner for a co-partner, or for a firm of which he is a member. An officer of a corporation will not be accepted as guarantor for such corporation.

(8) All blanks in the forms of proposals and guaranty must be filled; prices must be written in words as well as expressed in figures.

(9) Proposals and bidders' guaranties must be made in duplicate upon forms to be obtained at this office and as stated in advertisement.

Additional copies of this form will be furnished on application.

(10) Alterations by erasures or interlineations must be explained or noted in the proposal over the signature of the bidder.

(11) When firms bid, the individual names of the members of the firm should be written out and signed in full; but the signers may, if they choose, describe themselves, in addition, as doing business under a given name and style as a firm.

(12) Reasonable grounds for supposing that any bidder is interested in more than one bid for the same item will cause the rejection of all bids in which he is interested.

(13) The United States reserves the right to reject any and all bids; also to disregard the bid of any failing contractor or bidder known as such to the United States.

(14) The bidder must satisfy the United States of his ability to furnish the materials, and to perform the work for which he bids. Lack of evidence as to ability to furnish plant, materials, and to properly construct the proposed building, will be sufficient cause for the rejection of any bid.

(15) Within five (5) days after he has been notified of the acceptance of his bid, the successful bidder will be required to enter into a written contract with the United States, accompanied by a bond for the same amount as the total sum of the bidder's offer for the entire work, executed by the bidder as principal, and two sufficient and responsible persons as bondsmen. Each bondsman will be required to qualify in the full amount of the bond.

(16) Payment on account of contracts can only be made to principals.

Assignments and power of attorney to collect money from the United States are not recognized.

(17) Transfers of contracts or of interests in contracts are prohibited by law.

(18) One copy of each of the advertisements, instructions for bidders, and specifications must be attached to each proposal and be considered a part of it.

(19) Bidders are expected to familiarize themselves with the location of the proposed building, and to make their own estimate of the facilities and difficulties attending its construction. Claims for extra compensation based upon the contractor's ignorance on the above points will not be considered.

(20) The duplicate proposals and guaranties must be placed in an envelope, sealed, and marked "Proposals for fish hatchery near Leadville, Colorado;" and inclosed in another envelope, addressed to Marshall McDonald, U. S. Commissioner of Fish and Fisheries, Washington, D. C.

(21) No proposals can be received by telegraph, and none will be received after the time stated in the advertisement.

Specification of materials to be provided and of work to be done for, and in the construction of, a fish hatchery, for the U. S. Fish Commission near Leadville, Colorado.

The whole is to be done in accordance with these specifications, and accompanying plans, prepared by the architect of the U. S. Fish Commission, and no deviation therefrom will be permitted unless authority in writing shall be first obtained from him.

Any change of plans, etc., involving any difference in cost from that proposed by the original contract must be agreed upon by the parties to this contract, and state in writing the difference in price from that originally agreed upon.

Should it be deemed desirable during the construction of the proposed building to make any additions to, or to do any extra work not contemplated or provided for by these plans and specifications, an agreement in writing stating the nature and cost of such addition or extra work must be entered into between the U. S. Commissioner of Fish and Fisheries, and the contractor before such work is commenced.

No claim for extra work or materials, excepting as above specified, will be considered.

The work will be under the direction of the architect, or other agent of the Government in charge, and in case any disagreement should arise between the agent in charge and the contractor, as to the meaning or intention of any portion of these plans and specifications, the decision of the U. S. Commissioner of Fish and Fisheries upon said disputed point or points will be considered correct, and will be final.

The United States will not be liable for any injury occurring to the contractor's employees, or plant; or loss occurring to the contractor, or damage to the building caused in any manner, before the final completion and acceptance of the building.

The work is to be commenced within fifteen (15) days after the signing of the contract, and it is to be carried forward at such a rate as shall insure its completion within ninety (90) days thereafter.

No extension of time for whatever cause for the completion of the contract for this work shall be asked for or granted, except under the implied and understood condition, that the contractor shall be charged with, and shall pay to the United States, the sum of six dollars (\$6.00) per day, for each and every day that the building is not completed and ready for occupancy, after the time specified. Said penalty shall be deducted from any amounts due the contractor on account of this work.

Any failure to commence work within the specified time, or to prosecute it hereafter at the rate and in the manner required, will be considered as allowing the United States to annul the contract and declare a forfeiture of all reserved percentage and other dues, or as allowing the United States, at the option of the U. S. Commissioner of Fish and Fisheries, to carry on the work at the expense of the contractor, and as rendering him and his bondsmen liable for any increase of cost over that proposed and agreed upon.

In case the lowest price be named by two or more bidders, these bidders must agree between themselves within twenty-four (24) hours after notification, as to who shall have the award. If the question be not thus settled, within the time stated, and the Commissioner of Fish and Fisheries so informed, he may select either of them to do the work at his discretion, at said price.

Payment for the work done will be made after the end of each month, when the progress and character of the work are satisfactory, but not otherwise. Twenty per centum of the amount due will be retained until the final completion and acceptance of the work by the U. S. Commissioner of Fish and Fisheries within thirty days thereafter final payment for the work will be made.

The "Instructions for Bidders," as far as they may be applicable, are to be considered essential parts of these specifications.

The tools, scaffolding, etc., used by the contractor must be suitable for the work, and satisfactory to the agent in charge.

The contractor shall furnish all necessary plant, materials, and labor. He shall allow the agent of the Fish Commission, in charge of the work, full access to all parts of the work at all times, and shall give the agent any assistance which he may need.

All materials furnished for the work must be first-class of their kind, and satisfactory to the agent in charge; any materials not satisfactory will be condemned, and must be removed from the location of the work, and be not again brought upon the ground.

All workmanship must be neat and first-class, and any work not so must be corrected immediately upon the request of the agent in charge.

GENERAL DESCRIPTION OF BUILDING.

The proposed building will be of stone with shingled roof, and one story high.

To be of the style shown on the elevation plans.

The main portion will be one hundred (100) feet long by forty (40) feet six (6) inches wide. It will have two additions or transepts, one in the centre in front,

thirty-four (34) feet wide by sixteen (16) feet deep, and one at the rear thirty-four (34) feet wide by five (5) feet deep. At each end will be a bay fourteen (14) feet wide by five (5) feet six inches deep.

The main portion of the building, including the rear addition and both end bays will be in one room used for hatching and rearing fish. This room will have a height of eleven (11) feet six (6) inches at the side walls, and twenty (20) feet in the centre.

The front transept will be divided by a central hall six (6) feet wide, making two rooms, one of which will be used for an office and the other for a sleeping room, or other purpose. Above these rooms there will be done off in the attic a room for storage or other purposes.

FOUNDATIONS.

The foundations are to be built of the stone found on or near the premises owned by the Government. The walls will be of rubble masonry, the stones as large as can be used to advantage, and to be laid in the best quality hydraulic cement mortar.

The stones must be well beaded and bonded together, and all joints filled solid with mortar and thoroughly slushed and chinked.

The foundation walls are to be plastered on the outside with cement mortar, well put on. On the inside these walls are to be smoothly struck at the joints.

The piers for veranda and foundations for chimneys to be built as above described.

The foundation-walls to be two (2) feet thick, for all portions excepting the side walls of the end portion of the hatching-room, where they will be two (2) feet, three (3) inches thick.

The foundations are to be four (4) feet deep below the grade line, as shown on the masonry plan. At the ends of the building the bottom of the walls must be properly stepped off, and leveled top and bottom.

EXCAVATION.

The necessary excavation for the trenches will be made by the contractor, who will deposit the material inside the walls, until the grade is raised to the proper height, as elsewhere described for the concrete pavement, any surplus will be deposited where indicated by the agent in charge.

MAIN WALLS OF BUILDING.

Above the grade line, the face stone used is to be that from the quarries of the Red Cañon, and is a red sandstone, easily worked. The stone for filling and backing to be the same as that for the foundations—namely, that found in the vicinity of the work.

The style of masonry is to be quarry faced, rubble, laid as irregularly as possible. All windows and door-jambs to be built up straight, so as to make a good job in fitting the frames. The window-jambs to be recessed for box frames as shown on the masonry plan. The walls must be well bonded and laid close, with all joints well slushed and filled with mortar.

Iron anchors to be used throughout the work where necessary.

The outside joints to be filled with mortar well struck and pointed out.

The inside joints to be well filled and struck smooth. Such portions of the inside walls as are to be plastered must be smooth enough to make a good job of the plastering.

In the gable ends of the building the joints are to be struck smooth and the walls to be given two coats of whitewash.

The tops of the walls and gables must be well filled with mortar, leveled up, and troweled off smoothly.

The side walls for the ends of the hatching-room to be two (2) feet thick. The other walls to be one (1) foot, six (6) inches thick.

BASE COURSE.

A base course or water table is to be laid all around the building ten (10) inches deep, and projecting three (3) inches from the walls, with beveled outer edge. This base course to have square joints and be parallel top and bottom. The bevel is to be straight, and its top must be level, when laid.

WINDOW SILLS AND CAPS.

Stone window sills and caps to be provided. The sills shall be dressed on top to a good surface, beveled to turn water, and both sills and caps shall be straight with corners, squared and lay well in place.

ARCHES FOR DOORS AND WINDOWS.

Turn the arches over the front and rear doors, and over the gable windows. Good centres must be used for these arches, and the stones cut sufficiently on joints to make a good secure arch, the central stone or key to project a little from the others. The centers must be left in until the masonry has well set.

Furnish proper centers and turn-brick or cut-stone arches over the opening at each bay end of hatching-room.

Furnish and set stones at the corner of the gable, marked as shown on elevation plans.

All the masonry above the grade line to be laid in mortar, made of one part of hydraulic cement and one part of lime.

CHIMNEYS.

The chimneys and fire-places are to be built of brick up to the flashings at the roof, above which they will be of stone, laid as above described. The chimneys at the ends of the building to project six (6) inches from the face of the wall above the bay, as shown on end elevation plans. Start the flues for these chimneys 7 feet from the floor.

The chimneys are to have a substantial stone topping, as shown on plans.

The flues are to be well plastered on the inside.

Lead is to be furnished and built in with each course of bricks at the roof so as to turn down over the roof flashings.

Openings of chimney pots to be left as follows: One in each chimney in the hatching-room, office, bedroom, and store-room in the attic five (5) inches in diameter.

Build the fire-places in the office and hatching-room of hard-burned red brick, as shown on plan, and lay a hearth of best quality red machine-brick or tiles all in red mortar.

Provide the materials and build the balconies at the ends of the house, as shown on plan. To have dressed-stone floor and ornamental iron railing as there shown.

Provide stone steps for entrances at the ends of the building. Top step three (3) feet by four (4) feet ten (10) inches; other steps twelve (12) inch tread by six (6) inch rise. Provide ornamental iron side brackets, as shown on plan for these steps.

Provide and set stone step at the rear of the building eighteen (18) inches wide by six (6) feet six (6) inches long and seven (7) inch rise.

Leave two openings in the wall under the office and bedroom four (4) inches by eight (8) inches, fitted with cast-iron grating for ventilating the space under the floors.

All the stone used in the building must be of good quality, sound and strong, and not liable to disintegration from exposure to air or water.

The brick used in the chimneys, arches, and gutters must be hard and well burned and of good quality.

The cement and lime used must be first class in all respects, and any materials used in the masonry not satisfactory to the agent in charge will be rejected, and must be removed from the location of the work and not again brought on the ground.

EARTH FILLING IN HATCHING-ROOM.

The present surface is below the proposed grade for the floor of the hatching-room, and it must be raised to the proper level with suitable filling.

This filling shall be placed in layers not more than six (6) inches thick and carefully and compactly rolled and tramped solid up to the necessary grade.

The earth floor thus prepared must have the proper grade and slope for the concrete pavement and gutters.

At least one-half the entire floor must be prepared before any concrete is laid.

The contractor shall receive and place in position, under the concrete floor, the water-supply pipe to be furnished by the Fish Commission.

It shall be carefully laid to the proper grade without expense to the United States.

HATCHING ROOM FLOOR.

The floor of the hatching room is to be paved with concrete, made as follows: One part of hydraulic cement is to be mixed with three (3) parts of sharp, clean sand, and water added to make a mortar; four (4) parts of broken stone are then to be added, and the mass well mixed, all voids to be filled with mortar.

The ground having been prepared at the proper grade, three inches of this concrete is then to be evenly spread over the ground, and well rolled or stamped solid. A top coat of mortar one (1) inch thick, composed of one (1) part best English Portland or

"Dykerpoffee" cement to two (2) parts of sand, is then to be applied, evenly spread, and well trowelled down.

Great care is to be taken to keep the pavement at the proper grade.

Before laying the pavement, brick gutters, made as shown on the plans, are to be laid along the sides of the room and across the ends.

These gutters are to have the grade shown on the plan, and are to be provided with a movable wooden grating.

At the ends of the hatching room eight (8) inch terra cotta drain pipes are to be provided, and laid under the pavement, and passing through the walls out to the line of the balcony outside the bays.

These pipes must connect neatly with the gutters above described.

FRAMING LUMBER.

The framing lumber to be of pine, straight and sound, sawed square, free from all defects tending to injure its strength or durability, such as split, shake, black, or decayed, or large, or loose knots.

All framing to be of the size indicated on the plans. The studding in the partition between the hatching room and the front addition to be framed into sills and plate and well and strongly put together. The other partitions to be nailed strongly but not framed together.

WOODEN FLOORS.

The floors are to be double. That of the office, hall, etc., to be first ordinary matched boards, but without large or loose knots or knot holes. On this to be laid double thick rosin size building paper. The top floor to be best quality hard wood, matched flooring of narrow width. The first floor to be laid diagonally and to extend out and be scribed to the walls. Both floors to be closely laid and well nailed.

The ceiling joists to be six (6) inches by eight (8) inches in section, dressed, with chamfered edges and spaced four (4) feet on centres. The ceiling will be one and one half ($1\frac{1}{2}$) inch matched stuff laid with the dressed side down. The top floor to be seven-eighths ($\frac{7}{8}$) inch flooring of good quality, between the floors to be a double layer of best quality building paper.

Both floors to be closely laid and well laid.

MAIN ROOF.

Construct the trusses for the main roof as shown on plans. The lumber to be carefully selected, each member of the trusses to be in one piece, sound and straight, and of the full dimensions required by the plans.

The straining rods to have turn buckles for tightening, and to have proper hard wood blocks at the ends. The king rods to have proper iron plates and blocks at each end. All rods to be the best quality American wrought iron, of the full size shown, and to have the ends upset before the threads are cut.

The tie beams for the trusses to be double and well spiked to the rafters at the ends; at their intersection they are to be halved together, and the junction strengthened by two pieces of two (2) inch by ten (10) inch joist five (5) feet long, placed between them.

Such parts of the tie beams as show from the hatching room to be dressed, and faced on the bottom with a board eight (8) inches wide with chamfered edge.

BRACKETS, ETC.

Provide and put up the side and centre ornaments as shown on detail plans; the centre to be double to hide the straining rods.

Between the trusses at the sides of the room fit a board with mouldings top and bottom.

At the ends of the room, put up a half-size bracket, etc., excepting that at the gable windows the centre ornament will be run into the casing and not carried across the windows.

ROOF.

The rafters are to be covered with good quality, sound straight-edge sheathing boards, without knot-holes or loose knots, laid close, and well nailed to the rafters. Nailings not over three (3) inches apart.

The boards to be covered with the best quality building paper, and all to be shingled with the best quality sawed pine shingles, laid four and one-half ($4\frac{1}{2}$) inches to the weather, and nailed with galvanized swedes iron nails. The shingles to lay perfectly clear to the weather.

FLASHINGS.

Provide and put in zinc flashings in the valleys and against the windows, and over chimneys. To be laid in with each course of shingles, and of sufficient size as to make the work water tight.

TRUSS FOR REAR ADDITION.

Construct and place in position the truss to span the opening in the wall for the rear addition, opening thirty-one (31) feet long.

This truss to have ten (10) inch by twelve (12) inch tie beam. Rafters eight (8) inches by ten (10) inches in section and struts six (6) inches by eight (8) inches.

The king rod to be full one and one-half ($1\frac{1}{2}$) inch diameter, with ends upset before the threads are cut.

Provide and set the drops and brackets, for this truss, as shown on plan of the truss.

This truss is to be set before the roof trusses, and it will be stiffened laterally by joists to the rear wall at the bottom and the purline at the sides and top.

It is to be made of selected material, as are the main roof trusses, and must be satisfactory to the agent of the Fish Commission in charge.

WINDOWS AND WINDOW FRAMES.

Provide and set all windows and frames of the size and shapes shown on plans.

All sash to be glazed with the best quality, selected, single thick, American window-glass. All to be back puttied, sprigged and puttied in the best manner, and left whole and clean at the completion of the building.

The window frames to be made with two (2) inch white-pine stiles with proper box for cord and pulleys, and to be recessed on the inside three (3) inches for inside blinds. A plan for window frames is provided.

All to be provided with best iron pulleys and braided window cord, with cast-iron weights sufficient to balance the weight of sash and glass. Each window is to have a good, stout, bronze window-fast.

All sash to be made of one and three-quarters ($1\frac{3}{4}$) material, and all frames, sash, and trimmings to be well made of clear white pine, and all first-class in every respect.

The inside casings will be four and one-half ($4\frac{1}{2}$) inches wide, and to match door-casings, beaded on face with corner rosettes. The gable windows will be pivoted at the center, the lower end swing out; they must be so constructed as to be water-tight, and the windows in the gables of the hatching-room to be provided with a proper arrangement for opening and closing from the floor, with cords and cleat for securing the sash in place.

Provide and set the four windows in the roof as shown on plans; these windows will have ventilating slats at their ends. In the points of the gables are small windows, also provided with ventilating slats.

DOORS.

All doors to be of clean pine, well made, and of the size and style shown on plans.

All outside doors to be two (2) inches thick, and hung to two (2) inch plank frames, made for the size of doors specified.

They are to be hung on figured imitation bronze hinges, and have good outside lever lock, with night-latch.

To have imitation bronze knobs and escutcheons.

The front door will be single, three feet four inches by seven feet two inches, with side panels and lights, making the full width of door and frame, etc., five feet eight inches. It will have transom as shown on plan.

The rear door will be double, each half two feet seven inches by seven feet six inches, with transom.

This door to have foot and chain bolts.

The doors at the ends of the building to be each three feet four inches by seven feet two inches, with sixteen-inch transom. And of the style shown on plan marked "Cross-section" on center line looking south.

The doors from hall to side rooms to be panel doors as shown on plan, each three feet by six feet ten inches with sixteen-inch transoms, and one and three-fourth ($1\frac{3}{4}$) inches thick.

The doors from hall to hatching-room to be similar in style to those last named, but double, each half two feet six inches, by six feet ten inches, with sixteen-inch transom, and one and three-fourth ($1\frac{3}{4}$) inches thick.

The door to water-closet under the stairs to have upper panels of ground glass. The

door to be two (2) feet eight (8) inches by six (6) feet eight (8) inches, and one and one-half ($1\frac{1}{2}$) thick.

This door to be provided with lock and inside catch.

The door from hatching-room to stairs to be two feet ten inches by six feet ten inches, with sixteen-inch transom.

The two doors in attic will be each two feet eight inches by six feet eight inches, with twelve-inch transoms.

The door from the office to hatching-room to be similar to those from the hall to the side rooms.

All inside doors to have four panels, those down-stairs with flush ogee mouldings.

All inside doors to be hung on plain black japanned iron, $3\frac{1}{2}$ -inch by $3\frac{1}{2}$ -inch loose joint butts. To have mortise locks and black knobs, with imitation bronze trimmings.

DOOR-CASINGS.

Door-casings of the first story to be five (5) inches wide, with beaded face and square corner blocks with turned rosettes. The foot of the casings to have wash-board with mouldings as shown on plans.

The second-story doors to have plain four (4) inch casings.

All inside doors to have hard-wood sills, four (4) inches wide.

CLOSETS.

Build the closets in the hatching-room, office, and bed-rooms where shown on plan, of narrow beaded stuff, and shelve, as shown, provide them with suitable locks and spring-catches.

LONG WINDOWS.

Provide and set the long windows in ends of hatching-room, office, and bed-room, opening down to the floor. All to be double windows, size of glass as shown on plans.

MANTELS.

Provide and set in the office and hatching-room wood chimney pieces with mantel, worth twenty dollars (\$20) each.

The designs for same to be acceptable to the architect.

INSIDE BLINDS.

Should they be decided on hereafter, at the extra price as agreed. Provide and set inside blinds to the lower story windows with movable slats to centre folds.

To have three folds in each half of blind and to fold back into pocket or recess. The blinds to be of white pine, well made, provided with proper hook and button for fastening.

The slats to be stained dark.

STAIRS.

Provide materials and build the stairs where shown on plan, leading from the hatching room to the attic, with door at the top and foot of stairs.

These stairs to be three (3) feet wide with three (3) stout two (2) inch string pieces or carriages. The treads to be ten (10) inches wide and the risers seven and one-half ($7\frac{1}{2}$) inches, with winders at the foot of the stairs.

These stairs will be entirely boxed in, and no rail and baluster required, but the washboard is to be continued up the stairs on both sides and a board set at the sides ten (10) inches wide, and two (2) feet six (6) inches above the steps.

Put a step at the door leading from the attic to the loft above the hatching room, and place a path two feet wide running through the centre of the loft in both directions.

PIAZZA.

Build the piazza around the front addition, as shown on the plans.

It will be framed eight (8) feet wide. Sills to be six (6) by six (6) inch, and joists two (2) by six (6) inches.

The posts to be solid six (6) by six (6) inches, turned, as shown on section plans and detail plan, the plates six (6) by eight (8) inches.

The roof at the sides to be continued down from the main roof, with easy curve at the junction, as shown on plan.

The plates and rafters to be dressed, edges chamfered. The sheathing to be beaded edge, laid face downward, and the roof shingled, as described elsewhere for the main roof.

The floor to be one and one-fourth ($1\frac{1}{4}$) inch thick, not over six (6) inches wide, and laid with interval of one-eighth ($\frac{1}{8}$) inch between the boards. The railing to consist of posts five (5) by five (5) inches in section turned with balls on top as shown on plan.

Top rail three (3) by four (4) inches, and middle and lower rails three (3) by three inches, square baluster one and one-half ($1\frac{1}{2}$) inch square, and ornamental filling between lower part of baluster, were shown on plan. Also brackets at corner of plates and posts as shown.

Provide and set the front steps as shown in plan, eight (8) feet wide over all with treads of hard pine twelve (12) inches wide and raise six (6) inches high. The steps to have four string pieces or carriages cut from two (2) by twelve (12) inch joists. These carriages to rest on a piece four (4) by twelve (12) at the bottom which is to have a suitable foundation.

Face the side carriages with one and one-half ($1\frac{1}{2}$) inch dressed board having beaded edge, and finish steps in a first class manner.

The eaves to be finished with board and wooden gutter as elsewhere described for the main roof.

All to be well built, and the junction with front gable to be flashed and made water-tight.

The floor at the inner edge to be seven (7) inches below the top of the left corner, and to have a drop of three (3) inches outwards, to shed water.

PORTE COCHIERE.

Build the porte cochiere at the rear of the building, as shown on plans, and of the same general dimensions of lumber &c., as described for the front piazza.

Finish the ridge of the roof with cresting, and finish as shown on plans.

PLUMBING.

Provide materials and fit up a water-closet under the stairs, where shown on plans. It must be neat cabinet work and wainscotted.

A "Demorest hygia cistern water-closet" with enameled cast-iron slop safe, or one equally as good, which the agent in charge shall decide, shall be provided and set with two and one-half ($2\frac{1}{2}$) inch ventilating shaft of cast-iron, carried through the roof sixteen (16) inches. Flash and make water-tight around the pipe where it passes through the roof.

Provide and place a four-inch soil pipe with trap from the closet, and carry same, with sufficient fall to insure perfect drainage, through a proper trench to a point one hundred (100) feet from the building to a stone vault to be constructed to receive the drainage. Make the necessary water connections with supply pipe from hatchery. Provide and set neat enameled cast-iron wash-basin where shown on plans of main floor; inclose same in cabinet-work with panelled doors opening both into hatching-room and to office, as there shown. Make proper water connection with supply-pipe from hatchery, and connect the waste-pipe to the soil-pipe from the water-closet.

Provide proper trap for the waste-pipe.

The basin and faucets must be first class and satisfactory to the agent in charge.

Provide trap door in sleeping-room to the space below the floor.

Provide trap door in ceiling of attic room.

Provide scuttle in the roof of rear addition and proper ladder for reaching same.

PLASTERING.

Plaster, and lath and plaster all the walls of the lower story and attic room, excepting when wainscoted. The ceilings of the first story will not be plastered, but finished in wood as above described. All plastering of partitions to extend down to the floor and not stop at top of baseboard.

Lath and plaster the attic room throughout and provide eight (8) inch baseboards for the same.

LATHS.

The laths to be of the best quality, sawed, and without knots or black sap.

MORTAR.

The mortar to be used is to be made of the best quality lime, hair, and coarse, sharp grit sand, to be well mixed and tempered, evenly spread and well troweled so as to make good clinches, and so that the first coat shall be one-fourth ($\frac{1}{4}$) inch over the

laths. When the first coat is dry put on a coat of lime and moderately fine sand, spread evenly and floated, the surface to be even but what is known as sand finish, fit for painting. This coat is to be tinted or colored so as to be a very light brown tint, instead of white.

PAINTING.

Paint all the outside wood-work with three good coats of pure white lead and pure linseed oil well mixed and of such three colors as shall be directed.

No spirits of turpentine, naphtha, benzine, or similar materials to be used on any of the outside work. Putty all nail-holes, cracks, etc., thoroughly before painting.

All the inside wood finish of the building will be left its natural color and will have one coat of boiled oil and one of shellac varnish.

The mouldings of the wainscoting, ceiling, doors, etc., will be given a coat of stain before oiling and varnishing if so directed by the agent in charge.

All the interior wood-work is to be thoroughly cleaned before oiling from lime and dirt.

Plane the down-stairs floors and give them two coats of oil.

COMBING AND CRESTING.

Provide and set the combing and cresting of galvanized iron, for ridges and peaks of roof, as shown on plans.

FLAG POLE.

Provide and set a flag pole of the size indicated, with wrought-iron supports as shown on plan, where the pole passes through the roof flashings are to be provided. The points of the compass and finial to be wrought iron gilded.

DOWN SPOUTS.

Provide and put up proper tin down spouts $2\frac{1}{2}$ inches diameter, with suitable lead connecting goose-necks 2 inches diameter to the wooden gutters.

LIGHTNING-RODS.

Provide and put up proper lightning-conductors, with branches, copper points, and proper ground connections.

Set branch to each chimney.

Insulate the conductors properly.

GONG-BELL.

Provide and set a gong-bell at front door.

VAULT.

Build a stone vault with dry wall at a point to be chosen by the agent in charge, about one hundred (100) feet from the building, eight (8) by eight (8) feet in size, and ten (10) feet deep.

Provide a proper wooden cover for the vault, with top hinged for easy access.

Make connection to the vault with the soil-pipe from the house.

GENERAL CLAUSE.

The foregoing specifications and accompanying plans are intended to express all that is necessary to enable the U. S. Fish Commission to have built of the best materials and in a thorough and workmanlike manner the house there shown and described. The contractor is to do all such things which are usual and common in buildings of this class and description and which are necessary to its completion, whether they be fully expressed or called for or not. The house shall be complete in all respects and ready for occupancy when the contractor is ready to deliver the building to the Government, and will not be accepted otherwise.

GUARANTY.

We, Joseph S. Reef, of Leadville, in the State of Colorado, and Albert Sherwin, of Leadville, in the State of Colorado, hereby guarantee and bind ourselves, and each of us, our and each of our heirs, executors, and administrators, to the effect that, if

the bid of L. G. Hunt, herewith accompanying, dated Sept. 13th, 1889, for building fish hatchery near Leadville, Colorado, shall be accepted in whole or in part within sixty (60) days from the date of the opening of proposals, the said bidder will within five (5) days after being notified of such acceptance enter into a contract with the United States, in accordance with the terms and conditions of the specifications, and will give bond with good and sufficient sureties for the faithful and proper fulfillment of the same. And in case the said bidder shall fail to enter into contract within the said (5) days with the proper officer of the United States and furnish good and sufficient bond for the faithful performance of the same, in accordance with the terms of said bid and specifications, we and each of us hereby stipulate and guarantee, and bind ourselves, and each of us, our and each of our heirs, executors, and administrators, to pay unto the United States the difference in money between the amount of the bid of said bidder and the amount for which the proper officer of the United States may contract with another party for the work covered by the said bid, if the latter amount be in excess of the former for the whole period covered by the proposal, not exceeding the sum of fifteen hundred dollars (\$1,500.00).

Subscribed and sworn to before me, Geo. S. Phelps, commissioner of the circuit court of the United States for the district of Colorado.

[SEAL.]

GEO. S. PHELPS,

Commissioner of the circuit court of the United States for the district of Colo.

CERTIFICATE.

I, Geo. S. Phelps, do hereby certify that Joseph S. Reef and Albert Sherwin, the guarantors above named, are personally known to me, and that to the best of my knowledge and belief each is pecuniarily worth over and above all his debts and liabilities, the sum stated in the accompanying affidavit subscribed by him.

[SEAL.]

GEO. S. PHELPS,

Commissioner of the circuit court of the United States for the district of Colorado.

Contract for building a fish hatchery for the U. S. Fish Commission near Leadville, Colorado.

This agreement made and entered into this 14th day of October, in the year eighteen hundred and eighty-nine, A. D., by and between Marshall McDonald, United States Commissioner of Fish and Fisheries, for and in behalf of the United States of America, of the first part, and Lyman G. Hunt, of Leadville, Colorado, contractor, of the second part.

Witnesseth, That the said party of the second part has agreed, and by these presents does agree, with the said party of the first part, for the consideration hereinafter mentioned and contained, and in accordance with his proposal of the thirteenth day of September, 1889, and with the specifications and plans thereto annexed, and under the penalty expressed in a bond bearing even date with these presents, and hereto annexed, all of which form a part of this contract, to furnish at his own cost and expense all the necessary materials and labor to construct and complete, ready for use, in a good and first-class manner, the entire fish-hatchery building including masonry and carpentering, plumbing, painting, and concreting of floor, with all necessary gutters and pipes complete that may be needed in and for the construction of the proposed fish hatchery near Leadville, Colorado, for the sum of twelve thousand six hundred and seventy-two dollars (\$12,672.00).

The said party of the second part, for and in behalf of the United States of America, hereby agrees to pay to the said party of the second part the sum of twelve thousand six hundred and seventy-two dollars (\$12,672.00) when the same shall become due him in accordance with the terms of this contract.

In witness whereof, the parties of these presents have hereunto set their hands and seals the day and date hereinbefore first written.

THE UNITED STATES OF AMERICA,
By MARSHALL McDONALD,
United States Commissioner of Fish and Fisheries.
LYMAN G. HUNT,
Contractor.

Signed, sealed, and delivered in the presence of J. J. O'Connor and Edward Hayes as to Marshall McDonald; John A. Ewing and John H. Kory as to Lyman G. Hunt.
(Executed in triplicate.)

BOND OF INDEMNITY.

Know all men by these presents, That we, Lyman G. Hunt, of Leadville, Colorado, as principal, and Albert Sherwin, of Leadville, Colorado, Emmet Nuckolls, of Leadville, Colorado, as sureties, are held and firmly bound unto the United States of America in the sum of twelve thousand six hundred and seventy-two dollars (\$12,672.00), lawful money of the United States of America, to be paid to the said United States of America, for which payment well and truly to be made, we bind ourselves, our heirs, executors and administrators, jointly and severally, firmly by these presents.

Sealed with our seals and dated the 14th day of October, eighteen hundred and eighty-nine.

Whereas, the said Lyman G. Hunt has entered into a contract with the United States of America, by the United States Commissioner of Fish and Fisheries, bearing date on the 14th day of October, eighteen hundred and eighty-nine, for the construction of a fish-hatchery building near Leadville, Colorado.

Now, the condition of this obligation is such that if the said Lyman G. Hunt shall well and truly keep and perform all the terms and conditions of said contract to be kept and performed on his part, and shall indemnify and save harmless the said United States of America as therein stipulated, then this obligation to be of no effect, otherwise to remain in full force and virtue.

LYMAN G. HUNT.
ALBERT SHERWIN.
EMMET NUCKOLLS.

Signed and sealed in the presence of—
JOHN A. EWING, *Leadville, Colorado.*
JOHN H. KORTY, *Leadville, Colo.*
DANIEL SAYER, *Leadville, Colorado.*

JUSTIFICATION OF GUARANTORS.

STATE OF COLORADO, *county of Lake, ss:*

I, Albert Sherwin, of Leadville, Colorado, one of the guarantors named in the foregoing bond of indemnity, do hereby swear that I am worth the sum of twelve thousand six hundred and seventy-two dollars (\$12,672.00) over and above all my just debts and liabilities, for any cause whatever, to the best of my knowledge and belief.

ALBERT SHERWIN.

Subscribed and sworn to before me this 14th day of October, A. D. 1889.

GEO. S. PHELPS,

*Commissioner of the Circuit Court of the United States for the District of Colorado.*STATE OF COLORADO, *County of Lake, ss:*

I, Emmet Nuckolls, of Leadville, Colorado, one of the guarantors named in the foregoing bond of indemnity, do hereby swear that I am worth the sum of twelve thousand six hundred and seventy-two dollars over and above all my just debts and liabilities for any cause whatever to the best of my knowledge and belief.

EMMET NUCKOLLS.

Subscribed and sworn to before me, this 14th day of October, A. D., 1889.

GEO. S. PHELPS,

Commissioner of the Circuit Court of the United States for the District of Colorado.

I certify that the above-named sureties are personally well known to me, and that they are sufficient for the penalty indicated in the foregoing bond.

GEO. S. PHELPS,

*Commissioner of the Circuit Court of the United States for the District of Colorado.*LEADVILLE, COLORADO, *January 14th, 1890.*

We, the undersigned contractors for building a fish hatchery near Leadville, Colorado, for the uses of the United States Fish Commission, in consideration of being allowed to use in the construction of said fish hatchery certain lumber which has been "stained or discolored" by stormy weather while in transit, and thereby rendered unsuitable for "natural wood" inside finish, as provided for by the specifications for the said fish hatchery, do hereby agree to paint the inside wood-work of said fish hatchery a proper body color and to grain the same in imitation of oak.

It is understood and acknowledged by us that the said change in the finish of the interior of said building is made for our benefit and at our request, and any additional expense involved in said change is to be borne by ourselves.

LYMAN G. HUNT,

Contractors.

TESTIMONY OF JOSEPH W. COLLINS.

JOSEPH W. COLLINS, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. You are connected with the Fish Commission?—A. I am.

Q. In what capacity?—A. I am assistant in charge of the Division of Fisheries.

Q. What are your duties? What does the Division of Fisheries cover—please explain that?—A. I have a statement here that fully explains the work of the Division of Fisheries and my duties in connection therewith.

THE DIVISION OF FISHERIES.

ORGANIZATION.

The Division of Fisheries was organized on May 24, 1888, by the present Commissioner of Fish and Fisheries, who, on that date, appointed an assistant to assume charge of the division and the direction of its work.

PERSONNEL, ETC.

The personnel, as first constituted, included, besides others, those who had been serving in the Division of Statistical Inquiry, as organized by Professor Goode. The following is a list of the personnel at that time:

	Salaries.
J. W. Collins, assistant in charge.....	\$2,400.00
Hugh M. Smith, clerk in charge of office.....	960.00
E. C. Bryan, stenographer.....	780.00
W. A. Wilcox, field agent.....	1,500.00
Charles B. Hudson, artist.....	900.00
M. P. Snell, clerk.....	720.00
H. R. Center, clerk.....	600.00
W. H. Abbott, clerk.....	600.00
S. J. Martin, collector of statistics.....	600.00
Luther Maddocks, field agent.....	1,800.00

On June 2 the assistant in charge was appointed to the responsible charge of preparing and conducting the Fish Commission exhibit at the Centennial Exposition of the Ohio Valley and Central States, held at Cincinnati, Ohio, in the summer of 1888, and soon after Messrs. E. C. Bryan, W. H. Abbott, and H. R. Center were detailed to assist in the work.

The personnel of the division, as constituted June 15, 1890, is as follows:

	Salaries.
J. W. Collins, assistant in charge	\$2,700.00
Hugh M. Smith, clerk in charge of office of statistics	1,380.00
E. C. Bryan, stenographic clerk	1,200.00
W. A. Wilcox, statistical agent*	1,380.00
Ansley Hall, statistical agent	900.00
Charles H. Stevenson, statistical agent	900.00
W. H. Abbott, statistical agent	900.00
S. Le R. Pritchard, clerk	780.00
L. M. Collins, clerk	600.00
S. J. Martin, local agent, Gloucester, Mass.	600.00
F. F. Dimick, local agent, Boston, Mass.	300.00

WORK AND PURPOSES.

The work of the Division of Fisheries is to pursue an inquiry respecting statistics, methods, and relations of the fisheries of the sea, coast, and inland waters. The purposes of the inquiry may be briefly stated as follows:

(1) To ascertain the commercial importance of the fishery industries of the United States.

(2) To study the commercial value of fishing grounds; to define the extent and character of inshore fisheries, and those in interior waters; to determine their resources, as shown by the catch of various species; the seasons of abundance; the effect of fishing upon the supply of fish.

(3) To study the economic condition of the fishermen; to ascertain their nativity and citizenship, etc.

(4) To study the vessels and boats employed in the fisheries, with a view to suggesting improvements that may benefit the fishermen.

(5) To determine the character of different forms of apparatus of capture; their utility, and their effect upon the fisheries.

(6) To study the methods of fishing, for the purpose of suggesting improvements or discouraging the use of those which are harmfully destructive or unprofitable.

(7) To investigate the utilization of fishery products, including methods of curing, refrigeration, canning, or otherwise preparing such material for commercial purposes.

(8) To ascertain the means and methods of transportation, by sea and land.

(9) To inquire into the condition and extent of the wholesale fish trade; the sources of supply and the principal lines of distribution.

(10) To study the question of international relations affecting the fisheries.

The following brief explanations will convey a better idea of the scope and important character of the work that has been enumerated:

1. STATISTICS OF THE FISHERIES.

The study of a reported decrease of food-fishes in New England, which was the first work that the Fish Commission was charged with, necessarily involved the collection of certain data of a statistical nature showing the importance of the fisheries and to what extent they had been affected by fishing. Similar facts were required for the presentation of the American side of the case at the Halifax convention in 1877.

* On leave of absence without pay.

It will, therefore, be seen that the collection of statistical data and the study of the commercial importance and relations of the fisheries constituted a part of the work of the Commission from its inception.

From the first, Professor Baird realized the importance to the Government of being provided with comprehensive statistics of the fishery industries; and he did what he could in the early history of the Commission to supply data of this character, which, previous to the organization of the Fish Commission, was wholly lacking or so incomplete and unreliable as to be worthless.

But his means were limited, and it was not until an arrangement was made with the Census Office in 1879, whereby the Fish Commission was charged with the responsibility of making a census of the fisheries of the United States, that it was possible to enter upon this work under such auspices as would insure the desired results. What was accomplished by the Fish Commission at that time is well known, and it is worthy of remark that it was the first time in the history of the United States that a comprehensive and satisfactory statistical report was made concerning its fisheries.

The statistical data now accumulated by the Commission furnish the only safe guide to Congress in legislating upon matters affecting the fisheries, while such a source of information is of the greatest consequence in the consideration of foreign relations where the rights of fishery are involved. In recent years this has been so fully recognized by Congress and the Executive Departments of the Federal Government that frequent demands have been made upon the Commission for statistical information.

It is confidently believed that the results of the Halifax convention would have been far different, and that the United States would not have been called upon to pay the award of \$5,500,000 in 1877, if this Government had been in possession of full and detailed knowledge, such as it now possesses, of the condition of its fisheries and fishery resources.

2. FISHING GROUNDS.

The study of the fishing grounds carried on by this division differs in most particulars from the investigations made by the Division of Scientific Inquiry, and to a large extent is supplementary to the latter.

Here the purpose is to show the actual commercial value and importance of the fishing grounds resorted to by American fishermen, both within the jurisdiction of the United States, on the high seas, or in waters adjacent to foreign coasts where citizens of this country have the right to fish.

Much knowledge has been obtained of the fishing grounds controlled by foreign countries, and in some cases where these have an intimate relation to the fishing interest of the United States, they have been mapped.

The fishing grounds near our own coasts, and in the bays, rivers, and lakes, are defined, and their character and resources are illustrated and described.

In order that changes in the fisheries affecting the fishing grounds may be clearly understood, as well as any variation that may occur from time to time in existing conditions, a special effort is made to locate on maps the position of all important forms of fixed apparatus, and to show by illustrations, whenever practicable, where other special forms of fishing gear are used. This is an important phase of the work,

since it graphically presents the whole matter and furnishes the only available means of judging accurately concerning the influence exerted upon the abundance of fish by the use of certain devices for their capture. It also shows clearly the special conditions under which the different kinds of apparatus can be most profitably employed.

Nothing is of greater consequence or more helpful to the fishermen than this; for, though one may have fished all his life under certain conditions, he may, nevertheless, not possess the knowledge which will enable him to attain success when those conditions are changed, and he finds that what he has previously learned is entirely inadequate to insure profitable results under the new circumstances in which he is placed. Through its publications the Commission gives to the fisherman that special knowledge which enables him to employ such apparatus and methods as are best suited to the fishing grounds that he frequents, and to avoid the use of such as may prove destructive to a fishery and perhaps at the same time unremunerative.

Knowing the kind and quantity of apparatus used on the fishing grounds and the quantities of fish taken from year to year, the influence of certain methods and devices upon the abundance of fish can be determined with accuracy, when, without this knowledge, conclusions would have to be based on guess-work, or would generally be open to the influence of prejudice, as too often has been the case.

An important object in connection with a study of the fishing grounds has been to determine as nearly as possible the relative quantities taken of each species on each important area; the seasons of abundance of the different species; migrations from one locality to another, as shown by the catch; and the influence of currents, food, etc., upon their abundance and capture.

Much useful information is obtained by the Division of Fisheries from the fishermen and others concerning the characteristics and importance of distant fishing grounds. The fishermen have shown a marked interest in this direction, and the Commission is in possession of many notes and journals which have been voluntarily prepared, without remuneration of any kind, and which contain much valuable information that could not otherwise be obtained. This affords to the Commission an opportunity of determining and pointing out to the public the value to Americans of fishing areas in distant seas or near foreign countries.

3. THE FISHERMEN.

In all maritime countries the fisheries have been recognized as constituting the best nursery or school for the training of hardy, brave, and efficient seamen. Accustomed from childhood to vicissitude and danger, trained to self-reliance and to meet the direst peril unflinchingly, fishermen become a self-supporting and invaluable militia of the sea—the natural bulwark of a nation—available to man its navy and protect it from invasion in time of war.

It is therefore important that the Government should possess full and reliable information concerning the nativity, the citizenship, the general characteristics and economic condition of those men who are employed in the American fisheries. This knowledge the Fish Commission seeks to supply through its inquiries, whereas it would be difficult, and might be impossible without it, for Congress to intelligently legislate on many matters affecting the fisheries and the fishermen.

4. VESSELS AND BOATS.

Special attention has been given to the study of fishing vessels and boats. It is well known that nothing conduces more to the success of the fisheries than the employment of those types of vessels and boats that are best adapted to the special conditions under which their operations must be carried on. The employment of unsuitable craft may not only result disastrously from a financial stand-point, but may be the cause of much destruction of life—a loss that often leaves its blight upon an important industry and seriously interferes with its progress. Such has too often been the case in the history of the American fisheries, and, as mentioned in a subsequent paragraph, it is only in recent years and through the influence of the Fish Commission that this great evil has been remedied in a large degree.

But it is not alone in building large ocean-going vessels that the fishermen need suggestion and assistance. Frequently success may depend simply on the possession of sufficient knowledge—a knowledge possessed by comparatively few white men—to enable the fishermen to build a cheap (possibly a primitive) boat with the materials at command, and which may, nevertheless, be useful and serve the purpose for which it is made until a change of circumstances renders it practicable to construct a more costly craft.

The Fish Commission aims, through its publications, to convey a full knowledge of fishing craft, and nothing short of this will enable our fishermen to attain that degree of success and security which they should have.

5. APPARATUS.

Man being recognized as “one of the chief destroyers of fish,” it is important that his influence upon their abundance, through the use of various devices for their capture, should be studied and determined. By a comprehensive examination and comparison of the fishing apparatus of this and other countries, it is practicable to introduce such as are most serviceable and discourage the use of those forms that may be less effective or liable to cause the destruction of important fisheries. The study of the commercial aspects of the fisheries not only embraces the quantities and values of the different forms of apparatus and the amount and value of fish taken, but it contemplates also a consideration of all details of form, construction, and location, with a view to furnish definite information to the Government whenever necessary, and with the additional object of publishing illustrated descriptions of the best forms for the benefit of the fishermen, as has elsewhere been intimated. The definite object sought is that of ascertaining the form of apparatus best adapted for use under certain conditions, which may be either local or seasonal. As with boats and vessels, a knowledge of the adaptability of fishing gear is of the greatest moment to the fishermen, for the simple reason that what might be specially effective in one locality, or at certain seasons might be, and often is, practically worthless under other conditions. Knowing the habits of any particular species which is an object of fishery, and understanding the local conditions where it is sought, the Commission aims to impart to the fisherman such information as will enable him to secure the best results.

6. FISHERY METHODS.

A study of the methods of fishing is intimately associated with a consideration of the apparatus employed. It, however, covers a much broader field and includes the whole subject of the art of capture and

the care and manipulation of fishery products on shipboard, by which they are put into a suitable condition to be landed or marketed. Success more frequently depends upon the proper and efficient management of fishing gear than upon the apparatus itself. And, again, big catches may mean anything but large profits if the fisherman lacks the special knowledge which will enable him to utilize to his best advantage the material which he has captured.

An important function of the Division of Fisheries is therefore to closely study this particular phase of the commercial fisheries and to place before the fishing interests of the United States the fullest information concerning the most approved methods employed in this and other countries.

7. UTILIZATION OF FISHERY PRODUCTS.

The proper and most effective utilization of fishery products opens up a wide field for study, experimentation, and suggestion. Although much has been done in this direction, much still remains to be accomplished, particularly in those localities where the most advanced ideas have not yet received the attention which their importance entitles them to.

The inquiry under this head embraces the whole question of curing, freezing, canning, or otherwise preparing fishery products for commercial purposes, and properly includes the utilization of secondary products of the fisheries, whereby much otherwise waste material is saved and the public benefited by the production of many useful articles of commerce. This subject is receiving the most careful consideration. Much has been done to disseminate knowledge among those interested in the fisheries, and the work has been conducted with special activity for the past two years. By the publication and distribution of papers dealing particularly on this subject it is proposed to place in the hands of fishery preparators all that is known in this or other lands respecting the best methods for utilization of fishery products.

8. TRANSPORTATION.

The matter of transportation is an important factor in the successful development of fishery industries. In a country having such broad proportions as the United States, the fate of the fishery may depend largely if not entirely on transportation. If the facilities are good and the charges reasonable, the industry thrives to the benefit alike of the fishermen and the transportation agencies. But without the means of distributing the catch or taking it to market in the best condition at a moderate cost, a profitable fishery could not be established, even supposing there was an abundance of fish to be taken.

This matter is being studied with a view to offering suggestions for improvement.

9. MARKETS.

Under this head is embraced a consideration of the wholesale fish markets—the receiving and distributing centers for fishery products—the sources of supply and the principal lines of distribution.

10. INTERNATIONAL RELATIONS.

The effect upon our commercial fisheries of relations of the United States with foreign countries is receiving careful consideration in connection with the general subject of studying the commercial fisheries

and whatever may influence them for good or evil. This includes the obtainment of a knowledge of the extent to which Americans are affected by the interpretation of treaties by other countries, or the administration of foreign laws, or by being excluded from jurisdictional waters adjacent to foreign countries. Connected with this is an examination into the question of bait supply; the effect upon our coast fisheries of withholding from American fishermen by Canada of full commercial privileges; and of a development of new methods and apparatus for securing a supply of bait by the fishermen on the outer banks.

MEANS AVAILABLE.

The available means for conducting the inquiry consisted (1) of an appropriation of \$10,000 for each of the fiscal years ending June 30, 1889 and 1890; (2) in addition to which \$5,000 was assigned each year, from the appropriation for scientific inquiry, for a "study of the methods and relations of the fisheries." By this arrangement the division had available each year \$15,000 for prosecuting its work.

NEED OF ECONOMY.

In view of the enormous extent of sea-coast and rivers to be canvassed, it has been necessary to practice the strictest economy, particularly in the matter of expenditure in the field. That the field agents have shown remarkable and praiseworthy care in this particular will be apparent when it is stated that the average daily expenditure per man, when traveling and engaged in canvassing the fisheries, has been only about \$2.50. This amount includes travel by rail, steam-boat, carriage, sail and row boats, street-car and ferry fares, all hotel bills and other expenses properly chargeable to the Government. It may also be said that it embraces long lines of travel, such as trips across the continent, and to the extreme southern and northeastern points of the United States.

The following itemized tabulated statement shows in detail the individual and average daily expenditure of statistical field agents of the U. S. Fish Commission while in the field, during the fiscal year ending June 30, 1890:

Name.	Days in field.	Expenses.	Daily average.
Wilcox, W. A.....	226	\$675. 75	\$2. 99
Stevenson, C. H.....	247	611. 39	2. 47
Hall, Ansley.....	262	527. 22	2. 01
Smith, H. M.....	71	240. 13	3. 38
Abbott, W. H.....	171	454. 20	2. 65
Alexander, A. B.....	62	109. 55	1. 76
Total.....	1, 039	2, 618. 24	2. 423

The following explanations may be made:

The expenditure of W. A. Wilcox includes travel along the Pacific coast and up the rivers northwardly from San Francisco to Puget Sound (passing twice over much of the ground), thence to Wood's Holl, Mass., along the coast of New England from New Bedford to Boston and return to Washington.

C. H. Stevenson went from Washington to New York, canvassed the coast of that State; thence to Maine, worked from Portland to Cape

Ann ; then along the coast of Connecticut, and returned to Washington.

Ansley Hall canvassed Rhode Island, the middle portion of the Maine coast, returned to Washington, and was then sent to study the fisheries of Massachusetts between Gloucester and Boston, and to complete data for 1889 in Rhode Island, whence he returned to Washington.

H. M. Smith canvassed the eastern half of Maine, assisted by W. H. Abbott. His expenditures include fares from Washington to Eastport, Me., and return ; also hire of teams employed in the work for himself and Abbott.

W. H. Abbott covered eastern Maine with Smith ; returned to Washington ; sent to Massachusetts to work up territory abandoned by Wilcox on account of sickness. His expenditures include fares from Washington to Eastport, Me., and return ; fares from Washington to Massachusetts and return.

It should be kept in mind, however, that the travel one way is chiefly only from point to point, following the trend of the coast, and is therefore much more expensive than direct travel. It is also important to consider that boats and teams must often be hired (with men to manage them), to visit points not otherwise accessible. This method of communication is usually expensive compared with the ordinary means of travel. The coast-line of some of the States is so broken by bays, estuaries, and islands that the actual extent is enormously increased. Thus, Maine has an actual coast-line of about 2,000 miles, every bit of which is more or less engaged in the fisheries. A straight line from the eastern extremity to Kittery on the southwest is only about one-tenth that distance.

A. B. Alexander canvassed San Francisco and the adjacent region bordering on San Francisco Bay, and the Sacramento River.

METHODS OF CONDUCTING THE WORK.

The methods employed in prosecuting the inquiry carried on by the Division of Fisheries are a result of, and are based upon, the experience of the Fish Commission from its establishment to the present time. In the early days of the Commission a common practice was to make personal inquiry of fishermen and others concerning statistics and the methods and relations of the commercial fisheries. But as the means then available did not permit of conducting such an inquiry upon a sufficiently extensive scale to cover even a single fishery resort was had from time to time to circulars, which were sent to those in fishing communities who were best informed. By these means much valuable information was acquired, though it follows, as a matter of course, that it was much less comprehensive and not usually so detailed as is contemplated in the inquiry now made. At a later date, in connection with the obtainment of the fishery census of 1880 and the collection of the vast amount of historical and other data obtained at that time, the methods of inquiry and research were expanded, though in their general features they remained about the same, the change being chiefly in the scope of the work, of which mention will be made further on.

In 1885 a new method was introduced by Professor Baird for the collection of statistics of certain vessel fisheries through the co-operation of the Treasury Department. By this method circulars are sent to all the collectors of customs where there are fishing vessels, and these are filled out from information furnished by some responsible person connected with each vessel.

It took some time to satisfactorily develop this part of the work, but experience brought gratifying results.

From the first there have been many enterprising and intelligent fishermen and fish-dealers (as well as others) who have exhibited a marked interest in and appreciation of that special branch of the Fish Commission work relating to statistics and the general investigation of the commercial fisheries. This has been more wide-spread, and the reliance upon and confidence in the Commission have increased as its work has become better understood. A gratifying result is that the Commission now receives much valuable and important assistance, free of charge, from those who are practically engaged in the fisheries, and who are anxious to aid the work, which they recognize as being of material advantage to the industries they are connected with.*

Among the material which has been gathered in this manner it is proper to mention the journals which have been kept by the fishermen, and which give us a full record of events transpiring upon vessels engaged in different fisheries, as well as the daily catch and other valuable information. With these should also be placed notes, many of them instructive and interesting, that are contributed from time to time by others.

But while much information has been gathered through the aid of the Treasury Department and the voluntary contributions alluded to, it will readily be seen that other means and methods must be adopted to secure a knowledge of the extensive shore and boat fisheries as well as of the whale and seal industries, none of which are covered by the inquiry made through the Treasury Department. Besides, it is important to verify the data received through the custom-houses and to fill in such gaps as will necessarily occur in this method. Therefore it becomes necessary, in order that a comprehensive knowledge may be obtained of the fishery industries of the United States, to make a personal canvass.

Trained experts are sent out who visit the fishing communities, and by careful and systematic inquiry secure all knowledge of the commercial aspects of the fisheries that it is practicable to obtain. Fishermen, fish-dealers (including market-men), curers, manufacturers, and others who have knowledge of fishery matters are interviewed, records are carefully examined (including those of fishing firms, railroads, express agencies, and custom-houses), and all other available sources of information are utilized with a view to making the inquiry as accurate and comprehensive as possible. When practicable the fishing grounds are visited, and the location of apparatus and the methods of fishing are studied and observed. When this can not be done the information is obtained from those who are best informed, and whose daily intercourse with the fishing grounds and the fisheries enables them to supply all needful information.

Elsewhere mention has been made of the personnel; here it is only necessary to say that the men employed as field agents (and who also assist in making the compilations) have been selected for their special

* It is noteworthy that, on many occasions within the past two years, the field agents of the Commission have been the recipients of many courtesies, and have been materially aided in their work by those carrying on the fisheries, who have generally given free access to their records. On some occasions boats and steamers owned by fishermen or fishing firms have been placed at the disposal of the Fish Commission agents free of charge, and frequently the owners have also tendered their services in a like generous manner to aid in the collecting of data which otherwise it might have been very difficult to secure. This generous consideration has made it possible to carry on the work with far less expense to the Government than would have been practicable under other conditions; and besides, it has resulted in the procurement of a great deal of knowledge which it is important to have, and which it would have been scarcely practicable to obtain without such co-operation.

fitness for the work in which they are engaged. They have received special training, and have generally had a long experience in the work. As a rule they are young men, graduates of the best schools, though some have become specially proficient from long business association with the fisheries, supplemented by extensive experience in the work they are now engaged upon.

Briefly summarized, the methods now adopted in this inquiry are as follows:

(1) Through the assistance and co-operation of the Treasury Department, statistics of the vessel fisheries are obtained on blanks sent to the collectors of customs, and filled out by the collectors with information gathered from the captains, owners, or agents at the time that the vessels apply to change or renew their papers. This part of the inquiry applies to all fishing vessels excepting those engaged in the seal, sea-elephant, and whale fisheries. This system of collecting statistics has become an important auxiliary in the Fish Commission work, while its inexpensiveness is a feature which recommends its continuance.

(2) A special inquiry is prosecuted by field agents, who visit the various localities where fishing is carried on, and besides collecting statistics of the shore, boat, whale, and seal fisheries, thus supplementing the work done through the Treasury Department, they make special inquiries concerning the fishing grounds, fishermen, vessels, and boats, apparatus, methods of fishing, etc. For the past two years agents of the Commission have been constantly in the field pursuing their investigations with indefatigable zeal and tireless energy. Employing such means of transportation as were available, they have managed to reach the most secluded and out-of-the-way places. They have often been called upon to make dangerous passages in open sail-boats to outlying islands, or to take mule-back rides over mountainous paths to reach a "fishery" in some isolated and otherwise uninhabited region. Again, it has been necessary for them to visit Chinese fishing camps on the Pacific coast, where the utmost tact and ingenuity of the investigator must be brought into requisition to gather from suspicious Celestials the information wanted. But by continued experience these field agents acquire a detective's skill in following clues, and they meet with success, though the difficulties encountered are often of such a character that one not equally well trained would find it impossible to overcome them.

(3) Statistical agents are permanently located in some of the large fishing centers. In addition to reporting the daily arrivals of vessels, receipts of fish, etc., they collect other important data, making monthly or semi-monthly reports which show the varying conditions of the fisheries, the fluctuations in abundance of the different fishing grounds, and also the comparative results obtained by the use of certain forms of apparatus or methods.

(4) Many voluntary and valuable contributions to a knowledge of the fisheries are received from those who are actively engaged in prosecuting such industries. These not only embrace journals of voyages (to which reference has already been made), but also relate to the employment of methods and apparatus, etc.

(5) An office force of clerks is engaged, under the direction of the assistant in charge of the division, in tabulating the returns and in preparing the reports and special papers relating to the fisheries, as well as maps and other illustrations. The field agents often engaged in this work after completing the investigation of localities to which they have been assigned.

WORK PERFORMED.

In the field.—Since the organization of Division of Fisheries, in the spring of 1888, the following has been accomplished in the field.

A comprehensive investigation has been made of the fisheries of the Pacific coast and rivers from San Diego to Puget Sound. An inquiry has also been made into the condition of the salmon fisheries of Alaska, in conjunction with researches carried on at the same time by the Division of Scientific Inquiry.

A study has been made of the coast and sea fisheries of all the Atlantic States, and of the Gulf of Mexico from Florida to Mississippi. These investigations cover the two years of 1887 and 1888. But in New England, the South Atlantic States and portions of the Pacific coast full data have also been obtained for 1889.

These researches and inquiries have been made by agents of the Fish Commission who have traveled from point to point and have obtained the requisite data with all possible accuracy and comprehensiveness of detail.

The following résumé shows the territory canvassed by each individual and the time occupied:

W. A. Wilcox: Began work on the fisheries of eastern Massachusetts and Connecticut on July 2, 1888; investigation discontinued August 15, 1888.

Detailed to make canvass of fisheries of Pacific coast and rivers from San Diego to Puget Sound November 15, 1888; investigation completed September 21, 1889; ordered to Wood's Holl, Mass., to complete reports and settle accounts.

Ordered to make investigation of fisheries of Massachusetts from Rhode Island State line to Boston; operations suspended on account of illness February 8, 1890; ordered to Washington to write up notes. On leave of absence without pay for two months from May 10, 1890.

Luther Maddocks: Ordered to make investigation of fisheries of Maine July 1, 1888, in vicinity of Boothbay; investigation suspended August 15, 1888.

Hugh M. Smith: Ordered to investigate the fisheries of Virginia, Maryland, Delaware, Pennsylvania, and New Jersey in conjunction with M. P. Snell. Began work July 12, 1888, and returned to Washington October 6, 1888.

Detailed to make investigation of fisheries of Maine from Eastport to Penobscot River August 8, 1889, assisted by W. H. Abbott. Completed work and returned to Washington October 18, 1889.

Merwin P. Snell: Ordered to assist H. M. Smith in investigation of fisheries of Maryland, Virginia, Delaware, Pennsylvania, and New Jersey. Began work July 12, 1888, returned to Washington December 31, 1888.

February 17, 1890, granted conditional leave of absence for one month, and resigned from service March 16, 1890, to accept another position.

William H. Abbott: April 4, 1889, was ordered to Elizabeth City, N. C., to complete investigation inaugurated by W. de C. Ravenel in North Carolina. Completed work and returned to Washington June 13, 1889.

Detailed to assist H. M. Smith in making an investigation of the fisheries of Maine, leaving Washington August 12, 1889. Completed investigation and returned to Washington November 14, 1889.

Ordered to complete work in Massachusetts abandoned by W. A. Wilcox on account of illness. Left Washington February 12, 1890; completed investigation and returned to Washington April 29, 1890.

W. de C. Ravenel: Ordered to make investigation of the fisheries of South Atlantic coast from Florida to Virginia. Began work December 3, 1888, and carried investigation as far north as the vicinity of Elizabeth City, N. C.; on March 27 was ordered to Washington and assigned to other duty.

On January 14, 1890, was ordered to make similar investigation for the year 1889. Began work at Charleston, S. C., and made canvass as far as Elizabeth City, N. C. Was ordered to Washington on other duty on April 1, 1890.

D. Edwin Collins: January 3, 1889, was ordered to make investigation of the fisheries of the Gulf States, including western Florida. Investigation abandoned at Scranton, Miss., April 22, 1889, on account of failing health. On sick leave of absence for one month from May 1, 1889. Granted leave of absence without pay for one month from June 1. Reported for duty July 1 and remained on duty one month. Compelled to abandon service on August 1, 1889, on account of continued ill health.

Ansley Hall: Ordered to duty to collect fishery statistics in Rhode Island May 7, 1889. Investigation completed August 19, 1889.

Detailed August 19, 1889, to make investigation of fisheries of Maine, beginning at Belfast and working south. Completed investigation and returned to Washington December 17.

February 11, 1890, was ordered to make investigation of fisheries of Massachusetts between Gloucester and Boston. After completing that work was directed to complete statistics of Rhode Island for 1889. Returned to Washington May 15, 1890.

Charles H. Stevenson: Detailed on May 6, 1889, to make investigation of fisheries of New York. Completing that work, was ordered to Wiscasset, Me., August 24. Made investigation of fisheries of western Maine, New Hampshire, and Massachusetts to Cape Ann, omitting Gloucester, finishing that work November 8, 1889.

Ordered to Connecticut November, 18, 1889, and completed investigation February 28, 1890. Ordered to Washington and granted leave of absence for ten days. Returned at expiration of leave, and directed to tabulate returns in office.

S. J. Martin: Employed at Gloucester, Mass., in collecting statistics of the daily receipts of fish from vessels and boats. He makes monthly and semi-monthly reports, showing the amount of fish landed by each vessel arriving at Gloucester, the locality where the fish were taken, etc.

F. F. Dimick: Appointed April 15, 1889. Employed at Boston, Mass., in collecting fishery statistics of that port. Submits a daily and monthly report, the latter showing the number of fares of fish landed at Boston, classified under headings to show the home port of each vessel; the quantity and value of each species, the price, the locality where taken, etc. The amount of receipts of the principal species from other ports, including importations, and the quantities taken by boat fishermen are also given.

E. F. Locke: Collected statistics of shore and vessel fisheries of Gloucester, Mass., for 1888.

In the office.—The following special reports, etc., have been published:

1. New forms of blank books for the use of field agents in collecting the statistics of the shore and vessel fisheries, with instructions for each.
2. American sardine industry in 1886.
3. Notes on certain fishery industries of Eastport, Maine, in 1886.

4. The beam-trawl fishery of Great Britain, with notes on beam-trawling in other European countries, etc. Fifty-seven illustrations.
5. Some reasons why the fishermen of Nova Scotia prefer to use salt-clams (*Mya arenaria*) for bait in the bank hand-line fishery.
6. Statistics respecting certain features of the vessel fisheries of the United States for the years 1886 to 1888.
7. Suggestions for the employment of improved types of vessels in the market fisheries, with notes on British fishing steamers. Twelve plates.

The following have been prepared and are now in type, or in course of publication:

8. A comprehensive and detailed illustrated review of the fisheries of the Great Lakes. Forty-four plates, including six maps.
9. Report upon the construction and equipment of the Schooner *Grampus*. Twenty-three illustrations.

The following have been submitted for printing:

10. Report upon the operations of the *Grampus* from March 15, 1887, to June 30, 1888, with notes and observations on fisheries, collections made, etc. Seventeen plates, including track chart.
11. Catalogue of the exhibit of the U. S. Fish Commission at the Centennial Exposition of the Ohio Valley and the Central States, held at Cincinnati, Ohio, July 4 to November 8, 1888.
12. Notes on the crab fishery of Crisfield, Md. Two plates.

The following are ready for publication:

13. Report upon the fishing vessels and boats of the United States, with material for nearly two hundred illustrations.
14. Report upon the principal types of fishing vessels and boats of foreign countries, with material for about two hundred illustrations.
15. Information concerning the American vessels involved in the Canadian fisheries controversy in 1886.
16. Report upon the inquiry concerning the stranding, abandonment, rescue, etc., of the Schooner *Grampus*.

The following are in course of preparation and well advanced:

17. Descriptive and statistical review of the fisheries of the Pacific coast from San Diego to Puget Sound. This will include a history of the Pacific cod fishery from its inception; history of salmon canning, and a review of the whale fishery for the past decade. It will be fully illustrated with plates and maps. The maps will show the location of canneries and all fixed apparatus, seine fisheries, gill-net reaches, oyster-beds, inshore fisheries, etc., on the coast and rivers.
18. Statistical tabulations for 1887 and 1888 for the coast and river fisheries of the Pacific States, and for the coast fisheries of the States bordering on the Atlantic Ocean and Gulf of Mexico. For many of the Atlantic States tabulations have been made of the fishery statistics for 1889 as well as for the two previous years.

Statistics of the shore and vessel fisheries of 1887-'88 have been tabulated for sixteen coast States, namely: Alabama, California, Connecticut, Delaware, Florida, Georgia, Maine, Maryland, New Hampshire, New Jersey, Oregon, Pennsylvania, Rhode Island, South Carolina, Virginia, and Washington.

Tabulations are well advanced for the following States: Louisiana, Massachusetts, Mississippi, North Carolina, New York, and Texas. It is proper to say, however, that full data has not yet been obtained of the shore fisheries of Louisiana, Mississippi, and Texas for the years named.

19. Report upon the Division of Fisheries for the fiscal year ending June 30, 1888.
20. Report upon the operations of the Division of Fisheries for the fiscal year ending June 30, 1889.
21. Report upon the participation of the U. S. Commission of Fish and Fisheries in the Centennial Exposition of the Ohio Valley and Central States, held at Cincinnati, Ohio, July 4 to November 8, 1888.

Data, more or less elaborated (in some cases nearly ready for publication), are available in the office for preparing special reports showing

the present condition of, and recent changes or improvements in, the following important fisheries:

22. The fresh halibut fishery.
23. The cod fishery.
24. The mackerel fishery.
25. The menhaden industry.
26. The market fishery, including New England fresh haddock fishery.
27. The sardine industry for 1887, 1888, and 1889.
28. The bluefish fishery.
29. The herring fishery.
30. The red snapper fishery.
31. The pound-net, weir, and trap fishery. The number and location of these forms of apparatus can be shown on maps.
32. The lobster fishery.
33. The oyster fishery.
34. The clam fishery.
35. The scallop fishery.
36. The whale fishery.
37. The sponge fishery.
38. The relative productiveness of the principal fishing grounds.
39. Relative effectiveness, as shown by catch, of different forms of apparatus of capture.
40. Nativity and citizenship of the coast and sea fishermen of the United States.
41. On the preparation of fishery products.
42. On certain forms of fishing apparatus, and utilization and operation of same. Many drawings and engravings are already completed, together with elaborated notes.

Mention may properly be made of the fact that the Division of Fisheries has been called upon to do a large amount of work in connection with the Fish Commission exhibit at the Centennial Exposition of the Ohio Valley and Central States, held at Cincinnati in 1888. The responsibility of preparing and conducting the Commission's exhibit at Cincinnati devolved upon the Assistant in charge of the Division of Fisheries, and several experts of the Division were detailed to assist in that work.

Besides (as has been indicated in the foregoing notes), this Division has been charged with important duties in connection with the work of the *Grampus*. It was necessary for the Assistant in charge to prepare reports on her construction and work, and also in the winter of 1888 and 1889, to conduct an official inquiry concerning the stranding, abandonment, rescue, etc., of the schooner, and to report upon the same. At the same time he had to superintend the making of necessary repairs and the fitting of the vessel for sea, as well as the selection of officers and the enlistment of seamen.

IMPORTANCE OF THE WORK.

The importance to the fishing interests of the United States of the work prosecuted by the Division of Fisheries can best be estimated in the light of what has already been accomplished by the Fish Commission in this special field of effort. But, in calling attention to this, it is proper to state that only the most noticeable results are mentioned—those that have had an important influence upon the welfare and development of the fisheries. They may be briefly summarized as follows:

- (1) The introduction of gill-nets in the cod-fishery resulting in an increased catch of large fish and an estimated annual saving to the fishermen of about \$50,000 in the single item of bait.*

* The gill-net cod fishery during the last two years has been less successful than usual, due chiefly, it is believed, to the prevalence on the New England coast of unusually warm weather in winter, which has seemingly prevented the schools of winter cod from approaching the coast in as great numbers as common.

(2) The dissemination of knowledge concerning the abundance of halibut near Iceland, resulting in the establishment from New England ports of the Icelandic salt-halibut fishery, the yearly product of which amounts to from about \$70,000 to \$100,000.

(3) The introduction of safer and swifter types of fishing vessels, resulting in a much greater immunity from loss of life and property, a better utilization of time, and a marked increase in profits (specially noteworthy in the market fishery), due to the improvement in speed, which renders it possible to market the catch in a much better condition than heretofore.

The importance of this change in the model and rig of fishing vessels, which was inaugurated through the efforts of the Commission, can not be estimated, but its beneficial effects may be partially understood when it is stated that in the ten years ending in 1883, the loss by foundering at sea, from Gloucester alone, amounted to eighty-two vessels, with a valuation of upwards of \$400,000, with crews amounting to eight hundred and ninety-five men, who thus lost their lives, leaving hundreds of widows and fatherless children in a destitute condition.

It is not difficult to comprehend the paralyzing influence exerted upon the fisheries by such losses, and there is reason for profound satisfaction in the thought that the fishing vessels now being built are modeled and rigged with a view to reducing disaster to the minimum, while their usefulness and efficiency are correspondingly increased.

(4) The preparation and publication of new designs for fishing vessels and boats*; these embodying the results of extensive studies of the fishing flotilla of the world, together with a consideration of the conditions under which they must be employed.

The following extracts from letters received from parties interested in the fisheries, or otherwise competent to judge, will convey an idea of the estimation in which such work is held:

We have received a copy of your valuable paper entitled "Suggestions for improvements in fishing vessels and boats." As far as we have examined same find it quite interesting and think your suggestions will prove of great value if followed by those about to construct new vessels.—(Shute & Merchant, Gloucester, Mass., April 19, 1890.)

Your publication, "Suggestions for improvements in fishing vessels and boats," was duly received. Accept my thanks for the above, which will be of much interest.—(John J. Pew, Gloucester, Mass., April 19, 1890.)

Many thanks for your paper on the employment of improved types of fishing vessels, etc. I don't want to part with my copy, as it has some important data regarding steamers, and would be very glad if you could send one to my son.—(Chief Eng. Alex. Henderson, U. S. Navy, March 29, 1890.)

Have not time but to skim through your paper, but I compliment you upon the thorough manner in which you got up such valuable information.—(W. V. Booth, Chicago, Ill., April 4, 1890.)

We beg to tender our sincere thanks for copy of your recent paper entitled, "Suggestions for improvements in fishing vessels," which we think will prove a great boon to those interested in the fishing industries of this country.—(Louch & Johuson Seattle, Wash., April 9, 1890.)

We acknowledge the receipt of your recent paper, "Suggestions for improvements in fishing vessels," etc., which we find very interesting, and herewith tender our sincere thanks for same.—(Fred. Wright, secretary Fishermen's Protective Union, Astoria, Oregon, April 12, 1890.)

Your work contains many excellent points, as I think steam-vessels in time will revolutionize the fish business, even on this coast.—(A. K. Demere, Punta Gorda, Fla., April 18, 1890.)

Your plan of fishing-cutter is excellent. If I have good success this season I shall build one for winter fishing.—(Jos. A. Smith, Port Hartford, San Luis Obispo County, Cal.)

* "Suggestions for the employment of improved types of vessels in the market fisheries, with notes on British fishing steamers," by J. W. Collins.

Your paper entitled, "Suggestions for improvements in fishing vessels," is at hand and I thank you for the same. It is very interesting to me as I am in the fishing business and have taken great pleasure in reading it.—(J. W. Hume, Brandon, Oregon, May 7, 1890.)

(5) The publication of monographs of the fisheries, including fishing grounds, fishing vessels and boats, methods of fishing, preparation of fishery products, etc. The dissemination of the knowledge embraced in these comprehensive treatises enables fishermen, packers, and dealers to become familiar with the most approved methods, and of the best localities for fishing. The constant demand upon the Commission for such information is sufficient evidence of its value and importance.

(6) The collection of statistical and other data bearing upon the commercial fisheries, whereby the executive and legislative branches of the Government have been kept well informed concerning the status of these industries. The Commission is now in a position to materially aid the Government in this particular.

(7) The assembling together of an exhaustive study and exhibition series of fishing appliances, including models of boats and vessels, illustrations of fishing scenes, etc.

(8) The furnishing of authoritative and definite information to fish dealers of the value of the thimble-eye mackerel (*Scomber pneumatophorus*) for food purposes, the result being a material enhancement of the profits of the mackerel fishery by establishing on a firm basis a remunerative market for this species.

(9) The probable establishment of a new fishery industry in the United States, that of beam-trawling, which the Commission is informed has already been begun as a result of its publications.

UTILIZATION OF INFORMATION.

From the foregoing it will be apparent that a very important function of the Fish Commission is the proper utilization of the information obtained by it. The publication of what is learned concerning the fisheries, though constituting a most important work, nevertheless falls far short of the maximum of desired or anticipated achievement. What gives special value to this inquiry is the intelligent interpretation of the data acquired whereby, when existing conditions are known, the Commission is often able to suggest improvements, or changes in methods, which may have a most important influence upon the development of certain fishery industries.

Thus the study of the methods and relations of the fisheries is planned to include within its scope all that experience has shown to be useful or profitable, and with the object in view of furnishing specific information to the Government or individuals; or to make suggestions from a consideration of the data obtained which may insure the prosperity of fishing communities.

The constantly increasing demand for technical and specific information, coming from all sections of the United States, shows conclusively the estimation in which this work is held by all who prosecute the fisheries and the growing reliance upon the Commission for success. Hardly a day passes without some demand upon the Commission for information. These demands take a very wide range, and cover in their scope nearly all phases of the methods, etc., of the commercial fisheries.

By Senator BLODGETT:

Q. You say you are assistant fish commissioner?—A. The title is

“assistant in charge of the division of fisheries.” There is no assistant fish commissioner under the present organization.

Q. You rank next to the Fish Commissioner in that Department?—A. I do. Mr. Rathbun, who is assistant in charge of the division of scientific inquiry, is next in that work.

By the CHAIRMAN:

Q. You are next to the Commissioner in charge of a special branch?—A. Yes, sir. The statement is a consideration of that organization and work of the division of fisheries.

Q. Let me ask you right here—when did you enter the service of the Commission?—A. I first entered the service of the Commission in connection with the census work, the obtainment of the fishery census, in 1879. I reported for duty in August of that year.

Q. You were then in the employ of the Census Bureau?—A. I was then on the rolls of the Census Bureau.

Q. When did you enter the actual service of the Commission after that?—A. I will explain that the following spring, that is in the spring of 1880, I was assigned to duty in connection with the Berlin Fisheries Exhibition and accompanied Professor Goode as one of the commission that went from the United States to Berlin on that occasion. In June, I think it was, I was put on the rolls of the Fish Commission.

Q. That was under Professor Baird's administration?—A. In 1880, yes, sir; under Professor Baird's administration.

Q. Will you just sketch your connection with the Commission up to the time that that commenced?—A. After my return from the Fisheries Exhibition at Berlin I was engaged for a few weeks in the preparation and elaboration of notes which had been collected there. After those were completed I again entered upon the field work, collecting statistics and other information concerning the fisheries. This work continued until the latter part of December, 1880.

Q. 1880?—A. Yes, sir; 1880. From that time until the summer of 1882 I was engaged chiefly in the compilation and preparation of reports upon the American fisheries, including the making of a large number of drawings for illustrations.

Q. Representing what?—A. Representing the different phases of the fisheries. Many of those appear in the Report of the Fisheries and Fishing Industries of the United States.

Q. When you speak of drawing do you mean fish or boats and appliances?—A. The drawings represented vessels, fishing scenes, etc., illustrative of the methods of fishing, and apparatus. In the spring of 1882 I made a cruise on the steamer *Fish Hawk* to the lower part of Chesapeake Bay to investigate the appearance or occurrence of shad at that season.

Q. I do not care about having so much of detail. I merely wanted to know in a general way if you had been actively connected with the Commission right along?—A. I thought perhaps it would be better for me to sketch briefly the outline of the work I had accomplished in the Fish Commission so that the committee might have a better understanding.

Q. But we are not going so much in detail. It will make it too voluminous and consume too much time.—A. In the summer of 1882 I was assigned to duty in connection with the preparation of an exhibit to be made by the United States at the International Fisheries Exhibition at London, which took place in 1883. In the spring of the latter year I accompanied Professor Goode to London and remained with him there until he returned about October.

Q. How did our fishery exhibit compare with those of other countries at this exhibition at London?—A. Most favorably. It received the greatest possible praise, and was conceded by all to be superior to every other exhibit made. After returning from London I made a cruise on the *Albatross* for observing the movements of mackerel when they were migrating from the New England coast southward. From that time until 1885 I was engaged chiefly in the preparation of reports upon the fisheries, and so on, including illustrative material.

In January, 1885, I joined the *Albatross* and made a cruise in her to the Gulf of Mexico to investigate the fisheries of that region, and a report of the work accomplished has been published, as have also reports upon other investigations in which I had previously been concerned.

In the summer of 1885 I made another cruise to the Grand Bank of Newfoundland and other intervening ocean banks for the purpose of studying the condition of the cod fisheries in those regions. In the same summer I was assigned to the duty of designing and preparing the specifications for the schooner *Grampus*. The work was completed in the fall, and during the following winter I had charge of the construction of the *Grampus*. After she was built and went into commission, on the 5th of June, 1886, I was officially in command of her. It is proper to say, however, that during the two years or thereabouts I held command of her I was chiefly employed in other duties which frequently took me to Washington, when the actual command was delegated to the first officer.

Q. What was your compensation when in charge of the *Grampus*?—A. \$1,800. It was increased to \$2,000 by Professor Goode in November, I think, 1887.

I will say, in continuing this, that during the summer of 1887 I made a cruise on the *Grampus* to the Gulf of St. Lawrence and around the island of Newfoundland and along the shores of southern Labrador to ascertain the occurrence or non-occurrence of mackerel in those regions. It will probably be remembered by the committee that in 1887 and the previous year mackerel were very scarce and reports had reached the Fish Commission that they had occurred in greater or less abundance on the northeast coast of Newfoundland and along the Labrador shore, particularly in the Strait of Belle Isle. Professor Baird therefore concluded that it was an important matter to send the *Grampus* on that expedition in order that a full knowledge of the facts could be obtained, and in case mackerel had been met with, a plan was arranged for the *Grampus* to immediately sail to the nearest port where telegraphic communication could be had with the United States and to send the fullest information to the Commissioner for the benefit of the —

Q. If there were indications of their return to our coast?—A. If we had found them in abundance on those coasts which could be easily reached by our fishing vessels.

Q. What position did you occupy at the time the present Commissioner was appointed?—A. I was officially in charge of the *Grampus*. I had been ordered to Washington by Professor Goode to prepare maps for the use of the International Fisheries Commission which was then engaged in negotiating a treaty—

Q. With Great Britain?—A. Yes, sir. These maps were colored and showed the distribution and areas of abundance of our principal food-fishes in the northwestern Atlantic and also the baiting stations, the distribution of bait species, and the principal fishing ports there, etc.

I was also kept here to prepare notes regarding certain phases of the fisheries and to confer with the Commission as they had occasion to call upon me for information.

Q. How soon after the present Commissioner entered upon his duties was your position changed?—A. The present Commissioner, if my memory serves me right, qualified on February the 21st after his confirmation, which I think occurred the previous day.

Q. 1888?—A. 1888; and in the latter part of April, or early in May, I was ordered to Gloucester on duty, with the purpose of making the necessary preparations for a trip to the Pacific coast, where I was to make a reconnaissance of the fisheries of that region. I had made my preparations for the trip, and was expecting orders when I received a telegram to go to Washington. After my arrival in Washington I was appointed in charge of the division of fisheries, on May 24.

Q. When you received that appointment was your salary increased?—A. Yes, sir.

Q. From what sum to what sum?—A. From \$2,000 per annum to \$2,400.

Q. And the statement is a statement of the organization and duties of your position?—A. Yes, sir. I will explain what might otherwise not appear clear to the committee, that it has been the practice of the Commissioner, in the interest of economy, to assign to the Division of Fisheries, temporarily, certain gentlemen who are embraced under the head of the division of fish culture. The work of these gentlemen is most active in certain seasons of the year in fish-cultural duties, and during the rest of the season they are able to attend to such work as devolves upon them in the Division of Fish culture, and still give to the division of fisheries a great deal of assistance. So that their employment is in the interest of economy, or rather it enables the Commission to get from them a large amount of work that it would not otherwise secure.

Q. What is the difference between the work of the Division of Fisheries and that of the Division of Fish culture?—A. The work of the Division of Fisheries consists in collecting the statistics of the fisheries and in studying the methods and relations, so that we get a comprehensive knowledge of all that pertains to the prosecution of the commercial fisheries. The Division of Fish culture has to do with the propagation of food-fishes and their distribution.

Q. The artificial propagation?—A. Yes, sir.

Q. I think I understand now the difference.—A. I was going to cite, for the information of the committee, the case of Mr. E. F. Locke, who has been in charge of the hatchery at Gloucester, Mass. The work of hatching cod is carried on in the winter, beginning usually in October and continuing through until May. During the rest of the year Mr. Locke is simply janitor of the station or hatchery, as it is necessary to have some one there to look after the property; but it is entirely feasible for him to attend to that duty and still give a full day's work each day to the collection of fisheries statistics at that port.

Q. As to the catch?—A. As to the amount of fish taken?

Q. And the number of boats and men employed?—A. The number of vessels employed in the fish trade, etc. He is at work at that now. That is one of the points I had not fully covered.

Q. Do you have anything to do with the appointment of your subordinate officers within your division; clerks in your office, etc.?—A. I recommend them for appointment.

Q. And the Commissioner appoints upon that recommendation or otherwise, as the case may be?—A. Yes, sir.

Q. Upon your appointment to your present position was it a new classification, new arrangement of the work?—A. It was a new organization.

Q. To apply to the old character of work but under new arrangements, was it?—A. I have explained in this statement fully, I think, in regard to that.

Q. You have described there fully the whole scope of your work?—A. I think fully enough for this purpose.

Q. Let me ask you this question, for some criticism has been made in regard to it. When you were appointed to your present position by Professor Baird your salary was \$2,400?—A. Pardon me—not by Professor Baird.

Q. I mean by the present Commissioner?—A. My salary was \$2,400.

Q. Has that salary been increased since then?—A. It has, to \$2,700.

Q. When was that increased, or about when?—A. I think about October, 1889.

Q. At the time of the increase had your duties and responsibilities been increased, or were they the same as when you were first appointed? That is, what was the occasion, what was the reason for the increase?—

A. The reason for the increase, as I understood it, was chiefly that the salary previously paid was not considered adequate to the duties I had to perform. I would like to have it understood by the committee that in addition to my duties in charge of this division I have had much else to do. I have had to prepare the reports of the construction of and work on the *Grampus*. I am generally called upon to supervise or decide upon all repairs made to the *Grampus* and upon many other things that appertain to her work and welfare. I have also had to prepare a catalogue and must report upon the participation of the Fish Commission in the Exposition at Cincinnati in 1888. I will say to the committee that my duties have been so onerous since I assumed charge of this position that it is rarely the case that I do not have to work at night. Generally my working hours extend from a quarter to 9 in the morning, at which time I reach the office, until 10 o'clock at night.

Q. You do not come within the eight-hour law?—A. Hardly; I never did. For the years I have been connected with the Fish Commission I have always made a practice of working overtime, as the records of the National Museum and Smithsonian Institution, where I formerly had my office, will show.

By Senator BLODGETT:

Q. Are you a relative of Commissioner McDonald?—A. I am not.

By the CHAIRMAN:

Q. In your statement you give a list of the employés in your office, so to speak, and their salaries. Were all of them in the employ of the Commission at the time you assumed your duties?—A. They were. Those in the first list.

Q. Have you made any new appointments since the first organization of the office?—A. I have recommended several appointments.

Q. Have they been made?—A. They have.

Q. Are they included in this list?—A. No, sir; that is the list of the first organization, and all of the persons included there were in the Commission and on salary before I was appointed in charge of the division.

Q. Subsequently have you made any statement as to changes in that

list and new appointments?—A. I have not made a full statement of all the appointments, but will do so if the committee desire it.

Q. In one of those newspaper articles it was charged that you had procured the appointment in your division of several relatives of yours. How is that; is it so or not?—A. It is true only to this extent—

Q. I allude to those newspaper articles which were published and gave rise to this inquiry?—A. I recommended the appointment of my daughter, Lillian M. Collins, as a clerk in my division.

Q. Was she appointed?—A. Yes, sir; she was appointed.

Q. At what compensation?—A. At a compensation of \$50 per month.

Q. Is she an accountant or a clerk?—A. She is a clerk, engaged in special work.

Q. Of what character?—A. Lillian M. Collins first worked for the U. S. Fish Commission in the winter of 1885–86. Both she and my other two daughters assisted me in my official work to a greater or less extent for several months while the *Grampus* was being built.

I will explain that the hull and spars of the *Grampus* were constructed at Noank, Conn.; the steam winchlass and boiler were made at Providence, R. I.; the sails, rigging, cables, anchors, and boats were obtained at Gloucester, Mass., and the rest of the equipment was purchased chiefly at Boston, Mass. It devolved upon me to prepare in writing several copies of the specifications of all articles entering into the equipment of the vessel with the exception of the steam apparatus, and also to attend to the correspondence inviting bids and to draw up the requisite contracts. In addition to this I had to superintend the preparation of all this material as well as to look after the construction of the vessel's hull. At the same time I was engaged in the preparation of reports for publication and gave to them every moment that could be spared from other duties. With all this accumulation of duties it often happened that it was impossible for me to get along without assistance, and for this reason sometimes one and sometimes all three of my daughters aided in the work. None of them received any pay, although Professor Baird authorized the payment of Lillian M. Collins.

The latter was first appointed to temporary duty by Prof. G. Brown Goode on October 1, 1887, and continued on pay at \$40 per month for three months, until December 31. She did considerable work for the Commission, however, in the fall of 1887, before she was paid, and also in January and February of 1888.

She was reappointed by the present Commissioner, Colonel McDonald, on April 8, 1889, at \$50 per month and assigned to special work of an editorial character. Her work consists chiefly of classifying and arranging newspaper clippings, so as to make them most convenient for reference in order that all information of this nature may be easily available to the Commission.

At the time of her appointment the Commission had on hand somewhere between 15,000 and 20,000 newspaper clippings. Most of this material was unassorted, and at the best only a rough classification had been attempted, so that a great amount of time was required in order to find any particular item which might be needed, while it was evident that much of the material was wholly worthless because of the inexpediency of looking through such a mass of data in search of any item that might be required.

Here I beg to file with the committee copies of correspondence relative to that.

The correspondence is as follows :

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., December 26, 1885.

Capt. J. W. COLLINS,
Gloucester, Mass. :

DEAR SIR: Your letter requesting authority to employ your daughter at \$5 a week for clerical work was referred to me on my return, and I write to authorize you to engage her temporarily and that you will advise me about how long you deem it necessary to have this additional clerical assistance.

Very truly, yours,

SPENCER F. BAIRD,
Commissioner.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., April 3, 1889.

Col. M. McDONALD,
U. S. Fish Commissioner, City :

DEAR COLONEL McDONALD: I inclose requisition for the employment of Lillian M. Collins in the work of the division of fisheries. The special work which I desire her to do now is to classify and arrange newspaper clippings, etc., so that they will be available as soon as may be for use in my division. This seems demanded by the necessity that arises almost every day to consult such data when I am called upon for information. In the present condition of the material much time is lost by myself and my clerks in hunting through a mass of unassorted clippings, and often it is impossible to find what is needed, though it may be in our possession.

This recommendation is made necessary also by the fact that the accumulation of such material is so great that Mrs. Palmer is entirely unable to manage it, if well, and unfortunately she is ill at present and will probably not be able to do much for some time.

Very respectfully,

J. W. COLLINS.

By the CHAIRMAN:

Q. It has been charged before the committee that about the time of the present Commissioner's appointment you made quite an extended trip working up influence in favor of his confirmation, attending exclusively to that while your pay continued as in the discharge of your duties. How is that? Did you do any work of that character?—A. I was not out of Washington, to the best of my recollection, from a date several weeks before the Commissioner's appointment until after his confirmation. I was confined to the house by illness for a week immediately after his appointment.

A. You gave no time to working up influence and causing letters to be written to Senators favoring the confirmation of the present Commissioner?—A. Not in office time. The only letter that I wrote—

Q. If you wrote any please state it so that we may know the full extent of your assistance?—A. The only letter of that character I have any recollection of writing was one addressed to you, at your request.

Q. Yes; I remember of receiving one. You took no time from your duties in traveling and working up that influence with Senators?—A. No, sir; I did not.

Q. The present Commissioner was connected with the Commission before his appointment as Commissioner?—A. The present Commissioner, to the best of my knowledge, was connected with the Fish Commission in carrying on the fishery census work in 1879, and has been connected with it ever since.

Q. It has been charged in some of the newspaper articles which have been published that there is no discipline at this central station; that the employes in the different rooms or departments there are in the habit of coming late and being away at noon quite a time, and leaving before 4 o'clock, and that there is generally a lax condition of discipline. What is your observation on that point?—A. My observation is quite to the contrary.

Q. Do the employés in your office report promptly?—A. They do.

Q. And remain until 4 o'clock?—A. And remain until 4 o'clock or until the office closed. They frequently remain later. In many cases they work at night.

Q. Do they receive extra compensation where they work at night?—

A. No, sir. I will say that on many occasions it has been necessary for many of them to work late at night, until 10 or 11 o'clock p. m. When we were preparing the exhibit for Cincinnati in the summer of 1888, the people who were assisting me, as well as myself, generally worked until midnight, and that system of work was continued after we reached Cincinnati.

Q. Let me ask you if you have any knowledge of the preparation of some apparatus devised and fitted up with a view to the shipment of fish to Germany last summer?—A. I have no knowledge whatever, except hearsay.

Q. Is your daughter, whom you have spoken of, the only relative you have in your office?—A. She is.

Q. And the only relative you have connected with the Commission?—

A. The only relative I have connected with the Commission or any Government service as far as I know.

Q. Have the fishermen of the coast adopted the plans or suggestions which have been furnished by the Commission as to the construction of their fishing boats within the last few years? Has there been any particular change in the style of boats used by the fishermen?—A. There has been a marked change.

Q. Has that change been brought about by suggestions from the Department?—A. Undoubtedly it has. I will say to the committee that as early as the spring of 1882 I reached the conclusion that very great error had been made by our builders of fishing vessels in that they made the vessels too wide and too shallow for the service for which they were employed. In consequence, it frequently happened in gales that they were capsized or knocked down by heavy seas, and not having their center of gravity low enough they failed to right again and consequently filled, going down with all hands. It was not an unusual thing years ago, as the records will show, for as many as eight or ten and sometimes more vessels to be lost in a single gale, and with crews amounting to eighty or ninety or a hundred men. At first I wrote a series of letters and had them published in the Cape Ann Advertiser, at Gloucester, advocating a change in the vessels both in form and rig, and when Professor Baird put into my hands the designing of the *Grampus*, I embodied the ideas I had in her form and rig.

Q. Was she considered to be an improvement upon former vessels when you came to use her?—A. Decidedly so. She has proved to be not only an excellent sea boat, but she is very much swifter than the vessels previously used. Starting from about the time she was built, there has been a very marked improvement in the construction of fishing vessels so far as relates to their form and rig, and the most skillful designers have been employed to prepare the plans and specifications of fishing vessels.

Q. And they have been quite generally adopted?—A. Very generally adopted. The change has been particularly beneficial in that not only are the vessels more seaworthy, but they are vastly swifter.

Q. There are a few general questions I would like to ask you. It has been charged that in the administration of the office Commissioner McDonald indulges in more or less favoritism; that he has his favorites

and pets who are granted unusual privileges and advancement in pay, etc., and that the salaries of others who have been in the service; many who were in the service under Professor Baird, who did not come within his special favor, have not been increased, and they have not been advanced as they should have been. What is your observation on that point?—A. My observation is that Colonel McDonald has been exceedingly conscientious in all matters appertaining to the administration of the Fish Commission, and it is my thorough conviction that wherever promotions have been made they have been made in consideration of the usefulness of those who have received the promotions.

Q. It has been charged that he is governed by political considerations; that is, that he, being a Democrat, has been trying to appoint Democrats rather than Republicans. Do you know anything about that?—A. So far as my observation is concerned—I know a good deal about it—I can positively assert that to the best of my knowledge there has never been any such consideration since he has been Commissioner.

Q. What you intend to convey is that you think he is not governed by any consideration as to the politics of the person appointed?—A. That is what I wish to convey. In the appointments in my own division the question has never been asked by him what the politics of any individual was, and that has been the general practice in the Fish Commission ever since I have been connected with it.

Q. It has not been a political department?—A. Never.

Q. What would be the effect and value of the Commission if it were under political influences, and if in the change of administration employes were dismissed and others of the same politics as the controlling party were appointed?—A. I think it would rapidly deteriorate and that its usefulness to the country would vanish in a very brief time.

Q. Experience and thorough education in the various branches are essential to its success?—A. It is absolutely necessary, and perhaps more so in the Fish Commission than in any other department, even among the scientific departments of the Government.

Q. Do you know Mr. E. I. Rogers?—A. I do.

Q. It has been charged that he has not received proper advancement, and that he is entitled to receive more than he does receive because he is not a favorite of the Commissioner. What would you say on that point?—A. I am fully convinced that it is not a question of favor or lack of favor.

Q. Is Mr. Rogers an efficient man in his position; is he a good draughtsman?—A. So far as his draughting work is concerned, his copying of maps or plans, I am not so able to speak perhaps as others would be. He has done a little work of that nature for me, but not very much, and usually of late it has been satisfactory. He has also made some drawings for me, what are usually termed free-hand drawings. I will say that Mr. Rogers has improved somewhat in his work recently, and in free-hand drawing, but he receives the same salary I think that a young gentleman received who was with me until last year and who was a very proficient artist.

Q. More so than Mr. Rogers?—A. Yes, sir.

Q. And he received the same pay which Mr. Rogers received?—A. He received the same pay, \$900, as Mr. Rogers receives.

By Senator SQUIRE:

Q. Did you fix his pay or did the Commissioner?—A. I recommended his pay. In fact I recommended an increase in his pay. I had him at work prior to the time I received charge of the Division of Fisheries. He was at work under my direction and acquired great efficiency,

but he finally resigned to attend an art school in New York. Since then he has done a little work for me by piece-work.

By the CHAIRMAN:

Q. What was his name?—A. Charles B. Hudon.

By Senator SQUIRE:

Q. Is there any regulation or rule or practice upon which you go in making your recommendations or in assigning salaries to individuals? Is there any plan or scheme, or does it depend solely upon the judgment of yourself or the Commissioner at the time? Do you have any system in regard to it so that one class of men receive pay at a certain rate per annum or per month, and another receives another rate of compensation in proportion to their skill, or is it a matter of judgment at the time and decision upon the part of yourself and the Commissioner?—A. There is no system such as has been adopted in the other Departments of the Government, and in my judgment it would not be practicable to have such a system without materially injuring the work.

Q. Do you think it is better to leave it entirely to the view of the Commissioner or to those who recommend him at the time, or to have some regular system there so that men might look forward to promotions as they do in other branches of the service—a graduated scale of salary?—A. If there was a graduated scale of salaries and a regular system such as obtains in the Departments——

By the CHAIRMAN:

Q. That is, class 1, class 2, and class 3?—A. It seems to me that the development of the work, its energies, would be largely lost. The promotions now are made entirely because of efficiency. For instance, I have a clerk whom I find not only efficient but zealous enough so that he will work twelve to sixteen hours a day.

Q. Occasionally. You do not mean steadily of course?—A. Almost steadily.

By Senator SQUIRE:

Q. Those cases are rare?—A. They are not specially rare in my division. My field agents who go out into the field to collect fish statistics and other information generally work from eleven to fifteen hours a day. They have to do it, and their efficiency depends largely upon that.

Q. Upon what?—A. Largely upon the fact that they are willing to work overtime, and do it.

Senator SQUIRE. Would not that efficiency be stimulated if there was prospect of increase by reason of the regulations governing the increase of salaries from time to time, or promotion?

By the CHAIRMAN:

Q. I understood you to say that the promotions and increases in compensation are made in consequence of efficiency and devotion to the work?—A. That is what I intended to convey. That is the rule that applies now. If a man is found specially efficient and zealous in the work, if he is willing to throw into it all of his energies, and he seems to comprehend quickly matters with which he has to deal, he is promoted.

By Senator SQUIRE:

Q. As I understand you, at the present time you think that all these promotions are made for merit or for meritorious services and because the

increase of salary is deserved. You of course speak of matters as they exist now under your observation. Might not this power be used at a future time without reference to this efficiency, that is, subject to the whim of the Commissioner altogether? Might not it be dangerous to allow this institution, which has gone on in a sort of a peculiar way, to continue on in that way?—A. It might be dangerous in the hands of an unscrupulous person, but the fact that the Fish Commission has been in existence for nineteen years, that it has been conducted upon that system, and that it has accomplished results the value of which I think no one questions, is perhaps a good reason why a change should not be made without very careful consideration.

Q. That might be true of other branches of the Government; but should this be an exception? You are an expert. I speak to you because being there so many years, perhaps you have mature judgment about it; and you have had so many opportunities for judging that your views on that point are valuable, no doubt. I ask you whether the danger is not so great that the time has come—in other words, that there should be a different system, something that should be regulated by law and not purely by the judgment of the Commissioner at the time, or in consequence of any whim or humor he might be in in regard to any man?—A. If I am correctly informed, the Fish Commission is not entirely an exception under the Government. I think that in several of the so-called scientific bureaus promotions are made on the judgment of the person in charge.

Q. And offices created?—A. And offices created.

By the CHAIRMAN:

Q. What branches? Please specify some of them.—A. The National Museum may be taken as one, in which I think I am correct in asserting that promotions are made on the judgment or recommendation of the person in charge, or on his appointment.

Q. What would be the effect of a rule like this, that after a person, a clerk, in any position had served three years and had done his work well he should be advanced under a rigid rule of that character?—A. In the Fish Commission I think that any benefits that might accrue from a rigid rule of that nature would be more than counterbalanced by the disadvantages under which it would place the Commissioner. I suppose that it is well known to the committee that there is a great variety of ability shown by different men. I find in my own work that one man will grasp the situation in a year's training and be able to do as well or better than one who may have had considerably longer experience.

By Senator SQUIRE:

Q. In other words, you would not be governed by the element of time in making promotions. Ought there not to be some system about it? For instance, draughtsmen of the first class and draughtsmen of the second class, and so on in regard to that system. Then in regard to the fish culturists, as they acquire skill and ability and you repose confidence in them, they should be promoted from one class to another in consequence of good behavior and efficiency.

The CHAIRMAN. I understand that that is the existing condition of things.

The WITNESS. Practically.

The CHAIRMAN. That if a man after being employed a certain time becomes efficient and all that and makes himself valuable, he is more apt to be advanced than another man who may have been in the service a longer time?

Senator SQUIRE. Yes; but is there anything now in the present status of the Commission that makes it incumbent on the Commissioner to advance a man in proportion to his merits; or is there anything to prevent the advancement of a man disproportionately to his work, purely for personal or political reasons? Could not a man's salary be advanced simply by mere direction at the moment—advance this man's salary from \$2,000 to \$2,500 or to \$3,500, or is there any limit anywhere? Can not he make it \$5,000 as well as to make it \$2,000.

The WITNESS. That seems to me a point which can better be considered by the commissioner.

Senator SQUIRE. You are bearing on that branch of the question. I am speaking to you as a man of judgment, as a man who has had great experience in this direction. I do not ask you to step in and criticise this thing. We are considering this question, and your views upon it are as good as those of any one else that I know.

The CHAIRMAN. There is no law fixing the merit of the clerks. In the Treasury Department we appropriate for a certain number of clerks in a certain department, and a certain number in another department, at a certain fixed salary. Your point is that there is no rule governing salaries here.

Senator SQUIRE. Nothing that a man can look forward to except the approbation at the moment.

The CHAIRMAN. I was going to say this, that in this department, as I understand it, there are no salaries fixed by law; there is no rule of promotion fixed by law; it is all within the judgment and discretion of the Commissioner; while in the Treasury Department, for instance, there are certain fixed grades with certain fixed salaries attached to those grades, and advancements are made or promotions are made upon the action of the Secretary of the Treasury. He can promote from one grade to another, and when that promotion is made it is from a \$1,200 position to a \$1,400 position. The Fish Commission is upon a different basis. That is the idea.

Senator SQUIRE. I will ask Captain Collins whether, in his opinion and judgment, after this growth has been reached, after the Commission has assumed its present proportion, the time has not arrived when there should be some regulation of the salary by law or by a system other than that of the whim or judgment or favor of the Commissioner at the moment.

Senator BLODGETT. It does not necessarily follow that the promotions will be made in their order even after that. It will be left discretionary with the head of the department to make promotions, as it is in all departments.

The WITNESS. That is the point I was going to make, that it would still remain in the discretion of the head of the department to promote any individual whose salary may be fixed by law. But I do not understand that even in the larger Departments at the present time the Secretary is prohibited from advancing a man to any position for which in his judgment he is fitted.

The CHAIRMAN. When he is fitted he goes into a class at a certain fixed salary?

The WITNESS. Yes, sir.

Senator BLODGETT. What would be the objection? Here is a draughtsman who thinks he ought to receive a higher compensation. He has been there perhaps for years and he thinks his work is good. Now what would be the objection; would it not be proper that there should be classes? For example, I might say the same with regard to fish cult-

urists, as you call them, whether there should not be gradations in their classes?

The CHAIRMAN. You mean fixed by law? Of course there are gradations now.

Senator BLODGETT. Yes, sir; I mean by law.

The WITNESS. There would be in my opinion nothing urged against that excepting in the interest of economy.

Senator BLODGETT. To be left discretionary with the Commissioner to make promotions if he thought them worthy even after these classes were established.

Senator SQUIRE. Yes, sir.

The WITNESS. My experience with the Fish Commission teaches me this, that is, that the salaries paid by the Commission in proportion to the duties performed are very much lower than in the other departments, and if they should be established by law they would probably be put on the same basis as they are in the other departments, and would bring it to a certain extent under departmental routine; at least to that extent. Then the question might arise, or the effect might be this, that being under that routine, whether there would be the same zeal and energy displayed that is noticeable at the present time in the work of the Commission. I take it for granted that there are very few of the people in the larger departments who work much overtime, and I know that in the Fish Commission it is a common thing.

By Senator SQUIRE:

Q. Please give me an idea of your operations on the Pacific coast. State it briefly.—A. The operations of the Fish Commission on the Pacific coast within the past two years have been far more extensive and comprehensive than ever before. I will only mention now incidentally the work of the *Albatross*, of which Mr. Rathbun, who is in charge of the scientific inquiry, can give you a more comprehensive account. That work comes particularly under his charge and jurisdiction. It may perhaps be enough for me to say, briefly, that the *Albatross* has investigated the fishing grounds on the west coast from Lower California to Behring Sea, and in addition to mapping the banks has ascertained the value of them for fishing purposes. My own work, or the work prosecuted under my charge, covers an investigation of the coast and sea fisheries, so far as they relate to commercial purposes, from San Diego to Puget Sound, and also a study of the salmon fisheries of Alaska in conjunction with the investigation made last summer under the direction of the scientific inquiry. I have aimed to get the fullest information, statistical and otherwise, of the fisheries of the Pacific coast and rivers, and a comprehensive illustrated report is now in the course of preparation and is well advanced. I have already shown you some of the maps that have been drawn to illustrate the fisheries of that region.

Q. Take, for instance, in the vicinity of the State of Washington. Have you found any indications of extensive fishing banks in that vicinity?—

A. There have been fishing banks found by the *Albatross* off the west coast of Washington, but, as I have said, I would prefer that Mr. Rathbun would explain that to you, because he has the maps and the whole thing at his fingers' ends.

Q. This inquiry you are speaking of now relates to the fish that already exist there and not to the placing of any spawn or any young fish out there. Have you had that in charge too?—A. No, sir.

Q. You have had nothing to do with that?—A. I have nothing to do with fish-culture operations. My duty is simply to study the methods

and relations of the fisheries to and obtain the statistics of them commercially.

Q. From what you have already learned, have you formed an opinion as to the commercial value of the fishing grounds on the Pacific coast; have you formed a definite opinion as to their value?—A. I have formed an opinion so far as the fishing grounds are now known, taken in conjunction with the methods of fishing.

Q. Now practiced?—A. Now practiced.

By the CHAIRMAN:

Q. Are they of a good deal of value?—A. Undoubtedly the fisheries of the Pacific coast will reach a great value in the future. They are now, as compared with our Atlantic fisheries, in an early stage of development, and they require a larger population for market. They need a larger aggregation of the people on the Pacific coast to constitute the necessary markets.

By Senator SQUIRE:

Q. Under the present methods of cold-storage shipments, etc., could they not be shipped through to the East? They are doing it already I believe.—A. Yes, sir; the salmon fisheries can be improved very materially by the new methods of transportation. The only drawback is the high rate of transportation.

Q. What other fish are there in such quantities as to be favorably considered by you in reference to their commercial value—what other kinds of fish besides salmon?—A. The principal kinds are the cod and halibut and various species of the so-called rock-cod. There are also on the coast of California the bonito, mackerel, and various other species of food-fishes.

Q. You do not know anything about the details of the effort to introduce the lobster there in the waters of Puget Sound?—A. I only know that lobsters have been sent there by the Fish Commission, and that they were planted in those waters.

By the CHAIRMAN:

Q. Do you know anything of the result of that experiment?—A. It is too early yet to have the results.

By Senator SQUIRE:

Q. Your efforts have been connected with the ascertainment, first, of what fish there are there; stating what fish there are there and their probable future commercial value?—A. My efforts have been to ascertain the commercial value of the fisheries and what amount of fish and other marine animals is taken for commercial purposes, and it also embraces a study of the fishing grounds, the fishermen, the apparatus, vessels, and boats.

Q. You say "and other marine animals." Do you include seals?—A. Seals and sea-otters, mollusks, including oysters and clams, and crustaceans, such as crabs, lobsters, etc.—anything that comes from the sea and is considered a product of the sea is taken cognizance of, even to the utilization of the sea-weed for fertilizing and other purposes, the capture of whales and other cetaceans.

Q. I understand you that within two years the commission has spent a good deal of time on this subject?—A. We have made, as I have stated, a complete investigation of the coast and river fisheries from San Diego to Puget Sound.

Q. You say "river fisheries." Have you done anything with any other river besides the Columbia?—A. Yes, sir.

Q. Any other river in the State of Washington besides the Columbia?—A. We have investigated the salmon fishery in the State of Washington.

Q. Have you investigated the upper Columbia?—A. We have gone as high as any important salmon fisheries, up to Celilo.

Q. You have only gone as high as Celilo?—A. Yes, sir.

Q. Here (indicating on map) is the Snake River; that comes in here (indicating). It is 3,000 miles long and it is a branch of the Columbia. The Columbia River is one of the largest rivers in the world.

By the CHAIRMAN:

Q. Yes, sir. There are no commercial fisheries, no establishments where fish are put up and shipped on the upper part of the river?—A. Not as I understand it.

By Senator SQUIRE:

Q. Have you done anything with such rivers which flow into Puget Sound as the Skagit River. That is a large river; not as large as the Columbia, but it is a large river emptying into Puget Sound and navigable fifty miles from its mouth.—A. We have not attempted to investigate those small rivers where they have no commercial fisheries.

Q. There are various canneries at different places about the sound; but there is not such a large business done as there is on the Columbia River?—A. All the canneries on Puget Sound, all the fishing grounds, and pounds, and things of that kind are located on the map.

Q. In regard to propagation, state whether it would not be practicable to have a man stationed, for instance, on Puget Sound or on the northwest waters of the United States or vicinity, to superintend the development of fishing industries there?—A. The Commissioner could doubtless best inform you as to the feasibility or desirability of having a man stationed at Puget Sound in the interest of the fisheries so far as relates to fish cultural operations or the propagation of fish. In the development of the work of the Division of Fisheries ———

Q. By that you mean the commercial fisheries?—A. Yes, sir; which embraces a collection of statistics and a study of all the questions relating to the commercial phases of the fisheries, it has been my desire to have agents at the more important fishing centers throughout the country, and I consider that Puget Sound is a locality that is especially desirable to study.

Q. In that connection?—A. In that connection.

Q. In connection with the commercial branch of the business?—A. That has been stated. The reason why we have not heretofore carried out this phase of the work more fully than has been done is the lack of appropriations.

Q. Would it not be proper to allot some share of such appropriations as you do have?—A. If we did that and established agencies at the more important centers of fishing we would have nothing left to carry on the regular investigations and prepare the reports after the statistics had been collected.

Q. How large a sum do you require to enable you to do that at the more important places? I mean this branch that you have now under your charge?—A. I think \$5,000 additional would enable us to do it. If it is practicable I desire to personally visit the Pacific coast and make a reconnaissance of the fisheries in that region at an early day. I have had this in mind during the past three years and in the spring of 1888 was prepared to go there when other duties prevented, and last summer was as far as Denver when I was recalled by the Super.

intendent of the Census who desired to consult me regarding the obtaining of the fishery census.

Q. How soon do you think you might be able to go?—A. I can not definitely determine how soon I may be able to go. The present investigation of the Fish Commission has very much interfered with my work and has made it impracticable for me to do things that I had planned to do this summer.

Q. There is another thought that has occurred to me. Have you ever, in this commercial branch of the subject, made an estimate of the total amount of fish consumption in the United States, so as to be able to show how valuable fish food is to us as a people, relatively to other articles of consumption?—A. I have not made such an estimate for the simple reason that since I have been in charge of this work there has not been time to compile all the statistics bearing upon the subject, nor has it been yet feasible to investigate the river fisheries of the country to the fullest extent.

Q. You have never been able to come to any approximate estimate as to the relative consumption of fish, for instance, as compared with meats?—A. Such an estimate could be prepared as an approximation. We should have to take into consideration there the importations of fish products into the United States.

Q. Have you ever yet arrived at any approximation about what is the importation of fish into the United States?—A. That is a matter of record in the Treasury Department.

Q. Do you take cognizance of that; do you furnish them material?—A. No, sir; that comes through the custom-house.

Q. And you never made any examination of those things?—A. No, sir; it is not necessary, because all the importations are matters of official record in the custom-houses and we get the returns from the Treasury Department and use them as we have occasion. The same obtains regarding the exportation of fish. That is a matter of record in the Treasury Department.

Q. Do you know whether or not our exports are equal to our imports?—A. I could not say definitely without figures. I will say, however, if you desire to know it—

Q. I do not care to go into the detail. It is the interest I take and I think that the public would take. You have presented us here a very elaborate statement, which is undoubtedly valuable as to the ground that you work upon, and in connection with this I asked you questions in regard to the value of your work?—A. Those statements of the quantities and values and number of men and all other statements relating to statistics appear in our reports, and it would be impossible for me, I presume it would be practically impossible for any one else, to carry all the data in his head.

At 12 o'clock m. the subcommittee adjourned until Friday, July 25, 1890, at 10 o'clock a. m.

WASHINGTON, D. C., *July 25, 1890.*

The subcommittee met at 10 o'clock a. m., pursuant to adjournment. Present, Senators STOCKBRIDGE (chairman) and BLODGETT.

TESTIMONY OF RICHARD RATHBUN—Recalled.

RICHARD RATHBUN, being recalled, testified as follows:

The WITNESS. I have some material here which I want to present, by request of the Commissioner, to show the purpose and the workings of my department of the Commission, it being one of the departments which has been criticised for the work it has presumed to do since Professor Baird's death.

In order to be concise I have reduced the matter to writing. I have a statement to make, which is of a general character, and which I should like to make orally, if I may. The rest is in the nature of more technical discussions, as brief as possible; and I would like simply to run them over with maps I have here, showing the extent and character of the work.

By direction of Commissioner McDonald I have had the honor to prepare for your consideration a brief account of the operations of the department under my charge during the past two years, together with a statement of the expenditures connected with the same. Considering, however, that the newspaper charges serving as the bases for the investigation now in progress contain severe criticisms upon the assumed functions and the administration of my department, coupled with gross misrepresentations of the actual condition of affairs, I desire to preface the description of the work performed with certain explanations going to justify the position taken by the Commissioner in regard to the treatment of fishery matters from a scientific stand-point. Should his position be the correct one, it remains for the committee to decide, after an examination of the papers laid before it, whether the work has faithfully been carried on, or whether the contrary is true.

The three divisions (aside from general administration) which represent the present organization of the Commission, are based upon the different character of work involved in its operations, and not upon the scope of the greater problems before it. That is to say, all of the divisions may be called upon to take action with regard to each general problem, showing their close inter-relations and also the difficulty of imposing fixed limits within which to discuss the special functions of each. My preliminary remarks may, therefore, overlap to some extent the provinces of the practical fisheries and of fish culture.

The department with which I have been charged has for its full title "Division of Scientific Inquiry Respecting Food-Fishes and the Fishing Grounds." For the sake of brevity, however, this has been shortened in common usage to the "Division of Scientific Inquiry," its object being the application of scientific methods of research to fishery problems.

HISTORICAL NOTICE.

The Fish Commission was established by act of Congress in February, 1871, for the express purpose of investigating the cause of decrease among food-fishes chiefly on the New England coast, and of determining remedial measures in respect to the same. The following year it

was further charged with the propagation of fishes as a partial means of restoring depleted grounds, and later its scope was enlarged to include the methods and statistics of the fisheries, having reference in the beginning mainly to our relations with the neighboring British Provinces. The necessity for the first inquiry was urged upon Congress by Professor Baird and other prominent individuals, whose intimate acquaintance with the subject entitled them to the fullest recognition. The plan was novel, having for its object the study of the question from a scientific point of view, instead of from the one then current both in Europe and in America, by interrogation of the fishermen. The results proved satisfactory and for two decades they have passed the public scrutiny without adverse criticism. From this initial point the scope of scientific inquiry was gradually increased until, under Professor Baird, it finally covered what is essentially the present scheme of operations, and it is with reference more to the manner of carrying out this scheme than to its character, past and present, that I desire to call attention.

The writer's opportunities for judging of the scientific work began in the summer of 1874, when, as a volunteer, he was attached to the sea-coast party. He held the same relations in 1875, and since the spring of 1878 has been in the regular employ of the Commission, down to the time of Professor Baird's death having been practically second in charge of the dredging operations, which were chiefly conducted under the supervision of Professor Verrill.

During Professor Baird's administration the scientific investigations were mostly limited to the Eastern sea-coast, and had reference mainly to the New England region.

The regular field-work was chiefly carried on in the summer months, and during the first decade it was customary to select a new headquarters every year, in order to reach conveniently all parts of the New England coast. In 1881, however, a permanent station was established at Wood's Holl. During 1871 and 1872 the largest vessels regularly at Professor Baird's command were only sail-boats and steam-launches, but from 1873 to 1879 he was given the use of the naval tugs *Bluelight* and *Speedwell*. The Fish Commission steamer *Fish Hawk* was completed in 1880, the steamer *Albatross* in 1883, and the schooner *Grampus* in 1886. The *Albatross* has exclusively been employed in the work of scientific inquiry, and the *Fish Hawk* and the *Grampus*, when their services were not required for other purposes.

The scientific personnel, during the earlier years of the Commission, consisted entirely of volunteers, the temporary exploring parties being composed of well-known specialists and advanced students from several prominent colleges and museums of natural history. As the work grew in magnitude and importance, and the duties became more arduous the custom sprang up of paying these assistants small salaries, not sufficient to compensate them for their time, but large enough to cover their ordinary expenses. It also became necessary to employ regular assistants to care for the large collections that had accumulated, and to conduct the continuous researches in several branches, which were carried on throughout the entire year.

Professor Baird's connection with the Smithsonian Institution and the National Museum increased his facilities for advancing the Fish Commission work, and, as is well known, during his life, a close relationship existed between those three institutions which proved mutually beneficial to them all. At the hands of an unscrupulous person a co-partnership of this character might not have been judicious, but no one

who is acquainted with the facts can for a moment doubt the good and entirely proper purpose which it served. Three assistants of the Commission, of which the writer was one, were made curators in the Museum, a similar arrangement also existing in respect to the Department of Agriculture, the Geological Survey, and the Bureau of Ethnology, which together furnish some eight or nine curators. The departments of the Museum presided over by the first-mentioned curators corresponded with their duties in the Commission. The collections which they handled and studied were almost exclusively the results of Fish Commission work. Their salaries were paid by the latter, the expense incidental to the storage of collections, chiefly by the former, these collections being transferred formally to the Museum's keeping, in view of the superior accommodations furnished in the fire-proof building of the Smithsonian Institution. These curators, moreover, were far from being limited in their duties to the care and elaboration of collections. They took an active part in all the field researches and in the preparation of reports on economic subjects relative to the fisheries.

In addition to the persons specified above there were a number of other permanent assistants. Prof. A. E. Verrill was paid a nominal salary for the important work he did in connection with the natural history explorations and the study of marine forms. Prof. John A. Ryder was employed as embryologist, and Dr. J. H. Kidder as physicist and chemist, and there were always one or two naturalists attached to the steamer *Albatross*.

No organization was effected in the personnel of the Fish Commission during the life-time of Professor Baird, except in the offices of general administration and distribution. The form of government was essentially paternal. Professor Baird gave personal direction to nearly every detail of the service. The orders went from him directly to each assistant in charge of work. There were, properly speaking, no sub-chiefs, outside of the offices mentioned above, to share the great responsibilities and to help carry the heavy burden which bore with greater weight year by year upon the broad shoulders of that untiring man. It was undoubtedly the petty worriments of administration that caused his premature death.

In 1885 Professor Baird was persuaded to consider the proposition to organize his forces. A committee of Fish Commission employes was appointed by him, and they draughted a set of regulations which embodied essentially the same organization that now exists; but through influences that were brought to bear, they were not adopted until after his death. What would have been the effect of organization while he lived it is now impossible to conjecture. With several chiefs standing in a position to advise with him and competent to do so, feeling also the responsibility for the work intrusted to them, it is probable that results of a somewhat different character might have been accomplished, but the researches could not have been more conscientiously conducted, nor could they have had a better purpose in view.

As before explained, the Fish Commission work began in the interest of depleted fisheries, and during the first two or three years Professor Baird was chiefly occupied with that specific problem, applying to it all the methods of investigation at his command. Subsequently he states that some of his deductions had not been entirely verified, an act which is not surprising, considering the relatively scanty information he possessed. He became convinced that fishery matters first required of science a comprehensive knowledge of the biological and physical conditions of the sea over wide areas before positive and safe con-

clusions could be made. This was most imperative in respect to the distribution and habits of fishes, and the relations of different species to their environment, to their associates, and to the lower forms of life constituting their food.

Thenceforth greatest stress was laid upon the natural history work, both in shallow and in deep water, with the accompanying observations of temperature and density. Dredging operations were most actively carried on in the vicinity of Eastport and of Portland, Me., between Cape Ann, Mass., and the eastern part of Long Island Sound; on the continental slope south of Martha's Vineyard, and along the outer edge of that slope, in deep water, from George's Bank to Cape Hatteras. A number of stations were occupied in the Gulf of Maine. The steamer *Albatross* made two trips across the great off-shore banks as far as the eastern edge of the Grand Bank, and cruises were undertaken to the Gulf of Mexico, the Caribbean Sea, and the Bahama Islands, chiefly for the benefit of the Hydrographic Office and at its expense. One of the principal duties of the *Albatross* was the study of the mackerel and menhaden grounds, but in that connection she was principally engaged in tracing the movements of the schools of fish, in interrogating the fishermen, and in visiting the factories. No special plans were matured for determining the characteristics of the grounds and the laws which regulate the varying abundance of fish. The temperatures were not observed with sufficient system and regularity to furnish data for a single continuous profile across the regions which those species traverse.

A very large amount of seining and of collecting by other methods was carried on in the neighborhood of the regular shore stations and in other localities along both the Atlantic and the Pacific coasts. Fishing methods were also employed on board the steamers, and assistance was received from the fishermen and from other bureaus of the Government. The results of all this work are of great value, and many reports upon it have appeared in the publications of the Fish Commission and of the National Museum. The large quarto volumes recently issued by the Fish Commission give practically an epitome of the benefits derived so far as they relate to the economic species down to about 1882.

The collections that accumulated have been stored in two places, the National Museum at Washington and the Peabody Museum at Yale College, Prof. A. E. Verrill, of New Haven, Conn., having had charge of the study of the marine invertebrates from north of Cape Hatteras.

In his report for 1883 Professor Baird remarks concerning the ocean fishing-grounds: "There has never been any formal investigation on this subject, and the banks that are known have been brought to light purely by accident."

It had evidently been his intention to take up this important subject, but for some reason it was never done. However, he succeeded in laying a good foundation for those who were to follow, and the broad surveys which he directed will serve as a basis for all future work. Moreover, many valuable discoveries were made in the way of fishery resources and other matters connected with the sea, the discussion of which would needlessly prolong these remarks.

Little attention was paid during the latter part of Professor Baird's life to the systematic determination of the causes of decrease among food fishes, but he was especially active in measures for replenishing the fisheries by means of artificial propagation, in relation to which many important monographs were prepared on the development and life history of economic species. Substantial progress was also made in the

investigations undertaken for the purpose of devising methods for the propagation of oysters on a commercial basis. The physical and natural history features of the large river systems were but partially understood, however, and there were many uncertainties regarding the stocking of new regions.

THE ADMINISTRATION OF COMMISSIONER M'DONALD.

In the interval of six or seven months between the death of Professor Baird and the appointment of Mr. McDonald, the commissionership was held by Prof. G. Brown Goode, assistant secretary of the Smithsonian Institution, who adopted, in its main features, the organization which exists to day.

As soon as Mr. McDonald entered upon his new duties, the purpose and functions of the Division of Scientific Inquiry were fully discussed, and advice was obtained from prominent scientific men, as well as from the fish commissioners of several States. He determined to abandon for the present the general oceanic problems, and to concentrate his efforts upon more specific ones, which promised immediate benefits to the fishermen and to fish culture. He found that the off-shore fishing grounds in the Gulf of Maine had never been examined by the Fish Commission, except in a very general way, while nearly all the marine surveys south of Block Island and as far as Florida had been confined to the outer steep edge of the continental plateau, outside of the ordinary range of fishing grounds. Scarcely anything had been done in the Gulf of Mexico, and the Pacific coast had not been touched upon beyond the study of its shore fishes.

The *Albatross* was then on her way to San Francisco. It was decided that she should first be assigned to develop the cod and halibut banks on the coasts of Alaska and Washington, which were then attracting particular attention and promised to afford the most important fisheries in the North Pacific Ocean. Later she would continue her work southward along the coasts of Oregon and California to San Diego. Her operations were to be confined to the continental border, where alone it was expected that fishing grounds could be found. The surveys were to be conducted with great care and thoroughness in order to determine the precise locations of all spots suited to fishing and their chief characteristics and resources. After the completion of the first general survey special fisheries will be investigated, and if the policy of the Commissioner is faithfully carried out, a few years will be sufficient to determine the fishery resources of that coast to the full extent that will be demanded by the western markets for a considerable period of time.

The *Fish Hawk*, which has generally served as a tender to the Wood's Holl laboratory during the summer months, was to be withdrawn from that service, and, so far as the funds would permit, take up the study of the oyster grounds of southern New England and New York, with respect to certain problems in which the oystermen are deeply interested, such as the destruction of oysters by star-fishes, and the failure during some seasons to obtain a set of spat.

The *Grampus*, when not required for other purposes, was to be assigned to the specific duty of determining, by precise methods, the actual characteristics of the off-shore surface fishing areas, the conditions regulating the migrations of pelagic fishes, like the mackerel and menhaden, and the possibility of anticipating their movements by surface or atmospheric indications. She was also to be available for the exploration

of bottom fishing grounds, in accordance with the methods followed by the *Albatross*.

Arrangements were made with Dr. David S. Jordan, the well-known ichthyologist, to report upon the fishes of the several river basins of the country and upon the physical characteristics of those basins, in the interests of existing fisheries and of fish culture. Before that could be done with satisfaction, however, it was necessary to conduct investigations in many regions the conditions of which had not been studied, and that work has been going on during the past two years.

The transfer of the *Albatross* to the Pacific coast made it impossible to continue at Wood's Holl for the present the work in systematic natural history which had been going on for so many years, and it was arranged to limit the investigations at that place to special studies upon the embryology and life history of useful fishes, for the benefit of fish culture, legislation, and fishery methods. The facilities of the laboratory were still to be granted to specialists in biology as during the lifetime of Professor Baird, where the same did not involve any additional expense to the Government.

At Washington the Fish Commission interests were entirely severed from those of the National Museum and the Smithsonian Institution, and a special laboratory has been established in its own building. After collections have been studied and reported upon, a type series from the same is deposited in the National Museum in accordance with law. The duplicates, however, are made up into sets and distributed directly by the Fish Commission, upon the recommendations of members of Congress, to institutions of learning throughout the country.

The creation of a Division of Scientific Inquiry made it necessary to establish an office in which the clerical work incidental to its administration could be performed. But, including the wages of the clerical force, the salaries paid to-day in the interests of scientific inquiry, together with the pay of assistants on board of vessels, are very much less than they were three and four years ago.

Summarizing the principal changes and advances made by Commissioner McDonald in respect to scientific inquiry, we find them to have been as follows:

The organization of the personnel upon the basis established by Professor Goode, which permits of the methodical direction of the work.

The severance of direct relations with the National Museum, insuring the conduct of the work in natural history in the interests solely of the Fish Commission.

The study of undeveloped fishery resources both on the sea-coasts and in interior waters, and the publication of reports upon the same, for the information of the fishermen.

The study of the biological and physical characteristics of the sea-coasts, lakes, and rivers, as a basis for the propagation and dissemination of useful fishes.

The investigation of the mackerel and menhaden grounds by precise methods, to determine if surface or atmospheric conditions readily observed by the fishermen are influential in regulating the movements of pelagic species, and may, therefore, be utilized in predicting their absence, their presence, or their abundance.

The return to methods first inaugurated by Professor Baird for determining the cause of decrease among food fishes and the remedies therefor, by investigations carried on for that specific purpose.

I venture to offer the following papers in explanation and confirmation of the foregoing statements, namely: An account of the purpose

and functions of the Division of Scientific Inquiry; Summary of the work accomplished between February, 1888, and July, 1890, with several maps showing the extent of the same; Summary of expenditures on account of scientific inquiry during the last four fiscal years; and, Copies of instructions for the guidance of field parties.

With respect to the first-mentioned paper, it should be explained that the scheme which it presents is the same that was determined upon at the beginning of Mr. McDonald's administration, and that has been followed in planning operations for the past two years. It covers, briefly, the Commissioner's views respecting the obligations of science to fishery matters, based upon the assumption that the purpose of Congress in establishing this Commission was to provide for the continued prosperity and improvement of the fishery industries, as much for the present time as for the future. That the work has not yet been extended into all the branches there proposed is frankly acknowledged, but that matter has necessarily to be regulated by the means at his disposal. The main points to be determined are: Has he directed the scientific work in the proper channels, and has the same been faithfully and economically conducted?

PURPOSE AND FUNCTIONS OF THE DIVISION OF SCIENTIFIC INQUIRY.

THE FISHING GROUNDS.

First in sequence may be placed the investigation of existing fishing grounds, whether those grounds are known to the fishermen at present or still await discovery. The purpose of this inquiry is the development of natural fishery resources; the supplying of information to the fishermen as to where their work may be carried on with most profit.

The principal fishing grounds are on the sea-coast, but important fisheries exist in all of our larger lakes and great river systems. Up to within a very short period the discovery of fishing grounds has been chiefly accidental or incidental, not due to organized and well-directed efforts, and their resources have been ascertained only through their gradual development. Such has been the history of the great ocean fisheries which are mainly tributary to New England, and having been resorted to long before the settlement of the adjacent coast, they are now better known than those of any other section of the North American continent.

It was stated by Professor Baird in his annual report for 1883, that up to that time no formal investigations had been made of any of our fishing grounds. It was in that year that the steamer *Albatross* was completed, but an examination of the operations of that vessel down to the fall of 1887 shows that the systematic surveys which Professor Baird evidently contemplated had not yet been taken up, and scarcely any researches had been made inside of the 100-fathom line, either in the Gulf of Mexico or on the Atlantic coast south of New York. As to the Pacific coast, it was almost wholly unknown ground. That all of these regions contain important fisheries has been well substantiated, and the value of determining their resources has been urged for many years. It was, therefore, manifestly the duty of Commissioner McDonald to take immediate action in respect to this matter, which he did.

It was considered that substantially the following character of information was what was demanded by the fishermen: The location, outline, and extent of the grounds, with the character of the bottom and the depth of water upon them; the kinds of useful fishes which inhabit each of the grounds, their abundance, size, and utility; their breeding and feeding habits, upon which in some cases depends their quality as food in different seasons; their migratory habits, which explain the shifting of the species from one locality to another at different seasons; the permanence of the grounds, dependent upon the character and abundance of the food and upon certain physical conditions; the distance of the grounds from markets; the meteorological characteristics of the region in which the grounds are located, as determining the period and length of the fishing season, and the character of the fishing vessels to be employed; the kinds of bait best suited to each species of fish and the localities where supplies of bait may be obtained, etc.

The inquiries to be made in obtaining the above information fall under three general heads, as follows: Hydrography, physics, and biology. Hydrography, in its

limited sense, determines the topography of the grounds, the depths of water, etc. This is essentially the character of work chiefly performed by the Coast Survey and Hydrographic Office for the benefit of commerce, but the interests of the fisheries in this respect have pushed outward from the coast more rapidly than those of commerce, requiring that the Fish Commission vessels pay considerable attention to this character of surveying work. Where, however, the soundings have previously been made by another branch of service, they are never duplicated, and the soundings of the Fish Commission are immediately utilized by the Coast Survey and Hydrographic Office in the making and correcting of their charts.

Physical observations relate to the temperature and density of the water, to the character, direction, and force of currents, and to atmospheric conditions and other kindred subjects. These, taken in conjunction with the hydrography, determine the limits of the faunas, and therefore the distribution of fishes. They also regulate the migrations of fishes and the methods of the fishermen. These inquiries are of greatest importance in relation to the more actively migratory fishes, such as the mackerel and menhaden, and the anadromous species like the shad and salmon, but they are essential to the study of all fisheries whatsoever, from the oyster beds between tides to the greatest depths frequented by useful fishes, and for those located in river systems as well as those on the lakes and sea-coasts.

The biological researches relate directly to the products of the grounds. They determine the different economic species which inhabit each region, their abundance, the purposes for which they may be utilized, and the seasons during which they inhabit the grounds, while the character and amount of the lower animals indicate the permanence of the grounds, and in great measure the commercial fishes which may resort to them. The subject necessitates a close observance of the habits of useful fishes, by which the fisheries are largely regulated, and of the species of fishes and invertebrates associated with them, serving as their natural food, and indicating the best kinds of bait to be used in their capture.

The manner of presenting this information to the fishermen is by means of charts, descriptive matter, and tables. The charts should be prepared with the same care that is bestowed upon those of the Coast Survey and Hydrographic Office, enabling the fishermen to locate the grounds by the ordinary methods known to them. As a pattern of what can and is being done by the present administration in this branch of the service, reference should be made to the report upon the first investigations of the steamer *Albatross* in the North Pacific Ocean, forming Part I of the Fish Commission Bulletin for 1888. •

THE DECREASE OF FOOD-FISHES AND THE DETERIORATION OF FISHING-GROUNDS.

This subject, for the consideration of which the Fish Commission was specifically established in 1871, requires in part the same treatment as the previous one, but a much more thorough execution and a closer attention to details. In the first instance we were studying the grounds in what was assumed to be their normal condition. A decrease indicates that in some way the balance of life has been disturbed, and it then becomes necessary to determine what the changes have been, how they have been brought about, and what measures are required to restore the normal condition, putting those measures into execution if it is possible to do so.

Previous to the organization of the Fish Commission it was customary for all governments which investigated subjects of this character to rely for evidence upon the testimony of the fishermen, fish-dealers, and other interested persons, with the almost invariable result of reaching no beneficial conclusions. We owe entirely to Professor Baird the inauguration of the natural method which now prevails, not only in this country, but also to some extent abroad.

The decrease of useful fishes may be due to natural causes, or to injudicious practices on the part of man. The fact of a decrease is usually reported by the fishermen, but requires confirmation in many instances, and its extent is often difficult to determine on account of the incompleteness of the older records. The cause of decrease is sometimes evident on slight inspection, but is more often exceedingly obscure. The human agencies which have chiefly been instrumental in this respect are the many large appliances of capture which line the shores, dams built across the streams and preventing the ascent or descent of fishes, and the pollution of the waters by factory refuse, etc. The natural causes are many and less well defined, such as the destruction of the natural food supply, the ravages of predaceous fishes and other natural enemies, changes in temperature, and perhaps in density, poisoned waters, excess of sediment, unusual storms, accumulation of shore ice, diseases, etc.

The decline in the New England inshore fisheries and in the shad, salmon, and whitefish fisheries have chiefly been the result of human agencies, if not in all cases directly yet through the destruction of the food on which the fishes lived. The naturally poisoned waters of the Gulf of Mexico have produced much damage, and physical disturbances along the inner edge of the Gulf Stream caused the death of

several hundred thousand tons of fishes during the spring of 1882. The oyster grounds of southern New England are said to suffer to the extent of several hundred thousand dollars annually through the depredations of star-fishes alone, and other predaceous species are known to be equally destructive. Epidemics among-food fishes are common in the interior lakes, and sometimes result in their almost entire depletion.

Precise methods of investigation are therefore necessary, to determine the actual cause of decrease and to furnish the proper data for applying remedial measures. The character of these researches must vary with that of the fishing regions and in accordance with the several species involved. The remedies are effected in two general ways, namely, by legislation and by propagation. In case the damage has been caused by human agencies and has not been carried too far, a protection of the grounds, strictly enforced, may, in the course of time, restore the fisheries, but legislation, being too often ill-advised and loosely executed, has seldom produced the desired effects. Moreover, the General Government has refrained from passing fishery laws, except in a few cases, leaving that matter to the discretion of the States. Propagation has, however, given marked beneficial results and is the one method by which the Fish Commission has been able to improve the condition of many depleted fishing-grounds.

LEGISLATION AND FISHERY METHODS.

While legislation has generally been the outcome of exhausted fisheries, it may serve a better purpose in protecting grounds while they are still productive, as is now being done by the Government in respect to the Alaskan salmon rivers. Effective laws and judicious fishery methods, however, can only be based upon a more or less complete knowledge of the natural conditions peculiar to each fishing region, or to each class of fisheries, and especially of the distribution, life histories and habits of fishes, and the relations of the same to their environment. These subjects have been receiving constant attention, and many practical benefits have already been obtained

INTERNATIONAL RELATIONS.

Our relations with neighboring countries, which are very important in respect to fishery matters, demand from scientific inquiry a knowledge of the positions, extent and character of foreign fishing grounds, of the sources of the bait supply, and of other similar subjects, both for the benefit of the fishermen and for use in treaty making.

PROPAGATION, OR INCREASE AND DISSEMINATION OF FISHES.

The purpose of this branch of work is, first, the maintenance or increase of existing fisheries, and, second, the establishment of new fisheries. The first relates chiefly to depleted grounds; the second to grounds which have never been sufficiently productive.

The necessity for propagation has first to be established. This is determined by the general investigation of fishing and other water areas and the special inquiry respecting depleted grounds, both of which subjects have been outlined above. If the object is to restore a depleted ground with a species which is native to it, the only precaution to be undertaken is to ascertain that the physical and, to some extent, the biological characteristics of the region have not materially changed. That is to say, that the conditions of its environment will still be congenial to the species, and that it will find an abundance of food. If, on the other hand, we are transplanting species into new regions, it becomes necessary to study all the conditions of the latter with respect to its suitability for the forms in question, both physically and biologically. Are the temperature and the density of the water adapted to them? Does the coast or river afford the necessary facilities for their spawning? Is there an abundance of proper food for the young and adult? Is the region infested with predaceous species which may destroy the eggs and embryos? But these are only a sample of the questions that have to be considered in this connection.

Moreover, the actual operations of propagation, the collecting and hatching of the eggs and the rearing and distribution of the embryos, are entirely dependent for their success upon the close observance of natural laws. We must know the breeding habits of the species, the places to which it resorts in large numbers for spawning purposes and the time of year when that occurs, the character and number of the eggs, the manner in which they can be fecundated and incubated artificially, the length of the period of incubation, the development of the embryo in the egg and also after leaving the egg, the length of time it should be kept in captivity, the kind of food adapted to it in the beginning, the proper localities for planting the young where they are certain to find nourishment and freedom from their enemies.

The development of hatching and of fishway methods are also scientific problems requiring not only an appreciation of the subjects mentioned above, but also a thorough knowledge of hydraulics and mechanics.

SPECIAL INVESTIGATIONS.

Certain problems occasionally arise which do not belong under any of the previous headings, but which deserve mention, such as determining the cause of deterioration in fishery products, methods of preservation of fish for food and bait, the composition and relative value of different fishes for food and other purposes, etc.

SUMMARY OF THE WORK ACCOMPLISHED BETWEEN FEBRUARY, 1888, AND JULY, 1890, WITH MAPS SHOWING THE EXTENT OF THE SAME.

WORK OF THE STEAMER ALBATROSS IN THE PACIFIC OCEAN.

When Mr. McDonald became Commissioner the steamer *Albatross* was in the Straits of Magellan bound for San Francisco, under orders from his predecessor, Professor Goode. She arrived at the latter place May 14, 1888, and immediately began preparations for a cruise to the Alaskan coast in accordance with the plans elsewhere described. The necessity of awaiting the beginning of the next fiscal year detained her in port until July four, when she sailed northward. Unalashka was reached July 21, and the *Albatross* remained in Alaskan waters until August 28, then returning to the coasts of Washington and Oregon, where a month and a half were spent in exploration. The work was only abandoned when the weather became so severe as to threaten the safety of the vessel.

The steamer reached San Francisco October 21, and began arrangements to spend the winter season on the coast of southern California. This cruise began January 3 and terminated April 25. May 21 she again left San Francisco for the north, but was detained on the coasts of Washington and Southern Alaska until August 4, when she started for Bering Sea. An accident to her machinery caused her to return to port, and the remainder of the season was spent between Cape Flattery and Cape Mendocino, the cruise terminating October 14. Operations were next begun March 10, 1890, and continued until April 13, between Point Conception and Punta Arena. On May 4 the *Albatross* sailed for Bering Sea to begin the investigation of the cod grounds in that region.

The extent of the investigations by the steamer *Albatross* in the Pacific Ocean during the past two years is represented on the four maps herewith presented; and it is confidently asserted that the work thus exhibited is greater in amount and has been more thoroughly executed than any similar surveys by this or any foreign government in a much longer period of time.

On the Alaskan coast the investigations have been carried continuously along the southern side of the Aliaska Peninsula from the vicinity of Unalashka to Middleton Island, a distance of 800 miles, the inquiry reaching from the coast line to the abrupt edge of the submerged continental slope. The total area examined was about 23,400 square geographical miles. Five principal banks were developed, having an extent of 15,200 square miles. These grounds resemble in character the great off-shore fishing banks of the Atlantic coast and are relatively equal to them in productiveness. Previous to the surveys of the *Albatross* only fragmentary information existed as to their positions and extent, and they had been resorted to by only a few fishing vessels from San Francisco.

On the western coast of the United States investigations of the same character have been carried from the Straits of Fuca to the latitude of San Diego, with a gap only between Cape Mendocino and Punta Arena. Beginning at the north the survey covers the entire halibut region lying between Vancouver Island and Flattery Rocks, and thence extends southward to Cape Mendocino, a distance of 520 miles, with an average width of about 30 miles. Within this width are comprised all the areas on this part of the coast which are suited to fishing.

From Punta Arena, just north of San Francisco, the work has been continued without intermission to the southern boundary of California, a distance of 550 miles. The width of the area examined (and of the continental slope) averages only about 16 miles north of Point Conception, but south of that place it broadens out to include the Santa Barbara Islands and Cortez and Tanner Banks.

The total area surveyed between Vancouver Island and San Diego is over 32,000 square miles, which added to the Alaskan grounds makes an extent of about 56,000 square miles representing the work of the steamer *Albatross* during two years.

The character of the surveys made by the *Albatross* may briefly be described as follows:

(1) The contour of the bottom is ascertained by hydrographic methods, in order to determine the location, outline and character of the regions or banks suited to fishing.

(2) The dredge and beam trawl are employed to determine the richness of the bottom in different places, or more properly speaking the feeding grounds to which fishes may resort.

(3) Fishing appliances are used to ascertain the actual presence of fishes, their kinds, abundance, and suitability for market.

This work has been conducted with the object of obtaining direct practical results, and those who are acquainted with its character can not but notice a marked difference in this respect from most of the explorations of the *Albatross* on the eastern coast.

Reports of the hydrographic, dredging, and fishing branches of the inquiry, covering the surveys to May 1, are already in hand and prepared for printing. That for 1888 has been published within a few weeks. The careful study of the fishes and lower animals requires considerable time, and their elaboration will throw much additional light on the character and value of the grounds, but the reports above referred to will give the fishermen of the Pacific coast a fair knowledge of their ocean fishing grounds, of which no surveys had previously been made.

Between February 26 and April 14 the steamer *Albatross* visited the Gulf of California, chiefly for the following purposes:

(1) To determine the physical characteristics of the Gulf with reference to the Colorado River, in which shad were planted a number of years ago.

(2) To study the conditions under which the Mexican oyster grows, with a view to its introduction on the coast of California.

(3) To ascertain the relations and intergradations between the northern and southern faunas, which must, to a great extent, determine the expediency of bringing oysters and other Mexican marine products into more northern waters.

The objects of the cruise were accomplished satisfactorily and a run was made to the Revillagigedo Islands, in order to make out their hydrographic relations to the American coast, such a digression being justified by our indebtedness to the Navy Department.

The table herewith appended has been prepared to show that there has been no relaxing in the work of the *Albatross* since the beginning of Mr. McDonald's administration. The record for 1889-'90 is incomplete, as the fiscal year has not yet ended; but that for 1888-'89 shows thirty-four days more service than for any previous year, a greatly increased number of soundings, and much more than the average number of dredgings. The fishing records have not been tabulated, as this branch of work is for the most part peculiar to the surveys of the past two years.

The following letter from Captain Tanner, commanding the *Albatross*, also shows that he considers that the steamer has been doing her full share of work:

U. S. COMMISSION OF FISH AND FISHERIES,
STEAMER ALBATROSS,
San Francisco, Cal., April 27, 1889.

M. McDONALD, Commissioner:

DEAR SIR: Your letter, No. 16, of April 16, is received. In reply, I beg leave to say that I will make necessary arrangements for work in the southern part of Bering Sea and Alaskan peninsula.

The work on the coasts of Washington and Oregon is incidental, and can be extended or restricted as you prefer.

In counting the time necessary for refitting you should bear in mind that this vessel is doing double duty, and if she is to continue it we must take ample time to put everything in order before sailing, particularly when bound for the remote regions of Alaska.

The summer's cruise in that region is usually considered sufficient for the year. The *Thetis*, *Bear*, *Rush*, *Patterson*, and *McArthur*, have spent the time since their arrival last fall in preparing for the next summer's cruise.

It is true that June is a good month in the Aleutian Islands, but to have been on the grounds at that date would have left no time for the Gulf trip.

I note what you say with reference to the Senate Committee.

With reference to coal. We can buy what we require from the Alaska Commercial Company at less cost than we can ship it, and the appropriation of the current year can be made available, if you will simply inform me of the amount you wish to apply to that purpose. I am glad to learn that the Alaskan chart is to be retained at a useful size. It is a great pity it could not have been out in time for the vessels going north this season.

I note what you say about the small boilers, glassware, etc. I wish the former were here now, for the launch gave out in San Diego, and will be of no further service until the new boiler is in.

As far as my own report of the recent cruise is concerned it will probably be ready before we start on the Alaskan trip, but I doubt your getting any from Professor Gilbert or Mr. Alexander, as their time will be pretty fully occupied with their trip. Professor Gilbert has charge of general investigations, including the oyster question, and reports on those matters must necessarily come from him. I suggested on several occasions, that he write from time to time informing you of his work, as I do of the movements of the ship. He sent one letter early in the cruise, and that ended it as far as I know.

I agree with you that the results of our work should be placed before the public as soon as possible, and have done what I could in that direction, with but indifferent success I fear.

Very respectfully,

Z. L. TANNER,
Lieut. Commander, U. S. Navy, Commanding.

Table showing the amount of work done by the steamer *Albatross* each year since she first went into commission.

	Days at sea.	Miles steamed.	Sound- ing sta- tions.	Dredg- ing sta- tions.
Calendar year 1883.....	121	11,228.2	116	116
Calendar year 1884.....	134	13,388	682	194
Calendar year 1885.....	130	13,705.4	625	318
Calendar year 1886.....	95	9,592.3	328	107
One and one half years January 1, 1887, to June 30, 1888.....	85	15,956.7	145	105
Fiscal year 1888-'89.....	168	17,124.6	965	237
Fiscal year 1889-'90 (to May 1, 1890).....			553	133

The record for 1889-'90 is necessarily incomplete. The *Albatross* sailed for Alaska the first part of May, and, unless prevented by accident, should accomplish fully as much work before the end of the fiscal year as is recorded for 1888-'89.

THE STEAMER FISH HAWK.

Oyster surveys.—This steamer, built more particularly for fish-hatching purposes, is assigned to scientific investigations when not otherwise employed. The most important inquiry in which she has been engaged during the past two years has been the study of certain problems relating to the oyster-beds of Rhode Island and Long Island Sound. It is well known that the oyster-beds in this region are subject to the attacks of star-fishes which are said to damage them to the extent of several hundred thousand dollars every year. The members of Congress from Connecticut have endeavored on several occasions to secure a special appropriation to defray the expenses of a survey of these grounds with the view of determining some measure for checking the ravages of these pests. Such an appropriation was never made, but Colonel McDonald realizing the commercial importance of the subject, decided to detach the steamer *Fish Hawk* from the Wood's Holl Station, to which she had generally served as a tender during the summer, and to assign her to the work. This was not possible until the latter part of the summer of 1888, when the *Fish Hawk* was sent to Providence River, and made a thorough survey of the oyster grounds from the mouth of the river to the most northern part of their extent. From Providence River the steamer went to the New Haven region and made a brief reconnaissance.

The following summer (1889) operations were commenced much earlier and extended through the entire region in the northern part of the sound from South Norwalk to New Haven, the work being conducted with great thoroughness over a large part of that area. As the inquiry progressed new problems were suggested by the condition of the beds, and it finally became evident that the investigations would have to be conducted on a much more comprehensive basis if positive and beneficial results were to be obtained. The physical characteristics of Long Island Sound had never been studied. It was not known whether there was a constant interchange of water between the sound and the ocean without, or whether the water became more or less stagnated and contaminated from the numerous dumping grounds and the sewage of the cities. Upon a knowledge of these facts, the importance of which was strongly emphasized in some quarters, might depend the future welfare of the oyster fisheries of Long Island Sound.

The *Fish Hawk* began this season's work about two weeks ago. Through the co-operation of the Coast Survey the means have been supplied to determine the circula-

tion of water through the sound and a chemist has been employed to ascertain the effects of the dumpings and sewage upon the purity of the water. As soon as that inquiry is well under way it is proposed to continue the careful survey of the bottom in each oyster district.

No survey of oyster territory upon so thorough and comprehensive a scale has hitherto been attempted either in this country or in Europe, and the results, whatever they may be, will have some application to all the oyster grounds along the American coast. Reports have been prepared upon the work accomplished up to the present time, but not being conclusive with respect to the principal points in question they have been regarded as in the nature of reports of progress, not warranting publication in detail. The accompanying maps show the extent of the work during the past two years.

Florida Fisheries.—From February 2 to April 5, 1889, the *Fish Hawk* was on the western coast of Florida chiefly in the vicinity of Charlotte Harbor, in the interest of the propagation of several species of fish, chiefly the mullet and the sheep's-head. Observations were made upon the habits, spawning season, and the amount and character of the spawn of those forms which could be obtained, and a number of localities were visited with the view of determining their fitness as sites for hatching stations. The eggs of the sheep's-head and of the sea trout were successfully hatched.

THE SCHOONER GRAMPUS.

During the past two years the schooner *Grampus* was assigned to this division for two important surveys. The first was undertaken in the winter season of 1888-'89, the second during the following summer.

The red snapper grounds.—The *Grampus* arrived at Key West January 27, 1889, under instructions to make a detailed investigation of the red snapper and grouper grounds which occupy a large part of the continental plateau off the western coast of Florida. A hasty reconnaissance of this region had been made by the steamer *Albatross* several years before, but her results were only general in character. The area marked out for study by the *Grampus* was comprised between the depths of 15 and 50 fathoms, and extended northward from the region of the Tortugas Islands to Cape San Blas. The object of the expedition was to determine the presence and relative abundance of red snappers, groupers, and other economic fishes in different parts of the region, and to learn as much as possible respecting their habits and the characteristics of their feeding grounds. The growing importance of the Gulf fisheries made it expedient to obtain such information as this, which had previously been sought for chiefly on the northeastern coast.

The manner of conducting the inquiry was to run parallel lines of observing stations across the bank from east to west at intervals of ten miles, the dredging stations to be ten miles apart on these lines, and the fishing to be carried on continuously while the vessel was under way as well as hove to, this being the method usually followed in the red snapper fishery.

The extent of the work is exhibited on the accompanying map which forms part of the report of that season's investigation. Stormy weather, which prevailed during a large part of the time, greatly interfered with operations, but ten lines were run between the Tortugas Islands and the latitude of Charlotte Harbor. The area covered was 100 miles long with an average width of about 65 miles, or a total extent of about 6,500 square miles. The work was thoroughly done and is to be compared only with the recent surveys of the steamer *Albatross* on the Pacific coast.

In conjunction with this exploration, a careful investigation was made of the shore fishes of the coast from Biscayne Bay to Tampa Bay, by Dr. James A. Henshall, using the seine boat of the *Grampus*. The methods and statistics of the fisheries of this region were also taken into consideration by Dr. Henshall. The narrative of this cruise has been submitted; the scientific results are being elaborated by Dr. Henshall and Dr. Jordan, conjointly.

The mackerel grounds.—There has probably been no more perplexing question before the Fish Commission than the migrations of pelagic fishes, chief of which, from an economical stand-point, are the mackerel and menhaden. The subject was first taken up during the earlier years of the Commission, and was attacked with renewed vigor after the completion of the *Albatross* and the *Grampus* with their greatly improved methods of investigation. The manner in which the problem was treated, however, did not permit of satisfactory results, and the physical observations were so disconnected that no general law could be deduced respecting the characteristics of the area through which these fishes pass in their migrations up and down the coast. The physical conditions of the water have as direct a bearing upon the habits of fishes as do the ordinary meteorological conditions upon the welfare of plants, and it is just as essential that the observations respecting them should be methodical and comprehensive.

The present Commissioner therefore made arrangements in the spring of 1889 with Prof. William Libbey, jr., of the College of New Jersey, to undertake this investigation in accordance with the perfected plans. The schooner *Grampus* was assigned to this work, and spent about two months of the summer of 1889 in the mackerel region south of New England. The appliances made use of were the most perfect that could be had, but it is unnecessary to describe them here. The report of Professor Libbey respecting the first season's operations is completed and nearly ready for the printer. The map which accompanies the same, and which is herewith presented, shows the area covered and the positions of the observing stations. Ten parallel lines were run southward from the coast a distance of 130 to 140 miles at intervals of 10 minutes of longitude, between the longitude of Block Island and that of eastern Nantucket, and observations were secured at every 10 miles along these lines. These observations were carried down to a depth of 500 fathoms and related to temperature and density. The result of this careful and painstaking inquiry was the construction of eight vertical sections or profiles through the area in question, and reaching well into the region of the Gulf Stream. These profiles which are exhibited show the distribution of layers of water of equal temperature, and also of the currents, and make known a peculiar intrusion into the Gulf Stream of a part of the arctic current which flows southward along the continental border. It is safe to say that no region in the world of equal extent has been studied in such detail and with so much care. In fact the method pursued was entirely novel and promises important results when considered in relation to the migrations of mackerel and also of other species.

The value of the inquiry has been recognized by the superintendent of the Coast Survey, not only in respect to the fisheries but to commerce also, and arrangements have been made for joint operations during the coming season by the steamer *Blake* and the schooner *Grampus*, under the direction of Professor Libbey.

Two such vessels, fully equipped, will be able to cover a much wider area than was studied last year, especially as one of them is a steamer, not dependent upon favorable winds. With a thorough knowledge of the physical characteristics of the region as a basis, the biological side of the subject may be taken up with some chances of explaining the fluctuations in abundance of pelagic fishes, but without such a basis no amount of desultory work in sounding, dredging, surface fishing, and temperature observation can be productive of satisfactory results.

INQUIRY RESPECTING INTERIOR WATERS.

The investigation of the interior waters, lakes, and rivers during the past two years has chiefly been under the supervision of Dr. David S. Jordan, of the University of Indiana, who has also taken an active part in the field work connected with the same. The only researches of this character which did not come under his direction were the study of the salmon rivers of Alaska, of some of the upper tributaries of the Ohio River by Dr. James A. Henshall, and of the Hudson River by Mr. Fred. Mather. The last-mentioned person is an employé of the Commission who was detailed for the examination of the Hudson River with reference to the recent introduction of salmon. The Alaskan investigations were also carried on by a regularly organized party of Fish Commission employés, with the exception of one member, the engineer. Otherwise all of the inland work has been done by volunteers, although during the last season a nominal monthly salary of \$25 each was usually paid to cover incidental expenses, wear and tear of clothing, etc., items which could not be refunded by the Treasury Department. These salaries for 1889-'90 amounted to \$300. Dr. Jordan's parties have been made up of persons who have received the benefit of his careful training in ichthyology, some of them having attained considerable eminence in that branch of zoology. Each field party is placed in charge of a competent head, and operations generally continue from June to October or November.

The distribution of the work during the past two years is represented on the accompanying map. The colored markings indicate the positions of the fishing and observing stations with as much accuracy as was possible on a map of so small a scale. What they fail to show, however, without explanation, is the fact that while the work appears to cover only limited portions of each river, it has in reality served to make known their character and inhabitants over a much greater part of their extent.

Up to the present time the inquiries have had reference chiefly to fishes, but the study of aquatic invertebrates which serve them as food has not been neglected, and plans were perfected during the past winter to give greater scope to that branch of the work. The researches have been comprehensive and exhaustive for nearly all localities, and, except for a few minor surveys, reports are in hand covering all of the inland investigations. A few of these reports are already in print.

The work accomplished has been as follows:

Atlantic coast drainage.—The Hudson River was examined in 1888, in order to learn the results of salmon planting by the Fish Commission, and to determine, if salmon

eggs could be obtained there, what small streams were suited to the development of the young, and the number and extent of the natural obstructions to the ascent of salmon. The work covered the entire length of the Hudson River and several of its upper tributaries, but was carried on in most detail from Albany northward. It is perhaps needless to explain that the Hudson River has been made a salmon stream through the exertions of the Fish Commission, substantial proof of that fact having been furnished by the investigations of Mr. Mather.

Farther south the following rivers were studied by Dr. Jordan and his assistants: Shenandoah, upper and middle course; James, upper and lower course; Dismal Swamp; Chowan, upper course; Roanoke, upper course; Pamlico, middle course; Neuse, upper and middle courses; Cape Fear, upper course; Great Pedee, upper course; Santee, upper course; Savannah, lower course; Ogeechee and Satilla.

Gulf of Mexico drainage.—Perdido, upper and middle courses; Alabama, middle course; Tombigbee, upper course; Pascagoula, lower course; Lake Pontchartrain.

Mississippi River tributaries.—The Ohio River at many places in the State of Ohio, and the following tributaries of that river: Muskingum, Little Miami, Hocking, Raccoon, Brush, and White Oak, in Ohio; Kanawha (upper and lower courses) and Guyandotte, in West Virginia; Big and Little Sandy, Kinnikinnik and Tygert, in Kentucky; Wabash River and many of its tributaries, in Indiana; Tennessee, upper branches in the Alleghany Mountains, and middle course in northern Alabama.

The Cedar and other rivers in Iowa; the southern tributaries of the Osage and the upper and middle courses of the Gasconade in Missouri; many tributaries of the White River in Missouri and Arkansas; the Arkansas River in Colorado, Kansas, and Arkansas; the upper branches of the Ouichita River, in Arkansas; the upper branches of the Platte River, in Colorado, and the upper waters of the Yellowstone River, in the Yellowstone National Park.

Pacific coast drainage.—The upper waters of the Columbia River in the Yellowstone National Park.

Gulf of California drainage.—The Colorado River and its branches in Colorado, Utah and Arizona; the Gila River in Arizona.

Alaskan salmon rivers.—The following act of Congress was approved March 2, 1889:

"That the Commissioner of Fish and Fisheries is hereby empowered and directed to institute an investigation into the habits, abundance, and distribution of the salmon of Alaska, as well as the present conditions and methods of the fisheries, with a view of recommending to Congress such additional legislation as may be necessary to prevent the impairment or exhaustion of these valuable fisheries, and placing them under regular and permanent conditions of production."

No appropriation having been made to carry out the provisions of this act, the Commissioner divided the expenses of the investigation between the items of the regular appropriation covering the three divisions of work to which the inquiries related, namely, scientific inquiry, methods and statistics of the fisheries, and propagation. Dr. T. H. Bean, ichthyologist, was in charge, assisted by Livingston Stone, fish culturist, Franklin Booth, engineer, and R. E. Lewis, general assistant. Mr. Booth was the only member of the party not in the regular service of the Commission.

The principal centers for the salmon industry in Alaska are Kadiak and Afognak Islands, Cook's Inlet, and Bristol Bay. The season suitable for field work is too short and means of transportation too limited to permit of the examination of all of these localities by a single party during one year, and operations were therefore limited to the two first mentioned places.

The results of this investigation have been fully described in a report by Dr. Bean, which was transmitted to Congress on June 9, with recommendations by the Commissioner as to the additional legislation suggested by the special act of Congress.

TEMPERATURE INVESTIGATIONS.

Temperature observations are taken regularly by the vessels and at the stations of the Commission. As only a comparatively small field can be covered in this manner, arrangements were made by Professor Baird a number of years ago with the Light-House Service and the Signal Service to co-operate in the work. At present such observations are being taken at 33 light-stations and 19 signal stations. The latter service conducts its part of the work without expense to the Commission. As to the light-stations, the Commission furnishes the instruments and pays the cost of forwarding the same. The only salary paid in this branch is for an observer at Fort Washington, on the Potomac River.

LIST OF CHARTS SUBMITTED.

Three charts showing the operations of the steamer *Albatross* on the coasts of Alaska, Washington, Oregon, and California, 1888-1890.

One chart showing the operations of the schooner *Grampus* on the mackerel grounds in 1889, with several temperature profiles.

One chart showing the investigations of the schooner *Grampus* on the red-snapper and grouper grounds of the Gulf of Mexico, 1889.

One map showing the extent of the inquiry respecting interior waters, 1888-1890.

WOOD'S HOLL STATION.

During the early years of the Commission the sea-coast work was chiefly confined to the New England coast, and a new locality was generally selected each year as the headquarters for operations. In 1881 it became advisable to make a permanent sea-coast station, as explained in the reports of Professor Baird, and Wood's Holl was selected for that purpose. Buildings and wharves were erected, and all the field work on the northeastern coast centered at that place. The propagation of cod, lobsters, and other marine species was started there some four or five years ago, and this branch of fish culture has rapidly increased in importance and results up to the present time.

Summer after summer the *Fish Hawk* and the *Albatross* were engaged in dredging and surveying in the neighboring region, and bringing their rich collections of specimens to Wood's Holl. To properly care for, assort, and study this large mass of material a force of ten to twelve persons was required, and during each summer season the station was chiefly given up to this class of work, although more or less attention was paid to the local fishes and zoology generally. When, in 1887 and 1888, the steamer *Albatross* was transferred to the Pacific coast, and the *Fish Hawk* was assigned to the more practical problems relating to the oyster industry, it was natural that a change should be made in the character of the researches at Wood's Holl. The need of a large force of workers in systematic zoology at that place no longer existed, and attention was turned to other problems, such as the embryology and life history of fishes and of the lower forms of life which require to be considered in connection with the fisheries and with fish culture. There has been no cessation in the activity at that station, which, in fact, is now more continuously in operation than ever before, dealing with fish culture from October to July, and with scientific inquiry during the summer as well as at other seasons.

During the summer of 1889, Prof. John A. Ryder, the eminent biologist of the University of Pennsylvania, was in charge of the laboratory, with the following associates, only a few of whom were under pay from the Commission, each being engaged upon some special investigation, namely: Prof. W. K. Brooks, Dr. E. A. Andrews, S. Watase, C. F. Hodge, and T. H. Morgan, of Johns Hopkins University; Dr. H. H. Field, Dr. and Mrs. C. F. Eigenmann, W. McM. Woodworth, and G. H. Parker, of Harvard University; Prof. Miller, Dr. C. F. W. McClure, and J. Warne Phillips, of the University of New Jersey; Prof. S. F. Clarke, of Williams College; Prof. S. F. Trotter, of Swathmore College; Prof. H. N. Mateer, of Worcester University; Dr. William Patten, of the Lake Laboratory, Milwaukee; Prof. J. S. Kingsley, of the University of Indiana; W. S. Marshall, of the University of Pennsylvania; and Dr. T. H. Bean, of the Fish Commission.

These men represented nine important educational institutions. Some of them staid only a few weeks, while others remained during the entire season. They are given the facilities of the laboratory in accordance with the policy inaugurated by Professor Baird, and occasioned no expense to the Commission, except in the case of those who were regularly employed for some specific purpose. However, it may truly be said that the work of all had a bearing upon the problems before the commission, in some cases perhaps remote, but nevertheless destined some day to exert an influence upon fishery matters.

In May, 1889, Dr. Henry V. Wilson, a graduate of Johns Hopkins University, was appointed resident naturalist at the Wood's Holl Station and placed in charge of the laboratory. Experience had shown the expediency of having some one at this locality to carry on the study of the embryology and life history of useful fishes throughout the year, and Dr. Wilson has so far chiefly been engaged upon the sea bass, one of the most important species of that region. His associates during the summer of 1889 were Prof. W. K. Brooks and Dr. E. A. Andrews, of Johns Hopkins University; Prof. F. H. Herrick, of Adelbert College; Prof. Edwin Linton, of Washington and Jefferson College; Dr. C. F. Hodge, of Clark University; W. McM. Woodworth, E. R. Boyer, and C. B. Davenport, of Harvard University; M. J. Greenman, of the University of Pennsylvania; B. H. Waters and C. W. Stevens, of the College of New Jersey; S. Watase, T. H. Morgan, R. P. Bigelow, and J. I. Peck, of Johns Hopkins University; Professor Wright, of Oberlin College. This year eight institutions were represented.

Reports of the operations at the Wood's Holl laboratory during 1888 and 1889, giving an account of the work of each person, have been presented, and will be printed in the annual reports of the Fish Commission. It may be stated in brief, however,

that the researches carried on expressly for the Commission related mainly to the sea bass, scup, sturgeon, lobster, oyster, the star-fish as an enemy of the oyster, and the parasites of fishes.

THE WASHINGTON OFFICE AND LABORATORY, PREPARATION OF REPORTS, ETC.

The Assistant in charge of Scientific Inquiry has direct charge of the investigations made under the appropriation of \$15,000 allotted to this purpose, and also of the operations of the steamer *Albatross*, and those of the steamer *Fish Hawk* and schooner *Grampus* when assigned to this service.

His office is the office of administration for this division of the work of the Commission. Three clerks are employed. In addition to the routine duties in conducting the investigations all reports upon the scientific work are passed upon in this office, revised if necessary, and prepared for publication. The correspondence is very large.

The Washington laboratory is maintained for the storage and assorting of collections and to afford facilities for studying the same. These collections are retained here until they have served their purpose to the Commission, when a type series is deposited in the National Museum, in accordance with law, and the duplicates are distributed to institutions of learning, upon the recommendations of members of Congress. Prior to June 1, 1889, the office and laboratory of Scientific Inquiry were accommodated in the National Museum, but during the month mentioned they were transferred to the new quarters in the Armory building. This transfer necessitated the purchase of considerable furniture for fitting up the rooms, an expenditure which will not be duplicated in future years, unless called for by the enlargement of the present quarters.

The reports upon the results of the investigations of lakes and rivers, conducted under the direction of Dr. David S. Jordan, are prepared at the University of Indiana by Doctor Jordan, Professor Gilbert, and other assistants. The collections are held there as long as required for study, after which they are forwarded to Washington. No salaries are paid for this work, and the only expenditures are for freight charges, type-writing, and the manual work of sorting and preparing collections for shipment. The collections of fishes made by the steamer *Albatross* on the Pacific coast during the past two years have also chiefly been studied at the Indiana University.

Many persons are engaged in elaborating the results of the scientific work as volunteers. They are chiefly college professors located in different parts of the country, who are actuated in undertaking this service by their personal interest in the subjects assigned them. They receive no salaries, and the only expenses incurred are for freight charges on specimens.

LIST OF THE SCIENTIFIC COLLABORATORS OF THE U. S. FISH COMMISSION, 1889-'90.

(Engaged in the preparation of reports without compensation.)

Prof. ALEXANDER AGASSIZ, Director Museum of Comparative Zoology, Cambridge, Mass. Echini and stalked crinoids.

JAMES E. BENEDICT, Assistant Curator, U. S. National Museum, Washington. Higher crustaceans of the North Pacific Ocean.

Prof. W. K. BROOKS, Johns Hopkins University, Baltimore, Md. Stomatopod crustaceans, medusæ and salpæ; embryology and life history of star-fishes in relation to the destruction of oyster beds by star-fishes. (Also temporarily employed in field work in connection with the latter subject, from July 1 to September 24, as explained elsewhere).

WILLIAM H. DALL, Curator, National Museum, Washington. Gastropod, scaphopod and bivalve mollusks.

Prof. B. W. EVERMANN, State Normal School, Terre Haute, Ind. Fresh-water fishes. (Also temporarily employed in field work, July 16 to August 31, as explained elsewhere.)

Dr. W. G. FARLOW, Harvard University, Cambridge, Mass. Marine plants.

Prof. WALTER FAXON, Museum of Comparative Zoology, Cambridge, Mass. Fresh-water crayfishes.

J. WALTER FEWKES, Secretary Boston Society of Natural History, Boston, Mass. Hydroids.

Prof. S. A. FORBES, State Laboratory of Natural History, Champaign, Ill. The invertebrate animals serving as food for fishes in Lake Superior, Lake Michigan, and other smaller lakes; diseases of fishes.

Prof. CHARLES H. GILBERT, University of Indiana, Marine and fresh-water fishes. (Also employed as naturalist on the steamer *Albatross* from July 1 to September 15, and from April 27 to June 30, as explained elsewhere.)

- Prof. G. BROWN GOODE, Assistant Secretary, Smithsonian Institution, Washington, D. C. Deep-sea fishes.
- Dr. JAMES A. HENSHALL, Secretary, Cincinnati Society of Natural History, Cincinnati, Ohio. Florida fishes.
- Dr. C. F. HODGE, Clark University, Worcester, Mass. The biology of the oyster grounds of Long Island Sound and Providence River. (Also temporarily employed in field work on the same subject, steamer *Fish Hawk*, August 1 to September 30, as explained elsewhere.)
- Dr. DAVID S. JORDAN, President University of Indiana, Bloomington, Ind. Marine and fresh-water fishes. (Also temporarily employed in field work, July 16 to August 21, as explained elsewhere.)
- Prof. LESLIE A. LEE, Bowdoin College, Brunswick, Me. Foraminifera; brachyuran, isopod and phyllopod crustaceans.
- Prof. WILLIAM LIBBEY, jr., College of New Jersey, Princeton, N. J. The physical characteristics of the mackerel grounds. (Also temporarily employed in charge of field work on the same subject, schooner *Grampus*, July 1 to September 24, as explained elsewhere.)
- Prof. EDWIN LINTON, Washington and Jefferson College, Washington, Pa. Parasites and diseases of fishes. (Also temporarily employed in field work on the same subject, as elsewhere explained.)
- Prof. J. P. McMURRICH, Clark University, Worcester, Mass. Actinians.
- Prof. W. F. MAGIE, College of New Jersey, Princeton, N. J. Meteorological conditions of the mackerel grounds. (Also temporarily employed in field work on the same subject, July 20 to September 18, as elsewhere explained.)
- Prof. S. E. MEEK, Coe College, Cedar Rapids, Iowa. Fresh-water fishes. (Also temporarily employed in field work on the same subject, July 16 to August 31, as elsewhere explained.)
- Dr. JAMES I. PECK, graduate of Johns Hopkins University. Pteropod and heteropod mollusks. (Also temporarily employed at Wood's Holl, July 1 to September 24, in investigating habits of scup and sea bass, as elsewhere explained.)
- Prof. JOHN A. RYDER, University of Pennsylvania, Philadelphia, Pa. The embryology of the sturgeon.
- Prof. S. I. SMITH, Yale University, New Haven, Conn. The crustaceans of the Atlantic coast.
- Dr. R. E. C. STEARNS, Adjunct Curator, National Museum, Washington. Gastropod, scaphopod, and bivalve mollusks.
- F. W. TRUE, curator, National Museum, Washington. Cetaceans.
- Prof. A. E. VERRILL, Yale University, New Haven, Conn. The marine invertebrates of the Atlantic coast north of Cape Hatteras.
- Prof. E. B. WILSON, Bryn Mawr College, Pa. Pycnogonids.

(Engaged in the preparation of reports for which compensation has or will be paid.)

- Prof. W. O. ATWATER, Wesleyan University, Middletown, Conn. Monographic report upon the chemical composition and nutritive value of economic fishes and marine invertebrates. (Cost, \$1,000.)
- Prof. F. H. HERRICK, Adelbert College, Cleveland, Ohio. Monographic report upon the embryology and life history of the lobster, undertaken for the purpose of obtaining data for improving the methods of propagating the same. (Cost, \$500.)

LIST OF OFFICIAL REPORTS AND SPECIAL SCIENTIFIC PAPERS, 1888-'90.

Following is a list of completed reports upon the work accomplished in this division during the past two years, together with the titles of many special papers on scientific subjects based upon materials or resulting from the facilities furnished by the Fish Commission. The latter were prepared and published at no expense to the Commission, and are inserted in this connection as proofs of the assistance that has been rendered incidentally toward the advancement of scientific research in general. This part of the list is, moreover, very incomplete, only the records conveniently at hand having been used in its preparation. Official reports now in course of preparation would add several titles to the list.

- A. C. ADAMS and W. C. KENDALL. Report upon the investigation of the red-snapper and grouper fishing grounds off the western coast of Florida, by the schooner *Grampus*, during the early part of 1889. 96 MS. pages, 1 map.
- ALEXANDER AGASSIZ. Ueber einen neuen Tiefsee-Crinoiden aus der Familie der Apiocriniden. Neuen Jahrb. Miner. Geol. and Palaeon, 1890. Bd. I, 1 page.
- Voyage of steamer *Albatross*, Norfolk to San Francisco, 1887-'88.
- E. A. ANDREWS. Notes on the body-cavity liquid of *Sipunculus Gouldii*, Pourtales. Johns Hopkins University Circular, No. 80, 1890, p. 65.
- From studies made at the Wood's Holl Laboratory.

W. O. ATWATER. Monographic report upon the chemical composition and relative value of economic fishes and marine invertebrates for food and other purposes. 400 MS. pages, 33 plates.

This important monograph, begun some years ago by request of Professor Baird, has been completed during the current year.

TARLETON H. BEAN. Notes on the cruise of the *Grampus* on the southern mackerel grounds during the spring fishery of 1887. Bulletin U. S. Fish Commission, VII, pp. 241-258. (See under D. E. Collins.)

TARLETON H. BEAN. Notes on fishes collected at Cozumel, Yucatan, by the U. S. Fish Commission, with descriptions of new species. Bulletin U. S. Fish Commission, VIII, pp. 193-206, 3 plates.

Material obtained by the steamer *Albatross* in 1885.

TARLETON H. BEAN. Report on the salmon rivers of Alaska. 107 MS. pages, 8 charts, 44 plates.

Investigations conducted in accordance with an act of Congress approved March 2, 1889. Report transmitted to Congress June 9, 1890.

TARLETON H. BEAN. Report on the proposed introduction of the Jamaica mountain mullet into the United States. 43 MS. pages.

TARLETON H. BEAN. Description of a new cottoid fish from British Columbia. Proc. U. S. Nat. Mus., XII, pp. 641, 642, 1890.

Investigations of the steamer *Albatross* on the western coast of North America, 1888.

TARLETON H. BEAN. New fishes collected off the coast of Alaska and the adjacent regions southward. Proc. U. S. Nat. Mus., XIII, pp. 37-45, 1890.

Investigations of steamer *Albatross*, 1888.

TARLETON H. BEAN. Hybrids in Salmonidæ. Trans. Amer. Fisheries Soc., 18th. meeting, 1889, pp. 12-20.

ROBERT PAYNE BIGELOW. Notes on the physiology of *Caravella maxima* (Portuguese man-of-war). Johns Hopkins University Circular, No. 80, 1890, pp. 61, 62.

From studies made at the Wood's Holl Laboratory.

ROBERT PAYNE BIGELOW. The marginal sense organs in the Pelagidæ. Johns Hopkins University Circular, No. 80, 1890, pp. 65-67.

From studies made at the Wood's Holl Laboratory.

CHARLES H. BOLLMAN. A report upon the fishes of Kalamazoo, Calhoun, and Antrim Counties, Michigan, obtained in connection with the investigation of the Michigan fish commission, during the summer of 1888. 20 MS. pp. In course of publication in the Bulletin for 1888.

W. K. BROOKS. On the relationship between *Salpa* and *Pyrosoma*. Johns Hopkins University Circular, No. 80, 1890, p. 53.

From studies made at the Wood's Holl Laboratory.

D. E. COLLINS, T. H. BEAN, and RICHARD RATHBUN. Results of investigations by the schooner *Grampus* on the southern mackerel grounds in the spring of 1887. Bulletin U. S. Fish Commission, VII, pp. 217-267.

J. W. COLLINS and D. E. COLLINS. Report upon the operations of the U. S. Fish Commission schooner *Grampus*, from March 15, 1887, to June 30, 1888. 267 MS. pages, 16 plates, 1 chart.

Relates both to scientific inquiry and to the methods of the fisheries.

E. D. COPE. Report on the batrachians and reptiles collected in 1887-'88. Proceedings U. S. National Museum, XII, pp. 141-147, 1889.

Voyage of steamer *Albatross*, Norfolk to San Francisco, 1887-'88.

WILLIAM HEALEY DALL. Preliminary report on the collection of mollusca and brachiopoda obtained in 1887-'88. Proceedings U. S. Nat. Mus., XII, pp. 219-362, 1889.

Voyage of steamer *Albatross*, Norfolk to San Francisco, 1887-'88.

WILLIAM HEALEY DALL. A preliminary catalogue of the shell-bearing marine mollusks and brachiopods of the southeastern coast of the United States, with illustrations of many of the species. Bulletin U. S. Nat. Mus., No. 37, 1889, 221 pp., 74 plates.

Based largely upon the investigations of the U. S. Fish Commission, and of the U. S. Coast Survey.

FLETCHER B. DRESSLAR and BERT FESLER. A review of the mackerels (*Scombrinæ*) of America and Europe. Bulletin U. S. Fish Commission, VII, pp. 429-446, 11 plates.

C. H. and R. S. EIGENMANN. The fishes of Cortez Bank. Notes from the San Diego Biological Laboratory, 1889, 14 pp.

Private investigations made subsequent to and in consequence of the development of Cortez Bank by the Fish Commission steamer *Albatross* in 1889.

WALTER FAXON. Notes on North American cray-fishes—family *Astacidæ*. Proc. U. S. Nat. Mus., XII, pp. 619-634.

Includes an account of the cray-fishes collected by the Fish Commission field parties during 1888-'89.

- S. A. FORBES. On some Lake Superior Entomostraca. 26 MS. pages, 4 plates. In course of publication in Annual Report for 1888.
Relates to some of the lower forms of animals inhabiting Lake Superior and serving as food for young whitefish and other species.
- S. A. FORBES. Preliminary report upon the invertebrate animals inhabiting lakes Geneva and Mendota, Wisconsin, with an account of the fish epidemic in lake Mendota, in 1884. 33 MS. pages, 3 maps.
- CHARLES H. GILBERT. Notes on fishes from the lowlands of Georgia, with a description of a new species (*Opsopeodus bollmani*). 11 MS. pages. In course of publication in the bulletin for 1888. Investigations by C. H. Bollman and Bert Fesler, 1889.
- CHARLES H. GILBERT. Lists of fishes from the bend of the Tennessee, and from the Alabama and Escambia rivers, with notes and descriptions of three new species. 43 MS. pages, 2 figures.
Results of investigations in 1889.
- CHARLES H. GILBERT. Report upon certain investigations relative to the planting of oysters in southern California. 14 MS. pages, 3 maps, 1 plate.
Investigations of steamer *Albatross*, 1889.
- CHARLES H. GILBERT. Notes on the occurrence of *Gillichthys y-cauda* at San Diego, Cal. Proc. U. S. Nat. Mus. XII, p. 363, 1890.
- CHARLES H. GILBERT. A preliminary report on the fishes collected by the steamer *Albatross* on the Pacific Coast of North America during the year 1889, with descriptions of twelve new genera and ninety-two new species. Proc. U. S. Nat. Mus. XIII, pp. 49-126, 1890.
- G. BROWN GOODE and TARLETON H. BEAN. The deep-sea fishes of the North Atlantic Basin. 1500 MS. pages, 230 figures. To be published as a Bulletin of the National Museum.
- JAMES A. HENSHALL. Some observations on Ohio fishes. Jour. Cincin. Soc. Nat. Hist., Jan., 1890, pp. 114-125.
Results of field work in 1888 and 1889.
- F. H. HERRICK. The development of the American lobster: *Homarus americanus*. Johns Hopkins University Circular, No. 80, 1890, pp. 67, 68.
From studies made at the Wood's Holl Laboratory.
- C. F. HODGE. A study of the oyster beds of Long Island Sound with reference to the ravages of star-fishes. Johns Hopkins University Circular, No. 75, p. 102, 1889.
Investigations of steamer *Fish Hawk*.
- C. F. HODGE. Report of experiments made at Wood's Holl in 1889 upon lobster hatching and the feeding of young lobsters, 22 MS. pages.
- L. O. HOWARD. Annotated catalogue of the insects collected in 1887-'88. Proc. U. S. Nat. Mus. XII, pp. 185-216, 1889.
Voyage of steamer *Albatross*, Norfolk to San Francisco, 1887-'88.
- DAVID STARR JORDAN. Report of explorations made during 1888 in the Alleghany region of Virginia, North Carolina, and Tennessee, and in Western Indiana, with an account of the fishes found in each of the river basins of those regions. Bulletin U. S. Fish Commission, VIII, pp. 97-173, 3 plates.
- DAVID STARR JORDAN. Report of explorations in Colorado and Utah during the summer of 1889 with an account of the fishes found in each of the river basins examined. 82 MS. pages, 13 plates.
- DAVID STARR JORDAN. A reconnaissance of the streams and lakes of the Yellowstone National Park, Wyoming. 68 MS. pages, 26 plates, 1 map.
Investigations made in the autumn of 1889.
- DAVID STARR JORDAN. A review of the Labroid fishes of America and Europe. 209 MS. pages. In course of publication in the Annual Report for 1888.
- DAVID STARR JORDAN. Descriptions of fourteen species of fresh-water fishes collected by the U. S. Fish Commission in the summer of 1888. Proc. U. S. Nat. Mus., XI, pp. 351-362, 1 plate, 1888.
- DAVID STARR JORDAN. Catalogue of fishes collected at Port Castries, Sta. Lucia, by the steamer *Albatross*, November, 1887. Proc. U. S. Nat. Mus., XII, pp. 645-652, 1890.
Voyage of steamer *Albatross*, Norfolk to San Francisco, 1887-'88.
- DAVID STARR JORDAN. List of fishes obtained in the harbor of Bahia, Brazil, and in adjacent waters, during the voyage of the steamer *Albatross* from Norfolk to San Francisco. 41 MS. pages. To be published in the Proc. U. S. Nat. Mus.
- DAVID STARR JORDAN and CHARLES HARVEY BOLLMAN. Descriptions of new species of fishes collected at the Galapagos Islands and along the coast of the United States of Colombia, 1887-'88. Proc. U. S. Nat. Mus., XII, pp. 149-183, 1889.
Voyage of steamer *Albatross*, Norfolk to San Francisco, 1887-'88.
- DAVID STARR JORDAN and CARL H. EIGENMANN. A review of the genera and species of Serranidæ found in the waters of America and Europe. 443 MS. pages. In course of publication in the Bulletin for 1888.

DAVID STARR JORDAN and BARTON WARREN EVERMANN. Description of the yellow-finned trout of Twin Lakes, Colorado. Proc. U. S. Nat. Mus., XII, pp. 453-454, 1890.

New species of trout occurring at the Colorado Station of the Fish Commission.

DAVID STARR JORDAN and BARTON W. EVERMANN. Description of a new species of fish from the Tippecanoe River, Indiana. Proc. U. S. Nat. Mus., XIII, pp. 3, 4; 1 fig., 1890.

Investigations of 1888.

WILLIAM LIBBEY, Jr. Report upon the investigations of the schooner *Grampus* in 1889 in respect to the physical characteristics of the mackerel fishing grounds off the coast of southern New England. 198 MS. pages, 1 map, 31 diagrams, 6 plates.

Contains the following supplemental reports: On the atmospheric electricity of the region, by Prof. W. F. Magie; on the surface organisms collected, by Prof. W. K. Brooks.

WILLIAM LIBBEY, Jr. The cruise of the *Grampus*, Princeton College Bulletin, Vol. I, No. 4, 1889, pp. 100-103.

Brief account of the investigations on the mackerel grounds during the summer of 1889.

EDWIN LINTON. Notes on Entozoa of marine fishes of New England, with descriptions of new species. Part II. 448 MS. pp., 15 plates. In course of publication in the Annual Report for 1888.

The greater part of the material discussed in this paper was obtained in the Vineyard Sound region of Massachusetts by Professor Linton and other members of the Fish Commission during several years past.

EDWIN LINTON. Notes on Entozoa of marine fishes, with descriptions of new species. Part III. 59 MS. pages, 8 plates.

The remarks made under the previous title apply also to this one.

EDWIN LINTON. On two species of *Ligula* (larval *Dibothria*) infesting the trout and suckers in the Yellowstone National Park. MS. pages, 5 plates. In course of publication in the Bulletin for 1889.

Material collected by field party under Dr. David S. Jordan, October, 1889. These parasites are a source of great trouble, especially in respect to the trout, a large percentage of which they render worthless as food.

EDWIN LINTON. On the wart-like excrescences occurring on the short minnow, *Cyprinodon variegatus*, due to psorosperms. 14 MS. pages, 1 plate.

Studies made at the Wood's Holl Laboratory.

FREDERICK A. LUCAS. Catalogue of skeletons of birds collected at the Abrolhos Islands, Brazil, the Straits of Magellan, and the Galapagos Islands, in 1887-'88, Proc. U. S. Nat. Mus., XIII, pp. 127-130, 1890.

Voyage of steamer *Albatross*, Norfolk to San Francisco, 1887-'88.

FRED. MATHER. Report upon the results of salmon planting in the Hudson River, Bulletin U. S. Fish Commission, VII, pp. 409-424.

Based upon an investigation made in 1888.

SETH E. MEEK. Report of investigations during the summer of 1889, in the Ozark region of Missouri and Arkansas, with an account of the fishes found in each of the river basins of that region. 54 MS. pages, 2 figures.

T. H. MORGAN. Origin of the test cells of ascidians. Johns Hopkins University Circular No. 72, p. 63, 1889.

From studies made at the Wood's Holl laboratory.

T. H. MORGAN. A preliminary note on the embryology of the Pycnogonids. Johns Hopkins University Circular No. 80, 1890, pp. 59-61, 3 figures.

From studies made at the Wood's Holl laboratory.

WILLIAM PALMER. Fish-eating birds observed during the cruise of the schooner *Grampus* to the Gulf of St. Lawrence and Newfoundland, in 1887. Proc. U. S. Nat. Mus. XIII, 1890, 49 MS. pages.

JAMES I. PECK. Notes on the life history of the scup and sea bass in Vineyard Sound. 29 MS. pages.

Investigations made during the summer of 1887.

JAMES I. PECK. On the anatomy and histology of *Cymbuliopsis calceola*. Johns Hopkins University Circular No. 70, pp. 32, 33, 1889.

Based upon materials supplied by the schooner *Grampus*.

J. I. PECK. On the anatomy and histology of *Cymbuliopsis calceola*. Studies from the Biol. Lab. of Johns Hopkins Univ. IV, No. 6, pp. 335-353. plates XXXVI-XXXIX, 1890.

Based upon material supplied by the schooner *Grampus*.

ROBERT PLATT. Report upon the investigations made by the steamer *Fish Hawk* on the coast of Florida during the early part of 1889, relative to the spawning habits etc., of the mullet, sheepshead, sea trout, and other species.

ROBERT PLATT. Report upon the investigations made by the steamer *Fish Hawk* during the summer of 1889, relative to the oyster grounds of Long Island Sound. 35 MS. pages, 6 charts.

- RICHARD RATHBUN. Notice of the small surface organisms taken in the tow-nets, and of the contents of mackerel stomachs. (Cruise of schooner *Grampus*, spring of 1887). Bulletin U. S. Fish Commission, VII, pp. 259-267. (See under D. E. Collins.)
- [RICHARD RATHBUN.] Report upon the explorations of the fishing grounds of Alaska, Washington Territory, and Oregon, from July to October, 1888, by the U. S. Fish Commission steamer *Albatross*, Lieut. Commander Z. L. Tanner, U. S. Navy, commanding. Bulletin U. S. Fish Commission, VIII, pp. 1-92, 11 plates, 3 charts.
- RICHARD RATHBUN. The transplanting of lobsters to the Pacific coast of the United States. 75 MS. pages, 2 plates. In course of publication in the Bulletin for 1888.
- RICHARD RATHBUN. Ninety-seven charts showing the average temperature of the water by ten-day means at ninety-seven stations of the Light-House Board and Signal Service in different parts of the United States.
- ROBERT RIDGWAY. Birds collected on the Galapagos Islands in 1888. Proc. U. S. Nat. Mus. XII, pp. 101-128, 1889.
Voyage of steamer *Albatross*, Norfolk to San Francisco, 1887-'88.
- ROBERT RIDGWAY. Birds collected on the island of Sta. Lucia, West Indies, the Abrolhos Islands, Brazil, and at the Straits of Magellan, in 1887-'88. Proc. U. S. Nat. Mus., XII, pp. 129-139, 1889.
Voyage of steamer *Albatross*, Norfolk to San Francisco, 1887-'88.
- JOHN A. RYDER. The sturgeon and sturgeon industries of the eastern coast of the United States. 173 MS. pages, 23 plates.
Investigations made chiefly during 1888, with the view of devising means of propagating the sturgeon.
- JOHN A. RYDER. Report upon the scientific work carried on at the Wood's Holl laboratory of the U. S. Fish Commission during the summer of 1888. 31 MS. pages.
- JOHN A. RYDER. The lateral line organs and the hyaline tissues of the head of the shad.
Trans. Amer. Fisheries Soc., 18th meeting, 1889, pp. 20-22.
- WILLIAM P. SEAL. The Aquarium. A brief exposition of its principles and management. Bulletin U. S. Fish Commission, VII, pp. 274-282.
- WILLIAM P. SEAL. The keeping of Salmonidæ for purposes of exhibition. Bulletin U. S. Fish Commission, VII, pp. 283, 284, 1 figure.
- WILLIAM P. SEAL. An inquiry as to the proper methods for the care of living things held for popular amusement and instruction, or for purposes of biological research. Bulletin U. S. Fish Commission, VII, pp. 285-287, 2 plates.
- WILLIAM P. SEAL. Notes on the aquaria at the central station of the U. S. Fish Commission, Washington, D. C. 19 MS. pages, 3 figures.
- JAMES M. SMITH. Report upon the operations of the steamer *Fish Hawk* during the summer of 1888, relative to the oyster-starfish investigation in Providence River and Long Island Sound. 25 MS. pages, 4 charts.
- ROBERT E. C. STEARNS. Descriptions of new West American land, fresh-water and marine shells, with notes and comments. Proc. U. S. Nat. Mus. XIII, pp. 205-225, plates XV-XVII, 1890.
The marine shells were partly obtained during the voyage of the steamer *Albatross*, Norfolk to San Francisco, 1887-'88.
- Z. L. TANNER and others. Report on the work of the U. S. Fish Commission steamer *Albatross* from January 1, 1887, to June 30, 1888. 113 MS. pages 12 figures. In course of publication in the annual report for 1888.
Investigations on the Atlantic coast prior to November, 1887, and the voyage from Norfolk to San Francisco.
- Z. L. TANNER and others. Report on the work of the U. S. Fish Commission steamer *Albatross* from July 1, 1888 to June 30, 1889. 225 MS. pages
Investigations on the Alaskan coast and on the coasts of Washington, Oregon, and California.
- Z. L. TANNER and others. Report on the work of the U. S. Fish Commission steamer *Albatross* from July 1, 1889 to June 30, 1890. 108 MS. pages.
Investigations on the coasts of southern Alaska, Washington, Oregon, and California.
- CHARLES H. TOWNSEND. Birds from the coasts of western North America and adjacent islands, collected in 1888-'89, with descriptions of new species. Proc. U. S. Nat. Mus. XIII, pp. 131-142, 1890.
Scientific results of the explorations of the steamer *Albatross*.
- CHARLES H. TOWNSEND. Reptiles from Clarion and Socorro Islands, and the Gulf of California, with descriptions of new species. Proc. U. S. Nat. Mus. XIII, 1890. 3 MS. pages.
Scientific results of the explorations of the steamer *Albatross*.
- FREDERICK W. TRUE. Contributions to the natural history of the cetaceans. A review of the family Delphinidæ. Bull. U. S. Nat. Mus. No. 36, 1889, 190 pp., 47 plates, Based in part upon collections made by the U. S. Fish Commission.

- GEORGE VASEY. List of the plants collected in Alaska in 1888. Proc. U. S. Nat. Mus. XII, pp. 217-218, 1889.
Alaskan cruise of steamer *Albatross*.
- GEORGE VASEY and J. N. ROSE. Plants collected in 1889, at Socorro and Clarion Islands, Pacific Ocean. Proc. U. S. Nat. Mus. XIII, pp. 145-149, 1890.
Scientific results of the explorations of the steamer *Albatross*.
- S. WATASE. On a new phenomenon of cleavage in the ovum of the Cephalopod. Johns Hopkins University Circular No. 70, pp. 33, 34, 1 fig., 1889.
From studies made at the Wood's Holl laboratory.
- S. WATASE. On the structure and development of the eyes of the Limulus. Johns Hopkins University Circular No. 70, pp. 34-37, 2 figs., 1889.
From studies made at the Wood's Holl laboratory.
- S. WATASE. Karyokinesis and the cleavage of the ovum. Johns Hopkins University Circular No. 80, 1890, pp. 53-56, 2 figures.
From studies made at the Wood's Holl laboratory.
- S. WATASE. On the migration of the retinal area and its relation to the morphology of the simple ocelli and the compound eyes of Arthropods. Johns Hopkins University Circular No. 80, 1890, pp. 63-65.
Based in part upon studies at the Wood's Holl laboratory.
- S. WATASE. Observations on the development of Cephalopods: homology of the germ-layers. Studies from the biol. lab. of Johns Hopkins University IV, No. 4, pp. 163-192, plates XVI-XVII, 1888.
From studies made at the Wood's Holl laboratory.
- S. WATASE. On the morphology of the compound eyes of Arthropods. Studies from the biol. lab. of Johns Hopkins University IV, No. 6, pp. 287-334, plates XXIX-XXXV, 1890.
From studies made at the Wood's Holl laboratory.
- CHARLES A. WHITE. On certain Mesozoic fossils from the islands of St. Paul and St. Peters, in the Straits of Magellan. Proc. U. S. Nat. Mus. XIII, 1890, 4 MS. pages, 2 plates.
Voyage of steamer *Albatross*, Norfolk to San Francisco, 1887-'88.
- HENRY V. WILSON. Report upon the scientific work carried on at the Wood's Holl Laboratory of the U. S. Fish Commission during the summer of 1889. 21 MS. pages.
- HENRY V. WILSON. Monographic report upon the embryology and life history of the sea bass (nearly completed).
Investigations made at the Wood's Holl Laboratory.
- HENRY V. WILSON. On the development of the sea bass. Johns Hopkins University Circular No. 80, 1890, pp. 56-59, 3 figures.
Studies made at the Wood's Holl Laboratory.

SUMMARY OF EXPENDITURES ON ACCOUNT OF SCIENTIFIC INQUIRY DURING THE LAST FOUR FISCAL YEARS, AND OF SALARIES FROM 1888 TO 1889.

EXPENDITURES ON ACCOUNT OF SCIENTIFIC INQUIRY, FISCAL YEAR 1886-'87.

Wood's Holl station.

Salaries.....	\$8,203.04
Temporary services.....	1,173.83
Traveling expenses.....	1,658.64
Subsistence.....	2,015.54
Rent of quarters.....	54.50
Storage quarters.....	50.00
Preservation outfit.....	219.02
Outfit of station.....	3,062.08
Plans for new launch.....	200.00
Apparatus.....	882.03
General material and supplies.....	4,022.97
Launch <i>Cygnat</i>	745.76
Stone wall, piles, etc.....	720.41
Repairs, etc., to buildings.....	1,781.01
Telephones.....	267.00
Live fish.....	44.10
Freights.....	923.69
Telegrams.....	10.21
Miscellaneous.....	235.40
	26,269.23

Washington station.

Salaries	\$6,647.50
J. H. Kidder and Thomas Watkins	1,904.65
T. W. Smillie	1,809.00
Traveling expenses	12.70
Apparatus and equipment	2.30
Materials and supplies	102.09
Specimens	12.65
Freights	41.49
Miscellaneous	50.00
	<u>10,582.38</u>

New Haven station.

A. E. Verrill and others	<u>\$2,588.20</u>
--------------------------------	-------------------

Miscellaneous.

Charles H. Townsend	750.25
S. E. Meek	30.00
Sarah Joyce	60.00
	<u>840.25</u>
Total	<u>40,280.06</u>

FISCAL YEAR 1887-'88.

Wood's Holl station.

Salaries	\$8,459.25
Temporary services	836.58
Traveling expenses	1,704.10
Buildings and ponds	1,432.75
Apparatus and equipment	2,266.98
Fuel and light	2,516.69
Preservation equipment	331.00
Fish and eggs	326.49
Miscellaneous	1,010.50
	<u>18,884.34</u>

Washington station.

Salaries	5,961.58
Traveling expenses	95.88
Outfit	136.16
Stationery	23.15
Preservation equipment	332.39
Miscellaneous	1,696.05
J. H. Kidder	293.10
T. W. Smillie and others	959.68
	<u>9,497.99</u>

New Haven station.

Salaries	2,520.00
Traveling expenses	50.01
Stationery	5.25
Miscellaneous	6.90
	<u>2,582.16</u>

Miscellaneous.

Bessley's Point exploration.....	\$11. 18
Somer's Point exploration.....	691. 65
Schooner <i>Grampus</i> , special inquiry	261. 40
Fish preservation.....	18. 01
Sanderson Smith.....	420. 53
John A. Ryder (embryology)	293. 72
Determination of desirable food-fishes for propagation and distribution ..	550. 00
	2, 246. 49
Total.....	33, 210. 98

FISCAL YEAR 1888-'89.

Assistant in charge of scientific inquiry, salary,.....	\$2,400.00
Office of assistant in charge of Scientific Inquiry :	
Pay-roll	\$1, 674. 82
Furniture.....	259. 00
Equipment	88. 16
	2, 021. 98
Washington laboratory :	
Equipment.....	146. 55
Services	1, 283. 40
Preparation of reports, incidentals.....	353. 82
Incidental expenses.....	17. 93
	1, 801. 70
Wood's Holl laboratory :	
Equipment.....	385. 61
Services	1, 520. 64
Incidental expenses	31. 11
	1, 937. 36
General equipment.....	2, 164. 21
Investigation interior waters:	
Virginia, North and South Carolina, Tennessee: Field ex-	
penses	817. 42
Michigan :	
Field expenses.....	\$171. 34
Services	31. 45
	202. 79
Arkansas, field expenses.....	99. 05
Ohio River, incidentals.....	2. 25
Indiana, field expenses.....	104. 70
Iowa, incidentals	. 80
Hudson River, field expenses	178. 60
Colorado and Yuma Rivers	390. 05
Alaskan salmon rivers:	
Expenses	\$452. 61
Services	277. 50
	730 11
Alabama and Mississippi explorations	402. 15
Georgia, explorations	75. 55
	3, 003. 47

Incidental expenses		8. 20
		14, 110. 20

COMPARISON OF EXPENDITURES FOR SCIENTIFIC INQUIRY DURING THE PAST FOUR YEARS.

A proper comparison can not be made of the expenditures for scientific inquiry during the fiscal years 1887 and 1888, with those during 1889 and 1890, in view of the fact that an entirely different and more systematic classification of accounts was introduced at the beginning of the latter period. The charges which appear against

scientific inquiry on the account books of the Commission for these years are as follows:

1886-'87	\$40,280.06
1887-'88	33,210.98
1888-'89	14,384.99
1889-'90 (to June 1).....	14,110.20

The separate items for the first two years are shown in the following table:

1886-'87.		1887-'88.	
Washington Station.....	\$10,582.38	Washington Station.....	\$9,497.99
Wood's Holl Station.....	26,269.23	Wood's Holl Station	18,884.34
New Haven Station.....	2,588.20	New Haven Station.....	2,582.16
Miscellaneous	840.25	Miscellaneous	2,246.49
	40,280.06		33,210.98

During 1886-'87 about \$5,000 of the Wood's Holl expenditure was for permanent construction and equipment in establishing the station. Moreover, the Wood's Holl items for both 1886-'87 and 1887-'88 include the maintenance and operation of the station for fish-cultural as well as scientific inquiry purposes. Deducting \$5,000 for 1886-'87, and combining the expenditures for scientific inquiry and fish-culture in 1888-'89 and 1889-'90, the cost of maintaining and operating Wood's Holl Station during each of the four years appears as follows:

1886-'87	\$21,269.23
1887-'88	18,884.34
1888-'89	13,373.61
1889-'90	12,560.57

The following table represents the expenditure for scientific inquiry during the same four years plus the cost of maintaining and operating Wood's Holl Station for fish-culture. It furnishes the means of making a more just comparison of the expenditures than the first table given, but it should be understood that it represents a large expenditure each year which does not belong to scientific inquiry:

1886-'87	\$35,280.06
1887-'88	33,210.98
1888-'89	25,821.24
1889-'90	24,388.78

SALARIES AND PAY OF TEMPORARY ASSISTANTS, SCIENTIFIC INQUIRY, 1888-'89.

(Appropriation on account of inquiry respecting food-fishes and the fishing-grounds.)

Assistant in charge of division:

Richard Rathbun, 12 months, at \$200..... \$2,400.00

Office of assistant in charge:

H. R. Center, clerk, December, 1 month at \$50; January 1 to June 30, 6 months at \$83.33, \$499.98..... \$549.98

H. S. Hinrichs, clerk, July 1 to January 31, 7 months at \$40, \$280; February 1 to June 30, 5 months at \$60, \$300 .. 580.00

Frank McCormick, copyist, July 5 to March 31, 8 $\frac{2}{3}$ months at \$40, \$354.84; April 1 to June 30, 3 months at \$50, \$150. 504.84

E. G. Lang, draughtsman, November 23 to December 22, 1 month 40.00

1,674.82

Laboratory, Washington:

Dr. T. H. Bean, ichthyologist, July 1 to September 15, and October 15 to December 31, 1888, 5 months at \$175..... 875.00

Prof. L. A. Lee, temporary assistant, November 17 to 26; December 27 to January 23, omitting January 9 and 10, 1 $\frac{5}{8}$ months at \$150 174.20

W. C. Kendall, assistant, April 14 to June 30, 2 $\frac{1}{2}$ months at \$60 154.00

Thomas Watkins, attendant, July, 1 month 40.00

1,243.20

Laboratory, Wood's Holl.:

Prof. John A. Ryder, in charge, July 1 to September 30, 3 months, at \$150	\$450.00
Dr. Henry V. Wilson, in charge, May 17 to June 30, $1\frac{1}{2}$ months, at \$100	148.39
Prof. W. K. Brooks, temporary assistant, July 13 to Septem- ber 30, $2\frac{1}{3}$ months; June 18 to 30, $\frac{1}{3}$ month, at \$150	456.93
Dr. T. H. Bean, ichthyologist, September 15 to October 15, 1 month	175.00
Dr. T. H. Morgan, temporary assistant, August 1 to Septem- ber 30, 2 months, at \$50	100.00
Dr. C. F. Hodge, temporary assistant, June 15 to 30, 16 days, at \$2.50	40.00
James I. Peck, temporary assistant, June 28 to 30, 3 days, at \$2.50	7.50
V. N. Edwards, assistant, June 1 to 15, one-half month, at \$60	30.00
Richard Dana, June 20 to 30, $\frac{1}{3}$ months, at \$75	27.50
William Goffin, attendant, June 18 to 30, $\frac{1}{3}$ month, at \$20	8.67
	\$1,443.99

Temperature investigations:

Sarah Joyce, observer at Fort Washington, Md., 12 months, at \$10	120.00
--	--------

Investigation of interior waters.

Michigan:

Dr. C. H. Bollman, July 11 to August 19, $1\frac{3}{4}$ months, at \$25	31.45
--	-------

Alaska:

Dr. T. H. Bean, June, 1 month	200.00
R. E. Lewis, June, 1 month	40.00
Franklin Booth, June 22 to 30, $\frac{3}{8}$ month, at \$125	37.50
	308.95

New Haven, Conn.:

Prof. A. E. Verrill, July, 1 month	125.00
Miss K. J. Bush, July, 1 month	45.00
Miss C. E. Bush, July, 1 month	40.00
	210.00
	7,400.96

(Appropriation on account of vessels.)

Steamer *Albatross*:

C. H. Townsend, naturalist, July 1 to October 30, 4 months, at \$100, \$400; November 1 to June 30, 8 months, at 140, \$1,120	1,520.00
Prof. C. H. Gilbert, temporary naturalist, December 14, to June 30, $6\frac{1}{2}$ months, at \$175	1,151.61
A. B. Alexander, fishery expert, July 1 to October 30, 4 months, at \$90, \$360; November 1 to June 30, 8 months, at \$100, \$800	1,160.00
L. de F. Bartlett, ship's writer, July 1 to October 30, 4 months, at \$60, \$240; November 1 to July 1, 8 months, at \$69, \$552	792.00
	4,623.61

Steamer *Fish Hawk*:

Dr. C. B. S. Adams, medical officer, 12 months, at \$100	1,200.00
--	----------

Schooner *Grampus*:

W. C. Kendall, naturalist, February 4 to April 14, 1 month + $\frac{3}{8}$ months + $\frac{1}{3}$ month, at \$60	147.57
Dr. James A. Henshall, naturalist, January 25 to May 7, $3\frac{1}{4}$ months, at \$100	345.16
	492.73
	6,316.34

SALARIES AND PAY OF TEMPORARY ASSISTANTS, SCIENTIFIC INQUIRY, 1889-'90.

(Appropriation on account of inquiry respecting food-fishes and the fishing grounds.)

Assistant in charge of division:

Richard Rathbun, July 1 to August 31, 2 months, at \$200 ..	\$400.00	
September 1 to June 30, 10 months, at \$225	2,250.00	
		<u>\$2,650.00</u>

Office of assistant in charge:

H. R. Center, clerk, 12 months	1,200.00	
H. S. Hinrichs, clerk, 12 months	720.00	
F. McCormick, copyist, 12 months	600.00	
		<u>2,520.00</u>

Laboratory, Washington:

Dr. T. H. Bean, ichthyologist, October 13 to 31, $\frac{3}{8}$ month, at \$200	120.00	
W. C. Kendall, assistant, 12 months	720.00	
Dr. R. R. Gurley, assistant, June 11 to 30, $\frac{3}{8}$ month, at \$100 ..	66.66	
		<u>906.66</u>

Laboratory, Wood's Holl:

Dr. H. V. Wilson, assistant in charge, 12 months	1,200.00	
Prof. W. K. Brooks, temporary assistant, July 1 to September 24, $2\frac{1}{2}$ months, at \$150	420.00	
Prof. Edwin Linton, temporary assistant, July 3 to September 4, 64 days, at \$3 per day	192.00	
Dr. C. F. Hodge, temporary assistant, July 1 to 31, 31 days, at \$2.50 per day	77.50	
Dr. James I. Peck, temporary assistant, July 1 to September 24, 86 days, at \$2.50 per day	215.00	
William Goffin, attendant, July 1 to September 30, 3 months, at \$20 per month	60.00	
		<u>2,164.50</u>

Temperature investigations:

Sarah Joyce, observer at Fort Washington, Md., 12 months, at \$10	120.00	
---	--------	--

Investigation of interior waters:

Colorado and Utah:

Dr. David S. Jordan, July 16 to August 31, $1\frac{1}{2}$ months, at \$25	\$37.50	
Prof. B. W. Evermann, July 16 to August 31, $1\frac{1}{2}$ months, at \$25	37.50	
B. M. Davis, July 16 to August 31, $1\frac{1}{2}$ months, at \$25	37.50	
Bert Fesler, July 16 to August 31, $1\frac{1}{2}$ month at \$25	37.50	
		<u>150.00</u>

Missouri and Arkansas:

Prof. S. E. Meek, July 16 to August 31, $1\frac{1}{2}$ months, at \$25	37.50	
Louis Rettger, July 16, to August 31, $1\frac{1}{2}$ months, at \$25	37.50	
Frank M. Drew, July 16 to August 31, $1\frac{1}{2}$ months, at \$25	37.50	
		<u>112.50</u>

Georgia:

Dr. C. H. Bollman, July 1 to 12 }	37.50	
Bert Fesler, July 1 to 15		

Alaskan salmon rivers:

Dr. T. H. Bean, July 1 to October 12, $3\frac{3}{8}$ months, at \$200 ..	680.00	
		<u>980.00</u>
		<u>9,341.16</u>

NOTE.—Salaries for inquiry respecting interior waters excepting Alaska, have been merely nominal, to cover incidental expenses, wear and tear of clothing, etc.

(Appropriation on account of vessels.)

Steamer *Albatross* :

C. H. Townsend, naturalist, July 1 to August 31, 2 months, at \$140, \$280 ; September 1 to June 30, 10 months at \$150, \$1,500	\$1,780.00	
Prof. C. H. Gilbert, temporary naturalist, July 1 to September 15, 2½ months, at \$175	437.50	
A. B. Alexander, fishery expert, 12 months, at \$100	1,200.00	
N. B. Miller, assistant naturalist, 12 months, at \$100	1,200.00	
H. C. Fassett, ship's writer, 12 months, at \$69	828.00	
		\$5,445.50

Steamer *Fish Hawk* :

Naturalist and medical officer, at \$100 per month.		
Dr. C. B. S. Adams, July 1 to August 31	200.00	
Dr. William Stimpson, August 26 to March 9	648.38	
Dr. R. R. Gurley, March 11 to June 10	301.07	
		1,149.45
Dr. C. F. Hodge, temporary assistant, August 1 to September 30, 61 days, at \$2.50 per day		152.50

Schooner *Grampus*.

Prof. William Libbey, jr., temporary assistant, July 1 to September 24, October 7 to 24, 2 months - ¼ month + ⅓ month, at \$150 per month	507.10	
Prof. C. J. Rockwood, temporary assistant, July 15 to August 24, 1 ⅔ months, at \$125 per month	165.32	
Prof. Wm. F. Magie, temporary assistant, July 20 to September 18, 1 month + ⅓ month + ⅔ month	248.39	
Prof. M. McNiell, temporary assistant, August 20 to September 7, ⅓ + ⅔ month, at \$125 per month	77.55	993.36
		\$7,745.81

COPIES OF INSTRUCTIONS TO FIELD PARTIES, 1888-1890.

INSTRUCTIONS TO STEAMER ALBATROSS.

WASHINGTON, D. C., June 6, 1888.

SIR: After the necessary arrangements have been completed you will proceed to the Alaskan coast, in the region of the Shumagin Islands and Kadiak, for the purpose of making an exploration of the cod-fishing grounds, in accordance with the detailed instructions herewith inclosed, addressed to Prof. Leslie A. Lee, Assistant, in charge of the Scientific Staff.

No changes have been made with respect to the relations between the naval and civilian staffs, as they existed during the last cruise; but the present instructions are mainly limited to a discussion and explanation of the proposed investigations.

I am fully aware that the amount of work laid out is far more than you can expect to accomplish in the course of one season, but I have made the scheme broad and comprehensive, having implicit confidence in the judgment of yourself and Professor Lee, to make the best possible use of the means at your command.

The length of the cruise is left to your discretion, but it is my opinion that it should not continue far into the fall, both for the reason that it will be an expensive trip, and from the fact that there is much work which we are expected to do during the fall and winter on the coasts of Washington Territory, Oregon, and California.

On the return from Alaska you may report at any place in the Straits of Fuca or Puget Sound, having telegraphic facilities, or at San Francisco, as seems most expedient; but the fall explorations will probably begin at the North, providing the weather is propitious there at that time.

An interesting problem respecting the hydrography of the North Pacific Ocean has been suggested to me by Prof. James D. Dana, and as you may possibly have the opportunity to make some observations in that direction I copy a portion of his letter. It is as follows: "There is a point of great interest in connection with the ocean just off the west point of Alaska and the Aleutian Islands. You will note on the map of the Hydrographic Department soundings of 3,660 and 3,684 fathoms between 160° and 165° W., south of 55° N. The important question is whether those soundings indicate that a 3,000-fathom trough extends westward from there along a curved line parallel with the Aleutian Islands, so as to include the 4,037-fathom sounding near 171° 30' E., just southeast of the west end of the Aleutians. It would

be of great service toward an understanding of the Pacific depths if this point could be worked out. A German Bathymetric makes the 3,000-fathom area cover a large part of the North Pacific, north of 38° N., from the Japan Sea eastward. It seems more probable that the area is a narrow one, south of the Aleutians, bending around into the Japan Sea belt of deep water—a 3,000 and 4,000 fathom belt."

In order to fully cover the question raised by Professor Dana it appears to me that two series of deep-sea soundings would have to be made. One should follow the line of the Aleutian Archipelago to fill in the gap left by the Tuscarora soundings. The other would consist of several cross lines at right angles to the Aleutian Islands, and extending south of them a distance of several degrees. Such an exploration as this you would have neither the time nor the means to undertake during the forthcoming cruise, but it has occurred to me that you might, without much delay, during the passage out or on the return trip, make one such cross line, south of the Tuscarora soundings, off the region of the Shumagin Islands, or perhaps even farther to the westward. This digression should not be made, however, if it will in any way seriously interfere with the regular objects of the cruise.

Any other important hydrographic work that can be done without detriment to the interests of the Fish Commission, may be undertaken at your discretion, and the results communicated to the Navy Department.

Very respectfully,

M. McDONALD,
Commissioner.

Lieut. Commander Z. L. TANNER, U. S. N.,
Commanding steamer *Albatross*, San Francisco, Cal.

Alaskan cruise of the steamer Albatross, season of 1888.

WASHINGTON, D. C., June 6, 1888.

SIR: In the conduct of the explorations to be undertaken by the steamer *Albatross* during the coming summer, in the region of Alaska, you will be guided by the following instructions:

The scientific staff will consist of Prof. Leslie A. Lee, assistant in charge; Mr. Charles H. Townsend, assistant; Mr. A. B. Alexander, expert fisherman.

The instructions issued for the "guidance" of the scientific staff, under date of November 15, 1887, will be continued in force; but in consideration of the few persons composing the staff, you may sometimes find it necessary to disregard instruction No. 6, which requires that at least one member of the scientific staff shall always remain on board the ship.

Those portions of the instructions, issued at the same time, for the "conduct" of the scientific work, from Norfolk to San Francisco, which relate to observations, reports, etc., will also remain in force.

The cruise of 1888 will be undertaken for the purpose of exploring certain portions of the Alaskan coast, which are known to be frequented by the cod *Gadus morrhua*, in large numbers, with the special view of determining the extent, character, and resources of the off-shore grounds, suited to the purposes of fishing.

The region selected for exploration lies to the south and southeast of the Alaskan Peninsula, and extends from the Shumagin Islands, on the west, to and including Portlock Bank to the east of Kadiak Island, on the east, and from the mainland of the Alaskan Peninsula to the steep slope bordering the North Pacific Ocean; the location of this slope being indicated approximately off the Shumagin Islands, by the deep-sea soundings made by the U. S. S. *Tuscarora* in 1874. This region is the one now most resorted to by the American fleet of cod-fishing vessels in the Pacific Ocean. Its length, on a line parallel to the coast, is over 400 nautical miles; its least width about 80 miles. It will be impossible to entirely cover this area in the course of one season's work, and your explorations should begin in the neighborhood of the Shumagin Islands and be carried thence eastward.

The term "off-shore grounds," as used in these instructions, is intended to include all open water areas to within a short distance of the coast and islands.

So little is known respecting this entire region, that the field may be considered as wholly new, and requiring investigation as to all particulars.

Regular series of soundings should be made from near the mainland and the islands to the edge of the continental slope, and into depths of at least 100 or 200 fathoms, in order to ascertain the depth of water and the character of the bottom. The frequency of sounding, the manner of running the lines, and all the questions pertaining to this subject should be determined upon by consultation with Captain Tanner, who will take the hydrographic work in charge as heretofore. This investigation should be sufficiently thorough to afford a complete knowledge of the principal features of the

bottom. Where important banks or other inequalities of the bottom are indicated by the soundings, their outline and surface contour should be worked out with as much care as seems expedient.

In connection with the sounding operations, the dredge, beam-trawl, and other apparatus for obtaining specimens from the bottom should be employed as often as possible, to determine the richness of the bottom with respect to food for fishes.

The fishing appliances, such as hand-lines, trawl-lines, gill-nets, etc., should also be used frequently, in order to ascertain the abundance and quality of the cod and of other food fishes, especially the halibut. The records made in connection with the fishing operations should be as complete as those for dredging, and should include an account of the kind of apparatus used, the success attending its use, and the kind of bait employed.

A careful record should be made of the number, size, weight, and condition (lean or well fed) of the cod and halibut taken. Different markets demand special sizes of fish, and the average cod now caught in the in-shore waters of Alaska would probably not find a sale in the Eastern markets of the United States.

The contents of the stomachs of all important fishes taken should be examined, and as much of the contents saved as may be necessary to determine their food, and suggest the kinds of bait to be used in their capture. The same species should be examined with respect to the condition of their reproductive organs, with a view of ascertaining the breeding season of each species. An attempt should also be made to locate the spawning grounds of the cod and halibut, and information respecting this subject may possibly be obtained from the fishermen.

Constant inquiry should be made as to the best and most abundant species suitable for bait for the cod and halibut, whether fishes or invertebrates; the particular localities where they abound, and the best methods of capturing them, preserving them, etc. In fishing for cod and halibut with bait you should try all species of fishes and invertebrates that occur in sufficient abundance and seem to be adapted to the purpose. The value of a bait is known to change with the season, and sometimes abruptly. Dr. Bean states that the yellow fish, *Pleurogrammus monopterygius*, forms the best bait for cod in Alaska. The mussel is used extensively in England, but not in this country.

The amount of material, in the way of specimens, to be saved from your collectings is left to your discretion, and you should be guided in the matter by your experience in the same kind of work on the Atlantic coast.

The temperature of the water at the bottom and at intermediate depths, and the density of the water at the surface, bottom, and intermediate depths, should be determined in connection with the hydrographic work, in the same manner as heretofore, and as frequently as possible. The surface-water temperatures and the meteorological observations regularly entered in the ship's log, are undoubtedly sufficient for most purposes; but the conditions and changes in the weather should be carefully noted with respect to their effects upon pelagic fishes, should such fishes be observed, and their influence in regulating the fishing season, etc.

It is also important that the ocean currents should be studied with respect to their limits, velocity, causes, effects upon temperature, and upon the movements of fishes.

While the investigation of the off-shore grounds should be conducted especially in the interest of the cod fishery, no opportunity should be neglected to study the other economic species occurring in the same region, and with the same general objects in view.

The surface explorations should be pressed with vigor, especially if there are indications of surface schooling fishes which might afford a fishery either for food or bait. In using the small tow-net, state on the label or in the notes accompanying the collections, the distance traversed, in addition to the usual memoranda, in order to furnish data for determining the amount of life in a given area. The tow-net should also be used as frequently as possible just above the bottom in connection with the trawl, as was the custom on the Atlantic coast. A recent examination of the bottom towings has yielded very interesting results.

Whenever opportunities occur inquiries should be made of the fishermen who have visited the Okhotsk Sea, as to the relative merits of the cod grounds on the two sides of the North Pacific Ocean. These inquiries should relate to the size, quality, and quantity of the fish, the facilities for fishing, for obtaining supplies and shelter in stormy weather, the character of the grounds and of the weather, etc.

When detained in port or among the islands by reason of stormy weather, or from other causes, the opportunity should be taken to study the shallow water grounds and island shores with the same thoroughness as the outside waters. In this connection, your inquiries should also extend to the question of harbors best suited to the fishermen. Which offer the best facilities for obtaining supplies, for repairing, for curing the catch, etc.? Is the climate suitable for drying and otherwise preserving fish for export? Suggestions have been made relative to the establishment of curing stations on the islands, whence the fish could be carried by regular transports to

San Francisco and other southern ports. Kadiak is recommended by Mr. Dall as a site for such a station, from its affording the nearest timber to the fishing grounds available for repairs, from its being already a depot for the ice trade, and affording good anchorage; while the Aleuts might easily be trained in the curing of fish.

The fresh waters may also be examined, should the time permit, with special reference to the salmon and other fresh-water fishes. As this branch of inquiry, however, can be as well undertaken by a party sent by ordinary conveyance from Sitka or San Francisco, it is not advisable to engage in it to the neglect of any of the other and more important investigations previously described.

All information respecting the occurrence and habits of cetaceans, seals and other aquatic mammals, and also respecting the seal fishery will be of value. Interesting specimens should be saved whenever possible; and photographs or sketches may be made of specimens and of the haunts of those species which resort to the land. Suggestions by Mr. True and Mr. Lucas, for preserving skins and skeletons, are contained in your former instructions.

Attention should also be paid to the water birds, especially in their relations to marine fishes. What species prey upon fishes? Does their presence at any place in large numbers indicate the existence of schools of fishes at the surface? Are any of the species suited for bait? (See paper by Joseph W. Collins in Fish Commission Report for 1882, p. 311.) Appendix G of these instructions contains suggestions from Mr. Robert Ridgway relative to collecting and observing water birds. Skins and skeletons should be saved. Mr. Ridgway's instructions furnished in November last also relate to Alaskan birds.

The small amount of time which you will be able to spend on land may be utilized in such manner as you think best. It will be important to give some attention to the statistics of the fisheries in the regions in which you are exploring, but you will have neither the time nor the opportunity to consider this subject in a comprehensive way. In the study of the fisheries and fishery methods you will be guided by the remarks given in Appendix C.

The appendices forming part of these instructions should be given careful consideration, and in so far as they are applicable to the Alaskan region should guide you in your inquiries.

Appendix A relates to the investigation of ocean fishing grounds, and by a tabular arrangement of topics and questions presents a comprehensive scheme for the study of the entire subject.

Appendix B relates in the same manner to the natural history of different species of fish that may have economic value; and Appendix C to the fisheries and fishery methods.

Appendix D is a list of the Alaskan salt-water food-fishes and important marine invertebrates.

Appendix E contains descriptions of all the known Alaskan cod grounds.

Appendix F is a list of all papers bearing upon the Alaskan fishes and fisheries that have been published in the reports of the U. S. Fish Commission and U. S. National Museum, of which you are supposed to have a complete file on board.

Appendix G consists of suggestions by Mr. Robert Ridgway relative to the water birds.

With respect to our present knowledge of the aquatic mammals, of the fresh-water fishes, and of the fishery methods and statistics of Alaska, the five published sections of the quarto fishery report may serve as a basis for your investigations on those subjects. These same reports, together with the annual reports and bulletins of the Commission, and the proceedings and bulletins of the National Museum, contain a vast amount of information respecting all branches of the natural history and the fisheries of Alaska.

The area selected for exploration this year, with respect to the off-shore fishing banks, and described on the foregoing pages, is indicated on a general coast-survey map of Alaska, which is forwarded by the same mail with these instructions.

The separate instructions relative to the transplanting of the common soft clam, *Mya arenaria*, from San Francisco to Alaska, should be carried out if possible. Should the location indicated for planting, viz, Chignik Bay, seem to be too far from your first working ground, you may select such other place for the purpose as you think best. Chignik Bay was, however, strongly recommended by Mr. W. H. Dall, because of the character of its shores, especially in the coves on the south side of the bay, which he considers to be specially adapted to the growth of the clam, and sufficiently removed from human habitations to warrant their remaining undisturbed for some time.

Very respectfully,

M. McDONALD,
Commissioner.

Prof. LESLIE A. LEE.

Assistant in charge of Scientific Staff, steamer Albatross, San Francisco, Cal.

APPENDIX A.—*Suggestions relative to the investigation of ocean fishing grounds.*

Professor Baird recognizes four classes of ocean fishing grounds, viz: *In-shore*, *off-shore*, *deep-sea*, and *pelagic*. These are not separated by distinct lines of demarkation, but merge one into the other, and the physical and biological problems concerning them may each be outlined under one head for all. The principal points, with respect to each class of grounds, upon which information is desired are as follows:

IN-SHORE GROUNDS.

Location and extent.

Contour and character of the adjacent shores.

Configuration, character, and composition of the bottom; depth of water.

Ledges, banks, shoals, etc., worthy of special notice, should be located and described.

Are the shores suited to the use of various kinds of fishing appliances, such as seines, gill-nets, weirs, traps, etc.?

Occurrence of seal rookeries.

Breaks in the coast line, such as river mouths, bays, harbors, etc., and their influence upon the density and temperature of the water, and the amount of sediment.

OFFSHORE GROUNDS.

Mostly characterized by banks, ledges, and shoals, although the fishery often extends to the intervening depressions, or even over extensive flat bottoms, as in the Gulf of Maine.

The banks and other elevations should be considered, both individually and collectively, with respect to their location, extent, configuration (outline and surface contour), depth of water, geological structure, and character and composition of the bottom.

The same considerations, in so far as they apply, should be extended to the intervening depressions or gullies, and to the slopes on all sides of the banks, including the outer slope into deep water; and also to all other bottoms offshore which afford fisheries.

The connection and relations between the offshore and inshore grounds should be studied and described.

THE DEEP SEA.

Deep-sea fishes, strictly defined, do not enter into the question of the fisheries, and their surroundings should be treated only incidentally. Many economic species, however, range into comparatively deep water.

PELAGIC GROUNDS.

Pelagic or wandering fishes.—The region under treatment should be defined as to its location, extent, and surroundings. The mackerel grounds of the Eastern coast, for instance, are bounded on the one side by the coast and on the other by the Gulf Stream. All schools of migratory fishes that are observed should be noted, the species identified if possible, methods tried or suggested for their capture, and their habits ascertained so far as may be.

The problems to be studied are mainly of a physical character, as explained below.

PHYSICAL PROBLEMS.

THE WATER.

Tides.

Currents; tidal, general oceanic, etc.; character, extent, boundaries, depth, velocity, effect on temperature, on fishes, etc.; causes.

Temperature; surface, intermediate depths, bottom.

Density; surface, intermediate, bottom. The density of the surface water should be taken at frequent and regular periods.

Composition of the water.

Solids held in suspension, sediment.

Gases in solution.

Ice.

For the purpose of studying the composition and contents of the water, specimens should be preserved, in sealed bottles, whenever possible.

THE AIR.

Atmospheric conditions presumably affect only the pelagic and inshore grounds directly; but they also inconvenience and endanger the lives of the fishermen on all grounds. They are to be studied particularly with reference to their influence upon the pelagic fishes.

As to influence upon fishes; observe the relative influence of clear and cloudy weather, fogs, storms, temperature, etc., and the prevalence of each. Also, relative effect of daylight and darkness on the presence of schools of fish, their movements or shyness. Do they take the bait more at one time than another?

For the benefit of the fishermen; observe the occurrence and character, the period of duration and of greatest severity of fogs, storms, prevailing winds, etc., direction and force of winds generally; occurrence of ice, etc.

Thermometer and barometer observations should be recorded regularly.

Ports and anchorages—It is of importance to the fishermen that they should have positive information respecting all ports and safe anchorages within easy reach of the fishing grounds. Many of these have been surveyed and are plotted on the charts of the Coast Survey. The experience of the *Albatross*, however, may suggest the desirability of surveying new ports, or making further investigations of old ones, but such work, should not be undertaken by the *Albatross* to the neglect of those inquiries for which she has been specially detailed. Recommendations concerning this subject will be referred to the Coast Survey, in whose province it properly belongs.

ECONOMIC PRODUCTS OF THE FISHING-GROUNDS.

Animals and plants used for food, bait, etc. Faunal check-lists, with uses noted. Biographies of the more important species, in accordance with suggestions, forming Appendix B.

The fauna and flora considered as the basis of production and support of the economic species.

The principal objects of the cruise will be the determination of the distribution, abundance, and habits of the useful marine animals which occur upon the off-shore grounds, with special reference to those grounds. In this category are to be included not only the forms which are now used for food, bait, etc., but also all species which are available for such purposes. Most attention, however, should be paid to the cod and halibut, which are supposed to be the most important of the food species inhabiting the Alaskan region.

In studying the relations of the economic species to the grounds which they inhabit, it will be necessary to determine the character, abundance, and distribution of their food, in the same manner as has already been done on the eastern coast. This will involve the constant use of collecting appliances, both at the surface and at the bottom, and the preservation of materials for future study.

APPENDIX B.—*Suggestions relative to the inquiry which it is desirable to make respecting the natural history of important Alaskan fishes.*

Common name in different localities.

External characters.—Although the more important of the Alaskan food species have probably been sufficiently well described to insure their identification and their proper position in the classification, it will be advisable, whenever the opportunity occurs, to make further descriptions from living specimens, with special reference to those characters which are not preserved in alcoholic specimens. For instance, the color, size, and weight of the different sexes; relative proportions of the fish in general, and of the soft parts, etc.

Varieties.—All varieties should be noted and described and their peculiarities as to distribution, localization, etc., ascertained, so far as possible.

Abundance, in different places and at different seasons. At what seasons are they most abundant, and when can they be fished for with greatest success?

Distribution, both geographical and bathymetrical at different seasons. Position and extent of the localities where they occur and may be fished for. The subject of the fishing grounds, is, however, elsewhere discussed.

Habits.—Relations to environment, character of bottom, depth, temperature, density, tides, etc.

Relations to its own species; whether gregarious, solitary, grouped by age or sex at any season, predaceous, etc.

Relations to other species; whether preyed upon by them, or feeding upon them, etc.

Movements.—Do they perform regular migrations? Are there also irregular movements, by which they may be abundant some years and scarce or absent others?

What are the regions, character, extent, and cause of their regular movements? Are they caused by the reproductive instinct, by the search for food, or by the pursuit of enemies? How are they influenced by temperature, atmospheric and other physical conditions, or by human agencies?

Do they hibernate at any season? What is the time of arrival and departure? Length of stay? Certainty of arrival? Rate of progression, coming and going? Number and times of runs or schools in one season? Summer abode? Winter abode?

If anadromous, when do they enter and leave fresh water, and what are the movements up and down fresh water of the adults and young?

Food.—Kind (animal or vegetable), character (living, dead, etc.), amount. Enumerate the different species found in the stomachs, and estimate the relative quantity or numbers of each. When it is impossible to identify the species, preserve the stomach contents in alcohol.

Place of feeding, bottom, surface, shore, etc. Manner of feeding.

Life history.—Time, place and duration of spawning, both as to the individual and the species.

Number, size, appearance, color, mode and place of occurrence of the eggs. Manner of fertilizing the eggs. Length of period of incubation.

Rate of growth, changes in, and habits and localities of the young, its food, etc.

Size and age of mature fish. Special habits before, during, and after spawning. Special enemies of the eggs.

Decrease.—It is not probable that the question of decrease will require attention, but should a decrease be claimed by any of the fishermen its causes and amount should, if possible, be ascertained.

Enemies, diseases, etc.—Fishes, etc., which pursue and devour the species in large quantities.

Parasites, external and internal. All specimens should be collected and preserved, and the extent and character of the injuries they inflict, if great, should be noted.

Diseased specimens should be examined as to the character and possible effect of the disease, and its frequency of occurrence in the species.

Specimens (or portions of the specimen) showing the disease should be preserved.

Uses, present and prospective, as for food, bait, oil, etc.

APPENDIX C.—*Suggestions relative to the fisheries.*

The fisheries should be studied with reference both to present conditions and methods, and to their improvement by the introduction of new methods. The Alaskan fishery was quite fully covered by the fishery census of 1880, and the vessels, boats, and fishing gear known at that time are well represented in the fishery collection at the National Museum, in Washington. It is desirable, however, to ascertain what changes may have taken place since then; what new styles of boats or gear have been introduced, and to what extent the natives have adopted the appliances and methods of the white men. In view of the above statements, many portions of the following schedule will be found to be superfluous for your purpose, and these should be entirely disregarded. The schedule was originally prepared as though intended for a region the fisheries of which were unknown.

These subjects should be referred to the expert fisherman for investigation if he is competent to consider them.

In describing new vessels or boats the following points should be considered

- (1) Form of vessel; whether sharp or square stern, round or flat bottom.
- (2) Keel or center-board.
- (3) Decked, half-decked, or open.
- (4) Clinker or Carvel built.
- (5) Material used in construction; size of frame, thickness of planks, etc., material used for fastening.
- (6) Interior arrangements.
- (7) Rigging. This to include spars, sails, and rigging.
- (8) Dimensions: Length, breadth, depth, length of spars and oars, measurement of sails, etc.
- (9) Cost of building and where built.
- (10) Number of men in crew.

In discussing any special type of boat, the extremes and average of length may be given; and the measurements of one of about the average size should be recorded in full to show the general proportions. State the fishery in which each type is engaged.

Fishing gear.—New fishing gear should be described in detail and illustrated by sketches or photographs, unless corresponding with appliances well known on the Atlantic coast.

Routine of the fishery.—Manner of operating the fishery appliances; localities where used; time of day when in use, or when visited; number of men required to operate each appliance, etc.

Bait.—Character of the bait; species used for that purpose; amount used; relative value and abundance of different species.

Methods of preservation and uses.

Disposition of the catch.—Home use; markets; methods of transportation; prices to the fishermen, at wholesale, at retail.

The fishermen.—Number engaged in each fishery; nationality; manner of employment; on wages, on shares, etc.

Financial organization.—Including all questions of ownership of vessels, boats, and gear; amount of money invested; amount of wages; amount made on shares; relations between employer and employed.

Statistics.—Amount and value of catch of present and past years. Number of vessels, boats, men, appliances, etc.

Improvement of the fisheries.—New methods of fishing should be tested as with the cod gill net, beam trawl, with the use of toll bait, etc.

New kinds of bait should be tried and recommendations made as to the introduction of species, not native to the region for use as bait, such as the clam, *Mya arenaria*. As many kinds of bait as possible should be tried in your experiments, providing the species is abundant and easily obtained.

Observations should constantly be made looking toward recommendations for the improvement of the fisheries in all directions suggested by the above headings.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., September 8, 1888.

SIR: Your letters and reports from Alaska, to August 17, and your telegrams of the 3d and 6th instant, from Nanaimo, British Columbia, and Seattle, Wash., have been duly received and their contents noted.

As soon as the necessary repairs and arrangements at Seattle are completed you will begin a survey of the ocean fishing grounds tributary to the ports of Washington Territory, continuing the same as long as the weather will permit, after which you will proceed to San Francisco, Cal., and await further instructions.

You will consider it the principal object of the present cruise to study the distribution and abundance of cod and halibut in the Straits of Fuca and along the outer coast to the north and south of those straits, not, however, neglecting other subjects which in your judgment may lead to important practical results. No time should be spent in explorations in Puget Sound unless the weather becomes too severe for outside work.

The interest recently created with respect to the halibut fishery in this region makes it important that the grounds on which halibut occur most abundantly should be explored as thoroughly as possible, with a view to determine their outlines, depths, and principal characteristics. As it is also probable that good cod fisheries might be established in this vicinity, it will be advisable to keep a constant outlook for the feeding grounds of that species.

Very little positive information has been published relative to the fishery resources of the region about the strait of Fuca. Halibut have been reported as most abundant and of large size on deep sand-banks off the western side of Vancouver Island, while large bodies of cod are said to occur at both the northern and southern end of the same island and about Cape Flattery. Prof. D. S. Jordan also states that extensive halibut banks, resorted to by the Indians, are located about 8 miles northwest of Cape Flattery. You may be able to obtain more positive data on this subject from the local fishermen, and especially from the Gloucester smacks, which have recently started in the halibut fishery, should you meet with them.

It will be interesting to ascertain to what extent both the cod and halibut enter the straits of Fuca, and the advantages which these straits present for deep-water fishing.

As to the methods of inquiry to be pursued, you will be guided by the instructions furnished for the Alaskan cruise.

You will keep me informed, by telegraph, of your general movements, and of your arrival at port and the time of your departure therefrom.

Very respectfully,

M. McDONALD,
Commissioner.

Lieut. Comdr. Z. L. TANNER, U. S. N.,
Commanding steamer *Albatross*, Seattle, Wash.

No. 2.]

WASHINGTON, D. C., December 13, 1888.

SIR: As soon as possible after Prof. C. H. Gilbert has reported to you for duty you will proceed with the steamer *Albatross*, to make an investigation of the waters adjacent to the coast of California, between the latitudes of San Francisco and the boundary line between the United States and Mexico, with the respect to their fishery resources and the fishing grounds. The fishery resources of this region are undeveloped and practically unknown except in the vicinity of San Francisco and in the shallow waters about some of the larger settlements farther south. You will therefore consider it the principal object of the present cruise to determine the contour of the sea bottom, the location, extent, etc., of banks or other areas suited to fishing, and the distribution and abundance of food fishes and other marine animals occurring with them, over this entire region or so much of it as the time will permit, between the shore soundings and the outer edge of the submerged continental plateau, and beyond the latter where it seems expedient.

The beam trawl and other dredging and fishing appliances, as well as the surface nets, should be frequently employed, in order to secure as large collections as possible, from which to determine the character and richness of the fauna. The physical characteristics of the region, with special reference to the temperatures and densities of the water, should be thoroughly studied in connection with the other lines of inquiry marked out, and soundings should be made to the extent deemed necessary to supplement the work already accomplished on that coast by the Coast Survey and Navy Department. Shore and shallow water collecting should be vigorously pushed whenever the steamer is in port or anchored near the land, but this work should never be carried on to the detriment of the off-shore investigations, unless, in your judgment, important results may be attained thereby.

The fishing grounds off San Francisco demand particular attention and should be made the subject of a thorough inquiry, but it is left to your discretion whether this area should be studied first or be left until the end of the cruise. Special consideration should be paid to the fisheries off the coast of Santa Barbara County and among the islands in that region, from San Miguel Island to Santa Catalina and San Clemente. Cortez bank, situated about 100 miles off the coast opposite the boundary line between California and Lower California, should also be visited, if possible.

Density as well as temperature observations should be constantly made while in port, and it is also desirable to obtain as much information as possible respecting the character of the bottom and of the shores in the principal bays and harbors which you enter, with a view to determine their fitness for the planting of beds of oysters. The habits and the abundance of seals and sea-otters and of the various species of cetaceans should be studied at every opportunity.

About two months should be allotted to the explorations on the coast of California, after which you will proceed to the Gulf of California for the purpose of investigating the physical and natural history characteristics of this nearly inclosed area in the interests of the shad and oyster fisheries.

A series of dredgings, principally by means of the beam trawl, if possible, accompanied by surface towings and by the determination of serial temperatures and densities, should be carried through the entire length of the gulf, at varying distances from the land, but the upper part of the gulf, especially above Tiburon Island, should be most thoroughly explored in this respect. These investigations should be extended into the Colorado River, and, if possible, to a point above the mud flats at its mouth. In the region comprising the mouth of the Colorado River and the adjacent gulf coasts every possible means of collecting fishes which you have on board suited to the purpose should be tried with a view to detecting the presence of shad, which were first introduced into the Colorado and Gila Rivers in 1884.

You will also make it a special feature of the explorations in the Gulf of California to ascertain the conditions under which the native oysters thrive best, the location and chief characteristics of some of the principal beds, and the best means of obtaining and transporting supplies of the oyster to the coast of California. Shore collecting should be carried on at all favorable opportunities.

If at the close of these investigations sufficient time remains for the purpose, a line of soundings should be run from off Cape St. Lucas to the Revilla Gigedo Islands, and the naturalists may be allowed to visit Socorro Island, in order to collect specimens of the shore and land animals, respecting which very little is known at present.

You will return to San Francisco in time to refit for a cruise to the coasts of Oregon and Washington Territory, to begin about May 1, 1889.

Very respectfully,

M. McDONALD,
Commissioner.

Lieut. Comdr. Z. L. TANNER, U. S. N.,
Commanding Steamer *Albatross*, San Francisco, Cal.
(Care Alaska Commercial Company.)

No. 29.]

WASHINGTON, D. C., May 24, 1889.

SIR: The following instructions are issued for your guidance in conducting the investigations of the fishing grounds on the coasts of Oregon, Washington, and Alaska during the summer of 1889. In view of the fact, however, that during the first part of the season you will be subject to the call of one or more Senate committees, it is not expected that you will be able to carry them out in full, but the more important objects of the cruise are expressly indicated.

The purpose of your investigations in the North Pacific Ocean, the methods of work to be followed, and the character of results desired were set forth in considerable detail in your instructions of a year ago, and do not need to be repeated here.

Work on the coasts of Oregon and Washington should not be continued later than July 1, unless you are detained there at the service of one of the Senate committees. In this region hydrographic work should be made only an incidental feature of the investigations during the early part of the season, as it is most important to develop the actual resources of the banks or grounds marked out by your soundings of last autumn. This should be done by dredging and trawling and by the frequent use of hand-lines and trawl-lines. Surface collecting and temperature observations should also be continued. The localities which should receive particular attention are Heceta Bank, the vicinity of Tillamook Rock, the region off the mouth of the Columbia River, the bank off Gray's Harbor, and the grounds between Flattery Rocks and Barclay Sound. It is more desirable to explore the grounds off the coast of Oregon than those off Washington Territory, as the former are the least known at present.

The objective point of your cruise to Alaska will be that area of the southeastern part of Bering Sea which is bounded as follows, namely: On the north by the parallel of 60° N.; on the west by the meridian of 170° W.; and on the east and south by the mainland of Alaska and the Aleutian Islands. In the region thus defined, the depths are everywhere slight except off Unalashka and Umnak. It is desirable to locate as many good fishing-grounds as possible, ascertaining their extent, depth, and the character of the bottom; the richness of the bottom with respect to animal life; and the abundance and size of the cod and other economic species occurring upon them. It is impossible to predict where the best fishing-grounds will be found, but good fares of cod have been obtained from several places near the coast, between Unalashka and the mouth of Bristol Bay. The investigations should be begun in this part of the region and carried thence northward and westward as far as the time will permit. Information bearing upon this region is contained in my instructions of last year, and also in your report of operations in Alaska.

You will endeavor to ascertain the nature of the slime bottom described by the fishermen as occurring in some parts of Bering Sea, where it is said greatly to interfere with their fishing. It is desirable wherever possible to make longer trials for fish than was customary during the summer of 1888 in order that more complete data may be obtained relative to the size of the cod occurring upon the grounds. Cod averaging 28 inches (the eastern standard) and over were secured last year at only six or seven of your stations, a fact which, taken alone, might deter many fishermen from resorting to that region.

Nothing is known respecting the depths of water in the western part of Bering Sea, and it would be of great hydrographic importance, and also of value to the fishery studies of the region, if some information could be obtained on that subject. Three or four lines of soundings extending across this unknown area to the westward of about 173° west, being carried preferably in a northeast and southwest direction between the parallel of 60° north and the line of the Aleutian Chain would give sufficient data for present purposes, and should you find it expedient to run one or more of these lines the present season you are authorized to do so. The work should not extend far beyond the boundary line between the United States and Siberia, and a few dredgings should be made in connection with the soundings.

South of the Alaska Peninsula and the Aleutian Islands it is very desirable to obtain additional information respecting the following areas, partly explored by you last year, namely, off Unalashka, between Sannakh Bank and the Shumagin Islands, and between the latter Islands and Kadiak. While much hydrographic work will require to be done in these regions, it is of most importance to locate off-shore grounds where cod of large size can be caught abundantly, for the reasons explained above. This part of the coast should not be visited as long as you can work to good advantage in Bering Sea, but during the passage up or down the coast you may find it convenient to spend a short time there, especially if detained for any cause.

I would also call your attention to the expediency of extending the deep-sea soundings south of the Aleutian Islands farther to the westward, whenever a suitable opportunity occurs, but the present season will probably be too short for any work of that character.

You will arrange to have Mr. Alexander undertake the investigations of the commercial fisheries at all places which you visit, giving him the necessary facilities for going on shore for that purpose. Where there are opportunities for engaging in this

branch of inquiry, he should not be required to enter into the natural-history work, at least not until he has finished with the subject with which he is specially charged. The beginning made by Mr. Alexander last year in this direction has proved very valuable, and I desire to have him continue the work as actively as possible.

With best wishes for a successful season, very respectfully,

M. McDONALD,
Commissioner.

Lieut. Commander Z. L. TANNER, U. S. Navy,
Commanding Steamer *Albatross*, Seattle, Wash.

No. 106.]

WASHINGTON, D. C., January 21, 1890.

DEAR SIR: Your letters of the 9th and 10th instants, Nos. 134 and 135, were duly received. With respect to the number of officers required by the *Albatross* for the difficult work on the Pacific coast, I will communicate immediately with Commodore Ramsay and endeavor to have an additional watch officer ordered to the steamer. As you do not recommend any particular one for that position, I shall be obliged to leave the choice to the Bureau of Navigation.

Concerning the investigations on the California coast, I think it will be best to fix upon February 10 as the earliest day at which your work may begin. That will give Mr. Townsend the opportunity of reaching the ship in time by leaving here on the first of the month. You will please furnish me with an estimate of the cost of fitting out the ship for the next Alaskan cruise, and of the expenses of two months' cruising in Alaska, namely, for May and June. Having received this, and also your final bills for repairs at Mare Island, I will make a special allowance of money for the investigations on the coast of California, and that work should then be limited to the expenditure of that amount.

The California investigations should be confined within the area which you have not yet explored, namely between Point Conception and Humboldt Bay, and in carrying on the work you will be guided by the instructions already given you with respect to other portions of the Pacific coast. It is desirable that a most thorough investigation should be made of the region about San Francisco, and of all areas that might be made directly tributary to that city in respect to the fisheries.

You are given entire discretion as to the place of beginning the work, and as to the continuity of the same, dependent upon the weather, etc.

After completing the investigations on the California coast and before proceeding to Alaska, you will please prepare and transmit to me your annual report for the current year up to that time.

Very respectfully,

M. McDONALD,
Commissioner.

Lieut. Comd'r. Z. L. TANNER, U. S. N.,
Commanding Steamer *Albatross*, Navy-Yard, Mare Island, Cal.

No. 117.

WASHINGTON, D. C., February 19, 1890

DEAR SIR: I have to acknowledge receipt of your letter of the 10th inst., No. 145, giving estimates of expenses for the balance of the fiscal year. I have referred the same to Mr. Gill, and in a few days will write you positively as to the amount that can be expended. In the mean time, however, there is no reason for changing the plans already sent you with respect to the work on the California coast, which may be begun as soon as the ship is ready.

While Mr. Townsend was in Washington, I talked with him about the desirability of studying, whenever there was an opportunity, the physical and biological conditions of San Francisco Bay, with special reference to oyster culture. There is no more important problem connected with our work on the California coast than the investigation of that bay with the view of ascertaining whether any part of it will prove suitable for the natural breeding of oysters. The *Albatross* is too large to engage directly in this work, but when she is detained at San Francisco or the navy-yard for any length of time, I would like to have Mr. Townsend make such researches as he can with whatever assistance you may be able to render him from the ship.

What is especially desired is that temperature and density stations be run over the shallow parts of the bay, which seems to offer advantages in other ways for oyster-planting. The stations should be close together and be accurately located, observations being made at both the surface and bottom, and the same areas being examined at different times of the year if possible. It is not expected, of course, that the en-

tire bay can be covered by Mr. Townsend, and it is best that his efforts should be limited to small areas, and the work very thoroughly done. It is also desirable that the existing oyster beds be examined in the same way.

The shore and shallow water invertebrates should also be collected and preserved for examination in Washington, and the character of the bottom where the density and temperature observations are made should be noted.

This letter will probably not reach you in time to have Mr. Townsend do much, if any, work of this character this spring, but the problem can be taken up from time to time as the opportunities arise.

Very respectfully,

M. McDONALD,
Commissioner.

Lieut. Comd'r Z. L. TANNER, U. S. Navy,
Commanding steamer Albatross, Navy-Yard, Mare Island, Cal.

No. 136.]

WASHINGTON, D. C., April 23, 1890.

DEAR SIR: In conducting the investigations of the Alaskan fishing grounds during the season of 1890, you will be guided by the following instructions:

The area to which attention should chiefly be paid is essentially the same that was indicated in my letter of May 24, 1889, namely the southeastern part of Bering Sea, bounded on the north by the parallel of 60° N., on the west by the meridian of 175° W. (in place of 170° W.), and on the south and east by the islands and mainland of Alaska. Over much of this region the soundings indicate comparatively shallow water, but the extreme western and southwestern portions are entirely unknown.

The principal object of your inquiries in this region will be to locate and define the grounds suitable for cod fishing, and to determine the abundance and size of the cod and other economic species occurring upon them, as well as the richness of the bottom with respect to animal and plant life. Certain localities, especially in the vicinity of the Aliaska Peninsula, Unimak and Unalashka Islands, are reported to be richly supplied with cod, as mentioned in previous communications. This area is also said to furnish a larger size of cod, and to be favored generally with better weather during the fishing season than the grounds south of the Aliaska Peninsula, to which your inquiries were directed in 1888. It will be of the greatest importance to obtain as much information as possible respecting those questions which must determine the relative value of the fishing grounds in these two adjoining regions.

While the hydrographic work should not be slighted in any way, I am particularly desirous of having more attention paid to the natural-history investigations than was possible in 1888, both by dredging with the beam-trawl and dredge and by hand-line and trawl-line fishing. The actual records of fish taken, showing their abundance, size, etc., afford, in a measure, the most substantial evidence of the value of the grounds for fishing purposes. According to the report of your operations in 1888, cod averaging 28 inches (the Eastern standard) and over were obtained on the grounds south of the Aliaska Peninsula at only six or seven stations, a fact which, taken alone, might influence many fishermen against resorting to that region. By making longer and more frequent trials with the fishing appliances, a larger average in size may possibly be secured. The "slime" bottom, which is said to be characteristic of some parts of Bering Sea, and greatly to interfere with fishing operations, should be made the subject of careful investigation.

With an accomplished ichthyologist and a skilled fishery expert on board, it is to be expected that the fishes of this important region will be as thoroughly studied as the time will permit. Respecting the general collections, as large a representation as possible of all the forms obtained should be preserved. While the surface waters will probably be comparatively barren, the towing nets should be constantly used, and specimens of the bottom material without cleaning should be saved at many stations. Shore collecting should also be carried on whenever an anchorage is made near the land.

Although the interesting Seal Islands are contained within this area, it will be needless to undertake any land investigations with reference to the seals, as a party consisting of Henry W. Elliott, in behalf of the Treasury Department, and William Palmer, in behalf of the National Museum, will proceed to those islands for that special purpose some time in May. Should an opportunity occur, however, to render these persons any assistance in the line of their work without interfering with your regular duties, you are authorized to do whatever seems expedient. Observations relative to the habits and distribution of the seals at sea can not fail to be of value, and they should be made whenever the time and opportunity will permit. Scarcely anything is known, from careful inquiry, respecting their aquatic habits away from the vicinity of the shores, and it will be especially interesting to determine their in-

fluence upon the fishing grounds in the neighborhood of the Seal Islands. All existing information on this subject is probably contained in the report of Henry W. Elliott, published by the Tenth Census, and in Section I of the Fisheries and Fishery Industries of the United States.

In accordance with the request of the Secretary of the Treasury, you will, while in this region, make an investigation of the salmon fisheries at the mouth of the Nushegak River, and, if the circumstances require it, take steps to enforce the provisions of the law for the protection of the salmon fisheries of Alaska, as explained in the separate instructions contained in my letter No. 135, of this date.

Your investigations in Behring Sea should also be carried into the unexplored area to the west of the meridian of 175° W. to such an extent as the time will permit. You will confine your operations mainly within the boundary of the United States, but it will be important to obtain at least one or two complete sections across Bering Sea to near the Siberian coast. The direction in which the lines should be run is left to your judgment. It is generally supposed that this region is occupied by much deeper water than the eastern part of Bering Sea. In the case of finding shoal water valuable fishing grounds may be discovered, and these should be studied in the manner previously described. Otherwise the hydrographic results alone could not fail to be of great importance, and in either case it will be interesting to determine the relations between the main body of Bering Sea and the deep belt of water discovered by the U. S. S. *Tuscarora* along the northern side of the Aleutian Islands. The outer margin of the plateau composing the eastern part of Bering Sea, if this is bordered by deep water, should be traced out and defined.

As many dredgings as possible should be made in connection with this survey, their number being regulated by the depth of water and the time necessary to make them. We have very few records of temperature, and none of density observations for Bering Sea, and these subjects should receive the proper amount of attention. Moreover, in the deeper water, serial temperatures should be taken at several stations in different parts of Bering Sea, these stations being selected with the view of securing data to show the thickness and distribution of belts of equal temperature over the entire region explored.

After finishing the work in Bering Sea, if there is time for still further investigations, it will be most important to return to the grounds explored by you in 1888, to the south of the Aleutian Islands and the Alaska Peninsula, with the special object of obtaining further information respecting the resources of the five principal banks and of completing the surveys of the intervening areas. Dredging and fishing operations should chiefly be carried on if the time is limited, and the dredging stations should be extended into comparatively deep water on the edge of the plateau. This part of the coast should not be visited for the purpose of making investigations, however, as long as you can work to good advantage in Behring Sea.

If it is feasible to run one or two additional lines of deep-sea soundings south of the Aleutian Islands, with a view of obtaining further data respecting the westward extension of the deep trough indicated by previous soundings, you are authorized to make them. It will also be important to use the beam-trawl one or more times in the same connection. Weather and other conditions permitting, you will make several dredgings in moderately deep water during the return trip southward, in order to obtain material illustrating the marine fauna occupying the area between Alaska and the United States.

Upon the completion of the cruise you will proceed to Seattle or San Francisco, as seems most expedient in your judgment. If any work is carried on during the fall, it now seems most advisable to make the surveys between San Francisco and Cape Mendocino, but conditions may arise before then which will necessitate a change in the plans.

It has not been considered necessary to incorporate in these instructions the detailed explanations which accompanied the instructions in 1888. The methods of work to be pursued and the character of results desired are already sufficiently well known. Attention has been specially called, however, to the importance of doing a larger amount of natural history work than in 1888, as the permanent value of fishing grounds is largely dependent upon the richness of the bottom in animal life. At all places which you visit Mr. Alexander should be charged with the study of the commercial and local fisheries, if such exist, and be given the necessary facilities for going on shore for that purpose, being relieved from all other duties until that special investigation has been completed.

Very respectfully,

M. McDONALD,
Commissioner.

Lieut. Commander Z. L. TANNER, U. S. Navy,
Commanding Steamer *Albatross*, Navy-Yard, Mare Island, Cal.

No. 135.]

WASHINGTON, D. C., April 23, 1890.

DEAR SIR: The Treasury Department is in receipt of information that four canneries located on the Nushegak River, which empties into the upper part of Bristol Bay, are about to build a trap or dam completely across Wood River, one its tributaries, in violation of the act of Congress for the protection of the salmon fisheries of Alaska, approved March 2, 1889. Wood River enters the Nushegak about 25 miles above its mouth and is said to be about one mile wide. It is reported to be one of the finest salmon rivers in Alaska.

The Secretary of the Treasury has directed that the revenue steamers cruising in Bering Sea be instructed to enforce the law so far as the circumstances will permit, but as the number of those steamers is limited he has requested that the steamer *Albatross* investigate the subject, and in case the law has been violated, that she take the necessary steps to carry out the provisions of the same. A letter clothing you with full power and authority in the matter is herewith inclosed, together with copies of the law and instruction as to the manner of proceeding in case any action is required.

You will make this one of the first objects of your cruise in Bering Sea, and comply with the instructions of the Secretary of the Treasury to the fullest extent possible.

It will also be important, while you are in the Nushegak River, to make some observations along the lower part of the river respecting its general characteristics, and also, if possible, respecting the runs of fish, etc. Such an investigation is in accordance with the act of March 2, 1889, but it is not advisable to detain the *Albatross* upon it more than a few days.

Very respectfully,

M. McDONALD,
Commissioner.

Lieut. Commander Z. L. TANNER, U. S. Navy.
Commanding Steamer *Albatross*, Navy-Yard, Mare Island, Cal.

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., April 18, 1890.

SIR: You are hereby clothed with full power and authority to enforce the provisions of law contained in the act of Congress approved March 2, 1889, providing for the protection of the salmon fisheries of Alaska, which prohibits the erection of dams, barricades, or other obstructions in any of the rivers of Alaska, with the purpose or result of preventing or impeding the ascent of salmon or other anadromous species to their spawning-grounds.

Respectfully, yours,

GEO. S. BATCHELLER,
Acting Secretary.

Lieut. Commander Z. L. TANNER, U. S. Navy,
Commanding Steamer *Albatross*, San Francisco, Cal.

[Circular.]

Protection of salmon fisheries of Alaska.

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., March 16, 1889.

TO COLLECTORS AND OTHER OFFICERS OF THE CUSTOMS:

The following provision of the act approved March 2, 1889, entitled "An act to provide for the protection of the salmon fisheries of Alaska," is hereby published for the information and guidance of all concerned:

"That the erection of dams, barricades, or other obstructions in any of the rivers of Alaska, with the purpose or result of preventing or impeding the ascent of salmon or other anadromous species to their spawning grounds, is hereby declared to be unlawful, and the Secretary of the Treasury is hereby authorized and directed to establish such regulations and surveillance as may be necessary to insure that this prohibition is strictly enforced and to otherwise protect the salmon fisheries of Alaska; and every person who shall be found guilty of a violation of the provisions of this section shall be fined not less than \$250 for each day of the continuance of such obstruction."

Collectors and all other officers of the customs, and officers under the jurisdiction of this Department who may be assigned to duty in Alaska, will see that the requirements of said section are strictly observed, and that no dams, barricades, or other obstructions are placed in any of the rivers of Alaska, with the purpose or result of preventing or impeding the ascent of salmon or other anadromous species to their spawning-grounds; and should any such dams, barricades, or other obstructions be discovered, to warn the persons who erected the same to immediately remove them and thereafter to report the persons (with statement of facts) to the United States attorney of Alaska for prosecution under the said section, and also to forward duplicate reports to this Department for its information.

Officers of the Revenue Marine Service on duty in Alaska waters are hereby required so far as practicable to assist officers of the customs in Alaska in seeing that the requirements of the statute are strictly enforced.

HUGH S. THOMPSON,
Acting Secretary.

Seal and salmon fisheries of Alaska.

TREASURY DEPARTMENT, *March 25, 1889.*

The act of March 2, 1889, and the proclamation of the President thereunder, dated March 21, 1889, regarding the protection of the seal fisheries of Alaska, are published for the information and guidance of collectors and other officers of the customs, officers under the jurisdiction of the Treasury Department, assigned to duty in Alaska, and others concerned:

AN ACT to provide for the protection of the salmon fisheries of Alaska.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the erection of dams, barricades, or other obstructions in any of the rivers of Alaska, with the purpose or result of preventing or impeding the ascent of salmon or other anadromous species to their spawning grounds, is hereby declared to be unlawful, and the Secretary of the Treasury is hereby authorized and directed to establish such regulations and surveillance as may be necessary to insure that this prohibition is strictly enforced, and to otherwise protect the salmon fisheries of Alaska; and every person who shall be found guilty of a violation of the provisions of this section shall be fined not less than two hundred and fifty dollars for each day of the continuance of such obstruction.

SEC. 2 That the Commissioner of Fish and Fisheries is hereby empowered and directed to institute an investigation into the habits, abundance, and distribution of the salmon of Alaska, as well as the present conditions and methods of the fisheries, with a view of recommending to Congress such additional legislation as may be necessary to prevent the impairment or exhaustion of these valuable fisheries, and placing them under regular and permanent conditions of production.

SEC. 3 That section nineteen hundred and fifty-six of the Revised Statutes of the United States is hereby declared to include and apply to all the dominion of the United States in the waters of Behring Sea; and it shall be the duty of the President, at a timely season in each year, to issue his proclamation and cause the same to be published for one month in at least one newspaper, if any such there be published, at each United States port of entry on the Pacific coast, warning all persons against entering said waters for the purpose of violating the provisions of said section; and he shall also cause one or more vessels of the United States to diligently cruise said waters and arrest all persons, and seize all vessels found to be, or to have been, engaged in any violation of the laws of the United States therein.

Approved March 2, 1889.

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA.

A PROCLAMATION.

The following provisions of the laws of the United States are hereby published for the information of all concerned:

Section 1956, Revised Statutes, chapter 3, title 23, enacts that "no person shall kill any otter, mink, marten, sable, or fur seal, or other fur-bearing animal within the limits of Alaska Territory, or in the waters thereof; and every person found guilty thereof shall, for each offense, be fined not less than \$200 nor more than \$1,000, or imprisoned not more than six months, or both, and all vessels, their tackle, apparel, fur-

niture, and cargo, found engaged in violation of this section shall be forfeited, but the Secretary of the Treasury shall have power to authorize the killing of any such mink, marten, sable, or other fur-bearing animal, except fur-seals, under such regulations as he may prescribe, and it shall be the duty of the Secretary to prevent the killing of any fur-seal, and to provide for the execution of the provisions of this section until it is otherwise provided by law, nor shall he grant any special privileges under this section."

* * * * *

Section 3 of the act entitled "An act to provide for the protection of the salmon fisheries of Alaska," approved March 2, 1889, provides that:

"SEC. 3. That section nineteen hundred and fifty-six of the Revised Statutes of the United States is hereby declared to include and apply to all the dominion of the United States in the waters of Behring Sea, and it shall be the duty of the President at a timely season in each year to issue his proclamation and cause the same to be published for one month at least in one newspaper (if any there be) published at each port of entry on the Pacific coast, warning all persons against entering such waters for the purpose of violating the provisions of said section, and he shall also cause one or more vessels of the United States to diligently cruise said waters and arrest all persons and seize all vessels found to be or to have been engaged in any violation of the laws of the United States therein."

Now, therefore, I, Benjamin Harrison, President of the United States, pursuant to the above-recited statutes, hereby warn all persons against entering the waters of Behring Sea, within the dominion of the United States, for the purpose of violating the provisions of said section 1956, Revised Statutes; and I hereby proclaim that all persons found to be, or to have been, engaged in any violation of the laws of the United States in said waters will be arrested and punished as above provided, and that all vessels so employed, their tackle, apparel, furniture, and cargoes, will be seized and forfeited.

In testimony whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this twenty-first day of March, one thousand eight hundred and eighty-nine, and of the independence of the United States the one hundred and thirteenth.

BENJAMIN HARRISON.

By the President:

[SEAL.] JAMES G. BLAINE,
Secretary of State.

INSTRUCTIONS TO STEAMER FISH HAWK, OYSTER-STAR-FISH INVESTIGATIONS.

Scheme of operations with respect to the proposed investigation relative to the oysters and oyster grounds of Long Island Sound, and Rhode Island, season of 1890. (Submitted May 19, 1890.)

PURPOSE.

The purpose of this inquiry is as follows:

- (1) To investigate the ravages of star-fishes and other natural enemies upon the oyster beds, and to determine methods of checking the same.
- (2) To ascertain if the reported deterioration in the quality of oysters and the failure to obtain a set of spat during the past two years were actual facts, and if true to determine their causes and suggest remedies.
- (3) To inquire into the expediency and possibility of introducing into the Long Island Sound region improved methods of oyster culture, and of utilizing for artificial beds upon a larger scale the shallow waters along shore where means of protection against enemies can be provided.

EXPLANATORY NOTE.

While the purpose set forth above is of the nature of three distinct problems, the inquiries necessary in respect to each of them require the examination of much the same field, while together they involve practically an investigation of the entire oyster question in Long Island Sound, and Rhode Island, and demand a broad and liberal treatment of the subject. The information required as a basis for deduction is explained under the following heading.

SCOPE AND CHARACTER OF THE INFORMATION REQUIRED.

(1) *The topography of the bottom and of the shores throughout the entire region.*—This subject is sufficiently covered for all general purposes by the charts of the U. S. Coast and Geodetic Survey. It may be advisable, however, to have special surveys made of some of the shore areas in relation to oyster cultural plans; but this work can be done by the officers of the steamer *Fish Hawk*, and it may also be possible to obtain township maps giving the desired information with respect to some places.

(2) *Location and topography of the oyster beds.*—For New York these beds are all represented on State oyster maps; for Connecticut those within State jurisdiction are shown on the maps of the Shell-Fish Commission, and the same together with the grounds in town jurisdiction on the maps of the State Bureau of Labor Statistics. The township grounds on the latter, however, are not in sufficient detail to be of much service in our inquiry. The Rhode Island maps have not been brought down to a later date than 1880, except for the changes noted by the *Fish Hawk* in 1888. Massachusetts has no maps of its oyster grounds.

(3) *Character, composition, and condition of the bottom.*—The inquiry should relate both to the oyster grounds and to the adjacent region, and should extend to a depth of several inches below the surface of the bottom, providing the latter consists of mud and there is a probability of its being underlaid by a stratum of sand or hard bottom. The rake dredge would be most efficacious in this investigation, but being harder to work than the common dredge, should only be used when occasion requires it.

Under this heading are included the observation of all material other than life and cultch found upon the bottom, and the investigation of shallow as well as deep water areas.

(4) *Character of the shores and islands adjacent to the oyster territory.*—These should be studied with reference to oyster culture in accordance with methods that have been suggested by the Fish Commission. Observations should relate to the height, configuration, and composition of the shores; to the existence of ponds and springs close to the same, the density and temperature of their waters, etc.

(5) *The rivers and smaller streams flowing into the sound adjacent to the oyster territory.*—The character of the bottom and shores at the mouths of those streams and their suitability for oyster culture; the density and temperature of the water with reference to the same subject, and to the effect upon neighboring oyster-beds of the overflow of water from them.

(6) *The general movement of the body of water occupying the basin of Long Island Sound and adjacent areas.*—This branch of the inquiry will, through the courtesy of the superintendent of the U. S. Coast and Geodetic Survey, be in charge of an assistant at that survey, who will prepare a plan for the same.

Observations respecting local currents may also require to be made, in connection with the study of the pollution of the waters, in order to determine the origin of the pollution, if any is found to exist.

(7) *The density and temperature of the water over the region included within the scope of the inquiry, the same to be determined both at the surface and at the bottom.*—With respect to the open waters, especially off shore, it will be sufficient to make these observations at each dredging station. Off the mouths of rivers and in more or less inclosed areas it may be advisable to make more detailed observations.

(8) *The chemical examination of the water with reference to its pollution.*—No investigation of this character, so far as we are aware, have yet been made for the oyster region of New England and New York. They are suggested by the researches of the steamer *Fish Hawk* in Long Island Sound during 1889. The character of the work and the methods of analysis to be followed will be based upon the opinions of a competent chemist, and a suitable person will be employed to make the tests on board the steamer.

The localities to be examined will be indicated by the person in charge of the oyster inquiry, but the observations should cover a large part of the Sound in order to determine the extent of any pollution discovered, and to afford the means of comparing the different parts of the Sound in this respect. The condition of the oysters should be ascertained in each locality where chemical tests are made, if they occur there, to determine the possible effects of pollution upon their welfare.

The origin of any pollution discovered should be traced, and the occurrence of offal or other injurious refuse in observable quantities should be noted.

(9) *The character and condition of the oyster-grounds with respect to collectors or cultch.*—The composition and quantity of cultch. Of what shells and other material does it consist? When was it deposited, and what is its present condition? Is it regularly taken up, cleaned, and deposited again just previous to each spawning season? Are fresh shells deposited without reference to the existence of old ones upon the bottom, and when are they so deposited? At regular intervals? If the cultch is not clean, in what manner is it fouled? Are the shells covered with loose sediment, adherent mud, or with a layer of vegetable or animal growth? If the latter, what is its char-

acter? Do worm-tubes grow to the extent of being harmful? The same with respect to sponges.

(10) *The character and condition of the oyster-grounds with respect to live oysters.*—What is the relative number of oysters to a given area? What are their sizes and ages? What proportion belongs to the set of the previous year? What is the condition of the oysters of all ages?

Are the oysters natives, regularly cultivated, or only planted for convenience of trade or for fattening? If from other regions, state their origin? What is origin of seed, and is the product sold to the market or for seed? Give full particulars in every instance where the information can be obtained.

(11) *History of each oyster-bed* or group of beds from the time they were first started.

(12) *The fauna and flora of the oyster-grounds, and also the adjacent regions.*—Lists of species, abundance, habits, etc. How do they differ in these respects?

(13) *The natural history of the oyster*; embryology, life history under different conditions, relations to environment, food, etc.

(14) *Distribution of the common mussel (*Mytilus edulis*) and of mussel beds in the oyster region.*—In the case of beds, their size, character and associated animals and plants. On what kinds of bottom do they occur? Are they infested by star-fishes, and to what extent? Are the mussels utilized for any purpose, and for what?

(15) *The enemies of the oyster-beds.*—What are the enemies that have been observed upon oyster-beds—star-fishes, drills, winkles, worm-tube growths, etc?

What are the abundance, distribution, and relative harm done by each kind?

At what time of the year has each kind been observed and when is each most abundant and destructive?

What sizes of oysters do the star-fishes attack and which suffer most by their attacks?

The same with respect to the drills and winkles.

To what extent is damage done by the sandy or other worm-tube builders in covering over and smothering oysters?

Are the enemies increasing or decreasing in abundance with any regularity from year to year, or are they entirely fitful in their attacks, being abundant upon the beds some years and scarce others?

Are some beds subject to the attacks of star-fishes and others not?

If so, how does the one class of beds differ from the other? With respect to the beds that are attacked, to what extent do they differ in the amount of damage done or in the number of enemies that visit them?

Are all parts of a bed equally subject to the same injuries, and, if not, how does the area attacked differ from the rest?

Do the star-fishes and other enemies trouble both native and introduced oysters to the same extent, and, if not, what is the difference?

What other animals besides oysters do the star-fishes feed upon naturally to any great extent? What animals, if any, feed upon star-fishes? Are star-fishes subject to diseases of any kind?

How are star-fishes distributed during the breeding season? Do they congregate in "clusters," and, if so, how large are the clusters, and how far apart? Is there any way of determining the location of such clusters? Would a vigorous war upon the clusters at that time have any appreciable effect in diminishing the number of star-fishes?

Where are the star-fishes when not widely distributed over the oyster grounds? Are there any particular areas to which they resort? What is the relation of natural beds to planted beds in that respect? Is there any common ground where star-fishes collect outside of the oyster beds? If so, what is its location and character?

The natural history of each of the enemies of the oyster, and especially their embryology, breeding and feeding habits, migrations. Rate of progression of star-fishes.

History (and extent) of the damage done to the oyster beds by natural enemies, and also resulting from other causes, such as being buried by mud or sand, or destroyed by impurities in the water. This history may date back as far as positive information can be obtained, but is most important for the period since 1880.

What is the value of dried or prepared star-fishes as a soil fertilizer? Could the preparation of star-fishes for that purpose be made profitable? How could they be prepared? Are they now used; in what way; to what extent; and for what special purpose?

(16) *Are the oyster beds* subject to enroachment by sand or mud, covering and smothering the oysters; from what cause; to what extent, and how may the same be remedied?

(17) *Protecting the beds.*—Under this head we include methods proposed for preventing the star-fishes entering on the oyster beds. They should be considered with reference to their efficiency and to the cost of their construction and maintenance. The following methods have been suggested:

By barriers of coarse wire-netting or other materials, surrounding the beds and

carried up to the surface of the water. Such structures could only be used in shallow water, and are not to be given consideration in connection with the off-shore beds.

By baited traps set around the beds and frequently hauled. Such traps were used in 1889 without success, but should be tried again.

By beds of mussels planted around the beds. This method might answer in some places, but it is still to be positively determined whether the star-fishes prefer mussels to oysters, and if they will remain upon the former during an entire season, in case the mussel beds are sufficiently extensive.

The oystermen objected to this method in 1889, claiming that the mussels accumulate filth about the beds, and in this they may be correct.

By bringing fresh water into contact with the beds to such an extent as to reduce its salinity below that in which star-fishes can live. This water might be brought in pipes to the shallow-water grounds near shore, and distributed by means of numerous branch pipes pierced with holes. The scheme, however, is not promising from many points of view.

By keeping the area surrounding the beds clear of star-fishes through the agency of collecting appliances as explained below.

(18) *Clearing the beds after they have been attacked by star-fishes.*—The actual capture and killing of the star-fishes as they appear upon the beds is probably the only efficacious remedy with respect to all the beds which can not be protected by barriers. The star-fishes may be removed from the beds or from the surrounding areas as they approach the beds, the latter being preferable. While the question of clearing the Sound of all star-fishes is absurdly preposterous, still, if it can be found that they congregate together at certain seasons in the manner described by the fishermen, and the places to which they resort can be determined, a thorough warfare upon them at such seasons may possibly result in reducing their numbers in the oyster districts to a great extent. In respect to the general question of capturing star-fishes, the principal object will be to determine the cheapest and most efficacious methods of taking them. The following are suggested, namely:

Dredges: The oyster-dredge is now used for this purpose, but it is heavy and covers only a relatively narrow area at each haul. The naturalist's dredge is lighter, but otherwise not superior. Examine the star-fish dredge devised at New Haven.

Beam-trawl: Covers a wide field, dependent upon the length of the beam, but the net is easily torn on rough bottom. The lower side of the net might be constructed of iron rings linked together, as in the oyster-dredge. Examine star-fish attachment devised by Lieutenant Platt.

Tangles: They have many advantages so far as the capture of star-fishes is concerned, but are difficult to clean, and might not do thorough work.

Baited traps: As explained above.

Oyster-tongs: For shallow water.

Revolving brushes: A hypothetical suggestion.

(19) *Clearing the oyster beds of other enemies than star-fishes.*—Winkles could be captured by dredges, beam-trawls, etc.

Drills: Probably do not inflict sufficient injury in deep water to merit special attention there, and in such places could probably only be captured by actually taking up the oysters themselves. No method of capturing them in shallow water has been suggested.

Worm-tube growths: If they accumulate in sufficient quantity to damage the beds, would probably necessitate the temporary removal of all oysters on the bed.

PROGRAM FOR THE FIELD WORK OF 1890.

(1) *Determining the character, condition, etc., of the natural bottom of Long Island Sound (i. e., bottom undisturbed by oyster industry).*—Lines of dredgings will be run across Long Island Sound at eight different places, as follows, the stations on the same to be from half a mile to 1 mile apart, namely: From Hen and Chickens, N. Y., to Prospect Point, L. I.; from Manursing Island, N. Y., to Matinick Point, L. I.; through Darien district, Conn., to Long Island; through Fairfield district, Conn., to Long Island; through Milford district, Conn., to Long Island; through Bradford district, Conn., to Long Island; through Clinton district, Conn., to Long Island; through East Lynne, Conn., to Long Island.

As the principal object of this inquiry will be to determine the character, and condition of the natural bottom for purposes of comparison with the oyster territory, the dredge and rake dredge chiefly should be used, the latter more especially on muddy bottoms where there is a prospect of finding a substratum of sand. Samples of fine material from the bottom, if required for further examination, should be preserved in alcohol. The fauna and flora should be determined, and a fair number of specimens may be saved as records of the work or for future identification. Temperature and density observations should be taken at the surface and bottom. It is preferable to make a microscopic examination of fine bottom material as soon as it is obtained. If

starfishes are found, the beam trawl may be used over a wider area to ascertain their distribution and abundance.

It is estimated that about eighteen days will be required to complete these lines if the work was carried on continuously.

(2) *General investigation of the off-shore oyster grounds and adjacent territory.*—It is proposed to conduct this work by running lines of observing stations due north and south, or off and on shore, half a mile apart, the stations on these lines also to be half a mile apart, unless it becomes expedient to increase or lessen the distance between them. The lines should extend as near to the shore as it is possible to work conveniently with the *Fish Hawk* and should reach to the outer limit of each oyster district.

The work will begin in the Stratford district, and be carried east and west from there, as far as time and circumstances will permit. It will be preferable to cover one entire district before beginning upon a second, but this may not be possible, in view of the fact that the physical and chemical inquiries must be carried on conjointly with the other work. Observations should relate to the unoccupied ground as well as to that now utilized for oyster beds. It is suggested that the investigation be carried first to the eastward of Stratford district, in preference to moving westward from the same, as the greatest amount of damage from star-fishes and other causes has been reported from the Stratford and New Haven regions.

A similar survey should be made of Guilford or Madison district, east of New Haven, as the artificial beds in both of these districts are probably farther removed from sources of pollution than any others of considerable extent in Long Island Sound. The object of the examinations of one of these districts will be to obtain data for comparison with that derived from the inquiry farther west.

It will also be expedient to examine with equal care some of the oyster areas of the New York side of the sound, preferably the large natural ground off Hempstead Bay and the artificial ground off Lloyd's Neck.

Having gone over one or more of the districts in the detailed manner first described above, it may become advisable to expedite the work in others in order to cover as large an area as possible before the close of the season. This question should be left to the discretion of the person in charge of the inquiry.

Over the oyster grounds it may be necessary to rely chiefly upon the dredge for examining the bottom, but, if the oystermen will permit, the beam trawl should be employed freely there as well as upon the undesignated grounds. The discovery of star-fishes in abundance should be followed by a thorough study of the surrounding bottom.

It is estimated that the thorough examination of each district would occupy from 5 to 15 days.

(3) *The investigation of the shallow waters and the shores.*—This inquiry will relate (1) to the natural beds close along shore and to all the waters in such localities which are suited to oyster planting; (2) to the adaptation of the shore itself to the proposed system of natural oyster culture by means of ponds and sluice-ways.

The investigation can be carried on by means of a steam-launch while the steamer is working in the neighboring region. It may be best to begin in the Stratford district, where there is a large area of natural oyster territory, and carry the work thence east and west, but advantage should be taken of every opportunity to examine the shores in all parts of the sound.

It is possible that there will not be a sufficient number of persons on board the steamer qualified to pass upon the work, to conduct both the steamer and the shore investigations at the same time, in which case the latter should always be subordinate to the former.

(4) *The physical inquiry by the Coast and Geodetic Survey.*—The general work of the steamer will be so regulated as to enable this branch of inquiry to be carried on continuously. It will be possible in most instances to make the current observations from the two launches which will accompany the steamer, thus leaving the steamer free to engage in the dredging and other work laid out for her.

(5) *The chemical inquiry.*—This inquiry can be conducted in connection with the regular work of the steamer, but in case the former advances more rapidly than the latter, the steamer's movements should be regulated, so far as possible, to permit of their being carried on without interruption, as the chemical investigation will probably not occupy more than from four to six weeks at sea.

As directly affecting the subject of the oyster grounds, this inquiry should chiefly be limited to the region between New Haven and New York and to the northern side of the sound except at the extreme west. A few observations should be made, however, in the eastern part of the sound, in order to obtain data for comparison.

For determining the origin of any pollution detected, observations should be directed towards the dumping grounds and towards the channels leading from New Haven, Bridgeport, South Norwalk, and other large towns.

If no harmful amount of pollution is discovered between New Haven and New York,

it may be considered that the inquiry is conclusive as to the oyster beds in Long Island Sound.

(5) *Information to be obtained of the fishermen.*—A set of questions has been prepared with the view of obtaining from intelligent fishermen and others such information as can not be secured by direct observation. The questions will be put to the fishermen and their answer recorded by some member of the party. It is not considered judicious, in view of past experiences, to request written answers from fishermen generally.

[The instructions for the oyster investigations during the season of 1888 and 1889 were of the same character but less comprehensive in their scope.]

INSTRUCTIONS TO SCHOONER GRAMPUS.

WASHINGTON, D. C., February 2, 1889.

DEAR SIR: As soon as the necessary arrangements have been completed you will begin a careful investigation of the red snapper and grouper grounds, lying to the westward of the coast of Florida, between the Tortugas Islands and Cape San Blas, Florida.

These grounds begin near the coast and extend outward to about the 50 fathom line, over nearly the entire distance between the northern and southern points above mentioned. The bottom varies considerably in different parts of this area, in some places being rich and affording good fishing, while in others it is poor and devoid of much life. The inshore portions of this ground are more or less well known to the fisherman, and do not require examination at the present time.

The area marked out for your investigations this winter and spring is comprised between the depths of about 15 and 50 fathoms, beginning about 20 miles north of the Tortugas Islands and extending to within about 20 or 30 miles of Cape San Blas. You will begin the investigations at the south and carry them thence northward to such extent as the time and weather will permit.

The manner of conducting the work will be to run lines of dredging and fishing stations across the bank in an east and west direction, or practically parallel with the lines of latitude, and at intervals of about 10 miles apart. Along these lines you should make continuous trials for fish, especially the red-snapper and grouper, and, at intervals of about 10 miles, the dredge should be hauled upon the bottom, and its contents preserved for future examination. In trying for fish it will probably be best to adopt the methods generally followed by the red-snapper fishermen of the region, as explained in the report of the cruise of the steamer *Albatross*, by Capt. J. W. Collins.

If an opportunity occurs, you will also consult on this subject with Capt. D. E. Collins and with the Gulf fisherman.

Mark each line of exploration on a chart, and indicate on the same the position of each dredging station and of each trial for fish when good results are obtained. Record all the facts regarding such dredging and fishing stations which are called for, and in addition such others which you may consider sufficiently important in the printed record books, of which copies will be sent you by mail. Dredging stations should be indicated by numbers beginning with No. 5050. Fishing trials worthy of record should be designated by numbers beginning with No. 1, and an account of the same may be kept in the printed record books but separately from the dredging record.

A daily record should also be kept of all the fishing trials made during each day in order to locate the poor as well as the good grounds for fish. I inclose a page, torn from the printed record book, with a few notes of explanations made upon it. The density and temperature observations should be made with great care. The former at least should be intrusted to Mr. Kendall, the naturalist, who will be given special instructions respecting the manner of making the observations before he leaves Washington.

It will not be expedient to attempt to take or save large quantities of fish. The main object of your investigations will be to ascertain the presence and relative abundance of the various economic species in the different parts of the area marked out for your exploration in order that the localities best suited for fishing may be accurately determined.

Rare and unknown species of fish should be preserved in alcohol, and also the contents of the several dredge hauls; but special instructions in this matter will be given Mr. Kendall. Weigh and measure the length of all the red-snappers and groupers taken at each trial, and having determined the average weight and size of each species at each haul, make a record of the same in the record book.

The same may be done with respect to other economic species, if the time will permit. Examine the contents of the stomachs of the red-snappers and groupers and

preserve the same in alcohol, each species separately, unless the names of the species found in the stomachs can be determined on board the *Grampus*.

In order to insure as much accuracy as possible in your work with respect to the dredging and fishing stations you will probably find it to your advantage to anchor on the ground when the day's work is done, providing the conditions of the weather will permit. By so doing you will be able to get under way in the morning with a certainty of making your starting point precisely where you left off work the night before.

The conduct of the work must be left largely to your discretion, and you must also decide whether, in case of threatening weather, it will be to the advantage of the work, so far as accuracy and general results are concerned, for you to make a harbor or remain at sea.

Whenever you arrive in port where mail can be sent you will inform me of the general progress of your work since last leaving port. You will also before leaving port instruct the postmaster to forward to you at the next station any mail received after your departure.

Instructions for the trip to Campeache Bank will be sent you later.

Inclosed you will find a tracing of the grounds designated for your investigation, the inner and outer edges of the same being indicated by red lines.

Very respectfully,

M. McDONALD,
Commissioner.

Capt. A. C. ADAMS,
Commanding Fish Commission Schooner *Grampus*.

Dr. JAMES A. HENSHALL,
Washington, D. C.:

DEAR SIR: You are hereby assigned to the schooner *Grampus* as senior naturalist during her investigations in the Gulf of Mexico, which will continue about three months. You will proceed as soon as possible to Key West, where she is now awaiting instructions, and report your arrival to Capt. A. C. Adams, her commanding officer.

You are authorized to begin at once the investigations of the coast waters of Florida between Biscayne Bay and Cedar Keys, including the fresh-water streams, lagoons, and ponds in the neighborhood of the coast and the southern part of the Everglades, should it be found practicable to enter them from any part of the coast along which your researches will extend. The principal object of your investigations will be to collect and study the fishes of this region and develop its fishery resources. This work should also extend to the marine invertebrates, with special reference to the useful species of crustaceans, sponges, etc. It will be very desirable to ascertain the habits, abundance, and distribution of as many forms as possible, and particularly of those species which may be of economic importance as food, bait, or otherwise.

You will also make as full observations as you can on the methods and statistics of the fisheries between Biscayne Bay and Charlotte Harbor, as this region will not be visited by Capt. D. E. Collins.

After the completion of your coast work you will return to the *Grampus* and assist in the off-shore investigations.

Instructions to Captain Adams direct him to supply you with the seine-boat, fully equipped; one dory, and two men, one of whom shall be able to act as cook. He will also furnish you with all the alcohol, tanks, jars, fishing-tackle, guns, etc., necessary to your work.

Very truly, yours,

M. McDONALD,
Commissioner

WASHINGTON, D. C., July 19, 1889

DEAR SIR: As soon as all the necessary arrangements on board the *Grampus* have been completed and she is prepared for sea service, you will proceed to carry on the physical and biological investigation off the coast in accordance with the plans already agreed upon. For this purpose, Capt. A. C. Adams, commanding the schooner *Grampus*, has been instructed to place that vessel under your orders when the work of refitting has been finished. Captain Adams is responsible for the safety of the vessel, and you will yield to his judgment in all cases where this question arises. A copy of his orders

is herewith inclosed. It is expected that a brief statement of your experiences and results will be transmitted to the Commissioner each time that you arrive in port.

Very respectfully,

M. McDONALD,
Commissioner.

Prof. WILLIAM LIBBEY, Jr.,
U. S. Fish Commission, Wood's Holl, Mass.

WASHINGTON, D. C., July 19, 1889.

DEAR SIR: After the arrangements now in progress on board the schooner *Grampus* have been completed and she is made ready for sea service you will hold yourself subject to the orders of Prof. William Libbey, jr., in carrying on the investigations along the coast, with which he has been intrusted by the Commissioner. You will, however, be held responsible, as heretofore, for the safety of the vessel and the crew, and have full authority to exercise your own judgment in relation to the same.

You will notify this office of your movements by telegraph whenever you arrive at or leave port. A copy of the orders to Professor Libbey are herewith inclosed.

Very respectfully,

M. McDONALD,
Commissioner.

Capt. A. C. ADAMS,
Commanding Fish Commission Schooner *Grampus*, Wood's Holl, Mass.

[The plans for the work of the schooner *Grampus* on the mackerel grounds south of New England and New York during the summer of 1889 were arranged by personal conference between the Commissioner and Professor Libbey.]

INQUIRY RESPECTING INTERIOR WATERS—LAKES AND RIVERS.

INQUIRY REGARDING INTERIOR WATERS.

The plans for the investigation of interior waters under the direction of Dr. David S. Jordan have been arranged chiefly by personal conference between him and the Commissioner, beginning in May, 1888, when, at the meeting of the American Fisheries Society at Detroit, Mich., the subject was fully discussed in the presence of the fish commissioners of several States, who advised that the subject be taken up without delay.

WASHINGTON, D. C., June 3, 1889.

DEAR SIR: You are hereby charged with the investigation during the summer of 1889 of the salmon rivers of Alaska, authorized by the following act of Congress, approved March 2, 1889:

That the Commissioner of Fish and Fisheries is hereby empowered and directed to institute an investigation into the habits, abundance, and distribution of the salmon of Alaska, as well as the present conditions and methods of the fisheries, with a view of recommending to Congress such additional legislation as may be necessary to prevent the impairment or exhaustion of these valuable fisheries and placing them under regular and permanent conditions of production.

Your party will consist, beside yourself, of the following-named persons: Mr. Livingston Stone, Capt. E. P. Herendeen, and Mr. Robert Lewis.

Instructions for the conduct of the work are herewith enclosed. You will arrange to leave San Francisco at the earliest date possible, and will proceed directly to the island of Kadiak, where your explorations will begin.

As you will have only a comparatively short season during which to carry on these investigations, it will be necessary to limit your operations to a few regions, of which Kadiak Island, Afognak Island, Cook's Inlet, and Bristol Bay are the most important. They should be visited in the order named, unless, after your arrival at Kadiak, you should find that the salmon fishery interests of Bristol Bay have greater need of attention than those of Cook's Inlet, in which case the Bristol Bay region should be taken in hand next after Kadiak and Afognak. This is, however, on the supposition that you will not have the time to visit all of the regions.

You will pay most attention to those rivers in the districts mentioned where the fishery is now being prosecuted with the greatest activity, and also those which, from their location and the abundance of salmon, are likely to attract the canning interests at an early day. Upon your arrival at Saint Paul, Kadiak, you will

probably obtain the information necessary to enable you to map out the course of your explorations.

It is on the short rivers, and especially those on Kadiak and Afognak Islands, as well as those on the adjacent coast of the peninsula, that the greatest fishery abuses are said to exist, and the dangers from injudicious fishing are most imminent. This class of rivers should, therefore, be carefully studied, and you will also seek to locate all the prominent salmon rivers in each district, ascertaining their chief characteristics, even though you may be able to do this, in many cases, in only a superficial way.

Your observations should all be made with a view to their bearing upon the practical question, as to how the salmon interests can best be protected, and to presenting to Congress a clear and succinct report upon the entire subject.

Three subjects are presented by the investigations in question, namely: First, the natural history of the salmon and the physical characteristics of their environment, in connection with which the river fishes generally may be studied; second, the conditions, methods, and statistics of the salmon fisheries; third, the artificial propagation of the salmon in Alaskan rivers.

Mr. Stone has been detailed to accompany you on account of his extensive knowledge respecting salmon culture on the Pacific coast. He should be given special charge of that branch of the work, but he will undoubtedly be able to assist you in the other subjects. Otherwise you will apportion the work among your assistants in such manner, as seems best.

The duration of your stay in Alaska will be determined by the length of the season suitable for field investigations. A letter has been addressed to the Alaska Commercial Company, requesting them to furnish you and your party with transportation to and from Alaska and to grant you the customary facilities at their stations. You will call at the office of the company immediately upon your arrival in San Francisco and ascertain what arrangements can be made with them.

Should the opportunities occur for sending mail home, you will inform me from time to time of the progress of your work.

Very respectfully,

M. McDONALD,
Commissioner.

DR. TARLETON H. BEAN,
Ichthyologist, U. S. Fish Commission.

Instructions for the conduct of the investigations of the salmon rivers of Alaska, authorized by the act of Congress approved March 2, 1889.

THE NATURAL HISTORY OF THE SALMON AND THE PHYSICAL CHARACTERISTICS OF THEIR ENVIRONMENT.

Physical characteristics of the rivers, etc.—In order to study the natural history of the salmon, it will be necessary to obtain some knowledge of the character and conditions of their environment, and to this end the rivers in which they occur should be carefully investigated. No accurate maps exist of any of the Alaskan rivers. You will be supplied with a copy of that part of Captain Tanner's recent chart of Alaska, which covers the regions you will visit. On this the rivers have been plotted in accordance with the best information obtainable. You will seek to correct these plottings by such observations as you are able to make. Your observations with respect to this subject should also relate to the following matters:

The course, length, width, and depth of the river. Contour and composition of the bottom. Character and composition of the shores and adjacent land. Character of the source, whether springs, lakes, snow, etc. Rate of descent, force of current, etc. Number, position, and character of the branches, and their influence on the main stream. Are any lakes connected with the river, and what is their character and their relations to the river? Character of the mouth of the river and its relations to the sea. Influence of the sea upon the water in the river. How far up do the tides extend, and how far does the salt-water reach? At what point does the fresh water begin? Clearness of the water. Temperature of the water at successive points along the river, taken both at the surface and at the bottom. Character, location, and permanence of all obstructions, natural and artificial. To what extent, if any, does the river freeze over in winter? Relations of one river to another. The temperature of the air should be observed and recorded several times each day at stated periods and also the general character of the weather from day to day, and, if possible, its influence upon the movements of the salmon. Photographs should be taken wherever possible, to illustrate the character of the rivers and of their surroundings.

Natural history of the salmon and other fishes.—Your observations in natural history should be directed specially toward the species of salmon which are of economic value. You will, however, make as extensive collections as possible of all the fishes inhabiting the rivers which you visit, and also of the aquatic invertebrates and plants, should you find it convenient to do so. With respect to the plants, it may be said that it will not be important to collect other species than those which may serve as food for fishes, or which are characteristic of the rivers and should be discussed in connection with them. The number of specimens of each species of fish which should be preserved in alcohol for future study is left entirely to your discretion.

These collections will serve as the basis of a comprehensive check list of the river fishes; but it is even more important to obtain materials for the preparation of a report giving the names, the relative abundance, and the relative importance of the different species of food-fishes, including, of course, the salmon. In this should be specified the edible qualities and average size of the several species of salmon found in the regions which you visit, the names of the species chiefly used at the canneries, and the value of the other species (not now so used) for canning purposes.

Respecting the salmon, it is most important to obtain as many observations as possible concerning their habits, and especially their migratory and spawning habits, as bearing directly upon the inquiries with which the Commission has been charged by Congress. Under this heading special attention should be given to the following topics:

At what time do the salmon begin to enter the rivers, and for how long a period do they continue to enter? At what time do they begin to leave the rivers, and for how long a period does this seaward migration continue? What are their movements and other habits after entering the rivers? How far up the river do they ascend? At what places, during what seasons, and for how long a period do they spawn? Are they ever observed in salt water off the mouths of the rivers? In what abundance, and at what seasons? How far from shore? Would it be profitable to fish for them in such places? Ascertain, if possible, what, if any, decrease has occurred in the supply, and the cause of the same. Has there been a willful or injudicious destruction of the fish, as claimed in the reports made to Congress, and in what manner has this occurred? Has the decrease occurred among all the commoner species of salmon, or has it been limited to the red-fleshed species, which appear to be the only ones that are now canned? The above questions should be answered separately for each species, should they differ much in their habits.

THE METHODS, CONDITIONS, AND STATISTICS OF THE SALMON FISHERIES.

Appliances and methods.—It is desirable to ascertain approximately the number of fishing vessels, boats, kyaks, etc., employed at each locality or at each of the salmon stations visited; but it is not necessary that they should be described in detail. The different kinds of apparatus in use for taking the fish should be ascertained, and the number and size of each mentioned; but, excepting where new forms of appliances have been introduced, it will not be essential to discuss them at length. In the case of fixed appliances, however, it is expedient to learn the date of their establishment, their cost, etc. The methods of using these appliances should be described, except where the same is already matter of record.

Products of the fisheries.—Under this head, data should be obtained respecting the yield of the fisheries, and the history and development of any of the important fisheries or manufacturing enterprises that have recently been established. The question of the increase or decrease in abundance of each of the commercial species of salmon should also be considered, and the influence exerted by the methods of fishing in vogue.

Preparation of fishery products.—It is desirable to secure as much information as possible respecting the preservation and preparation of all fishery products, especially in cases where new methods have recently been introduced. When these methods are already well known they need not be described in detail, but the manner of curing should be specified in each case, whether pickling, kench-curing, smoking, canning, etc. New and improved forms of apparatus used in the preparation of fishery products should be fully described, and drawings or photographs of the same should be made where practicable.

Transportation and markets.—Special attention should be paid to the question of markets and of methods of transportation, and as complete information as possible should be obtained respecting these subjects. Under this head belong the questions regarding the dispositions of the catch, the quantities of fish used locally, and the wholesale and retail prices.

Financial organization.—All questions of wages, shares, ownership of boats, etc., should be considered, and the cost of plants, such as factories, etc., should be ascertained. It is also important to obtain as much information as possible respecting the

value of vessels, boats, apparatus fish-houses, the amount of money invested, etc., and the amount and value of the catch during the present and past years.

The fishermen, etc.—It is desirable to ascertain the number of white and of native fishermen in the places visited, and also the effect on the native population of the establishment of canneries and other fishery enterprises.

THE ARTIFICIAL PROPAGATION OF THE SALMON IN ALASKAN RIVERS.

The chief points in the natural history of the salmon which it is essential to determine before undertaking their artificial propagation have been covered in the first section of these instructions. Should ripe fish be obtained at any time by your party, it will be expedient, however, to ascertain the number and size of the eggs common to each species, their rate of development, and such other facts as might aid in determining the methods of hatching best suited to the species.

One of the most important inquiries respecting this subject, and one which should receive careful attention, is that relative to the establishment of hatching stations. A constant outlook should be kept with the view of determining the more eligible sites for hatching work, always bearing in mind the qualifications required for such purposes, among which the following are essential:

The presence close at hand of large bodies of salmon during the breeding season. The fitness of the shores for the erection of buildings, for the penning of salmon, and for other necessary purposes; the possibility of obtaining an abundant supply of water by gravity means, and from a source near the station; proximity to a settlement or fishing station, not too remote from a shipping port.

You will also ascertain the nearest point at which building materials can be obtained and the general cost of the same.

MARSHALL McDONALD,
Commissioner.

By the CHAIRMAN:

Q. When the organization was made by Mr. McDonald, were the parties who were assigned to duty in your department largely new men who were introduced into the service, or were they persons who had grown up in the service?—A. In reply to that I would state that there were at that time and have been at all times very few persons as permanent employes in scientific inquiry; that the same volunteer assistants were continued——

Q. I mean the regular force, under pay. I did not speak of the volunteers.—A. The office did not exist before that time. One man was transferred from another office; two clerks came in as new men.

Q. Who were they?—A. H. S. Hinrichs and Frank McCormick.

Q. Is he a relative of Mr. McDonald's wife?—A. He is a relative of Commissioner McDonald's wife.

Q. Is he a competent man?—A. He is a thoroughly competent man for the work on which he has been employed. He had experience in type-writing before he came into my office, and that is what he was employed for.

Q. What was his compensation?—A. His compensation when he entered the commission was \$40 a month. That was increased on April 1, 1889, to \$50.

Q. That is his present pay?—A. It is his present pay.

Q. Do you know of any other relatives of Commissioner McDonald whom he has appointed? There is a Mr. Lewis, is there not?—A. I understand there are two Lewises—R. E. Lewis and—I have forgotten the initials of the other—who are distantly connected with Mrs. McDonald. That I simply know by hearsay. I know R. E. Lewis slightly.

Q. Do you know whether one of the Lewises was in the employ of the commission before Colonel McDonald became commissioner?—A. I know that he was.

Q. The other has been appointed by Commissioner McDonald?—A. The other has been appointed since the administration of Commissioner McDonald. I have an idea that he was temporarily employed before.

Q. Do you know anything about his efficiency ; whether or not he is a good man ?—A. I understand from those under whom he has worked that he is. He has not worked under me.

Q. What is the method pursued as to the payment of clerks and others employed in your department ?—A. No expenditures are made on account of the appropriation which is assigned to me for this purpose without my certification of the vouchers.

Q. Then the vouchers go to the commissioner ?—A. They go to the commissioner.

Q. And he approves them ?—A. First of all I make out requisitions for everything that is purchased for my department, or for all labor for it, except in a few cases where the field work demands that the person in charge of that work should make his requisition and get his material at once ; but his requisition then comes to me. Then the bills when they are made out come to me first. I indicate whether they are correct or not. By that I mean the bill made out by the parties of whom the goods were purchased. I certify on them whether the bill is correct. If it is not correct it goes back. Then when the bill goes to the disbursing agent he makes out the vouchers. They come back to me first then again for certification. That is, they never go to the person furnishing the supplies until they have been certified to as correct by the one authorizing the purchase or by the one making the purchase. They are then signed by that party, and sent back to the disbursing agent, who hands them in to the commissioner for his approval ; that is, the last act is the approval. The former acts are merely certifications or signing the receipts.

Q. After approval by the commission they are paid ?—A. After approval by the commission they are paid.

Q. In regard to your own department—do you think all purchases are made carefully and that everything is purchased at reasonable figures ?—A. Yes, sir ; we are careful in getting bids wherever we can do so and wherever it is required. Of course, in small purchases it is a waste of time and it is a thing which involves a few dollars ; but for large purchases bids are always requested from as many persons as possible, and the lowest bidder gets the work.

Q. You examine the bids ?—A. Yes, sir. I will state here that in my division every item of expense passes through my own hands personally ; that is to say, it is not left to the discretion of any clerk.

By Senator BLODGETT :

Q. Do you act independently of the commissioner in making purchases ?—A. No, sir. A requisition is first made out ; this requisition requests the goods or the services for a certain purpose, and is signed by the one needing them ; that goes to the disbursing agent, who ascertains whether the requisition is an appropriate one, whether it has been requested on the proper appropriation, whether it is justifiable in every way ; then he puts his initials on it ; then it goes to the commissioner, who signs it, approves it, and then it goes back to this person, and it is his authority for making the purchase. No purchases are made except upon a requisition signed by the commissioner, except in a few instances where emergencies demand it and for which there are strict regulations.

By the CHAIRMAN :

Q. Do you know whether the same regulations exist in the other departments ?—A. It is not a regulation of my division. It is a regulation of the entire Commission. It is a general regulation.

In the case of the steamer *Albatross*, detailed requisitions are not required of the captain, because it would simply delay the work. An allotment of money is made to her, within which the captain is obliged to keep.

I desire to place upon record the opinions of certain scientific men, who are competent to judge of the conduct of work during the past two years. I have here the sworn statements of two such persons, who are absent from the country, and desire to have them form part of the testimony :

QUEBEC, CANADA, June 30, 1890.

To whom it may concern :

I am informed that the management of the United States Fish Commission is now under examination, and as I have had many opportunities to study the manner in which scientific research has been prosecuted by the Commission under the late Professor Baird and under Prof. Marshall McDonald, as well as by other organizations of a similar character, I beg leave to express my high estimation of the wisdom and breadth of view and the fidelity to the interests of the public which have characterized the scientific investigations which have been carried on by the Commission under Professor McDonald's direction.

My qualifications for forming and expressing an opinion upon this subject are as follows: In 1878 I was employed as a naturalist to carry on scientific researches and experiments in oyster propagation under the Maryland State Fish Commission. During the years 1883 and 1884 I was chairman of the Maryland State Oyster Commission, and was employed for the whole of this period in studying the oyster industry, from the practical side as well as in its scientific aspects. During the years 1886 and 1887 I was employed by the British Government to assist in contributing to the scientific results of the cruise of H. M. S. *Challenger*, and the experience and training which I have thus obtained have fitted me for estimating the practical value of scientific researches. My position as a professor in the biological laboratory of the Johns Hopkins University, in Baltimore, and as a member of the National Academy of Sciences, has given me opportunities to become thoroughly acquainted with the scientific work of the Commission.

As a bureau for applying science to practical ends its aim should be the attainment of practical results rather than the advancement of science, and the explorations and investigations and researches which it has undertaken under Professor McDonald's direction have been carefully and wisely planned for the purpose of aiding its practical work, either by perfecting and improving its appliances and methods, or by extending its usefulness into new fields, or by throwing light on practical problems and by removing difficulties, or else by increasing our knowledge of the conditions which are favorable or prejudicial to our fishing interests. Most of this work necessarily relates to the life of the ocean. The ocean is the home of animal life, and all the life on the land is as nothing when compared with that under the water. The amount of food for man which the ocean might be made to furnish is unlimited and inexhaustible, and all naturalists know that our marine food resources admit of sufficient development to supply abundant food for all the people which the country will ever contain.

Even now sea-food is very cheap, although our ignorance of marine life, and of the conditions which are favorable to its increase is profound.

The chief aim of the Fish Commission should therefore be to discover how to make this source of wealth available, and to develop and improve it for the use of our people. From the time of its establishment it has wisely devoted much attention to the study of marine life, but the researches in marine biology which it has initiated, during the past three years, under Professor McDonald's direction are very much more intimately and directly related to its practical duties than were some of those with which it was concerned at an earlier date.

During the first years of the Commission the exploration of the unknown regions of the ocean and the collection of museum specimens to exhibit the characteristics of marine life, was a very prominent part of its work, and as a preliminary step to more thorough investigation, this was not only perfectly proper, but highly important and useful, as is well shown by the fact that while our Government was the first to undertake the exhaustive scientific exploration of the ocean, its lead has been followed by most of the maritime nations of Europe. England, France, and Italy especially have entered upon the work with great energy, and have sent out costly and well-equipped expeditions for marine exploration. It is worthy of remark that most of the machinery and apparatus which these foreign countries have employed has been modeled after that which has been devised and used by our Fish Commission.

Some of the collections which our Commission has obtained in past years were

studied by specialists, and the results which were published, are valuable contributions to science and important additions to our knowledge of our marine resources. Other collections, however, were stored away for future study, and although many American naturalists would have been glad to investigate them and to prepare reports upon them, this was not permitted, and they have been kept until the results which they might have yielded have been anticipated by the researches which have been instituted in foreign countries; while, in the meantime, biological research has made such great advances that these collections are now of little value for investigation by modern methods.

As soon as Professor McDonald became Commissioner, the collection of natural history specimens was made incidental to the proper practical work of the Commission, but whenever it has been possible for the vessels of the Commission to gather specimens for scientific research without detriment to practical work this has been done and the material has been promptly assigned to specialists who have undertaken the work of studying it and of preparing reports upon the scientific results of their researches, without any expense to the Commission.

Professor McDonald has also introduced, under the immediate auspices of the Commission, scientific researches and experiments which have for their purpose the improvement of its methods and the extension of its field of usefulness, but the expense of these investigations has been strictly limited to the amount specifically appropriated for scientific inquiry. Scientific investigations have been employed to study such problems as the history of the injurious parasites of food-fishes, the influence of ocean currents and temperature on the distribution and multiplication of migratory fishes, the history of important marine animals, such as the sturgeon, the sea bass, and the lobster, the origin of the food supply of marine fishes, and the history of the animals which serve as food, the history of injurious marine animals, such as the star-fish and so on.

The method which has been pursued in these inquiries has been to employ, for a limited period, a scientific investigator who possesses especial qualifications for that particular work, and to give him every facility for gathering and studying his material according to the most improved modern methods and the economy and practical efficiency of this plan as compared with general miscellaneous collecting is so obvious as to require no comment.

By confining the attention of the scientific investigator to a specific problem the researches of the Commission have been made more directly and immediately tributary to its practical work, but at the same time that Professor McDonald has thus systematized and wisely directed the investigations of specialists he has also greatly increased their scientific value and has brought them abreast of the most advanced researches of the age in marine biology.

W. K. BROOKS,
*Assistant Professor of Animal Morphology
in the Johns Hopkins University, of Baltimore.*

CONSULATE OF THE UNITED STATES OF AMERICA FOR QUEBEC,
Quebec, Canada.

On this 2d day of July, 1890, before me the undersigned consul of the United States of America for Quebec, personally appeared Prof. W. K. Brooks known to me to be the person described in and who executed the foregoing instrument in writing, and acknowledged the same to be his act and deed, and declared that he had executed the same freely and voluntarily, to the uses, and for the purposes therein mentioned.

Given under my hand and the seal of this Consulate at Quebec, the day and year above written.

[SEAL.]

FREDERICK M. RYDER,
Consul of the United States of America.

Statement of David S. Jordan in regard to the work of Scientific Inquiry of the U. S. Fish Commission.

BLOOMINGTON, IND., June 13, 1890.

To whom it may concern:

Since the year 1876, I have been more or less closely connected with the United States Fish Commission as a volunteer assistant or as a consulting expert on matters pertaining to the classification, structure, habits, distribution or relations of fishes.

I have been especially interested in the exploration of river basins as a means of adding to our knowledge of fishes. At different times, in Professor Baird's administration, I received some aid in the work of the exploration of the waters of Indiana, Georgia, North Carolina, Florida, and other states. Most of the expenses of this work were however borne by myself and my assistants.

In 1880, means were furnished me for a comparatively thorough study of the shore fishes of California, Oregon and Washington, and in 1884, for an exploration of the waters of parts of Iowa, Missouri, Arkansas, Texas, Alabama and Tennessee. All these explorations in the aggregate covered but a small part of the United States, and while satisfactory so far as they went, they were far from complete.

It is manifest that before intelligent and effective work can be done in the introduction of new fishes into any region, and in the preservation of the native species, it is necessary to make such preliminary surveys.

It is necessary:

(1) To ascertain what our species of fishes are, their value, habits, and relations; the kind of waters in which they thrive, the food they need, their enemies, and their friends.

(2) To find the natural range of each species and the character of the barriers that limit it.

(3) To ascertain the general character of each river-basin in which the planting or preservation of fishes is contemplated; the temperature of the water, its fluctuation with seasons, and in general every fact which can have a bearing on the work of the Commission.

(4) To ascertain for each river-basin the species it now has; their relative abundance and value.

(5) Besides these directly practical ends, such explorations should furnish data which would aid us to fix more precisely the laws of animal distribution.

Without such information, the work of the Fish Commission in the fresh waters must be more or less blindly or wastefully done. The importance of securing it was fully appreciated by Professor Baird, but for one reason or another, not much was done under his administration.

When Mr. McDonald was appointed Commissioner of Fisheries, he recognized at once the necessity of this work, and his able assistant, Mr. Richard Rathbun, chief of the division of scientific inquiry, made arrangements at once for its prosecution. It has been attempted to do this work thoroughly and effectively, in such a manner that it will not need to be done again, and the means used has been through the organization of parties of naturalists as volunteer assistants, their bare expenses being paid, without salaries.

In the spring of 1888, I was asked by Mr. McDonald and Mr. Rathbun to take a general, although unofficial, oversight of this work, and I spent part of the summers of 1888 and of 1889 in field-work of this nature, assisted in both cases by students. The report on the work done in 1888 is now published, and the reports of 1890 are now in the hands of the printer.

In 1889 the following river-basins were explored more or less completely: Wabash, Holston, French Broad, Kanawha, Saluda, Catawba, Neuse, Cape Fear, Tar, James, Roanoke, Shenandoah, and the Dismal Swamp. An exploration of various lakes in southern Michigan was also made in co-operation with the Fish Commission of that State.

In 1890, the streams of Colorado, Utah, and the Yellowstone Park were explored under my personal direction. Other parties examined streams of Georgia, Southern Missouri, Arkansas, and Alabama.

From all these streams collections were obtained, not so much for the sake of the specimens as to make possible that degree of accurate comparison on which the value of this work depends. While most of these specimens ultimately find their way into the National Museum, their collection is not undertaken for museum purposes, but for the purpose of a better knowledge of American food fishes.

The results of the work of these two summers have been of great practical as well as scientific importance. The continuance and extension of this work seems to me an integral part of the duty of the United States Fish Commission.

In this regard as well as in others, in my judgment, the work of scientific inquiry has been more wisely and effectively prosecuted under the present Fish Commissioner than was the case during the administration of Professor Baird.

DAVID S. JORDAN,
President of the Indiana University.

Subscribed and sworn to before me, a notary public in and for the county of Monroe, in the State of Indiana, by David S. Jordan, president of the Indiana University, this 13th day of June, A. D. 1890.

[SEAL.]

J. H. LOUDEN.
Notary Public.

At 11 o'clock and 30 minutes p. m. the subcommittee adjourned until Monday, July 28, 1890, at 10 o'clock a. m.

WASHINGTON, D. C., *July 28, 1890.*

The subcommittee met at 10 o'clock a. m. pursuant to adjournment.
Present, Senator Stockbridge (chairman).

TESTIMONY OF MARSHALL M'DONALD—Continued.

MARSHALL MCDONALD, having resumed the stand, testified as follows:

The WITNESS. I have here the questions submitted to the committee by Mr. Blaisdell and my answers thereto.

REPLIES TO QUESTIONS SUBMITTED BY MR. BLAISDELL.

Question 1. What was your position in the Fish Commission under the late Prof. S. F. Baird?

Question 2. What was the amount of your salary at that time?

Answer. I held a number of positions under Professor Baird. At the time of his death I was chief of the Division of Distribution and received a salary of \$2,400 per annum. My official title did not, however, define my duties or responsibilities. I was practically in charge of the fish-cultural operations of the Fish Commission, propagation as well as distribution; was the superintendent of central station, Washington, D. C.; the director of the Wytheville station in Virginia, and had general control of all the stations, with the exception of Battery station and St. Jerome's, which were under the immediate direction of the Assistant Commissioner, and the Wood's Holl station, which was controlled directly by the Commissioner, Professor Baird. I prepared also the larger part of the correspondence of the Commissioner, relating directly or indirectly to fish culture. At the time of the death of Professor Baird I was in Colorado on a tour of inspection, looking to the establishment of new stations in the South and West, and the better organization and ordering of existing stations.

When Professor Goode succeeded Professor Baird as Commissioner of Fisheries, he formally constituted a division of fish culture, and I was appointed assistant in charge of the division with a salary of \$2,800 per annum.

Question 3. Who is in charge of the same division at this time in the Commission?

Question 4. Has the work of the division increased in the department of distribution since 1887?

Question 5. Is the work of this department performed in a satisfactory manner by the present head of the department?

Question 6. Do you not consider the methods used in the Division of Distribution to be carried out in a thorough business way, and have you not stated that you considered that Mr. Moore was a thorough practical and business man?

Question 7. Do not the records of the Commission show that more work has been performed than in the past?

Question 8. What salary does Mr. Moore receive?

Answer. Eighteen hundred dollars per annum.

Question 9. Is the salary paid Mr. Moore in just proportion to that paid by you to other departments of the Commission of less responsibility and work and results?

Questions from 3 to 9 have the same purport, viz, to show that Mr.

George H. H. Moore, now superintendent of distribution, is discharging duties for which the present Commissioner received \$2,400 per annum, and for which Mr. Moore receives but \$1,800 per annum.

Answer. The salary paid Mr. Moore is fully up to the measure of his responsibilities and duties. He is not chief of a division of distribution, such as was defined in a general way under Professor Baird's administration, nor has he the multiple duties and responsibilities that devolved upon the chief of the Division of Distribution then. He is what his official designation defines him to be, superintendent of distribution with his duties and responsibilities clearly set forth in his letter of assignment, a copy of which is herewith submitted.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., February 21, 1888.

GEORGE H. H. MOORE, *Messenger.*

DEAR SIR: You are hereby assigned to duty as superintendent of distribution, and will have immediate and responsible direction of all that relates to the service of distribution. All requisitions will be made through or by you; all original bills and vouchers for expenditures will be certified or approved by you, and you will be charged with the execution of all details of distribution in accordance with the lists furnished by the office of the division of fish culture or programme directed or approved by the Commissioner.

Respectfully,

M. McDONALD,
Commissioner.

True copy:

J. J. O'CONNOR,
Chief Clerk.

He is in immediate charge of the regulation of the car and messenger service of distribution. All applications for fish or eggs, all promises made in regard to stocking public waters, and all assignments made for this purpose, are after approval by the Commissioner, entered in the records of the office. From these records the lists of distribution are from time to time made up and submitted to the Commissioner. Upon the basis of these lists the general programme of distribution is arranged and incorporated in instructions, which are given by the Commissioner verbally or in writing to the superintendent of distribution, who is responsible for their proper execution. The salary of the superintendent of distribution has been fixed at \$1,800 after careful consideration. I do not deem any increase advisable. The office is of the same grade so far as responsibilities and qualifications are concerned, as is that of superintendent of a first-class hatching station, and receives the same compensation.

By the CHAIRMAN:

Q. What was Mr. George H. H. Moore's salary when he was captain of a car?—A. Twelve hundred dollars.

Q. What is his present salary?—A. Eighteen hundred dollars.

Q. That advance has been made under your administration?—A. Yes, sir.

Q. In consequence of his advanced position and increased duties and responsibilities?—A. Yes, sir.

Q. You consider his present salary as a suitable one for the position he holds?—A. Yes, sir; fully up to the measure of his responsibility.

Q. Is he a competent and faithful man in his position?—A. I have had no reason to think otherwise until recently. I may state this in regard to Mr. Moore. I think he has shown evidence of dissatisfaction with his position and of jealousy and antagonism to others in the Com-

mission, on account of their advancement or promotion, thinking, I presume, that it militated against his own advancement.

Q. But he discharges his duties faithfully?—A. Yes, sir; just as all do. I would discharge him if he did not.

MR. BLAISDELL'S QUESTIONS.

Question 10. Have you any relatives or any relatives of Mrs. McDonald on the rolls of the Commission?

Question 11. Will you state the names of any relatives of yourself or wife on the roll of the Commission, the salaries paid when appointed, their duties, length of time employed, kind of work done, and present salary?

Answer. I have no relative in the Commission or elsewhere in the Government service so far as I know. Having fourteen brothers and sisters living, all married and most of them with sons growing up and seeking positions in life, I have had abundant occasion as well as opportunity to place some of them in good positions had I been so inclined.

Mrs. McDonald has a single relative, a nephew, Mr. Frank McCormick, in the service of the Commission. He is employed as a typewriter and copyist in the division of scientific inquiry, under Mr. Rathbun, who has appeared before your committee already and testified as to the pay, duties, and qualifications of Mr. McCormick.

Mr. R. E. Lewis and Mr. C. C. Lewis, who have been named as relations, are not related either to Mrs. McDonald or myself. They are remote connections by marriage with Mrs. McDonald, so remote that even in Virginia we don't count such connections.

Mr. C. C. Lewis entered the messenger service November 1, 1886. This service was not then continuous. He was employed whenever active work was going on. The record of his service from the time of entering until January 13, 1890, is as follows:

Tenure of service.	Occupation.	Compensation.
		<i>Per month.</i>
November 1 to December 31, 1886	Messenger apprentice	\$45
January 8 to 24, 1887	do	45
February 1 to June 20, 1887	do	45
September 27, 1887, to January 15, 1888	Assistant messenger	60
April 23 to October 31, 1888	do	60
November 1, 1888, to March 15, 1889	do	75
April 25 to December 15, 1889	do	75
January 2 to 13, 1890	do	75

On January 13, 1890, he was transferred to Leadville Station to assist Mr. Robinson, the superintendent. His compensation was increased \$15 per month, to cover the increased cost of living, such increase being usual when such assignments are made.

Mr. R. E. Lewis is my own appointment. I desired to train up in my office a young man who could acquire general knowledge of the work. I selected Mr. Lewis because I knew him to be a young man of thorough integrity, industrious, and capable. I have not been disappointed in this estimate based on personal knowledge. He is rendering most efficient service on a meager salary of \$50 per month.

Question 12. Have you the letters sent you by Mr. E. M. Robinson from Colorado Station, showing why Mr. Bright was removed, and also why he requested the transfer of Mr. Lewis?

Answer. All of Mr. Robinson's letters are in our official files subject to the call of the committee. Those relating to Mr. Bright will be taken up specifically in connection with his appointment and discharge. As to Mr. Lewis, I have never received from Mr. Robinson a request for his transfer to another station. In one letter I believe he suggested that he did not think Mr. Lewis physically capable of standing the hardships and inclemency of weather.

Question 13. Why was Mr. Lewis transferred from the Colorado Station to the Wytheville Station?

Answer. Mr. Lewis has not been transferred to the Wytheville Station. He was ordered there from the Colorado Station in charge of a shipment of the native Rocky Mountain (black spotted) trout, which I have sent there for breeders. His services are being utilized there pending an inquiry as to the truth of the charges made against him by Mr. Bright.

Question 14. Was there ever in the history of the Commission under the late Professor Baird at Wytheville Station a position as superintendent at \$1,200 per annum, and an assistant superintendent at \$1,080 per year?

Answer. I believe not, nor is there now. Mr. Lewis, as stated above, is only temporarily at the Wytheville Station.

Question 15. Had Mr. C. C. Lewis ever had any experience as an expert at fish culture at the time he was sent to the Colorado Station.

16. Please give station and time of experience he had had as an expert in salmon hatching.

Mr. Lewis was not sent to the Colorado Station as a fish-cultural expert. He had previously been attached to the messenger service, and in this work had acquired a valuable experience in the handling and transfer of fish. The station was being developed in the most inclement season of winter. The work involved exposure and endurance, and was of a character such as to utilize the experience he had acquired in the transportation of fish in the messenger service. The assignment of Mr. Lewis to the Colorado Station was made in the exercise of the discretion vested in me by law as Commissioner of Fish and Fisheries, and with due regard to the best interests of the service. I hardly think it competent for a discharged employé, himself discharged for neglect of duty, incompetence, and insubordination, to call in question the action of the Commissioner in cases where the right and the responsibility of decision under the law necessarily vests in him and must be controlled by his judgment.

Question 17. Was there ever in the past history of the Commission such an office as inspector of stations?

Answer. No; nor was there such an office as superintendent of distribution. Both were made necessary by the increased economic work, and the necessity of better organization. The work of the Commission is comprised under four divisions, as follows: The division of general administration; the division of scientific inquiry; the division of fisheries; the division of fish-culture. The routine of the general administration is directed by the chief clerk. The immediate direction of the divisions of scientific inquiry and fisheries is in charge of assistants. The Commissioner has retained direct charge of the division of fish-culture, and for the proper administration of the work has appointed a superintendent of distribution and an inspector of stations. This organization is based upon his experience and knowledge of the work, and is necessary for its efficient conduct.

Colonel Gay was selected as Inspector of Stations, because I had per-

sonal knowledge of his qualifications as a fish-culturist, and was assured that he had the methodical business training and experience necessary for efficient discharge of the duties of Inspector. His instructions as contained in his letter of assignment to duty define plainly and fully his duties.

Copy of instructions is herewith submitted for the information of the committee:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., July 3, 1888.

JOHN GAY, esq.,
*Inspector of Stations, U. S. Fish Commission,
Washington, D. C.*

DEAR SIR: The efficient discharge of the duties devolving upon you as inspector of stations of the U. S. Fish Commission requires that you shall make yourself thoroughly familiar with the affairs of each station of the Commission by careful study of the records of the stations, in the files of the office of the division of Fish Culture.

These files are placed immediately under your direction, and to them will be assigned, as received, all reports, letters, etc., relating to the stations; so that at any time all the data in regard to the work of the stations will be together and subject to your examination.

You will be called upon from time to time for reports on the condition of the work at the stations, and will be required to inspect the same from time to time as indicated by the Commissioner; making such recommendations as in your judgment seem proper with a view to the improvement of the efficiency of work at the stations. You are authorized to call upon the superintendents and personnel of the stations for information in regard to the same.

Very truly yours,

M. McDONALD,
Commissioner.

True copy.
J. J. O'CONNOR,
Chief Clerk.

Question 19. Has Mr. Gay any practical experience as an architect or builder of either buildings or machinery?

Answer. No; nor do his duties require such knowledge. He has common sense and business experience, which serve a useful purpose in the way of suggestion.

Question 20. Did he locate the Colorado station and the one at Put-in Bay, Lake Erie?

Answer. He did not locate either. He made the necessary preliminary investigations and inquiries. The definite location in both cases was made by the Commissioner, after careful personal examination of the ground.

Question 21. Did he alter the plans of the work at Lake Erie station?

Answer. No; all alterations were authorized and approved by the Commissioner upon his own responsibility and knowledge of the requirements of the stations. No alterations were made in the interest of the contractor. Some changes in details of plans and specifications were made necessary—owing to the fact that Mr. Blaisdell, the draughtsman employed in the office to make the drawings, proved to be ignorant of construction. The roof trusses, for example, were placed over the openings in some cases, and the trusses themselves were made more cumbersome and complex than necessary. All changes made were, however, duly authorized—and in all cases the Government interests protected.

Question 22. Did Mr. Gay locate the station at Gloucester, N. J.?

Question 23. Was this station located on Government or private property?

Question 24. What was the cost of fitting up this station?

Question 25. What rent is paid for the use of the property at Gloucester, N. J.?

Answer. The station at Gloucester, N. J., does not belong to the United States. It is the property of Mr. — Thompson, of Gloucester, N. J., who built it in accordance with plans furnished by the Commission, and furnishes the use of it to the Commission rent free for the period of five years, including right of water from the city mains.

It was a most liberal and public-spirited act. He has extensive fishery interests on the Delaware, and expects his compensation by reason of the improvement in the fisheries which will arise from the maintenance of a hatching station there. The cost of fitting up the station was about \$1,200. The equipment, however, is movable, and available for use elsewhere if desired. Heretofore the work on the Delaware has been done by the *Fish Hawk*, which can be engaged to better advantage in other work. A shore station was a necessity for the continuance of the work on the Delaware.

Question 26. Was there ever such a position as agent for the Fish Commission prior to your becoming Commissioner?

No; nor were there superintendents of Neosho station, Duluth station, Leadville station, Clackamas station, Fort Gaston station, Put-in Bay station. The stations have been established and put in operation since I became Commissioner.

Dr. Bartlett, designated as agent of the Fish Commission, is in fact superintendent of the collection and distribution of the native food fishes of the Mississippi Valley—a work which was begun tentatively two years ago, and which has proved to be one of the most productive and valuable works undertaken by the Commission. It is especially in the interest of the Mississippi Valley States, where it has the warmest recognition and appreciation. This work is so important that I have thought it best to give it independent organization and administration, and have placed it under the direction of Dr. Bartlett, who was the first, I believe, to inaugurate it, and to demonstrate its value. He receives a salary of \$1,800 per annum, and his necessary traveling expenses when engaged on official duty.

Question 27. Does he hold a position in the State of Illinois, in the Illinois State Fish Commission?

Answer. I am not sure; I believe he does.

Question 28. Does he receive a salary from the State any part of the year?

Answer. I do not know.

Question 29. Is it understood that Mr. Bartlett comes to Washington during the session of Congress to influence legislation in the interest of the Fish Commission?

Answer. Not that I know of. So far as I have knowledge, his visits here are under orders in the discharge of his duties, and have no other significance or object.

Question 30. By whose instructions was he recently called to Washington?

Answer. In response to the following telegram:

[Telegram.]

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., June 11, 1890.

S. P. BARTLETT, Quincy, Ill.:

Necessary to have personal conference with you in reference to summer's work. Report in Washington at early date.

M. McDONALD.

A true copy.

J. J. O'CONNOR,
Chief Clerk.

His expenses were paid by the Commission. I desired a conference with him in view of the proposed extension of the work of distributing the native fishes. About that time Mr. Atkins, superintendent of the Maine stations, was ordered here to confer in reference to the proposed improvements at the Maine stations. In both cases they were summoned here for reasons connected with the work and for no other.

Question 31. While here did he visit members of Congress or Senators to secure their influence for the defeat of the bill known as the Paddock bill for the transfer of the Fish Commission to the Department of Agriculture?

Answer. I can not say. Certainly not as the representative of the Commissioner or in any official capacity. Dr. Bartlett may be opposed to such a bill; those interested in the fisheries very generally are.

Question 32. Has Mr. Bartlett an interest in the McDonald Fishway Company?

Question 33. Please state the number of shares held by him, and the consideration he paid for the same.

These questions relate to matters entirely private and personal to Dr. Bartlett, and should be addressed to him if considered pertinent to this investigation by the committee. I may add in this connection that the McDonald Fishway Company is a corporation organized under the laws of Virginia, and holds exclusive control of all rights and franchises arising under patents granted to me for improvements in fishways. The invention so far as it is covered by patents was perfected prior to my having any connection with the Government service. The organization of the company was also, I believe, made prior to my accepting service under the Fish Commission. The stock, so far as I am informed, has no present or prospective value.

Question 34. Was there ever any understanding that, for the interest transferred to him, he was to use his influence in Illinois to secure the adoption of the McDonald fishway in Illinois and Michigan and and other Western States?

Answer. No. I have never made any transfer of interest of any kind or promise of consideration of any nature whatever to Dr. Bartlett with the understanding that he was to use his influence to secure the adoption of the McDonald fishway in Illinois, Michigan, and other Western States.

Question 35. Did he ever say to you that he was going to secure the passage of a compulsory law in the State of Illinois to compel owners of dams over the rivers of that State to construct such fishways as the fish commissioner of the State should prescribe?

Answer. I do not recall such a conversation, but it doubtless occurred. Such action on the part of the legislature would, in my judgment, be expedient and proper. Fishways in streams obstructed by dams are absolutely necessary to keep the streams stocked. The fish commissioners of a State are, from their position and presumed experience in such matters, best qualified to determine or approve the plans for any particular construction.

Question 36. Has he (Dr. Bartlett) been in the habit of making trips with the cars of the Fish Commission throughout the State of Illinois and other Western States for the purpose of distributing the local fishes of that State?

Answer. Certainly. It was his business to do so. He was and is in charge of the work of collecting and distributing the native food-fishes. The overflow ponds from which they are collected are in Illinois. Thence they are distributed by cars and messengers to the rivers, lakes, and

ponds of Ohio, Illinois, Michigan, Indiana, Missouri, Iowa, Kansas, and Nebraska. This work is under the immediate and responsible direction of Dr. Bartlett. Within the limits of it, and in pursuance of it, he goes where he finds it necessary—reporting regularly to the commissioner the progress and incidents of the work.

Question 37. Why is the State of Illinois selected for these especial favors? Are not the other States as much entitled to free distribution by the Government as the State of Illinois?

Answer. The State of Illinois is not selected for any special favors. The work there is carried on in pursuance of the general plan or policy of the Commission. The greater benefits of work in any section inure necessarily to the section in which the work is carried on. In Maine, for example, we have a group of salmon stations. The product of these stations goes largely to stock New England waters.

The marine work at Gloucester and Wood's Holl, Mass., is necessarily almost entirely in the interests of the coast fisheries of Maine, Massachusetts, and Rhode Island.

Of the product of the white-fish hatcheries at Duluth, Minn., Northville and Alpena, Mich., and on Lake Erie, the larger proportion, viz, from 60 to 75 per cent., goes to stock the waters of the States in which the work is carried on.

The same is true of the salmon hatcheries of the west coast at Fort Gaston, California, Baird, California, and Clackamas, Oregon. The fry produced at these stations are for stocking the Sacramento and Columbia Rivers, and the work is exclusively in the interests of California, Washington, and Oregon.

The same is true in reference to the shad hatcheries on the Potomac, the Susquehanna, and the Delaware. The product of these goes mainly to stock the waters of those sections in which the work is conducted.

The following questions submitted by Mr. Blaisdell, but doubtless formulated by others who are too cowardly to assume responsibility for them, but are base and mean enough to assail my personal and official character anonymously, all relate directly or by implication to the charge that I have used Government employés in doing work for my private use and advantage, and converted materials purchased at Government expense to such use and advantage.

I will first give the questions relating to this, and then cover the matter by one connected statement.

Question 49. At any time have there been plans of fish-ways or your patent water-filter made by the employés of the Fish Commission during Government time?

50. Have any of the employés of the Commission ever worked on models of fish-ways or water-filters during Government time?

51. Has the Government ever paid for any materials used in the construction of either fish-way or water-filters?

52. At any time have you approved or had made plans of fish-ways other than those for the Great Falls fish-way during Government time?

53. Did you have plans made for a fish-way at or near Bowling Green, Ky.?

54. By whom were such plans made?

55. Have you ever had other plans of fish-ways made by Government men in Government time?

56. Have any of the employés of the Fish Commission ever worked on models of a boat-way during Government time?

57. Has the Government ever paid for any lumber or materials used in such models or for fish-ways and your water-filter?

75. Did you ever have Mr. E. I. Rogers make plans, drawings or paintings of fish-ways, showing adaptation of your fish-way to different dams?

76. Were there ever any photographs made of such plans, drawings, or paintings by Mr. T. W. Smillie, of the National Museum?

77. Did you ever sign department requisitions for any work of this kind?

In reply, I respectfully submit that it has been the policy of the Commission from the beginning to give liberal encouragement to experimental investigations looking to the improvement of the methods and apparatus of fish-culture.

For years, under Professor Baird, I was engaged in the investigation of definite problems looking to the improvement of methods and apparatus of fish culture. The hatching jar now in general use here and abroad for hatching shad, whitefish, etc., and the tidal hatching-box now used for the hatching of the floating eggs of the marine species are the result of investigations undertaken by me with the authority and by direction and encouragement of Professor Baird.

These investigations required the aid of draughtsmen to design, and workmen to construct, the various tentative or experimental models and devices planned in the course of the investigations. Trained experts were also needed to conduct observations as to the working and to study the conditions of success or failure. The draughtsmen, the skilled workmen, the trained observers were all employed and paid by the Government, and the material required for the experimental constructions was provided at the expense of the Government.

No one, I presume, will question the wisdom of such expenditures, having for their object and resulting in the improvement of fish-cultural methods and apparatus.

Since I have been Commissioner the duties of the general administration have left me little time or opportunity for experimental investigations. I have, however, given some thought to the problem of securing clear water for our aquaria here in Washington, and investigations having this end primarily in view have after several years study and experiment resulted in the development of an automatic system of filtration, which doubtless will have value for general use. Anticipating the probability of such issue, I have been careful myself to pay for the material, patterns, castings, etc. None have been paid for by the Government. Some work in fitting up the models set up for study has been done by the machinists at the station, but these filters are now in actual use at the station, furnishing filtered water for drinking and for some of the aquaria.

So far from developing a patented invention at the Government expense, I have developed a valuable aid and adjunct to the Fish Commission work at my own expense.

Recently I have been engaged in the effort to apply the methods of retarding or controlling the velocity of water flowing down an inclined channel, which I had already applied in connection with fish-way constructions, to boat navigation in streams which, though having an ample volume of water, are not navigable by reason of their rapid descent.

Could a system be devised which would provide for boat navigation without the interposition of locks and dams, we could meet at once the requirements of traffic and of fish culture. The possibilities of accomplishing this have interested me greatly. I have had constructed an experimental design with a view to observation and study. The model

has been built by one of the carpenters at the station, and the material for it purchased on approved requisitions, and is the property of the Fish Commission.

BY MR. BLAISDELL.

Questions relating to tour of inspection made by the Commissioner during the summer of 1889.

Question 58. You took a trip to the Pacific coast in one of the Fish Commission cars, did you not?

Question 59. Give names of those who accompanied you on this trip.

Question 60. Were all of them in the employment of the Government?

Question 61. Was your son Angus one of the party?

Question 62. Was he in the employ of the Government?

Question 63. What was the object of this trip?

Question 64. What was the total cost of this trip and cost of repairs to car on its return?

Question 65. What were the results of this trip?

Answer. In the summer of 1889, I made a general tour of inspection with several objects in view. I desired to acquire a better knowledge of the Rocky Mountain and West coast regions that I might more intelligently direct the work in progress and plan the extensions of work contemplated in those sections for which the work was projected.

The arrangements for the trip and the detail of personnel was made in the best interest of the public service.

Car No. 3 was assigned to the work. The crew consisted of Mr. George H. H. Moore, in charge of transportation and living arrangements, and a colored cook.

Capt. J. W. Collins, assistant in charge of the Fisheries Division and Mr. E. C. Bryan, his clerk, accompanied me as far as Leadville, Colo., en route for the Pacific coast under instructions to make a general examination and arrange for the systematic and careful study of the fisheries and fishery industries of the West coast. From Leadville he returned to Washington, being recalled by a telegram from the Superintendent of the Census, Hon. R. P. Porter.

I was accompanied by Mr. O'Connor, my chief clerk, and by my son as a messenger. He was appointed for the temporary service and served without compensation, but his necessary traveling expenses were paid by my instructions in accordance with the following order:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., July 8, 1889.

J. J. O'CONNOR, Esq.,
Chief Clerk, U. S. Fish Commission:

SIR: Mr. Angus McDonald is hereby appointed messenger on U. S. Fish Commission car No. 3, to accompany party on tour of inspection of U. S. Fish Commission stations. He will serve without compensation. You are authorized, however, to pay such traveling and other expenses as may be incurred by him under instructions from the Commissioner.

Very respectfully,

M. McDONALD,
Commissioner.

True copy.
J. J. O'CONNOR,
Chief Clerk.

I took him because I preferred on so long a trip involving both exposure and hardships to have some one about me who was near to me and yet fully capable of discharging the duties required of him.

I went directly to Denver and Leadville, where I visited and carefully examined the reservation set aside by the President for a Fish Commission station; located the site of the hatchery building and made preliminary inquiries and arrangements with the view of letting the work to contract. Thence proceeded to Great Salt Lake and the Utah basin, which we had been stocking with shad in the hope of being able to colonize this species in that region. Careful inquiry and personal examination was made of the waters with a view to future operations. Thence proceeded to our salmon station on the McCloud River, California; inspected the same; made some necessary changes as to organization and personnel and directed better arrangements to insure water supply for hatching and to guard against contingencies of high water.

Thence proceeded to station at Clackamas, Oregon. Inspected the same; made provision for increased water supply by pumping; made definite organization and assignment of personnel and gave specific instructions as to administration, rendering of requisitions, accounts, and reports. Thence proceeded to the Yellowstone National Park, and at the request of Captain Boutelle, the Superintendent, made a careful examination of the waters of the Park with a view to stocking them. Captain Boutelle accompanied me in this tour of inspection which was made on horseback. I was also accompanied by Mr. Angus McDonald, the only one of my party who felt capable of undertaking the trip.

It was found that all the waters on the volcanic plateau, except the Yellowstone and its tributaries, did not contain fish of any kind, though evidently well suited for the Salmonidæ.

Immediately upon my return I sent a car-load of yearling trout to stock the Gardiner River above the falls and the Fire-Hole and Gibbon forks of Madison River, and directed to be set aside 100,000 lake trout at Northville, Mich., and 25,000 Loch Leven trout to stock lakes Shoshone and Lewis; also 25,000 Eastern brook trout to continue stocking the Gardiner, and 25,000 von Behr trout for the Fire-Hole and Nez Percez. These are now fingerlings, and arrangements are being made to send them out by car. The Grayling and the Red-throated Rocky Mountain trout are now abundant in some of the waters of the Park, and with the additions to be made the nation will have in time one of the grandest fish preserves to be found anywhere in the world.

Returning by way of Duluth, Northville, and Sandusky, I inspected those stations; inquired into their condition and capabilities; visited the site of the new station at Put in Bay, and thence returned direct to Washington.

The trip was made in the exercise of my discretion as Commissioner and in the best interests of the public service. It was planned with due regard to economy, and expenses were carefully considered and controlled. No unnecessary or unusual expenses were incurred. All accounts were made strictly in accordance with law and have been duly audited and paid and passed by the Comptroller.

Question 66. What was the salary of the superintendent of central station under the late Professor Baird?

Answer. I was superintendent of central station in addition to my other duties under Professor Baird. My salary was \$2,400. Mr. W. F. Page was superintendent of fish culture, receiving a salary of \$100 per month. Mr. J. E. Brown was in charge of property at the station, and also I believe custodian of the Museum property stored there. He also received \$100 per month.

Questions 67 to 72. Who is the present superintendent and from what State was he appointed?

Answer. Mr. S. G. Worth is the present superintendent. He is from North Carolina, but he was not appointed from that State. Fish culturists are appointed, and more particularly promoted, for reason of fitness and qualifications. The question of State, section, politics, color or previous condition of servitude does not enter into consideration.

In the absence of previous knowledge such appointments are made tentatively. If experience shows that a mistake has been made the appointee is dropped or discharged, as was the case with Mr. W. H. Bright at the Leadville station.

Mr. Worth entered the service as a trained expert. I had personal knowledge of his qualifications and of his aptitude and energy. I had been anxious for some time to draw him into the Government work. When the opportunity occurred I recommended his appointment to Professor Baird. His compensation was at the time of his appointment \$720. It is now \$1,800 per annum. It is the salary fixed for superintendents of first-class stations. He is assigned as superintendent of central station because he is, in my judgment, best qualified for the position.

Question 73. Has it ever been reported to you that Mr. Worth was addicted to the use of intoxicating liquor?

Answer. Never; nor do I believe it to be the case. Possibly I may have heard such assertions made, but I do not recall any specifically. Unscrupulous and malicious men may circulate any slanderous statement.

Question 74. Have you ever seen him when you thought him to be under the influence of liquor?

Answer. Never. Certainly not since I have been Commissioner of Fisheries, and I do not recollect ever to have seen him intoxicated at any time.

Question 78. Has the Fish Commission a hatching station at Fort Washington?

Question 79. Does the Government own the shad-seine that is used at this station? Please explain its use and how maintained.

Question 80. What disposition is made of the funds obtained from the sale of the fish taken by this seine?

Question 81. Were there any funds left at the close of the seasons 1887, 1888, 1889, 1890?

Question 82. Were any of these funds ever covered into the Treasury Department?

Question 83. Have you an itemized statement of these funds for the different years?

Question 84. Who kept these accounts?

Answer to questions 78 to 84, inclusive. The seine equipment is owned by the Government. The object of it is to obtain eggs for artificial propagation. The fish taken are sold either in the Washington market or on the shore or are consumed by employes of the Commission engaged at the station. The proceeds of sale are applied to the payment of the expenses of hauling the seine as far as they go. Any deficiencies are paid out of our regular appropriations on regular vouchers. In consequence of the difficulty of settling promptly outstanding accounts for eggs, a small balance may be left to the credit of the seine, which is carried over to the next year. None of the funds are covered into the Treasury, but are applied as indicated. It is as if we agreed with some one to run a seine and guarantied him against loss, on con-

dition that the Commission should have the right to take the eggs from the fish caught without any charge.

This work has been in charge of Mr. Worth ever since I have been Commissioner. Detailed statements of the seine operations covering this period, showing fish taken, the amount of sales and disposition of funds so obtained have been already submitted to your committee.

These statements further show that there has been a profit of several hundred dollars a year to the Government by the use of the seine.

Question 85. Is there a steam-launch kept at Fort Washington? Is it launch No. 61, and what are the uses of such launch?

Answer. The launch No. 61 is assigned for service at Fort Washington Station during the shad-hatching season; is used to visit the gilliers, transfer the spawn-takers to and from the fishing shores, and such other duty as the exigencies of the work may require.

Question 86. Is there not another launch charged to that Station called the *Blue Wing*?

Question 87. What is the nature of the work performed by this launch?

Answer to questions 86 and 87. She is used to communicate between the station and headquarters during the season of active work at Fort Washington; to relieve launch 61 in case of accident and damage needing temporary withdrawal and repairs; to assist her in emergencies in press of work and for such other work as the Commissioner may assign to her. Both launches are required for the efficient conduct of the work.

Question 88. Was the *Blue Wing* ever used to carry parties of your friends or those of Mr. Gill and Mr. O'Connor down to Fort Washington?

Answer. Various parties have gone down on the *Blue Wing*, but the launch was not used for the express purpose of carrying such parties. The trips were in the regular line of duty and for authorized purposes. Permission to go by the launch has been repeatedly given not only to friends but to strangers. It involved no expense to the Government and was the exercise of a courtesy which is both wise and proper. Like consideration for the public convenience where it can be exercised without cost to the Government is strictly enjoined upon the commanders of our vessels and the superintendents of our stations. Even if some latitude were exercised in the interpretation of these instructions, I should not be disposed to inquire too closely. At present the *Blue Wing* has been placed at the service of General Ordway during the period of encampment at Fort Washington, she not being at this season needed in the work of the Commission.

Question 90. At any time was there a dancing party went down to Fort Washington on the *Blue Wing*?

Answer. Never to my knowledge. The question "was there went a dancing party" is rather obscure. Certainly no party ever danced aboard the launch; it would not be possible. If any young men and maidens who may have had permission to go by the launch to Fort Washington danced after they got there it was an innocent and proper amusement, to be engaged in at their own discretion.

Question 91. Are any of the men charged to the launches employed at other places than on these launch's?

Question 92. Why was Mr. Sauerhoff charged to the *Blue Wing* when employed at Central Station?

Question 93. Why was Mr. Gray charged as fireman on the *Blue Wing* when Mr. Nelligan was fireman?

Question 94. What was the true work performed by Mr. Gray on this boat?

Answer to questions 91 to 94 inclusive. The launches are manned by special-service men from the Navy and are paid out of the contingent fund of the Navy. This force consists of machinists, firemen, and coxswains. They are not on the rolls of the Commission, with the exception of Mr. Walter Sauerhoff, who is, under the direction of Lieutenant Bayley, foreman of our repair shop at Central Station, where ordinary repair of launches, pump and steam and water plants is conducted. These employés are not charged to particular launches. All are available for assignment when and where needed, and these assignments are changed as the needs or exigencies of the service require.

Mr. Sauerhoff is not charged to the *Blue Wing*. He is assigned to her as machinist, and is paid out of the appropriation for the maintenance of vessels and steam launches. Of course I can not keep in mind the details of work of every employé.

Lieutenant Bayley is in charge of this naval contingent and can give the committee further information if desired.

Question 95. I believe, Mr. McDonald, yours is a strictly scientific department, is it not?

Answer. The intelligence of this question is not very evident, but I will endeavor to answer it. The Fish Commission is constituted and is maintained by the Government to secure certain economic results in the improvement of the fisheries. We seek to obtain these results by the application of *scientific* as distinguished from empirical methods. It is in a word practical and utilitarian in its objects, but truly and essentially scientific in its organization and methods.

Question 96. Did you not so claim before the Committee on Agriculture?

Answer. In presenting an argument to that committee in opposition to the transfer of the Fish Commission to the Department of Agriculture under the provisions of the Paddock bill, I made certain statements in this connection, which I reproduce as follows:

If the question before your committee were a proposition to create a new department, under which the scientific bureaus and commissions could be brought and co-ordinated, with the view to convenience of administration and executive control; if in the constitution of such department care were taken to guard the organization of each bureau or commission from the demoralizing influences of changes for political reasons; if the head of each bureau were held responsible for the scientific methods and results of the work committed to him; if the personnel of such bureau were constituted by selection and the survival of the fittest the question of expert knowledge and fitness alone controlling appointments as well as promotions, such organization would have some obvious advantages, if we consider only the convenience of administration or the necessity of subordinating all work under the Government to departmental control.

If, again, it were proposed to enlarge the scope of the present Department of Agriculture so as to constitute a department of agriculture and fisheries, each represented by its commissioner appointed by the President and confirmed by the Senate, each independent of the other in its internal administration, each with its personnel selected with regard solely to fitness and expert qualification and with secure tenure of office within these limitations, we should again have the advantage of certain convenience of administration, but it is questionable if any increase of working efficiency would result. In the case of the Fish Commission it is more than probable that there would be a distinct and serious loss of efficiency by removing from the Commissioner that direct responsibility for expenditures and for results to which he is now held by Congress and by public opinion and criticism.

The bill now pending before your committee contemplates much more than the subordination of the Fish Commission to departmental control. It proceeds upon the theory expressed or implied that the work now assigned to the Fish Commission is an integral part of agriculture and can be properly performed by a bureau under and in that Department, whereas the Fish Commission in the importance and diversity of the inquiries it is pursuing; in the relations it holds to scientific work and scientific

activities, by reason of the inquiries it is prosecuting; in the importance and value of the results it is securing by the application of scientific methods to the solution of economic problems; in the data it is accumulating; in the intelligent direction it is giving to fishery operations, by its study of the methods, conditions, and results of the fisheries; in its actual farming of the waters, so as to create and maintain a great food resource for the general advantage at the general expense, occupies a broad ground, distinct and separate from the work of a commission of agriculture, and should not be subordinated to or incorporated in that Department.

Question 97. How many of the personnel of the Fish Commission are strictly scientists?

Answer. You must define what you mean by "scientists" before I can attempt to answer the question.

98. Why do not the names of those who do most of the scientific work of the Fish Commission appear in the Blue-Book?

Answer. Because they are not on the regular rolls of the Commission. Some are employed for a period of the year only, at small salaries. Many are volunteers doing the work without compensation, in consideration of the opportunities for original investigation afforded.

Question 100. Why is it necessary to forward so much of the material collected elsewhere for identification?

Answer. The collection of material is a mere incident of the Fish Commission work. It would not be proper under the law for us to maintain a paid staff of naturalists solely for the classification of the collections, and for the description of new species. This work is well done by volunteers without material expense to the Government, and without making any unwarranted diversion of funds to this object.

Question 101. Has the Fish Commission any more cars employed in the work of distribution now than were in use under the late Professor Baird?

Answer. No.

Question 102. Has there been any increase in the number of employés on these cars?

Answer. There has been a large increase in the number of permanent employés. Prior to my administration the messenger service was carried on only a portion of the year. Only the three car captains appear on the permanent rolls under Professor Baird. Now the service is practically continuous, and the entire force is carried on the permanent rolls of the Commission. I have already submitted to the committee statements covering the organization, personnel, cost, and results of work of distribution for the fiscal years 1887 and 1890. These supply full and detailed information.

Question 103. Have you increased the number of men employed at Central Station over the old number?

Answer. I do not recall precisely. Doubtless I have. The information is given in tables already submitted. The work at Central Station has been greatly enlarged and diversified, and would of course require an increase of personnel. There are no more employés than are necessary for the work; all are fully employed. My functions as Commissioner are hardly limited to maintaining the status quo. The Fish Commission is aggressive and progressive. It is constantly enlarging and extending the sphere of its operations. An organization comprehensive enough to cover the work of 1887 would be entirely inadequate to meet satisfactorily present conditions.

Question 104. Did you have a special appropriation for the construction of the aquaria at Central Station?

Answer. No. Their construction and maintenance are provided for out

of the appropriation for the propagation of food-fishes, and under authority conveyed by the language of the appropriation, as follows :

For the introduction by the U. S. Fish Commission into, and the increase in, the waters of the United States of food-fishes and other useful products of the waters, including lobsters, oysters, and other shell-fish * * * and for such general and miscellaneous expenditures as the Commissioner of Fish and Fisheries may find necessary to the prosecution of his work, including salaries or compensation of all necessary employes, \$130,000 (sundry civil act of 1888, Stat. at Large, XXIV, p. 523).

I think it desirable that a liberal special appropriation should be made for the establishment of a national aquarium here in Washington under the direction of the Fish Commission. We have our National Museum, the Smithsonian Institution, the Botanic Gardens, the Zoological Park, the munificent contributions of the Government in aid of science, the arts, and general education. To complete and round out this series of magnificent institutions we need an adequate representation of the inhabitants of that "dim water world" which lies beyond common observation and attracts attention and engages interest and study by reason of its mysteries.

We may have here in Washington an adequate, if not complete, representation of the life of our coast waters, lakes and rivers, living, and under conditions closely assimilating those of their natural habitat. And the Fish Commission, by means of its facilities for collecting and transportation, is already in a position to provide for incidentally, the principal item of cost, in the maintenance of aquaria after buildings and necessary plant have been provided.

The present aquaria are merely working-tools. They provide for the exhibit of economic fishes, and the results of artificial propagation. They afford the opportunity to study the habits and proper conditions of environment of fishes and of other species which occupy essential relations to them as food or enemies. I consider them important and most useful aids and adjuncts to the work of the Commission.

Question 106. Is any employé of the Fish Commission interested in the sale of aquaria at Philadelphia?

Answer. Not to my knowledge. Mr. Seal, who is superintendent of aquaria at Central Station, was, I believe, engaged in such business prior to entering the Fish Commission. It was the experience gained then, and his faculties of close observation and his qualifications as a field naturalist, that led to his being offered his present position in the Fish Commission. Since he became a member of the Commission his services have been given faithfully, continuously, and most successfully to the work assigned him.

Question 107. Do you purchase any of the aquaria used by the Commission of any of the employes of the Fish Commission?

Answer. No. The glass is imported and admitted duty free; the slate and iron frames purchased on competitive bids after careful inquiry, the aquaria put together and all other work done by regular employes of the Commission.

Question 108. Have you ever promised to raise the salary of Mr. E. I. Rogers?

Answer. I do not remember. If I did, the promise was conditional upon his showing the ability to earn the increase.

Question 109. Why did you not do so? At that time did you not say that there were no funds with which to make the increase?

110. And were not some of the men at the station being put off? And at this time did you not raise the salary of Dr. T. H. Bean \$300 per annum; also Mr. C. C. Lewis to \$90 per month?

Answers to questions 108 to 110 inclusive. So far as these questions relate to Mr. Rogers they are covered by statement already laid before the committee. As a general reply I would state, in no individual case has my action been determined with reference to others. Every case has been decided upon its merits. Dr. Bean's increase of salary was made in consequence of his assignment to the editorial work which imposed additional duties and responsibilities upon him. It was one of the assignments made in the re-adjustment of the work in Mr. Smiley's office, which resulted in an annual saving in expenditures on account of the work of this office of \$2,180, as shown by statement appearing elsewhere in my evidence.

Question 111. Why is it that those men and ladies of the Commission that the late Professor Baird considered faithful employés have been left with the same salary as when he died?

Answer. If there are such cases, and you will give me their names, I will answer the question. It is, however, entirely irrelevant and inconsequential. Under the law my predecessors were charged with the responsibility of administration. A similar responsibility devolves upon the present Commissioner. He is not called upon to maintain inflexibly the condition of things he found, but to take charge of a work that was and is in process of rapid evolution and diversification.

Question 112. What was the total cost of the trip to Alaska made by Dr. T. H. Bean and party last year?

Answer. Vouchers of the same are herewith submitted.

Question 113. Was not young Lewis one of this party? Was he selected for any special work?

Answer. Yes. He was selected as were other members of the party, viz, because they were available for the assignment and deemed well qualified for the duties they were to perform. The designation of the personnel for such work is entirely in the discretion of the Commissioner.

This investigation of the salmon fisheries of Alaska was made under instructions of the last Congress and for specific objects. A report of the same has been transmitted to Congress and ordered to be printed. The expenses of the same were paid out of the current appropriations of the fiscal year in which the investigation was made.

Question 115. Is this Mr. Lewis any relation to yourself or wife?

Answer. This question has been answered specifically by myself and others. He is not a relation to either of us. He is a remote connection by marriage of Mrs. McDonald. He is a stenographer, copyist, and generally useful, and receives a salary of \$50 a month, which he earns by faithful and intelligent service.

Question 116. Why did not Dr. Bean make his trip to Alaska this year?

Answer. Why should he?

Question 117. Did the Government pay the salary of Capt. J. W. Collins during the months of August, September, October, November, and December 1887? While he was in Massachusetts were not his traveling expenses paid by the Government?

Answer. I presume they were, but if so, he was in the Government service and his accounts were duly authorized, approved, and paid. I was not Commissioner of Fisheries then.

Question 118. Was he not employed in getting up petitions to secure your confirmation as Commissioner at that time?

Answer. No. I had not been spoken of then for Commissioner. Personally I desired Prof. G. Brown Goode to continue as Commissioner

under the new organization. I do not think I was appointed by the President until the latter part of January, 1888, and was not confirmed by the Senate until the latter part of February following.

Question 119. Has he not said to you that he was instrumental in getting petitions signed by all the fishermen from Maine to Florida to secure your confirmation?

Answer. No. I was not aware that any petitions were circulated with a view to secure my confirmation.

Question 120. Did this work for you have anything to do with his promotion to his present salary and the appointment of his relatives to office?

Answer. Certainly not. Mr. Collins is assistant in charge of the division of fisheries and receives the salary attached to that office. He is in that position because he has demonstrated his qualifications for it; because he is by training, by experience, and intimate knowledge of our fisheries and fishery industries, in all respects the best qualified man for this place, which he has attained by efficient and honorable, as well as arduous service, and by successive and well-earned promotions under Professor Baird, Professor Goode, and myself.

Now, in regard to the questions relating to the Great Falls' fishway, I have not answered them because I do not see their bearing upon this investigation, and it will involve a very heavy piece of work, and bring out the whole history of that work. I am prepared to undertake it if the committee think it advisable after my statement.

The first movement towards the establishment of a fishway at Great Falls was instigated by the State commissioners of fisheries of Maryland and Virginia, under whose auspices a survey of the locality and a provisional plan of the fishway was made by Major Randolph, an engineer in the employment of the Baltimore and Ohio Railroad, I believe. No actual movement towards the construction of that fishway was undertaken until a bill for the increase of the water supply of the city of Washington was introduced and pending. As an amendment to that bill an appropriation of \$50,000 was made for the erection of fishways at the Great Falls of the Potomac.

Q. Do you know the date of that?—A. Yes, sir; under the act approved July 15, 1882, and the act amendatory of said act approved February 26, 1885. I do not know what that amendment was.

That appropriation was made, and under that appropriation the disbursement of money was to be made under the Secretary of War and immediately under the direction of the Chief Engineer of the Army, the Commissioner of Fisheries being required under the law to prepare the plans and specifications for such construction.

Professor Baird was at that time Commissioner of Fisheries, and after various inquiries, running through some time, looking to the best form to be adopted, he selected the general plan which was submitted to him by myself, and I was instructed by him to prepare detailed plans and specifications based upon the general plan which I had submitted to him, which was done. These plans and specifications were transmitted to the Secretary of War, and the construction of the same undertaken under the direction of Maj. J. G. Lydecker, who was then in charge of the water supply.

I will state that no part whatever of the appropriation thus made was disbursed by or under the control for disbursement of the Commissioner of Fish and Fisheries, the Fish Commissioner being simply limited in his functions to furnishing the necessary plans and specifications and to the certification of such authorized accounts as were in-

curred for surveys and drawings, in that connection, all of which were paid by Maj. J. G. Lydecker from time to time upon my certificate.

The fishways were duly let to contract by advertisement in accordance with law. The construction of fishways was progressing until the end of October, 1885, when the works were submerged by a high rise in the river, which put an end to the operations at Great Falls, doing great damage to the fishways.

Q. They were unfinished?—A. Yes, sir. That was in 1885. In the summer of 1886, at the request of the Commissioner of Fisheries, the Secretary of War directed the completion of the lower or No. 6 section of the fishway, no further work being done under that appropriation. In the deficiency bill passed February 1, 1888, there was an item of \$25,000 for the completion of the fishway, the amount for this item being based upon the estimate of the amount necessary, which had been submitted by Maj. J. G. Lydecker.

In the spring of 1888, the present Commissioner, after the appropriation had become a law, brought the matter to the attention of the Secretary of War, and announced his readiness to submit additional plans and specifications necessary, and asked that he authorize the expenditure of a certain amount of money to make the necessary field surveys and the new plans which were required to adapt them to the site.

The authority was granted, and acting under it, Mr. Frank Blaisdell was selected as the engineer to make the field surveys, and under my direction to make the necessary additional plans. These were completed in August, 1888, but when I came to examine them I found that both plans and specifications were too general to permit the advertisement of the work for contract, but served as the basis of a report which was transmitted to the Secretary of War, developing the general plan which it was proposed to pursue in the completion of the work.

Further authority was then asked to employ a draughtsman to complete in sufficient detail the plans and specifications of the work, so that it might be let to contract in accordance with the decision made by the Secretary of War. These plans were made during the following spring and summer, that is, the summer of 1889, by Mr. C. E. Gorham, but they were finished too late in the season to permit sufficient time for the completion of the work before the season of high water in the fall, which would necessarily endanger the constructions.

This involved the postponement of the construction to the present year. The plans and specifications have been completed and ready to be submitted for two months. I have been delayed first by the press of other business, but more especially by the fact that I have not been able to find an engineer qualified for the work who is willing to undertake that class of work, since it involves only temporary employment, only two or three months.

Q. Could you not ask the Chief of Engineers to detail a suitable man for the work?—A. That is a matter for them. They are not willing to do that. They prefer that the engineer to take charge of this construction should be designated by the Commissioner and the matter is now held in abeyance.

To sum up the matter, two appropriations have been made, of \$50,000 and \$25,000. Of the appropriation of \$50,000 originally made I think there remains unexpended some \$4,000 or \$5,000 and a lot of material which was left over from the old fishway, amounting in value to probably as much more. Of the appropriation of \$25,000 not a dollar has been spent, and being a continuing appropriation it is available whenever the work is undertaken.

Q. Do you consider that this is an important work to be done?—A. I consider it a very important work with a view to settling the possibilities of the opening of falls like that to the ascent of fish. I do not think it is certain when the work is completed that it will result in passing shad. I believe so firmly, but it is not certain, and, therefore, it is a work which is, and was at the time, considered an experimental work. It was thought proper to make that expenditure of money to test, once for all, under the best conditions and under the most careful observation and construction the possibilities there were in that direction.

Q. What is the height of the falls?—A. Seventy-one feet.

I have given you this general statement. I can not give you the whole history of the matter without involving labor of ten days or a week, but I do not see its bearing at all upon the administration of the Fish Commission.

Q. It is a question which is really under the direction and control of the Secretary of War, with your advice and concurrence. Have you discussed the matter with the Secretary of War during the present season?—A. Not during the present season. I may state this, that the Secretary of War, in 1889, in approving my general plan and specification submitted in 1888, decided that the work should be done by contract, the supervision of the work to be made by an engineer appointed by the Commissioner of Fisheries, but that all disbursements on account of the work should be made by Colonel J. M. Wilson, who was then in charge of the public buildings and grounds and a great many things in Washington, and who was succeeded by Colonel Elliott. I have had no further communication with the Secretary of War, nor was there necessity for any further communication with Colonel Elliott until I was ready to submit all the plans and specifications, which I have been for two months. They are already rolled up, the whole work completed, but it requires me to be in a position before I submit the plans, to recommend an engineer who shall take charge of it.

Q. And you have not been able to find such a man?—A. I have not been able to send in plans and specifications both for want of time—I have had some conference and correspondence—and for the want of a suitable person whom I felt I could put in charge of the work. For that reason I delayed sending in the plans and specifications.

Q. I understand you to say that in the disbursing of the \$45,000 out of the original appropriation of \$50,000, all the disbursements were made under the direction of the Secretary of War?—A. Yes, sir; by an officer of the Engineer Department.

Q. And the Fish Commission did not handle any of the money?—A. Not a dollar of it. My experience has been that there is a great deal of trouble in getting them even to approve expenditures that are perfectly reasonable.

Then there is one other question about fishways I should like to answer. I did not cover it.

At any time have you approved or had made plans of fishways other than those for the Great Falls fishway during Government time?

I will state that I have had a number of drawings and plans made in regard to fishways during Government time, but they all related to the development of Government work.

I may mention, for example, that Mr. Rogers was employed in making drawings of a little model fishway that we have at our Wytheville Station, which is there with a view of collecting the trout from the river, running them up into the pond above, and in that way securing them

for spawning. I considered it an interesting development in that direction, and I desired to have that printed in our report. So I had him make drawings of it.

Q. The work had not been constructed?—A. The work had been; it is part of the station.

Q. Is it a success?—A. Yes, sir. I intend to apply the same idea to the Colorado Station. It is a matter of the expenditure of \$20 or \$30. The fish, of course, in their spawning season, will go up into the rapids of the stream to find their spawning grounds, and by placing these intercepting fishways in the runs of the fish we will be able to collect them under such conditions that we can handle them without any trouble. I merely mention that. That is one instance.

Again, Mr. Rogers has made a series of sketches looking to the illustration of a revised report upon fishways, which I prepared to publish as a part of the official documents of the Fish Commission. Some years ago Mr. C. G. Atkins, of Maine, prepared a report on fishways which covered all existing knowledge at that time, and gave illustrations of all the fishways of different designs and devices which were in use in this country and abroad. Since that time, of course, there have been modifications of the designs and improvements and new devices which it is my intention to publish for the general information of fish-cultural interests.

Q. I will ask you whether you or any draughtsman or employé of your department has ever spent any time upon any private enterprise in the matter of fishways?—A. No, sir; there is no private enterprise in the matter of fishways. Although there is a pride and personal interest, of course, in my own invention, yet as a matter of profit there is no possibility of profit in this work. My only interest or ambition in the matter is to progress along the line of fish-cultural development. There was a time, I must confess, when I was young and green, when I hoped with the enthusiasm of an inventor that a great deal would come out of this fishway, but I abandoned that idea years ago. It is one of those inventions which will grow as slowly as an oak, and which will bear its fruit, probably, after I am dead. But as to my getting anything out of it, I have not the slightest anticipation.

I will give you another example. I may state that I myself, in response to a request of the *Société d'Acclimatation* of France, prepared a design of a fishway for the Vienne River. I prepared that myself, made the drawings. I do not know whether I did it in Government hours or not. I know that I do not observe any office hours. My work is all the time in the interest of the Government, but I think I did this work at home at night. I prepared the plans and forwarded them to the *Société d'Acclimatation*. They were submitted by request to the *Département des Ponts et Chaussées*, which represents the engineer department of France, and by them submitted to the criticism of their engineers of the sub-departments, and those fishways were adopted in France after the criticism of the best engineers, among the best engineers of the world, and are now in course of construction on their rivers. The one on the Vienne River has been completed, and two are now being built on the Seine.

Q. Did you receive any compensation from the French Government for that work?—A. Nothing except a medal; what they call the *Geoffroy Saint Hilaire*, medal from the *Société d'Acclimatation*.

I will state further that plans and models of my fishway of different designs have been made from time to time at Government expense, in pursuance of the general plan of having a complete series of models of

fish-culture devices and aids in our exhibition series in the National Museum. Those models were sent to the Berlin Exposition and to the Fisheries Exposition in London, and in both cases the design of the fishway was approved by the committee and received the gold medal.

Now this question I should like to answer:

Did you have plans made for a fishway at or near Bowling Green, in Kentucky?

Yes, sir. Those plans were made at the request of Lieutenant Mahan, an officer of the Engineer Corps, who was in charge of the improvements on the Green and the Barren Rivers in Kentucky, a law having been passed by Congress requiring, or rather authorizing, the Secretary of War in his discretion, wherever obstructions were placed in the rivers by Government agency or authority which prevented the upward movement of fish, to provide for the construction of fishways or passes in connection with the dams. I responded, of course, to the request of Lieutenant Mahan, and having received from him plans of the dam I prepared the detailed plans and specifications for the fishway, which I sent to him. It was a response merely to the request of an officer in another department of the Government.

Q. To carry out a provision of law?—A. Yes, sir; to carry out a provision of law; and I would have been negligent or indifferent to my duty if I failed, in this or any other case, where a similar demand for information was made to comply with it as far as I could.

Now, I desire to take up some of the points relating to the general statements which have been published or written by Mr. Smiley in respect to the administration of the office.

I want to set myself right. I hardly consider it necessary, but I want to set myself right upon this question of political appointments; at least I want the committee to know just what the facts are, but I want to put them on record.

I will state that when I became Commissioner of Fisheries I was subjected to a great deal of pressure on the part of the Democrats to turn out Republicans and put others in office. I have been subjected to a similar pressure under the present administration to turn out Democrats, of course, and put in Republicans. Now, I wish to state broadly that at the very beginning of my administration I took the ground that politics should not enter into it; that no appointment should rest upon political considerations or be determined by political exigencies.

I beg to submit the following correspondence, as an illustration of the uniform policy which I have pursued. Mr. W. H. F. Lee, member of Congress, forwarded to me the following letter from the Cleveland Democratic Association of Virginia.

CLEVELAND DEMOCRATIC ASSOCIATION OF VIRGINIA, 1888.

Falls Church, Fairfax County, Va., April 13, 1888.

DEAR SIR: This association hears with surprise that Mr. Center, of Falls Church, Va., a Republican, has received a position in the Fish Commission at a salary of \$700 a year, and, deeming that these positions should be occupied by Democrats, we protest against the aforesaid appointment, and request that the resignation of Mr. Center be called for, and Mr. G. E. Drinkard, of King George County, substituted in his place.

Very respectfully,

D. E. PORTER,
President League.

Hon. W. H. F. LEE,
House of Representatives.

This was indorsed by Mr. Lee as follows:

[Indorsement.]

Respectfully referred to Colonel McDonald, with the request that he will furnish me with information about this case.

W. H. F. LEE.

In response to that, on May 17, 1888, I wrote Hon. W. H. F. Lee, House of Representatives, as follows:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., May 17, 1888.

DEAR SIR: In response to yours, transmitting letter of Mr. D. E. Porter, president of the Cleveland Democratic Association of Virginia, I beg to say that appointments in the U. S. Fish Commission are made solely with reference to the qualifications and fitness of the appointees for the positions to be filled and without regard to the political party to which they may belong. As you are no doubt already aware, the majority of the employes in the service of the Commission are those having expert knowledge in matters connected with the different departments of the work.

Very truly, yours,

M. McDONALD,
Commissioner.

Hon. W. H. F. LEE,
House of Representatives.

I did not consider that as clear a definition of the position I ought to take as was necessary, and four days afterwards, May 21, I addressed an additional letter to Hon. W. H. F. Lee, as follows:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., May 21, 1888.

DEAR GENERAL: I wrote to you on Friday last in regard to the demand made by the Cleveland Democratic Association that Mr. Center, an employe of the Commission, should be discharged and another individual indicated by them should be appointed in his place.

I now beg to say that previous to the receipt of the communication from this association I was not aware that the gentleman referred to was an employe of the Commission. Upon inquiry I find that he is a clerk in the statistical division, receiving a salary of \$40 a month, for which he is rendering most capable and efficient service.

The request for his discharge is based simply upon the fact that he is a Republican, and the demand for the appointment of the individual named to succeed him is for the sole reason that he is a Democrat. Of course, considerations based upon the political affinities of a person must have little weight in a department which must make its selections with reference to special qualifications for the positions to which they may be assigned. I will add further in regard to Mr. Center that if he were discharged and it were necessary to fill the vacancy thus created, I should be compelled to make the selection from some other State than Virginia, which is more largely represented in the Commission than under any equitable distribution of the offices it is entitled to be.

Very truly, yours,

M. McDONALD,
Commissioner.

Hon. W. H. F. LEE,
House of Representatives.

In regard to Mr. Bright, I will say that W. H. Bright was, upon the recommendation of Senator Teller, on January 14, 1890, appointed an assistant at the Leadville Hatchery, Colorado, at a salary of \$60 per month. Pursuing the usual policy, it was my desire to constitute the personnel of the station, outside of the superintendent, of citizens of the State. Mr. Bright's appointment was a provisional one; his continuance in the work depended upon the qualifications and fitness he developed, qualities which could only be ascertained by trial.

The history of his case from his appointment to his discharge is given in the following letters :

January 14, 1890, letter of appointment.

May 10, 1890, letter of E. M. Robinson, superintendent of station, reporting Bright for neglect of duty and insubordination.

May 16, telegram of Commissioner directing Mr. Robinson to discharge Bright at once and make written report of circumstances.

May 17, 1890, letter of E. M. Robinson reporting discharge of Bright, etc.

June 9, 1890, letter of W. H. Bright asking for a personal interview.

June 11, 1890, letter of Commissioner declining a personal interview. Asks him to submit in writing any statements he may have to make, and they will receive careful consideration and investigation.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., January 14, 1890.

DEAR SIR: You are hereby appointed an assistant at the U. S. Fish Commission Hatchery at Leadville, Colo., at a compensation of \$60 per month, to take effect on this date. You will make arrangements to proceed at as early a date as practicable to the station and report to Mr. E. M. Robinson, superintendent, for assignment to duty.

Very respectfully,

M. McDONALD.
Commissioner.

W. H. BRIGHT, Esq.,
Washington, D. C.

U. S. COMMISSION OF FISH AND FISHERIES,
Leadville, Colo., May 10, 1890.

DEAR SIR: Yesterday morning Col. W. H. Bright came to me for permission to go to town, and stated that he would certainly be back by 12 o'clock; I therefore gave consent. Messrs. Martin, Lewis, and myself were at work some 400 yards below the hatchery fitting up one of the cabins. I was so positive that Colonel Bright had returned that I did not think it necessary to send a man to look after the hatchery or ditches. On my way from dinner I did not see any one, so sent Mr. Lewis to see if he had returned, and if not, to feed and look after things until he did. Mr. Lewis soon returned and stated that the head screen above the ditches was choked up and the water was entirely shut off from three of the ditches, and most of the fish dead. I went up at once to remedy matters as best I could. At 3 p. m. Colonel Bright arrived. I sent Mr. Lewis for him to come and assist in getting out the dead fish. When he came down I told him if he had fulfilled his promise that this accident would not have occurred. He then went on to me in a most terrible manner and said that I need not try to blame him for this loss, and that if I had attended to my duties it would not have occurred, and I should have had Martin or Lewis there to look after the place. Then he defied me as a man, and said that no man had been born of woman that he feared. He also accused me of being a drunkard and said I was afraid of him and ran away from him when he went to town this a. m., because I happened to ride down the hill with Mr. Hunt, and gave him (Hunt) the mail. He also said that I had accused him of this because I did not like his religion (which I did not know he had) and, too, because of his political creed.

All of this is a falsehood. Colonel Bright knows perfectly well that I have treated him with respect and favored him in every way possible on account of his gray hairs and inability to do laborious work. I certainly think I have a right here as superintendent to lay any blame on the person on whom in my opinion it should fall without being subject to such slanderous remarks and dictated to by him or any one that is supposed to be under my direction here. As to his defying me as a man, of course my hands are tied; he is an old, gray-haired man, but possibly some day he will find out that I am no coward. During the entire controversy I held my temper and tongue and did not speak to him in any way but in an ordinary tone of voice, while he acted like a crazy lunatic, and could have been heard all over the premises, cursing and damning and abusing me in every way possible. Now, I make this official report to you and ask that you transfer him from this station as soon as you can, for we can no longer get on together. He has not offered any apology yet and assumes the air of a

victorious bully toward me. I will not notice him after this except in an official way, and do as superintendent appeal to you for an immediate transfer or removal, which will be a relief to me and a benefit to the station.

I am, very respectfully,

E. M. ROBINSON,
Superintendent.

Hon. M. McDONALD,
Commissioner, Washington, D. C.

U. S. FISH COMMISSION,
Washington, D. C., May 16, 1890.

You should have discharged Bright at once when he became insubordinate. Discipline and subordination to the superintendent must be enforced at all hazards. You will relieve him from duty immediately, and make written report to me of circumstances.

M. McDONALD.

E. M. ROBINSON,
Superintendent U. S. Fish Commission Station, Leadville, Colo.

U. S. COMMISSION OF FISH AND FISHERIES,
Leadville, Colo., May 17, 1890.

DEAR SIR: Your telegram dated May 16 is at hand. In reply will say that I have this day written a letter to Colonel Bright relieving him from duty as an assistant on the work. The circumstances of this matter were put in my report of May 10, 1890, and if necessary I can prove every word that was said by Messrs. Lewis and Martin, who were on the ground at the time.

On delivering the letter to Colonel Bright he said that he would go to Washington immediately and call for an investigation, and said he wanted the Commission to furnish him with a pass. I told him I had no authority to do this, but you would settle the matter. He then said, "he be damned if the Commission wouldn't have to pay it." He also said that he proposed to see my successor appointed, and that the "longest pole would get the persimmon." I told the colonel that he had best not say more, for if he was going to Washington you would give him a hearing.

If you wish me to put what I have said in any other shape I can do so and file an affidavit (sworn) with it. His air and intention is, I am positive, to give me and any Fish Commission people trouble that he can. He is a vile man, and would now stoop to any meanness to injure me. I trust he will soon leave, for I don't wish to have any more trouble with him, for it would be hard to tell what the ending would be.

I am, very respectfully,

E. M. ROBINSON,
Superintendent.

Hon. M. McDONALD,
Commissioner, Washington, D. C.

WASHINGTON CITY, D. C., *June 9, 1890.*

DEAR SIR: Since my arrival in this city, which is two weeks ago, I have made several unsuccessful attempts to see you, and Mr. Connor informed me that you would not see me in person. Sir, will you please inform me by letter if you are still of that same mind?

I have the honor to be, very respectfully, your obedient servant,

W. H. BRIGHT,
No. 494 Maryland avenue southwest.

Hon. M. McDONALD.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., May 11, 1890.

SIR: Through Mr. O'Connor, chief clerk, you were informed that if you had any statements to make in reference to your discharge from the service of the Commission, or any charges to make in reference thereto, you must submit the same in writing,

and they would receive careful consideration and investigation. Such written statements can alone form the basis of any official action to be taken, and such action can not be promoted or advanced by any oral discussion of matters.

Very respectfully,

M. McDONALD.

W. H. BRIGHT, Esq,
494 *Maryland avenue, southwest, city.*

I understand that Mr. Smiley in his testimony before the committee stated that his official duties did not occupy his full time, and that he sought occupation in the Census Office that he might have better opportunities for work. On January 16, 1889, Mr. Smiley proposed to prepare a prospectus for a new carp pamphlet, and if approved to proceed with the compilation of the same. The proposition was approved by the Commissioner. On January 28, 1889, the prospectus was submitted, and approved March 26, 1889, and the compilation was directed. On July 6, 1889, in response to an inquiry from the Acting Commissioner, Mr. Rathbun, as to the status of the work, Mr. Smiley, under date of July 8, replied he had done nothing except to collect some materials; that the present condition of the library, publication, and stationery work rendered work on such a job impossible. I submit the papers in connection with this.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., January 16, 1889.

The COMMISSIONER:

There is renewed call for carp pamphlets. The stock has been exhausted for some time. None of those we have, just meet the want. All contain good matter. I think I might prepare a prospectus of a new one which shall embody the essential features of value in all the old. If the prospectus meets your approval the compilation may be undertaken immediately.

C. W. SMILEY.

This seems to me the most important thing to do now in pursuance of your instructions of August 27.

C. W. S.:

Please prepare a prospectus as proposed, for consideration and action.

McD.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., January 28, 1889.

The COMMISSIONER:

I submit herewith prospectus for a carp pamphlet, in accordance with your instructions of recent date.

C. W. SMILEY.

The general prospectus for report covers the ground desired and is approved; utmost care must be taken to insure exactness of statements and illustrations.

M. McDONALD,
Commissioner.

PROSPECTUS OF A FISH COMMISSION PUBLICATION TO BE ENTITLED "CARP CULTURE."

This is designed for issue in pamphlet form to persons seeking information on the subject, it first having been printed in the Fish Commission Report or Bulletin. It is estimated that the ground can be well covered in from seventy-five to one hundred

printed pages. The following is an outline of the proposed chapters and an indication of their contents.

CHAPTER I.—The desirability of fish culture in inland waters; the place of carp in this industry; its general claims for attention; its economic importance; literature on the subject.

CHAPTER II.—Different kinds of carp; their systematic position, and allies; the necessity of maintaining purity and preventing hybridization.

CHAPTER III.—Ponds; the selection of sites for ponds; the different kinds, and their uses and methods of building. (Benecke's description, with numerous illustrations, is probably the best for this purpose.)

CHAPTER IV.—Plants and seeds; the lists prepared by Professor Ward and Mr. Hessel may be used; those plants and seeds that are of greatest practical value should be described and figured, so far as possible, in order that people may identify and obtain them with as little expense as practicable.

CHAPTER V.—Food for carp; the different kinds of food supplied by nature should be described, and those kinds which can be furnished at least cost artificially. Something may be added upon the systematic feeding experiments which have been made.

CHAPTER VI.—Growth; the rate of growth, and the size to which carp attain; the environment which influences the same should be described.

CHAPTER VII.—Spawning; the most advantageous and disadvantageous circumstances should be enumerated; methods for distinguishing the sex; artificially controlling the deposition and hatching of eggs, etc.

CHAPTER VIII.—Enemies; all the forms of life which prey upon carp or its eggs should be fully described and, so far as possible, figured, to enable farmers to identify them. The most careful directions should be given for exterminating or keeping within control the worst enemies of the carp culturist.

CHAPTER IX.—Diseases. Such information may be given as will enable persons to identify the prominent diseases, especially fungus, and the method of treatment indicated.

CHAPTER X.—The edible qualities of carp. In this chapter should appear a statement of the general claim as to its edible qualities, the best methods of purging, killing, and cooking; and a summary statement as to the reception with which it has met in the United States.

CHAPTER XI.—Catching, handling, shipping, and storing. The various methods of catching carp and of transferring them should be described.

CHAPTER XII.—Work of the U. S. Fish Commission. Here may be given a summary and historical statement of the efforts of the United States Fish Commission, from the beginning to the present time, to establish this industry. This may be supplemented with a brief statement of the work of the various State fish commissions, what has been done by private enterprises, etc.

CHAPTER XIII.—A dictionary or glossary of terms should be added, explaining the meanings of words not in common use, defining the metric weights and measures, etc., to bring the contents of the pamphlet within the reach and comprehension of the average farmer throughout the country. There will also be needed an index.

CHAPTER XIV.—Appendix. There may or may not, as is deemed best, be added a brief appendix with reference to goldfish and other allied forms.

This will be provided separately.

C. W. S.

MEMORANDUM TO MR. SMILEY.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., July 6, 1889.

Please inform me (1) when you were instructed to prepare the proposed new pamphlet on the cultivation of carp; (2) when it will be ready for the printer; and (3) how many is it intended to print.

RICHARD RATHBUN,
Acting Commissioner.

REPLY TO MEMORANDUM OF ACTING COMMISSIONER.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., July 8, 1889.

The table of contents for a carp pamphlet was approved about March 1, but there has been nothing done (except the collecting of some materials) towards preparing a manuscript. This being a matter outside the usual office routine, has been crowded out, much to my regret. Present condition of the library, publication, and stationery work renders work on such a job impossible. I do not know that the question of how many to print has ever been reached.

C. W. SMILEY.

I submit further the following statement in reference to the same matter. On May 16, 1889, Miss Rockwell, a competent, faithful, and efficient clerk in Mr. Smiley's office made application for leave of absence.

In recommending the granting of the application Mr. Smiley states:

It is necessary that I request permission to employ a substitute with the June salary thus released.

If there was not sufficient work to employ fully the time of his office force, he was criminally negligent of his obligations as an employé of the Government in recommending an unnecessary expenditure of the public money.

WASHINGTON, D. C., May 16, 1889.

DEAR SIR: I have the honor to hereby make application for leave of absence from the 20th instant to the 30th of June, inclusive, with the request that the twelve days of May be allowed me on annual leave, and the month of June without pay.

The fatal illness of a family connection, requiring my absence from the city, is the reason for asking so long a leave.

Very respectfully,

JULIA L. ROCKWELL,
Clerk, Office of Records.

Hon. MARSHALL McDONALD,
U. S. Commissioner of Fish and Fisheries, Washington, D. C.

In recommending this application it is necessary that I request permission to employ a substitute with the June salary thus released.

C. W. SMILEY.

O'C.

For recommendation.

McD.

C. W. S.:

Request for leave approved. Arrangements will be made by transfer of Mr. Peter Parker from property division for the month of June.

By direction of the Commissioner:

J. J. O'CONNOR,
Chief Clerk.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., May 16, 1889.

The following articles or labor are needed for office records and publications:
1½ months labor, male clerk, to be selected by C. W. Smiley..... \$70. 00
One to do the clerical work and be available to assist in moving is needed.
Respectfully submitted.

C. W. S.

In reply to the charge of extravagance in the use of stationery, etc., I make the following statement:

C. W. Smiley charges extravagance and waste in the use of stationery. It would be expected that with the addition of new stations and with the increase of work in all divisions of the commission, there would be an increased expenditure for stationery. This has not, however, been the case. The cost of stationery in—

1886-'87 was	\$1,664. 95
For 1887-'88	1,766. 02
For 1888-'89	1,395. 46
For 1889-'90	1,279. 85

There having been a steady reduction in cost per annum under my administration. A certified statement of issues, compiled from the records, is herewith appended.

Cost of stationery issued from July 1, 1883, to June 30, 1890.

1883-'84	\$1,010.95	July 1, 1887, to Dec. 31, 1887....	\$1,193.09
1884-'85	837.21	Jan. 1, 1888, to June 30, 1888....	572.93
1885-'86	1,186.74	1888-'89	1,395.43
1886-'87	1,664.95	1889-'90	1,279.85

The above is a true statement, as shown by the stationery account books.

CHAS. W. SCUDDER.

JULY 16, 1890.

Now I desire to state that these records were in Mr. Smiley's immediate charge. It was his official business to know the cost of stationery. He has made a misstatement when it was his official duty to know the fact.

I beg also to submit a comparison of the cost of the work under Mr. C. W. Smiley and to the same work as now distributed and assigned.

January 1, 1888, just prior to my assuming the duties of Commissioner, the office of Records and Publications was constituted, as follows:

	Annual compen- sation.
C. W. Smiley, clerk in charge	\$2,000
C. W. Scudder, clerk	1,080
H. P. Jerrell, clerk	1,000
Miss J. L. Rockwell, clerk	840
C. E. Latimer, clerk	840
H. P. Parker, clerk	660
Albert J. Stoerzer, messenger	300
Total annual salary roll	6,720

The work of this office at present, July 1, 1890, is distributed as follows:

Dr. T. H. Bean, the ichthyologist of the Commission, is discharging the duties of editor with an increased compensation of	\$400
Mr. C. W. Scudder is in charge of the records and correspondence, and also assists in proof-reading, etc. He receives a salary of	1,200
Miss Rockwell is a clerk in his office, receiving	840
Albert J. Stoerzer is in charge of stationery and distribution of publications, and receives	600
Ebenezer Ellis is acting librarian, receiving a salary of	1,500
Total	4,540

From this it will be seen that the work performed under Mr. Smiley, as clerk in charge in 1888, at a cost of \$6,720, is, as now distributed and assigned, accomplished at an expense of \$4,540, being a saving per annum of \$2,180.

At present, moreover, the service is much more efficiently performed than it was under Mr. Smiley.

Mr. C. W. Smiley charges that in rejecting the proof of the report proper of 1886, which had been prepared by him, and in having the same revised and re-edited, I had arbitrarily subjected the Government to increased expense. In reply I beg to submit estimates by the Public Printer of the cost of printing the report proper as prepared by Mr. Smiley, and of the cost of printing the revised report as issued. Looked at from an economical stand-point only, my action resulted in an actual saving to the Government, as shown by the following summary, of \$91.08.

Cost of cancelled report—had it been printed:

Composition	\$207.29
Press-work, folding, paper	426.77
Electrotyping	41.76
	\$675.82

Cost of revised report:

Composition	\$112.00
Press-work, folding, and paper	244.93
Electrotyping	20.52
	377.45

Difference	298.37
Deducting cost of composition of canceled report	207.29

We have, as the result of revision, a saving of 91.08

Considerations of economy alone should not prevail in the issue of Government publications. A report may be in such shape as to make it undesirable to print without close pruning and revision. It may have conspicuous literary defects which require correction. It may contain errors of fact, and conclusions based on misapprehension or misinterpretation of facts.

These defects characterized the report proper of 1886 as submitted by Mr. Smiley. It was in consideration of these that I determined to relieve him from his duties as editor, and to constitute a committee on publications, as provided for in the organization of the Commission formulated by my immediate predecessor, Prof. G. Brown Goode.

Dr. T. H. Bean, the ichthyologist of the Commission, was designated to take charge of the editorial work, he having the necessary training, experience, and qualifications requisite to perform these duties to the credit of the Commission and the satisfaction of the general public.

In further explanation of my action in the matter of this report, I submit explanatory memorandum given to H. A. Gill, disbursing officer of the Commission authorizing the payment out of the general appropriation of the cost of composition of the original report as prepared by Mr. Smiley.

MEMORANDUM FOR MR. GILL.

U. S. COMMISSION OF FISH AND FISHERIES.

Washington, D. C., January 14, 1889.

The composition, proof-reading, etc., referred to as canceled, is the report proper of the Commissioner of Fish and Fisheries for 1886, prepared by Mr. Smiley. Upon examination of the proof I found that, instead of being a simple digest of the work of the year, it also included a discussion of the results from the stand-point of the Commissioner.

Relating, as the report did, to the work carried on under Professor Baird, the present Commissioner did not feel that he should take the responsibility for the report proper as set up and proofed. Consequently it was referred to a committee for condensation and emendation, which has been effected to such an extent as will greatly cheapen the cost to the Government of the publication of the completed report.

Whilst, therefore, the canceling of what had been already set up imposes an additional burden upon the contingent fund of the Commission, it is in the direction of economy so far as the expenditures of the Government are concerned. I therefore consider that the expenditure will be recognized as proper and expedient by the Comptroller.

M. McDONALD,
Commissioner.

OFFICE OF THE PUBLIC PRINTER,
Washington, July 12, 1890.

The following is an estimate of the cost by the "principal items" in the work called for. When completed the bill may be above or below this estimate, as the items are necessarily only approximate:

Extract from Fish Commissioner's Report, 1886 (58 pp.), 11,000 copies:	
Composition	\$112.00
Presswork, folding, paper.....	244.93
Electrotyping	20.52
Total.....	377.45

If you desire the work done, please sign below and return this estimate at once.

FRANK W. PALMER,
Public Printer.

I hereby certify that I have examined this estimate, and that the work estimated for is necessary.

OFFICE OF THE PUBLIC PRINTER,
Washington, July 12, 1890.

The following is an estimate of the cost by the "principal items" in the work called for. When completed the bill may be above or below this estimate, as the items are necessarily only approximate:

[Canceled.]

Extract from Fish Commissioner's Report, 1886 (116 pp. with title), 11,000 copies:	
Composition	\$207.29
Presswork, folding, paper.....	426.77
Electrotyping	41.76
Total.....	675.82

If you desire the work done, please sign below, and return this estimate at once.

FRANK W. PALMER,
Public Printer.

I hereby certify that I have examined this estimate, and that the work estimated for is necessary.

Q. So that instead of resulting in a loss it resulted in a gain, in an economy?—A. Yes, sir; and a decent report. His report was not fit to be printed.

C. W. Smiley charges that he called my attention to the extravagant demands for stationery coming from stations, cars, offices, vessels, etc., but that I disregarded his representations, etc.

In reply I submit (1) his memorandum of April 2 to which I presume he refers. (2) My reply of following day directing him to indicate specifically in what respect and by whom extravagance has been manifested in respect to the use of stationery. (3) His letter of April the 4th, denying that he had implied any extravagant use of stationary by stations, cars, offices, or vessels.

MEMORANDUM.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., April 2, 1889.

THE COMMISSIONER:

The stationery requisitions herewith represent the minimum purchase supply needed. They are made on the presumption that the Commissioner will carefully protect this office from extravagant demands coming from stations, cars, offices, vessels, etc. Unless such requisitions are carefully pruned prior to approval, it may be expected that requisitions for additional purchases will be made by me.

Respectfully,

C. W. SMILEY.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., April 3, 1889.

DEAR SIR: In submitting your requisition for stationery use for quarter ending June 30, 1889, you state, in memorandum, that stationery requisitions "are made on the presumption that the Commissioner will carefully protect this office from extravagant demands coming from stations, cars, offices, vessels, etc."

In making this statement you imply that extravagant use of stationery has been made by stations, cars, offices, and vessels; and if such be the case I desire to take measures for its correction.

You will please, therefore, indicate to me specifically in what respect, and by whom, the extravagance has been manifested in respect to the use of stationery.

Very respectfully,

M. McDONALD,
Commissioner.

C. W. SMILEY, Esq.,
U. S. Fish Commission.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., April 4, 1889.

DEAR SIR: I am not aware that I have implied any extravagant use of stationery to have been made at stations, cars, offices, or vessels. I therefore regret that I can not comply with your request for detailed information.

Very respectfully,

C. W. SMILEY.

Col. M. McDONALD,
Commissioner.

I hardly desire to rest my vindication upon a letter of Mr. Smiley's, but I beg to submit, as throwing some light upon matters, a letter received by me from him in July, 1888, in which he took special occasion to go out of his way to commend my administration.

[Private files, 1888.]

943 MASSACHUSETTS AVENUE, July 4.

MY DEAR COLONEL: The Commissioners of the District of Columbia have honored me with an (unsought) appointment as one of the delegates to represent this District at the Fifteenth National Conference of Charities and Corrections, to be held in Buffalo, July 5-11. If you find any occasion to communicate with me please telegraph me at Music Hall, Buffalo, N. Y., any of those dates, and I will take much pleasure in responding.

I may improve this opportunity perhaps to tell you how exceedingly I am gratified with your management of Fish Commission affairs. It has improved upon the highest expectations. Last evening one of Dr. Kidder's supporters admitted that the Commission is in far better hands than it would have been had the doctor been appointed.

Colonel, you appear almost like a new man, now that the trials and vexations of the past eight years have so fully departed, and no one is more pleased than I am over it.

In my absence please extend to Mr. Latimer every kindness, as you have to me. He is one of the noblest men in the whole Commission.

Most faithfully,

C. W. SMILEY.

Colonel McDONALD,
1515 R Street.

And as illustrating the troublesome character of the man under all conditions of public service, wherever he has been connected with it, I should like to include this letter in my evidence, but it will be for the committee to decide whether it shall be or not. I will read it:

[Confidential.]

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., August 26, 1887.

DEAR COLONEL: Ferguson staked all, and—lost. Judge Alexander McCue, Solicitor of the Treasury, has been appointed as Commissioner. Ferguson is disappointed and disgusted. He talked quite freely even to me! Some wonderful things have tran-

spired, of which I will tell you when I see you. The Commission is *safe*. Ferguson *must go*! He don't see it yet, but I do, and I can tell who will succeed him, I think! Goode has made a blunder and lost. He went so far as to espouse Ferguson's cause! But the *great Grover Cleveland* has spoiled all their schemes.

Yours, truly,

C. W. SMILEY.

I desire, as soon as we can, to have called for the defense several of these gentlemen and submit a series of questions, not anonymously. I shall take the responsibility for them, and leave it to the discretion of the committee to adopt them as it pleases, to show the intriguing character and motive which is behind all this business.

I do not know that it is necessary for me to say anything further in regard to the filter than has been brought out before the committee, but I desire to file with the committee my bills. Our records show that nothing has been paid by the Government. I desire to submit my bills, which do not cover one-half, to the amount of \$208, which I have paid in the development of the plans which were undertaken primarily with the desire to establish the possibility of an aquarium in Washington.

Q. Do I understand you to say that the Government has paid nothing for the construction of these filters?—A. Nothing, except the labor of the men. The material of the filters now in the building I paid for.

Q. And all that the Government has contributed to the filters that are now in the central building is the labor of the men?—A. Yes, sir. I considered it just as important as any other work, but instead of developing a filter in my own interest at Government expense, I have developed at my own expense an important advance in fish cultural possibilities for the Commission.

The abstract of the bills is as follows:

Apr. 30, 1888. Adams Express Company	\$0.25
Patterns for filters:	
Oct. 29, 1888. D. Ballauf	\$8.00
June 9, 1889. D. Ballauf	12.00
Oct. 17, 1889. D. Ballauf	12.00
Nov. 30, 1889. D. Ballauf	3.00
Dec. 20, 1889. D. Ballauf	2.00
	37.00
Dec. 9, 1889. Baltimore and Potomac Railroad, freight	.25
Mar. 17, 1889. Baltimore and Potomac Railroad, freight	.25
	.50
Filtering tiles and cylinders:	
Dec. 9, 1889. Edwin Bennett	31.50
Mar. 8, 1890. Edwin Bennett	6.30
Mar. 24, 1890. Edwin Bennett	4.20
Apr. 23, 1890. Edwin Bennett	12.60
	54.60
Dec. 31, 1889. E. N. Gray & Co	2.50
Dec. 12, 1889. G. J. Heady, freight.....5.....	.25
Dec. 28, 1889. John J. Healy, freight	.25
Dec. 28, 1889. John J. Healy, freight	.25
	.50
Feb. 10, 1890. George W. Knox, freight.....	.25
Castings, pipes, and fittings for filters and for manufacture of filters:	
June 25, 1889. Robert Leitch & Sons.....	12.90
Aug. 28, 1889. Robert Leitch & Sons.....	.65
Sept. 21, 1889. Robert Leitch & Sons.....	.70
Apr. 1, 1890. Robert Leitch & Sons.....	22.76
June 24, 1890. Robert Leitch & Sons.....	42.59
	79.60
May 15, 1889. Melville Lindsey.....	1.20
May 6, 1889. F. P. May.....	3.20

Glass cylinders for filters:

Dec. 7, 1889. Whitall Tatum & Co.....	\$9.00
Dec. 12, 1889. Whitall Tatum & Co.....	8.15
Dec. 27, 1889. Whitall Tatum & Co.....	7.59
Jan. 11, 1890. Whitall Tatum & Co.....	.50
Apr. 9, 1890. Whitall Tatum & Co.....	3.50
	\$28.74
Total.....	208.59

The WITNESS. At the request of Mr. E. M. Robinson, the superintendent of the Leadville station, I respectfully submit his own affidavit and other affidavits relating to himself personally and the character and the quality of his administration of the work since he has been in the Commission.

The affidavits are as follows:

GLOUCESTER, MASS., *July 7, 1890.*

Having been an employé under Mr. E. M. Robinson as superintendent of the cod-fish hatchery at Ten-Pound Island station, in 1888 and 1889, I hereby testify that his strict attention to business and his gentlemanly manner and impartial enforcement of duties won for him the friendship and esteem of all connected with the work.

E. F. LOCKE.

JULY 7, 1890.

MASS., *Essex, ss:*

Sworn before me.

[SEAL.]

AARON PARSONS,
N. P.

CAPE ANN NAT'L BANK,
Gloucester, Mass., July 7, 1890.

This is to certify that, having made the acquaintance of Mr. E. M. Robinson, of the U. S. Fish Commission, at the beginning of his service in this city, I am very glad to say that he won and held my esteem by his true worth and character as a gentleman, and I feel that his enthusiasm for, and faithful attention to, his work, were a credit and an honor to the Commission, as well as to himself.

For these reasons, I may be allowed to add, I still regard his transfer to another field as a personal loss to me.

HIRAM RICH.

GLOUCESTER, *July 7, 1890.*

COMMONWEALTH OF MASSACHUSETTS, *Essex County, ss:*

Then personally appeared the above subscribed Hiram Rich and made solemn oath to the truth of the foregoing affidavit. Before me,

[SEAL]

SUMNER D. YORK,
Notary Public.

LEADVILLE, COLORADO, *June 27th, 1890.*

Mr. Robinson, the superintendent of the U. S. Fish Commission station at this place, I know to be a man of good habits, sober, and industrious, kind and attentive; and too, one of capabilities. I have been at work with him now for six weeks. Since my stay here I have never seen him under the influence of whisky or any intoxicating drinks, but always prompt and on duty from 7 a. m. until 6 p. m.

M. E. STID.

Subscribed and sworn to before me this 28th day of June, A. D. 1890.

[SEAL.]

OLIVER ADAMS,
Notary Public, Lake County, Colorado.

My coms. expires Aug. 10th, 1892.

LEADVILLE, COLORADO, *June, 28, 1890.**To whom it may concern:*

This is to certify that I consider Mr. E. M. Robinson, the present superintendent of the Colorado Fish Hatchery, a competent and efficient man who thoroughly understands the business of fish culture, and further as a man who attends personally to his work and labors as hard as any of his men under him.

J. H. HUNT,
Proprietor Evergreen Lakes Hotel.

LEADVILLE, COLO., *June 27, 1890.*

The statement made in the New York World of June 19, '90, by Mr. W. H. Bright, while before the investigating committee appointed to investigate the workings of the U. S. Fish Commission, against E. M. Robinson, the present superintendent of the Fish Commission station at or near Leadville, Colorado, is I know to be false. I have been employed by the Commission since Mr. W. H. Bright came here to work, and do swear that he was treated as a gentleman by Mr. Robinson and favored on account of his age. As to the occurrence of the loss of fish which he says was the most of a year's work, I know this to be false, as not over 15,000 were lost, and the station then had on hand 297,000; the loss was caused entirely by Mr. Bright's negligence. Mr. Robinson and myself were at work on a cabin the very day the accident occurred, May 9, 1890. Mr. Robinson reprimanded him on his return for not keeping his promise, and said to him that this accident was the result of his negligence.

Mr. Bright then cursed and swore at Mr. R., calling him and the Commissioner all kinds of dirty names; therefore I know his entire statement to be an untruth. The superintendent, Mr. Robinson, is, in my opinion, a capable, energetic, and competent man, sober, upright, and attentive to his duties. I have never seen or known him to be absent from the station more than a day, and then in all cases on business. Neither have I ever seen him under the influence of whisky while on duty or during business hours. He could not even be called a drinking man, but takes a drink when he feels so disposed. I am of the opinion that on Mr. Bright's return from town on the 9th of May that he was himself drunk, or talked like one drunk or crazy. Since writing this I remember that Mr. Robinson was absent in Denver two days, but this was before Mr. Bright reported here, and he was there on account of sickness.

J. MARTIN.

Subscribed and sworn to before me this 28th day of June, A. D. 1890.

[SEAL.]

OLIVER ADAMS,
Notary Public, Lake County, Colorado.

My commission expires August 10th, 1892.

The WITNESS. Three of these men are reputable men of Colorado, and are in the vicinity of the station, and have testified exactly opposite to Bright, and here is Robinson's own testimony, which is very interesting. It gives an account of the way Bright carried on out there and all about it:

LEADVILLE, COLORADO, *June 30th, 1890.*

Hon. M. McDONALD,
Commissioner of Fish and Fisheries, Washington, D. C. :

In justice to myself and in denial of the testimony given by Mr. William H. Bright before the Senate investigating committee, and which was published in the New York World of June 19th, 1890. I wish to furnish this as a sworn statement that Mr. William H. Bright, in his entire testimony, has sworn falsely, if the New York World has reported him correctly. I send with this same sworn evidence, that will go to prove what he says to be a falsehood. This evidence is given by Mr. J. Martin, an employé, and one who has been on the work before and since Mr. Bright reported for duty. Also, you will find a sworn statement given by Mr. M. E. Stid, which, too, goes to prove that I am not what Mr. Bright would have the committee and world to believe. Mr. J. H. Hunt, proprietor of the Evergreen Lakes Hotel, and a near neighbor, has given me a certificate, which accompanies this statement.

Mr. Bright says, "that I was in the habit of going to town with Mr. C. C. Lewis and getting on protracted sprees and totally neglecting my duties for three days at a time," every word of which is false. I never was in Leadville with Mr. Lewis but once, and I never took a drink with him in my life, but whenever I feel disposed to take a glass of whisky or beer I do so. I have never been drunk on duty at this

station. I was on two occasions, one might say, under the influence of beer while Mr. Bright was stationed here, but this was after 6 or 7 p. m., and did not cause me to lose any time, neither was my work neglected, nor was I enough so that I could not attend to my duties, and on each of these two occasions I did errands for Mr. Bright, bought provisions, delivered messages, brought his mail out, and on my return gave him his proper change, so I could not have been *very* drunk.

Mr. Bright further states, "that through my negligence and drunkenness, that our station sustained a loss of fish that represented a year's work." As near as I can estimate, the number lost was 15,000, and at the time we had on hand 297,000. A full account of this will be found appended, which I made to you on May 10, 1890, and which was the cause of Mr. Bright's discharge. This report is an exact copy from my letter-book. As to the conversation between Mr. Lewis and Mr. Bright, I can say nothing, but I believe this statement to be as false as I know the others to be. Mr. Bright again says, "that I go to bed with a big jug of whisky and remain there until whisky is gone, and effects slept off." Therefore, I say that this man Bright has lied and has committed perjury. He says that "he was glad to get away, and had complained to nobody." Mr. Bright complained to Dr. John Law of his treatment and Mrs. Bright said to Mrs. Cavanaugh, a near neighbor, that they hoped to live long enough to have their revenge.

Mr. Bright reported to me for duty the latter part of Jan'y, '90. He was treated on all occasions with considerate respect, and favored on account of his advanced years; I myself brought water and carried wood for Mrs. Bright after our day's work was finished, in order to assist both of them in any way I could and save Mr. Bright this additional labor. He was given the easiest work at the sta., but like all others required to be prompt on duty. He was allowed more time and was absent from the station on leave more than any man here. From time to time Mr. Bright said that Col. John Gay, inspector of stations, he believed was bribed by Col. R. E. Goodell, P. M., and Dr. John Law, a physician of this town and too interested in fish culture to locate the station here. Senator Teller was accused by Mr. Bright of sending him out here for political purposes; he stated to me that Mr. Teller sent him here to secure his re-election to the Senate during the next campaign and also intimated to my men on the quiet that after the November election he would receive the appointment as superintendent of this sta., in payment for services rendered to Mr. Teller.

Mr. Bright said to me more than once, "Do all the superintendents work like you do, and if I were superintendent of a station I'll be damned if I would." Then he said: "Do you know that ability and industry do not go for anything in any of the Government works?" He said that he refused work in one of the Govt. Departments (I think the Printing Office) that would have paid him \$6 per day, in order to come out here and assist in Mr. Teller's re-election as he was one of the few that could carry this part of the State Republican. My absence from the station in each case, but twice, was on business. In Jan'y I went to Denver, Colo., for two days as I was sick and thought the change would do me good. The other time was when my wife arrived, and then I stayed over in town one night.

Mr. Bright is, in my opinion, a foul-tongued slanderer, the most worthless, unpleasant, blasphemous, and wicked man that I have ever been associated with. He defies all Christianity, and said "he was not afraid of Colonel McDonald or any other damned colonel; that he, Bright, had as his backing, the order of Knight Templars, Grand Army Post, the Republican party, and the U. S. Senate, and why should he be afraid of the Commissioner, for he, Bright, could grace that chair with as much dignity as Colonel McDonald." Mr. Bright, nor any other man can truthfully bring any charges against me, and the way in which I conduct the working of the station that will injure my character in any shape or form. I have written this lengthy statement to show in part the kind of a man that I was so unfortunate as to be associated with.

I am, very respectfully,

E. M. ROBINSON,
Supt. of Leadville, Colo., Station.

STATE OF COLORADO, *County of Lake, ss:*

Subscribed and sworn to before me this 30th day of June, 1890.

[SEAL.]

WILLIAM H. NASH,
Notary Public.

Commission expires April 14th, 1891.

I will add, further, that I have intimate personal knowledge of Mr. Robinson's character, of his attainments and qualifications in fish cultural work; that I consider him, so far as experience and capability to meet emergencies go, fully the equal of any superintendent we have. He has always been distinguished in his work by his self-consecration and utter fidelity to whatever was put in his charge. He is one of the

best men I know. He may have gotten tight once or twice. I think it is very possible that when a man gets 2 miles above the level of the sea, in a climate like that of Colorado, he may become somewhat demoralized.

Mr. Moore in his testimony, as I understand, being asked as to the Colorado station expressed his opinion that it was too far from the railroad. In reply I respectfully beg to state that Mr. Moore's experience in the Commission does not relate to fish culture at all, that he has not by knowledge or relation been in a position to determine what is proper or best either regarding the establishment or development of a station. His function is and his experience has been to take charge of fish as hatched, and plant them in waters as instructed. As a matter of fact the station instead of being 6 miles from the railroad is about 3. Outside of that the question of the convenience to a railroad is one of the minor questions connected with the establishment of a station. You must first of all go where you can secure an abundant water supply. If you can secure an abundant water supply by gravity instead of pumping you have at once eliminated an annual cost of \$1,500 in the administration of your station.

By the CHAIRMAN:

Q. That was kept in view in the location of this station?—A. Yes, sir, and it is always kept in view. Considering all the conditions I think the Leadville station is equal in all respects to any station we have.

Q. Have you seen the Leadville station since it was completed?—A. It is not completed yet.

Q. Will it be completed inside of the appropriation?—A. We were required to meet the necessities of the case. I took a part of that appropriation and put up an auxiliary building, which was to serve when the station was completed as a nursery for fish, and paid for it out of that appropriation, and consider it a part of the station.

Q. And you consider it a part of the station?—A. Yes, sir. That was done with the view of avoiding the loss of a year in the development of the station. It has involved, I think, possibly an expenditure in excess of appropriation of \$200 or \$300.

Q. Not more than that?—A. No, sir. These things are always looked after very carefully. I may state further that 20 per cent. of the amount of the contract is still in reserve and will not be paid to the contractor until the building is duly inspected and accepted, and if there be defects in it the contractors will be required to make them good, and when the building is completed in accordance with the plans and specifications it will be one of the very best buildings of the kind I know of, either in this country or anywhere else. It is a splendid building. I have prepared a brief description of the Colorado station.

COLORADO STATION.

Location.—After a thorough investigation, the location of the Colorado Station was selected in Lake County, near Evergreen Lakes, and about 6 miles west of the city of Leadville.

Reservation.—The Government reservation for the use of the U. S. Fish Commission was created by proclamation of President Harrison, dated April 16, 1889, and consists of 1,935 acres, beginning on the western edge of the Arkansas Valley, and extending to the top of Mount Massive, 14,298 feet above tide-water, so as to include the source of

Rock Creek, which is apparently the remains of a glacier, and the largest permanent ice and snow field in Colorado.

Construction.—In order that no time should be lost, it was deemed advisable to erect a temporary hatchery to be used pending the construction of the permanent hatchery, and the work of constructing flumes (741 feet) to bring the water supply by gravity from two springs on the hill-side to the hatchery was begun September 9, 1889, and the temporary structure was ready for the reception of eggs about the middle of October. In the mean time, eight thousand brook-trout, suitable for spawning purposes, were, by permission of Dr. Law, collected from Evergreen Lakes and held in ponds; from these fish, 568,000 eggs were taken and placed in the hatching-troughs. This temporary hatchery will be useful as a nursery for fry when the station is permanently established.

Appropriations.—Fifteen thousand dollars was appropriated by Congress, and approved March 2, 1889, for the purpose of erecting a hatchery building.

Bids.—Proposals for constructing the hatchery building were invited by advertisements, published in Leadville and Denver papers, in July, 1889, but as only one bid was received, and it being for a sum about equal to the amount appropriated by Congress, it could not be considered, and proposals were advertised for a second time. When the proposals were opened at Washington, D. C., September 20, 1889, Lyman G. Hunt, of Pueblo, Colo., was found to be the lowest bidder, and the contract was awarded him in accordance with his bid, which was \$12,672.

The location of the hatchery was made by the Commissioner after a thorough and careful examination of the ground and consideration of the conditions to be fulfilled in the economical and effective development of the work of trout breeding and rearing assigned to the station.

The plans for the hatchery were matured by the present Commissioner and are based upon his experience and knowledge of the requirements of fish-cultural work and the particular conditions to be fulfilled in this case. The detailed plans and specifications, under which the contract for the hatchery building is now being executed, are based upon his studies and were prepared under his direction by C. E. Gorham. (Copies of plans, specifications, etc., are herewith submitted.)

The building is now substantially completed. The plastering and other parts of the interior finish were suspended during the winter, and an extension of time granted the contractor, in order that the remaining work might be done when there was no risk of damage or deterioration by freezing. The work so far has been well done and in strict accordance with the specifications; 20 per cent. of the contract price has been retained in the hands of the disbursing officer of the Commission as security for the faithful completion of the contract.

Moreover the bondsmen of Mr. Hunt are responsible and liable for any failure on the part of the contractor. The Government is fully protected in every way. The hatchery when completed will be one of the most substantial and carefully constructed buildings in Colorado, and will be one of the best equipped and most extensive trout-breeding establishments in the world.

Extract from "Report of Explorations in Colorado and Utah during the summer of 1889,"
by David Starr Jordan.

B. Arkansas Basin.—The Arkansas River rises in the mountains to the north of Leadville. It flows southward through a broad park-like valley, grassy in its upper part, and becoming arid lower down. This valley is bounded on either side by lofty mountains, with snow-banks which are the source of many ice-cold streams. At

Salida the river turns abruptly to the east, breaking through the mountains in a deep and rocky cañon, by which it reaches the level of the sage plains. Throughout the region above the cañon the Arkansas is clear and cold, in every way well suited for trout. Placer mining at Leadville and Granite has much reduced the number of fishes in the river by filling the waters with clay, but they still abound in all the tributary streams. Below the cañon the river becomes warmer and more muddy, and no trout are found there, the fauna from Cañon City down being much the same as that of the rivers of Kansas. The fishes of the Arkansas were examined at the following points:

1. *Arkansas River and its Lake Fork near Leadville.*—Seined at a bridge across Lake Fork between Evergreen Lakes and the village of Malta, about 3 miles west of Leadville. The river and the Lake Fork are about equal in size and entirely similar in character, flowing with a moderate current through green meadows, shaded by willows, and with occasional deep holes in the bends. The streams are each about 15 feet wide and the bottom is gravelly. The temperature is about 62 degrees. These streams are ideal trout brooks. Trout are very abundant, and with them *Rhinichthys dulcis*. Species taken at Leadville are marked L in the following list.

2. *The Evergreen Lakes* are a series of trout ponds, wholly or partly artificial, fed by cold streams from the flanks of Mount Massive. One of these streams, having its rise in the largest permanent snow-field in Colorado, has been chosen by the U. S. Fish Commission as the site of its hatchery. No better location could be desired.

At 12 o'clock m. the subcommittee adjourned to meet at the call of the chairman.

AUGUST 21, 1890.

The subcommittee met at 10 o'clock a. m., pursuant to the call of the chairman. Present, Senators Stockbridge (chairman) and Squire.

TESTIMONY OF J. J. O'CONNOR.

J. J. O'CONNOR, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Please state your full name.—A. J. J. O'Connor.

Q. Are you in the employ of the U. S. Fish Commission?—A. I am.

Q. What are your duties?—A. I am chief clerk of the Fish Commission. I have the general supervision of the clerks and the official correspondence of the Commission, the transmission of the mails of the Commissioner's office, and the assignment of the major portion of the correspondence to the different officers and divisions of the Commission for reply or other necessary action; the indexing and registering of the correspondence of the Commission, and the custody of the records in charge of the record clerk under my direction; the purchase and use of stationery and the distribution of the publications of the Commission, the preparation of replies to all routine letters for the signature of the Commissioner, and the approval, under the direction of the Commissioner, of all requisitions of a routine character for the purchase of supplies, and for services, etc.

Q. When were you first employed in the service of the Commission?—

A. I was appointed in May, 1880, by Professor Baird.

Q. In what capacity?—A. As stenographer and clerk to Major Ferguson, who was afterwards assistant commissioner. I was paid folio rates; that is, at the rate of 10 cents per hundred words. In January, 1881, I was appointed clerk at \$75 per month, and continued at that compensation until January, 1882, when I resigned to accept a position as clerk and stenographer to the Committee on Education and Labor of the House. I continued to do piece-work, however, for the Commission, for some time after I resigned. I did that at the request of Major

Ferguson, the assistant commissioner. In November, 1882, I was assigned to duty as stenographer to Colonel McDonald, working at folio rates, viz, at 10 cents per hundred words. In July, 1883, I was again regularly appointed as clerk, at \$100 per month, under Professor Baird. In July, 1885, my compensation was increased to \$115 per month, and in December, 1887, while Mr. Goode was Commissioner, my salary was increased to \$150 per month.

Q. What was your compensation immediately before Colonel McDonald became Commissioner?—A. Eighteen hundred dollars per year.

Q. What is your present compensation?—A. Twenty-four hundred dollars a year.

Q. It was increased by Commissioner McDonald?—A. Yes, sir; the last increase.

Q. Were your duties increased?—A. I was appointed chief clerk in July, 1888.

Q. By whom?—A. By Commissioner McDonald, at \$183.33 per month, or \$2,200 per year. In August, 1889, my compensation was increased to \$2,400 per annum, which would be justified, I should say, by the fact that all of the correspondence, the archives of the Commission, were transferred to my office.

Q. At the time of the increase?—A. Yes, sir.

Q. Your duties were increased?—A. Yes, sir.

Q. Your duties and responsibilities were increased?—A. Yes, sir; both were increased.

Q. Mr. Smiley has stated, in regard to the transfer of a portion of his work to other persons, that at no time did the Commissioner make any complaint or find any fault with the work he did, barring one particular time, which he explained, viz, that the annual report for 1886 which he prepared was too voluminous, and that the Commissioner would not accept it for that reason. Can you give us any information on that point?—A. In reference to that specific report I would say that the statements already submitted by the Commissioner fully cover the point. Now I desire to say, in addition to that, that complaints were very general on the part of those who contributed material for publication in the Fish Commission bulletins and reports at the manner in which Mr. Smiley garbled their material. Several of them stated to me that the reports were so badly garbled by Mr. Smiley that the sense intended to be conveyed was entirely destroyed; and in other cases where scientific papers were submitted by those who were competent to write them the complaints were almost universal. Complaints were also being constantly made against Mr. Smiley by clerks and others in the office, because they were not able to procure from his office information which they desired and which it was necessary that they should have in the conduct of their work. He either could not, or would not, furnish the information, and I can say in reference to the Commissioner's office that repeated requests were made of Mr. Smiley for information from the records before they were transferred from his office, which information he did not give, or when he did give it it was frequently after the time when we could use it.

Q. It has been stated by Mr. Smiley that he never complained of overwork in his life, although he had worked twelve and fifteen hours a day; that he sought his present position in order that he might work more than the regular hours a day. What have you to say in reference to that statement?—A. That is exactly the opposite of what he said to me soon after Colonel McDonald became Commissioner.

Q. Did he state to you that he thought his work was too hard?—A.

No, sir. He stated to me at the former office of the Fish Commission at 1443 Massachusetts avenue, that he did not propose to work over office hours in the future; that he had done so under Professor Baird, but he did not intend to do so any longer. In his letter to Commissioner McDonald, dated January 8, 1889, he makes the following statement:

You are also aware that, under Professor Baird's administration, I did a great deal of work myself out of office hours, working after 4 o'clock, evenings, and even on Sundays. The latter course I discontinued, however, some time ago, hence the available force is now almost one-half what it was formerly.

The letter is as follows:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., January 8, 1889.

DEAR SIR: In response to your requests of January 2 and 4, I hand you certain memoranda (five pages) containing the information, and should, perhaps, remind you that the work of this office has been seriously interrupted (so far as the publications are concerned) during the past eighteen months by the various changes and uncertainties, and that *the personnel has been correspondingly decreased*. Eighteen months ago the force consisted of eight: Messrs. Latimer, Parker, Stoerzer, Miss Rockwell Messrs. Jerrell, Scudder, Gillis, and Kimball, the first four of whom now remain, and the last four of whom have been transferred or resigned without their places being filled. You are also aware that under Professor Baird's administration I did a great deal of work myself out of office hours, working after 4 o'clock evenings, and even on Sundays. The latter course I discontinued, however, some time ago. Hence the available force is now about one-half what it was formerly.

Respectfully,

CHAS. W. SMILEY.

Col. M. McDONALD,
Commissioner.

Office of Records: Duties of personnel (as constituted January 7, 1889).

C. W. Smiley.—To direct the work; to determine the details of all expenditures authorized by the Commissioner, to keep the records thereof; to be responsible for the character and amount of all stationery and printing received; to examine all accessions to the library, all periodicals, etc., with the view to their acknowledgment and disposition, to maintenance of series, etc; to assist the Commissioner in determining the issue of Fish Commission publications, prepare letters, etc.

C. E. Latimer.—To make synopses of the *important* letters received; to keep the record of all stationery received and issued, and to make inventories of stock periodically; to make out orders, labels, receipts, and envelopes for the issue of books from the armory, and to keep the record thereof; to make periodically inventories of the stock on hand; to catalogue the books and pamphlets received in the library, to charge and credit loans of book; so stamp foreign letters, bulletin signatures, library acknowledgments, and keep a record of the same.

H. P. Parker.—To index all letters received and written, and to search the files in response to all requests for letters and information. (This is the duty upon which Mr. Scudder has recently been engaged, it occupying about two-thirds of his time.) To make copies, write letters, etc., from dictation, upon the typewriter as needed in the work of the chief of the office.

Miss Rockwell.—To make synopses of all letters written, of the unimportant letters received; to record all letters in the registers, both written and received, by name, date, number, and synopses of contents.

A. J. Stoerzer.—To assort and put into files, letters, requisitions, orders, and periodicals; to put up packages of stationery; to make trips to stationery stores, armory, printing office; to have the care of pamphlets in stock, put them up for mailing as ordered; to wrap books and other matter; to assist in putting up the regular and other issues of bulletin signatures.

All.—To co-operate in special jobs, to do the work of each other when sick, absent on leave, etc.

Uses for a typewriting machine.

- (1) The preparation of lists of accessions to library.
- (2) The preparation of addresses in triplicate of all persons to whom reports and bulletins are sent, this in a regular sending amounting to nearly 1,000 items.

(3) The preparation of letters for the Commissioner and in carrying on the work of the office.

(4) An aid to any work in which the chief is engaged outside of ordinary routine, particularly if the digest of publications in libraries of the United States is continued.

(5) There are miscellaneous uses for the machine every day as an aid to the work of the office.

Memorandum of work pending in the office of records, in addition to the usual routine.

(1) Paper on Fish Commission publications in libraries, per memorandum herewith.

(2) An effort to collect the reports of all the State fish commissions which have been published during the past three or four years, very few of which were received at the time.

(3) Correspondence with the scientific societies of the United States for the purpose of determining to what extent their publications can be secured for the Fish Commission, and to what extent they have or can be supplied with our publications.

(4) The preparation of a book of railroad circulars for 1889. There are two ways of doing this: the one involving printing and binding at a cost of \$75 to \$100; the other by certain clerical work to avoid much if any outside expense. Mr. Moore and myself have determined that the latter is the wiser course to pursue.

Memorandum of a plan looking to the increased usefulness of the Fish Commission publications.

This plan was approved in the main by the Commissioner in June last, and much has been done toward its completion.

1. It was proposed (1) to ascertain what publications of the Fish Commission were contained in all the important libraries of the United States; (2) so far as practicable to fill up gaps in important series; (3) to publish in the Commissioner's report, and also in pamphlet form, a list of such libraries, with a statement of what is contained in each.

2. Returns have thus far been obtained from more than 1,300 libraries, and efforts are now being made to secure returns from a few large or important libraries that have thus far failed to respond.

3. The information, so far as received, has been tabulated, and constitutes a very valuable paper. The transfer of duplicate volumes from libraries that have them to libraries not having them has been arranged for and largely accomplished. Some cases still require correspondence. During the summer there were sent from the Commission's stock to libraries most needing them a lot of books such as could be most easily spared.

4. It remains to prepare for the approval of the Commissioner a list of sendings which would complete series in important libraries still unsupplied. When the last sending has been determined and the remaining returns are in, the paper can be completed and handed in for publication.

5. The pamphlet copies of this paper having been secured, it will be possible to mail it to miscellaneous applicants for publications, whose number will be considerable when a new volume shall have been issued, but of whom there have not been very many the past twelve months, owing to the fact that the Commission has published no volumes of annual reports or bulletins for nearly two years.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., January 5, 1889.

DEAR SIR: In reply to yours of January 4th, I beg to say that the instructions embodied in my letter of August 27th, from Wood's Holl, and relating to the preparation of digest of progress, are not modified or superseded by the new assignment of duties made in connection with the publications of the Commission.

Very respectfully,

M. McDONALD,
Commissioner.

C. W. SMILEY, Esq.

(On the margin of above letter:) Col. M.: This did not reach me until the p. m. of January 8. Meantime my report was made (of duties), which did not include this work. In considering the report allowance should be made for this.

C. W. S.

The WITNESS. I mention this simply to show the inconsistency on the part of Mr. Smiley. He states in this letter that he does not propose that he will work that number of hours again, while the other statement is just the opposite.

Q. Mr. Smiley also stated that Mr. Baird was a strong man and Mr. McDonald is a weak man. He means physically, of course.—A. He means otherwise.

Q. Did Mr. Smiley ever speak to you on this subject.—A. As showing how Mr. Smiley has been disposed to every Commissioner of Fisheries we have had, I will state that shortly after Colonel McDonald became Commissioner, Mr. Smiley stated to me, in speaking of the comparative qualifications and qualities of the previous Commissioners, that Professor Baird was a double-faced man and a liar, and that as for Professor Goode if he could ever do him a turn it would be to stab him in the back. I mention that matter as showing what has been the disposition of Mr. Smiley towards his superior officers, and that Mr. McDonald is no exception from the remarks which he has been in the habit of making, and I would say further, that Professor Baird and Mr. Goode, to the best of my knowledge and belief, had Mr. Smiley "placed," brought him out. What I mean to say is that at Professor Goode's recommendation he was appointed by Professor Baird in the Fish Commission.

Q. And he was still in the habit of speaking disrespectfully and disparagingly of Professor Goode as well as of Professor Baird?—A. Yes, sir.

Q. Is it a fact that Mr. McDonald has been in a state of continued nervous prostration during the past two years, and that he has thereby been unfitted for the duties of his office?—A. I consider that that is a most malicious falsehood. Having been directly under Colonel McDonald for the past eight years or thereabouts, and having traveled with him for periods of from one to three months during that time, I can say from the best of my knowledge and belief and from my observation that Colonel McDonald has been in better health during the past three years than he had ever been prior to that time while I was acquainted with him.

Q. Since he has filled the office of Commissioner have you discovered any indications of nervous prostration and unfitness for business?—A. Never. I would like to add also that Colonel McDonald has frequently stated to me that he was enjoying better health—that he has enjoyed better health during the past two years than he had enjoyed for any previous period within his recollection.

Q. Is Colonel McDonald in the habit of scolding employés around him and using language unbecoming a public officer in enforcing discipline?—A. I never heard him use language unbecoming a public officer to any employé of the Commission.

Q. What have you to say in regard to the charge of laxity of discipline among the employés of the office? It has been charged that the discipline is very lax; that the employés came and went about as they pleased, and did not observe hours, and read newspapers and wasted their time. What have you to say with reference to that, so far as your own observation goes?—A. That is a matter which would come directly under my observation, and with which I feel that I am charged. I will read a circular order which was prepared in reference to that matter on June 25, 1888, circular order No. 19. Our circular orders are numbered consecutively. This order is as follows:

[No. 19.—Circular order.]

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., June 25, 1888.

Employés engaged in the performance of clerical or other duties in the offices of the Commission are hereby notified that the hours of duty will be from 9 a. m. to 4 p. m. of each working day, with thirty minutes intermission at noon. In granting leaves of absence assistants in charge of division, and others having the responsible direction of work, will be governed by paragraph 63 of Provisional Regulations. Leaves granted from time to time will be deducted from the regular annual leave of each employé. Notice in writing will be forwarded to the chief clerk in each instance at the time of the granting of such leaves.

M. McDONALD,
Commissioner.

Paragraph 63, to which reference is made, is as follows :

63. Assistants in charge of division, persons in charge of office, and superintendents of stations, are authorized to verbally grant leaves of absence not exceeding one day in duration to persons under their direction. They may also grant leaves of absence not exceeding two and one-half days in any calendar month, but will give the authority in writing and forward a copy to the Commissioner. Such leaves shall not be granted to the detriment of the work of the Commission, except in very urgent cases. All applications for leave exceeding two and one-half days at a time shall be referred to the Commissioner for his approval.

That covers the matter in reference to the——

Q. Has that order been obeyed as far as your knowledge goes?—A. Yes, sir ; when it is not obeyed I feel it my duty to inform the employé whether he be a clerk or other person, that he is not obeying. As in every Department it is necessary now and then to remind a clerk or other employé as to what the regulations are, and it has been necessary to remind two or three of our employés, and one of those is Mrs. Palmer, with reference to whom a statement was made in one of the newspapers that she was a pet. I will read the letter which was sent to her :

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., May 21, 1890.

MADAM : It has been brought to my attention that you have been repeatedly absent from your desk during office hours without permission. Absent from the office or from your desk, as you must be aware, is contrary to sections 61 and 62 of Provisional Regulations of the Commission, which are as follows :

"61. No employé shall absent himself from duty except on Sundays and legal holidays, without permission from his official superior. In case of sickness or unexpected detention notice must be promptly sent by the employé so detained to his superior, stating the cause and probable duration of his absence.

"62. Persons absent on account of sickness will furnish physicians' certificates or other evidence satisfactory to their official superiors that the absence is necessary."

Your attention is called to circular order No. 19, a copy of which is attached hereto.

Very respectfully,

M. McDONALD,
Commissioner.

Mrs. I. MCB. PALMER,
U. S. Fish Commission.

[No. 19. Circular order.]

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., June 25, 1888.

Employés engaged in the performance of clerical or other duties in the offices of the Commission are hereby notified that the hours of duty will be from 9 a. m. to 4 p. m. of each working day, with thirty minutes intermission at noon. In granting leaves of absence assistants in charge of division and others having the responsible direction of work will be governed by paragraph 63 of Provisional Regulations. Leaves granted from time to time will be deducted from the regular annual leave of each employé. Notice in writing will be forwarded to the chief clerk in each instance at the time of the granting of such leaves.

M. McDONALD,
Commissioner.

Q. What has been the effect of that letter?—A. The effect of that letter has been that we have not found it necessary since to remind Mrs. Palmer as to what the hours of duty are. Another employé to whom we found it necessary to forward a similar letter, or a little stronger one, was Mr. Frank Blaisdell, to whom we sent this letter on November 26, 1889:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., November 26, 1889.

DEAR SIR: Your attention is respectfully called to Circular Order No. 19, of date June 25, 1888, which is as follows:

[No. 19. Circular order.]

“Employés engaged in the performance of clerical or other duties in the offices of the Commission, are hereby notified that the hours of duty will be from 9 a. m. to 4 p. m. of each working day, with thirty minutes intermission at noon. In granting leaves of absence assistants in charge of divisions, and others having the responsible direction of work will be governed by paragraph 63 of Provisional Regulations. Leaves of absence from time to time will be deducted from the regular annual leave of each employé. Notice in writing will be forwarded to the chief clerk in each instance at the time of the granting of such leaves.

“M. McDONALD,
“Commissioner.”

Very respectfully,

M. McDONALD,
Commissioner.

FRANK BLAISDELL, Esq.,
U. S. Fish Commission, Washington, D. C.
(Through Mr. Bayley.)

That letter, however, did not have the desired effect. Mr. Blaisdell continued to absent himself from the office without authority, and on February 5, 1890, the following letter was sent to him.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., February 5, 1890.

DEAR SIR: It has again been brought to my attention that, notwithstanding the notice sent you some time ago, you continue to absent yourself from the office of the Commission during business hours without permission. You are hereby notified that a repetition of this offense will be sufficient cause for your dismissal.

Very respectfully,

M. McDONALD,
Commissioner.

FRANK BLAISDELL, Esq.,
Engineer's Office, U. S. Fish Commission.
(Through Mr. Bayley.)

I will state that those letters were prepared by myself, of course for the signature of the Commissioner. Of course, you will understand that we have never considered it necessary to put a watch on any employé of the Commission unless we had very good reason to suppose there was something wrong.

Q. What was the effect of that letter? What was Mr. Blaisdell's course subsequent to that?—A. Subsequent to that he did better, so far as the observance of the office rules are concerned.

Q. Was he dismissed from the service soon after?—A. Yes, sir.

There is one letter I would like to introduce in reference to the questions in regard to Colonel McDonald's physical condition, and that is a letter which was written to Mr. Smiley on January 22, 1889, which is as follows:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., January 22, 1889.

SIR: I do not consider it either necessary or desirable that the Commissioner should be informed of correspondence between yourself and other members of the Commission, unless such correspondence involves official cognizance and action.

The instructions already given by me, relative to the new assignment of duties in connection with the office of editor, are explicit and require no further interpretation. It is, however, necessary that they be complied with without reservation and in a spirit of accommodation and cheerful subordination to authority.

The Commissioner is glad to assure you that he does not consider his health in an imperfect or dangerous condition. He is fully equal to the discharge of all his official responsibilities, nor does he propose either to delegate them or permit their assumption by others.

In the interest of good administration he will insist upon proper subordination to authority. He will make such assignment of duties as the interests of the service require, and he will not permit any feeling of dissatisfaction with such assignments as may be made to manifest itself in efforts to embarrass administration.

The above remarks apply as well to your office as to others.

It is not proper that the time of the Commissioner, which is fully occupied with important duties of administration, should be occupied in settling misunderstandings and controversies upon trivial questions which should never arise if each would apply himself to the competent discharge of his own duties, and should be willing to concede to others the same conscientiousness in the discharge of his duties—the same diligence, intelligence, and integrity of purpose, that he claims for himself.

Very respectfully,

M. McDONALD,
United States Commissioner of Fisheries.

C. W. SMILEY,
Office of Records and Publications.

Mr. Smiley seemed to be very much troubled, unnecessarily, in reference to Colonel McDonald's health.

Q. Can you enlighten the committee in regard to the following statement of Mr. Smiley? Mr. Smiley stated, when he was before the commission, as follows:

I enjoy seeing the fruits of my work, and I can not spend my time, month after month and year after year, pottering in a fruitless way; and if I am handicapped by my superior officer and prevented from bringing forth fruit, I am likely to look where I can produce fruit.

Now, the question is, can you enlighten the committee in regard to that statement? Do you know anything about what he could have alluded to, or why he should have introduced that sort of a remark into his testimony?—A. In reference to that, I should say that there was an abundance of work in Mr. Smiley's office from which he could produce results—or fruit, as he terms it—if he desired to do so. In the first place, he was instructed to prepare a pamphlet in reference to the cultivation of carp and other pond fish, for which there has always been a very great demand. The prospectus for such a pamphlet was submitted by Mr. Smiley and approved by the Commissioner.

About six months after the authority had been given him to proceed with the preparation of that pamphlet, the Acting Commissioner during the absence of the Commissioner, who was then on the west coast, inquired of Mr. Smiley what progress he had made with this pamphlet. He replied then that it was not published and that it would be impossible for him to complete it. That was one matter from which he could have produced very good fruit. Another matter from which he might have produced fruit, to use his language, would have been to systematize the records, papers, publications, etc., in his office. Soon after Mr. Smiley's resignation from the Commission there was a committee appointed, consisting of Mr. Rathbun, Mr. Gill, and myself, to investigate the library. Press of other work was such as to prevent us from completing that work, but we made a sufficiently thorough examination or investigation to show that the papers, records, correspondence, etc., in the library were in a most confused and chaotic condition. I should say that Mr. Smiley ought to have attempted to produce some sort of fruit from that condition of affairs in his own office.

Q. You think if he was anxious for work there was plenty to be done in his office?—A. Yes, sir.

Q. Are there any specific reasons why the records of the Commission were transferred from Mr. Smiley?—A. The most important reason was the fact that the work in the Commissioner's office was greatly retarded and embarrassed on account of the delay frequently in receiving each day's mail from Mr. Smiley. This was before the records were transferred from Mr. Smiley. He had instructed his clerks, I was so informed when I made inquiry, not to send the mail to the Commissioner's office until he had read it, and as he invariably came late to the office during Colonel McDonald's administration, the mail, of course, was received in our office late. In addition to this reason we had always had a great deal of difficulty in getting information from Mr. Smiley's office in reference to matters of record.

Q. All these matters of record went to his office first?—A. Yes, sir; that was before the transfer, and I recommended on three or four occasions to the Commissioner in the interest of the public solely that the records be transferred from Mr. Smiley. I would say also that several other employes of the Commission made complaint in reference to the difficulty in getting information from the records.

Q. Was Mr. Smiley in the habit of absenting himself from the office during Colonel McDonald's administration?—A. Frequently when I had occasion to send for information from Mr. Smiley or Mr. Smiley's office, I was informed that he was not in the office. During that time he had charge of the editorial work, however, and there might have been occasion at times for him to be absent from the office; that is, to go to the Printing Office. His frequent absence, however, and apparent lack of interest in his work and the difficulty of obtaining information from his office, I would say were abundant reasons for making the transfer.

Q. Since the transfer of the editorial work and records from Mr. Smiley is it a fact that it has cost, as Mr. Smiley has stated, one-third more to do that work than before?—A. No, sir.

Q. Mr. Smiley has stated that since the transfer it has cost one-third more to do the work than under the administration of his office?—A. No, sir; that is not so. The Commissioner has shown by actual figures that it cost just one-third less, viz, that there is a saving since the transfer of about \$2,000 per annum.

Q. Is there any reason why Mr. Smiley could not have maintained the same discipline among his employes under Colonel McDonald as existed under Professor Baird?—A. None in the world if he had desired to do so.

Q. It was stated by Mr. Moore, the superintendent of distribution, that some of the shipments of shad fry that were turned over to the messengers in twenty cans during the past season contained one million four hundred and seventy-four thousand fry, and that in other cases a million and a half fry were placed in twenty cans. What have you to say in reference to this statement?—A. In reference to that statement I submit herewith the reports of the messengers who took out from the Central Station during the present season the shipments of shad for planting in the streams throughout the country; that is, they were streams not very remote as a rule from Washington. These reports show the condition of each shipment, the condition of the fish when planted, the percentage of loss, and the number planted. They also show the number originally given to each messenger.

In reference to the specific statement that one million four hundred and seventy-four thousand fry were put in twenty cans, the statement of the messenger who had charge of the shipments shows that they were taken in forty cans.

Q. In forty cans?—A. Yes, sir; in forty cans.

Q. This number in forty cans?—A. Yes, sir; instead of twenty cans. That would be a reasonable number to the can.

Q. Did you ever know of one million and a half being placed in twenty cans?—A. In the case of the shipment taken by Mr. Steuart, to Goldsborough, N. C., 80,000 were taken in one can as an experiment, and he so indicates on his report that it was an experiment, and he reports of that 80,000 that 60 per cent. were planted. That is, that there was a loss of 40 per cent.

Q. That was a larger shipment than was usual?—A. Yes, sir.

Q. And was done purely as an experiment?—A. Yes, sir.

Q. Do you consider the interest of the work of the Commission justified an experiment of that character?—A. Yes, sir.

Now, in another case 1,500,000 were taken in thirty cans, not in twenty cans, by J. E. Brown, messenger, to Laurel, Md., which is only half an hour's ride from Washington. In his report he states that they were planted in excellent condition, and without any loss whatever. That will be shown in that statement.

Q. Mr. Moore also stated that he had frequently protested against putting so many fry in a can, because he did not think it could be done. Did he ever make such protest to you or to any one in the Commission to your knowledge?—A. He never made any such statement to me, but the Commissioner informed me that he did refer to the fact that he thought too large a number was placed in the cans. In reference to that I will read the following letter from the superintendent of the Central Station:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., May 6, 1890.

DEAR SIR: I respectfully report that Mr. Dana is keeping the records of shad-hatching in this station without variation from former seasons, and that each ticket shows in figures the number received and the number hatched. The losses in hatching are no greater than usual and rumors reaching you of 50 per cent. loss in the station are groundless, except in the case of a lot of eggs from Havre de Grace dropped here as a bad lot by one of the cars.

As regards shipping fish by the 70,000 or 80,000 to the can I have this to say: Mr. Moore requested 80,000 in one can for some purpose known to himself, and that a lot of 1,500,000 were sent to Laurel Station—only a thirty minute ride—in cans of 45,000 fry each. All other shipments have been normal. Mr. Dana informs me that he has fully explained these matters to you since you expressed your dissatisfaction on Saturday.

The reports which reached you appear to be sensational and libellous.

I am yours, truly,

S. G. WORTH,
Superintendent Central Station, corner of Sixth and B streets southwest.

Hon. M. McDONALD,
Commissioner.

Q. What is the usual number of shad fry placed in a can?—A. About 25,000.

Q. Can a greater number be taken with safety on short trips?—A. Yes, sir; as is shown by the statement of Mr. Brown of a shipment of one million and a half taken to Laurel, and it is done frequently on short shipments.

CENTRAL STATION, *May 2, 1890.*

In compliance with instructions received from headquarters U. S. Fish Commission, I have this day forwarded by J. E. Brown, to Meherring River, Virginia, 1,474,000 shad fry.

Shipment put up in forty cans.

RICHARD DANA,
Expert Fishculturist.

U. S. FISH COMMISSION,
Washington, D. C.

MESSENGER REPORT.

U. S. COMMISSION OF FISH AND FISHERIES,
May 2, 1890.

Report of shad fry distributed by J. E. Brown.

Date of receipt: May 1, 3 p. m.

Whence received: Central Station, Washington, D. C.

Number of shad fry: 1,474,000.

Date of departure from Baltimore and Potomac depot: 4.55 p. m.

Disposition of: Appomattox River, near Petersburg, Va., and Stony Creek, at Stony Creek, Va.

Date of deposit: May 2, 6 a. m.

Nearest railroad town to place of deposit: Petersburg, Va., and Stony Creek, Va.

Condition of fry when deposited: Fair.

Loss of fry in transit: 10 per cent.

Date of arrival at Central Station on return: 11.55 p. m., May 2.

Remarks: Fish were very much crowded in cans, and a good deal of dirt and shells put up with them; was on a freight train from Richmond to Stony Creek, and deposited some of the fish in the Appomattox, at Petersburg.

J. E. BROWN,
Messenger.

Loss.....		200,000		
		2,590,000		

On arrival at Montgomery on the evening of May 9, I ascertained that there was no train for Troy, Ala., until the next evening, so I saved eggs enough to make the trip. The next morning they cut off the water supply. After pumping it over a few times, found the eggs not looking well and hatching out weak fry, and in order to save them, placed them all in the river at Montgomery, so did not make trip to the Conecuh River at Troy, Ala. The 475 gold fish called for on instructions were not delivered by Central Station.

MESSENGER REPORT.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., May 13, 1890.

Report of shad fry distributed by R. S. Johnson.

Date of receipt: May 9, 1890.

Whence received: Car No. 3, at Montgomery, Ala.

Number of shad fry: 400,000.

Date of departure from Montgomery, Ala.: May 9, 1890.

Disposition of shad fry: Planted in Escambia River.

Date of deposit: May 9.

Nearest railroad town to place of deposit: Flomaton, Ala.

Condition of shad fry when deposited: Fair.

Loss of shad fry in transit: 5 per cent. = 20,000.

Date of arrival at Montgomery, Ala., on return: May 10, 1890.

MESSENGER REPORT.

U. S. COMMISSION OF FISH AND FISHERIES,
May 19, 1890.

Report of shad distributed by C. A. Steuart.

Date of receipt: May 14.

Whence received: Central Station.

Number of shad: 554,000.

Date of departure from Washington, D. C.: May 14.

Disposition of shad: Hurricane Creek.

Date of deposit: May 16.

Nearest railroad town to place of deposit: Blackshear, Ga.

Condition of shad when deposited: Good.

Loss of shad in transit: 30 per cent.

Date of arrival at Washington, D. C., on return: May 18.

Remarks: Shad designated for Satella River, Georgia, at Folkston, Ga., but owing to excursion party from Atlanta baggage-car packed and impossible to properly work fish. Owing to their weak condition, thought it best not to risk further travel and planted them in above-named creek, which empties into Satella a few miles below this point.

C. A. STEUART,
Messenger.

(Miles, 1,548.)

MAY 19, 1890.

Dear Mr. MOORE: After using all possible means (ice water, etc.) on fish for Satilla River I arrived at Atlanta, Ga., all right, but owing to excursion party from Atlanta, Ga., the baggage car was packed and could not work fish. Mr. Sturgis, traveling passenger agent, whose card I inclose, and others of the party not knowing of the condition of things asked, "Why not plant them at Blackshear, Ga. (this side of Folkston), as that stream (Hurricane Run) would do just as well." So, after leaving them, and seeing the weak condition of the fish on the morning of the 16th inst., thought it best not to risk further travel and planted them in this stream, which empties into Satilla River below.

Very respectfully, yours, etc.,

C. A. STEUART.

CENTRAL STATION, May 16, 1890.

MESSENGER'S REPORT.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., May 5, 1890.

Report of shad eggs and fry distributed by car No. 2.

Date of receipt. April 29 and 30.

Whence received: Havre de Grace Station, Maryland, and Central Station.

Number of eggs: Havre de Grace, 3,215,000; turned over to Central Station 2,136,000 in exchange for 3,293,000, making on car 4,372,000 eggs.

Date of departure from Perryville, Md.: 1.30 a. m. April 30.

Disposition of eggs and fry: Rivers in Georgia.

Date of deposit: May 1 and 2.

Nearest railroad town to place of deposit: Augusta and Macon, Ga.

Condition of fry when deposited: Very weak.

Loss of eggs and fry in transit: 1,703,000.

Date of arrival at Washington, D. C., on return: 2.30 a. m. May 5.

Remarks: The eggs I had on car were doing very well until I reached Augusta, Ga., then from some cause which I am unable to determine the eggs and fry produced from them commenced dying very rapidly.

Number of fry 2,500,000

Loss 1,703,000

Q. Have you read, in the past, a number of newspaper articles reflecting upon the management of the Commission and upon the conduct of the office?—A. I have.

Q. You have read those articles?—A. I have.

Q. If you have anything to say from your own knowledge touching the truth of the articles, or otherwise, you will please state it in your own way—A. There are so many false statements made that from memory I could not attempt to state them.

Q. Were any of the charges that were made true to your knowledge? You might remember that.—A. In the matter of salaries they may have gotten one or two of the salaries correct; but in reference to the general charges of favoritism, nepotism, undue administration, etc., I can say that I have seen no such thing in the Commission. I do not know of a single employé who has been appointed on account of favoritism by the Commissioner, and I would say further that most of the employés assigned to work in the office are assigned at my recommendation and are transferred from one office to another at my recommendation.

Q. Is it always for the good of the service?—A. Yes, sir, and in every case in the interest of the service.

Q. Do you know how many relatives of Colonel McDonald or his wife are in the employ of the Commission?—A. I do not think the Commissioner has a single relative in the Commission. I have understood that Mr. McCormick was a relative of Mrs. McDonald.

Q. And the Lewis's?—A. I have understood they were not even distantly related to Mrs. McDonald.

Q. Was Lewis employed by the Commission before McDonald became Commissioner?—A. Yes, sir.

Q. And McCormick was appointed by the present Commissioner?—A. Yes, sir.

Q. You are acquainted with Mr. McCormick?—A. Yes, sir; I know him very well.

Q. Is he a good and efficient clerk in the position he occupies?—A. I have always understood so from Mr. Rathbun, under whose immediate direction he is, and I can say further from what I have seen of his work that I consider him a most diligent, faithful, and efficient workman.

Q. Do you know Mr. Worth?—A. Yes, sir; I am very well acquainted with him.

Q. Did you have occasion to visit Fort Washington during the last season when he was there in charge?—A. Yes, sir; I visited Fort Washington once, I think, last season.

Q. Do you know whether or not Mr. Worth was in the habit of drinking excessively while he was there during last season?—A. I never heard of his drinking excessively except from one source, and when I heard it from that source I said it was a lie. I have known Mr. Worth for several years, and I know, at least I am reasonably certain, that if there was any excessive drinking going on at Fort Washington it would have been impossible to hide it, owing to the fact that either Colonel McDonald or some member of the Commission, or some person from Washington who had relationship with the Commission, went down there two, three, or four times a week. So that, if anything of that kind existed, it could not have been hidden.

Q. Do you consider Mr. Worth a good and efficient officer in the position he occupies?—A. I consider him one of the best qualified men generally that we have in the Commission. Of course you understand that we have very efficient officers in charge of specific work, but I speak now of general qualifications.

Q. State whether under Colonel McDonald old employes have been dropped and new employes appointed which worked disadvantage to the service?—A. I do not believe that Colonel McDonald has discharged a single employe who served under Professor Baird. There have been changes, there have been voluntary changes on the part of those who went out. I do not think he made a single discharge of an employe who served under Professor Baird.

Q. When occasion offered have you known of promotions being made on the score of merit where there were opportunities to make promotions on account of people going out? Has it been his custom to promote those who have served well to advanced positions?—A. Yes, sir; solely on account of merit and fitness for the position.

Q. Do you happen to know of any appointment which has been made by Colonel McDonald, which, in your opinion, was made on political grounds?—A. I do not know of a single appointment which has been made on political grounds. I do not know the politics of a dozen people in the Commission. It has never been considered a condition precedent to his appointment. It has never been considered necessary that a man should belong to one political party or the other. It was never considered so under Professor Baird's administration, and Mr. McDonald at the outset of his administration was very careful to say that he would not allow politics to have anything to do with the selection of appointees. I know further that requests have been made on the grounds of political pressure solely, and that in every case Colonel McDonald has resisted those requests. So far as I am concerned, I have never had any politics.

Q. It has been claimed that Commissioner McDonald, being a Democrat in politics, has favored employes who were Democrats. Do you think that is true?—A. I do not know of a single instance of that character. On the contrary I am reasonably positive that the three assistants next to him are Republicans.

If you are through with your questions, I would like to refer to one matter which was commented upon in a certain newspaper—I do not remember the name of it—in reference to the appropriation of money in lump for the conduct of the Fish Commission work, and I simply desire to say in reference to that, that Mr. McDonald submitted to the chairman of the Committee on Appropriations, Fiftieth Congress, first session a proposed classification of the employes, and in which he establishes, the grades and the salaries.

Q. And asks for an appropriation sufficient to cover it?—A. Yes, sir; and he asked further that it should be legalized, which was not done, however. I would like to say that we have, since that time, followed to a very great degree the classified or graded service as proposed by him. As it was not legalized, we did not consider that we had to follow it to the letter.

The classification is as follows :

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., April 9, 1888.

DEAR SIR: I respectfully transmit herewith revised "estimates of appropriations" for the U. S. Fish Commission for the fiscal year beginning July 1, 1888.

My predecessor in office, Prof. G. Brown Goode, was called upon to transmit the regular estimates shortly after he assumed direction of the affairs of the Commission and before determining upon the organization and definite direction of the work of the Commission.

It is necessary that these estimates should be corrected in important particulars in order that adequate provision may be made to carry on work at the new stations authorized by Congress and for the extension of the statistical and fisheries investigations to the South Atlantic, Gulf of Mexico, and West coasts. This will involve a moderate increase in the total estimates, the nature and necessity of which I will be glad to explain to the committee at their convenience.

Accompanying the estimates, and explanatory of the same, are schedules A, B, C, D, and E, giving the details upon which the several items of the estimates are based; also a memorandum explanatory of the increase in estimate over the appropriations for 1888.

Very respectfully,

M. McDONALD,
Commissioner.

Hon. S. J. RANDALL,
Chairman Committee on Appropriations, House of Representatives.

Memorandum to accompany revised estimates for 1888-'89, U. S. Commission of Fish and Fisheries.

The appropriations for 1887-'88 aggregate \$222,020, as follows:

Propagation of food-fishes.....	\$130, 000
Rent of offices	2, 020
Maintenance of fish-ponds, etc	45, 000
Maintenance of vessels.....	45, 000

The revised estimates for 1888-'89, herewith submitted, amount to \$249,080, as follows:

Salary of Commissioner.....	\$5, 000
Propagation of food-fishes.....	130, 000
Distribution of food-fishes.....	31, 180
Rent of offices	4, 000
Maintenance of vessels.....	43, 900
Inquiry respecting food-fishes.....	23, 000
Statistical inquiry	12, 000

The revised estimates being \$27,060 in excess of the appropriation for 1888.

The estimates for 1888-'89 provide for increased work in the propagation and distribution of shad, salmon, whitefish, trout, and other fish at all established stations, and for the maintenance and operation of the following additional stations, viz:

Gloucester station, Mass.....	\$3,000
Duluth station, Minn.....	4,800
McCloud River station, Cal., }	
Columbia River station, }	13,000

and for the following items not included in the previous estimates, viz:

Salary of Commissioner.....	5,000
Increased rent of offices.....	1,980
Total.....	27,780

They also provide for the extension of the work of the statistical and fisheries divisions to the investigation of the fisheries and fishing-grounds of the South Atlantic, Gulf of Mexico, and Pacific coasts.

U. S. COMMISSION OF FISH AND FISH FISHERIES—ESTIMATES OF APPROPRIATION 1888-'89.

Salary of Commissioner.....	\$5,000
-----------------------------	---------

PROPAGATION OF FOOD-FISHES.

For the introduction by the U. S. Commission into and the increase in the waters of the United States of food-fishes and other useful products of the waters, including lobsters, oysters, and other shell-fishes, and for such general and miscellaneous expenditures as the Commissioner of Fish and Fisheries may find necessary in the prosecution of his work, including salaries or compensation of all necessary employes, \$130,000, as follows:

Administration.

Schedule A (salaries and general expenses).....	\$34,940
(a) Office of Commissioner.....	\$9,820
(b) Office of accounts.....	6,180
(c) Office of records and publications.....	6,440
(d) Property office.....	2,500
(e) Engineer office.....	2,700
(f) Office expenses.....	7,300

Division of fish-culture.

Schedule B.....	62,920
(g) Office force.....	3,620
(h) Propagation, general.....	7,800
(i) Propagation of shad.....	11,000
(k) Propagation of whitefish.....	10,000
(l) Propagation of marine species.....	12,000
(m) Propagation of salmon, Pacific coast.....	13,000
(n) Propagation of salmon, Atlantic coast.....	5,000
Schedule C.....	28,310
(o) Maintenance and operation of stations, as follows:	
Carp ponds, Washington, D. C.....	5,940
Central station, Washington, D. C.....	5,630
Wytheville station, Virginia.....	3,960
Northville station, Michigan.....	5,700
Duluth station, Minnesota.....	4,800
Cold Spring Harbor, Long Island.....	1,500
St. Jerome's station, Maryland.....	780
General and miscellaneous expenditures, such as the Commissioner of Fish and Fisheries may find necessary in the prosecution of the work.....	3,830

130,000

DISTRIBUTION OF FOOD-FISHES.

For the distribution of the eggs and young of the whitefish, salmon, shad, carp, cod, lobster, and other useful inhabitants of the waters, including salaries or compensation of all necessary employes, \$31,180, as follows:

Schedule D:

(p) Salaries.....	\$8,880
(q) Movement of cars, traveling expenses, etc.....	17,000
(r) Maintenance and repairs	3,500
(s) Express charges, freights, etc	1,800

NOTE.—This item has been heretofore provided for under the title "maintenance of fish ponds," for which the appropriation for the current fiscal year is \$45,000.

RENT OF OFFICES.

Rent of rooms for offices in the city of Washington	\$4,000
---	---------

MAINTENANCE OF VESSELS.

Maintenance of the vessels and steam-launches of the U. S. Fish Commission, and for boats, apparatus, machinery, and other facilities required for use with the same, including salaries or compensation of all necessary civilian employes	\$43,900
---	----------

NOTE.—This item includes the cost of one year's work of the steamer *Albatross* in the study and development of the fishery resources of the Pacific coast.

INQUIRY RESPECTING FOOD-FISHES.

For continuing the inquiry into the causes of the decrease of food-fishes in the lakes, rivers, and coast waters of the United States, and for the study of the waters of the interior in the interests of fish-culture; for the study of the methods and relations of the fisheries, with a view to their improvement; for the exploration of the fishing-grounds of the South Atlantic and Gulf coasts, with a view to the development of the commercial fisheries; and for the preparation of reports relating to the inquiry, including salaries or compensation and field expenses of scientific assistants, fishery experts, and other necessary employes, \$23,000, as follows:

Researches and investigations (Schedule E and note attached).....	\$15,000
Explorations of fishing grounds	8,000

STATISTICAL INQUIRY.

For the collection and compilation of the statistics of the fisheries of all portions of the United States, including persons employed, capital invested, and the quantity and value of the products, and for such general and miscellaneous expenditures as the Commissioner may find necessary in the prosecution of this work, including salaries or compensation of all necessary employes.....	\$12,000
---	----------

SCHEDULE A.—Administration, salaries, and general expenses.

	Salaries.	Other expenses.	Total.
<i>Office of Commissioner.</i>			
1 assistant in charge of inquiry	\$2, 400		} \$9, 820
1 field assistant, fisheries division.....	2, 400		
1 chief clerk	2, 200

Messenger	400		
Compensation of experts, employed in special researches.....			5,000
Traveling expenses, and subsistence of field parties.....			3,000
Collecting appliances, instruments, preservatives, etc.....			2,400
Contingent expenses.....			900
Total			15,000

INQUIRY RESPECTING FOOD-FISHES.

[Memorandum.]

This inquiry relates both to the general fisheries and to fish-culture, and comprises:

(1) The prosecution of researches respecting the causes of the decrease of food-fishes, as directed by the law establishing the Commission.

(2) The exploration of the ocean, lake, and river fishing-grounds, with respect to their location, area, and resources, and the mapping and describing of the same for the information of the fishermen.

(3) The investigation of the temperature and density of the water on the fishing grounds, and of the spawning and feeding habits of fishes, as influencing their migrations and varying abundance from year to year.

(4) The study of the life history of important economic fishes, and of the conditions of their environment, as a preliminary to their propagation and transplantation to new waters.

(5) The study of methods of fish preservation, with special reference to the bait supply, etc.

(The above items have been regularly provided for in previous appropriation bills, but have not been separately stated.)

The Commissioner recommends, and begs to request the sanction by Congress of, the policy pursued by the late Commissioner in extending the facilities of the Wood's Holl Station to scientific investigators and representatives of educational establishments, from whom much substantial assistance has been obtained by the Commission. The buildings contain ample space for their accommodation without interfering with the legitimate work of the Commission, and their presence does not materially increase the cost of maintaining the station. A large amount of valuable material, resulting from the explorations of the steamers of the Commission, is brought into the station, especially during the summer, thus affording opportunities for scientific research which do not exist elsewhere in the United States. Similar stations are maintained by nearly all the maritime nations of Europe and by Japan.

The WITNESS. Further, I would also add that our service is now practically graded; at least, it is so nearly graded that it could be done without any trouble whatever, in my opinion. That is, we have first, second, and third class station superintendents. We have car service captains at an established grade. We have messengers, assistant messengers, and apprentice messengers, and as far as practicable we have our clerical force on a graded service.

Q. It has been claimed in some of those newspaper articles that the business, that is, the monetary affairs of the Commission were run in a loose way; that the purchase of necessary supplies, stationery, and all the various articles required by the Commission were bought in a haphazard way and paid for in a loose kind of way. Have you any knowledge as to the system of purchasing of and payment for supplies?—A. All supplies of the Commission are purchased on an approved requisition. That is, if any one in the office desires a supply of stationery, a chair, or anything else pertaining to the office, he makes out a requisition for it, and it is submitted to me. By the authority of the Commissioner I approve that requisition, if it comes under what would be considered as necessary and essential for the office. If there is an amount of money involved, that requisition goes to the disbursing agent first, and he certifies as to whether it is in accordance with law, as to whether we have the means wherewith to pay when the expense is incurred. Then it is returned to my office. If I consider that there is anything unusual, I take it to the Commissioner; so that there is no possibility for looseness in the way of purchasing or paying for purchases by the Commission, nor in the use of stationery.

Q. So that as to purchases outside of the daily needs of the office anything at all unusual you submit the requisition to the Commissioner?—A. Yes, sir; no one has authority to incur a single dollar of expense until he has that approved requisition, unless it would be in the case of probable destruction of public property. Then, of course, he would be authorized without this approved requisition to save that property and to incur a reasonable expense in doing so. But he is required at once to submit what we call an emergency requisition to cover that.

Q. Say a requisition is granted and the purchase is made; is there somebody who knows that that property, whatever it may be, is delivered, and is it checked off? Is there a regular system in regard to that?—

A. Yes, sir. Say the superintendent of the station at Northville, Mich., should make a purchase of property of any character—cans or anything else; the bill is made out by the person from whom he makes the purchase. He sends that bill certified to the disbursing agent that it is correct. You understand, of course, that there is a requisition already on file in the hands of the disbursing officer before this expenditure is incurred, and after he makes it—

Q. The superintendent in charge certifies to the delivery of the property?—A. Yes, sir; and sends the bill to the disbursing agent. If there is any inconsistency between that bill and the requisition the bill is not paid until it is explained. Then in addition to that and as a further means of security and establishing an accountability for that property the superintendent of the station who acquires the property forwards to the property clerk of the Commission a property receipt wherein he is charged with and accountable for that property until he is relieved by the Commission.

Q. And if the bill is in accordance with the requisition, then the bill is paid?—A. Yes, sir; by the disbursing agent.

TESTIMONY OF CHARLES W. SCUDDER—Recalled.

CHARLES W. SCUDDER, being recalled, testified as follows:

By the CHAIRMAN:

Q. You have already testified before the committee?—A. Yes, sir.

Q. What is your present position in the Fish Commission?—A. Record clerk; I have charge of all the manuscript and letters of the Commission.

Q. Were you ever connected with the record work under Mr. C. W. Smiley?—A. Yes, sir.

Q. Are you familiar with the routine through which the letters, etc., pass in being registered under the direction of Mr. Smiley?—A. Yes, sir; the letters were first opened in the chief clerk's office, then went by messenger to Mr. Smiley's office and left on his desk generally until Mr. Smiley came in. After that they were given to another clerk to register—given to another clerk, rather, to make on the top a synopsis of them; then they were registered by still another clerk. After registration they were passed back through the same channel to Mr. Smiley's desk, and if he were there they were turned over to the Commissioner. If he were not there they were held for his return. Sometimes the letters would get to the Commissioner's office as late as 12 or 1 o'clock.

Q. Letters received in the morning?—A. Yes, sir.

Q. About how many letters were daily registered during the period that Mr. Smiley had charge under Colonel McDonald's administration?—A. About fifty a day, I should think.

Q. About how long does it now take to register the letters and have them sent to the Commissioner's desk?—A. They are all returned to the Commissioner by 10 o'clock in the morning. The important letters are on the Commissioner's desk by half past nine.

Q. Why are they placed before the Commissioner earlier now than under Mr. Smiley's administration?—A. Under Mr. Smiley's registration they were held for his arrival, and they also went through this routine of three or four clerks registering. Now I open the letters in the morning, generally about a quarter to 9, and give them to a clerk to register. Then they are passed right into the Commissioner's office without going through so many hands.

Q. Is the present system as orderly and systematic as the former system?—A. Yes, sir; it is a very similar system to that under Mr. Smiley, with a few minor changes and alterations.

Q. Which result in the saving of time?—A. Yes, sir.

Q. You say that Mr. Smiley was not in when the letters were registered and came back to his office—was he not in usually by 9 o'clock?—A. No, sir; he was seldom there before 10, and it was sometimes 11 o'clock before he came.

Q. Was he detained by fishery business?—A. I think not. I do not know of any fishery business that would detain him.

Q. Do you consider that the efficiency of the service has been greatly increased by the transfer of the records from Mr. Smiley's office?—A. I think it has been materially increased, because while under Mr. Smiley's direction the registration of the mail was materially delayed and the letters often called for were not found by him in his office, thus interfering with the work of the Commissioner's office. That is, if a special letter was asked for from Mr. Smiley's office, although it may have been there, he would not always furnish it.

Q. Why?—A. He would report that it was not there.

Q. I understand what you mean?—A. I think it was through careless search that it was not found. I have one letter particularly in mind of Bergen Museum, Germany, and that was asked for, but Mr. Smiley said he had no copy of any such letter, which necessitated the writing to Germany of two letters.

Q. Were not complaints frequent during the last year of Mr. Smiley's administration of the Commission as to the manner in which he conducted the work of his office?—A. Yes, sir; there was great delay in getting stationery and letters from his office.

Q. Have you seen circular order No. 19 in reference to the hours of duty which the clerks and other employés in the office are required to observe?—A. Yes, sir.

Q. When did you first see it?—A. In the summer of 1888, soon after it was issued; I saw it in Mr. Smiley's office.

Q. Did you understand this order was to be strictly enforced, and did you yourself comply with its requirements?—A. Yes, sir; I understood it was to be enforced and I complied with it as far as I possibly could.

Q. Did Mr. Smiley, from your observation, comply with the provisions of this order?—A. No, sir; he was not there at 9 o'clock, and would leave at various times for private business.

Q. Have you any knowledge as to whether his coming late, 10 or 11 o'clock, and leaving early was because he did official work at his home, or was it for his own private convenience?—A. I have no knowledge on the subject only from what I have heard, that he went home and did private work in the afternoons, and that mornings he would not get his breakfast until half-past 9. Consequently he would not be doing Fish Commission work.

Q. During that time did he not act as editor?—A. I am speaking of the time after the editorial work was transferred.

Q. So that you know of no official business which kept him from the office?—A. No, sir.

Q. Is it the understanding that all circular orders issued by the Commissioner are to be strictly complied with?—A. I think so.

Q. Did he confine himself strictly to Fish Commission work after office hours?—A. No, sir; I have known him to do private work.

Q. Of what character?—A. I think he edited a microscopical journal; he did some of that work, and not only did not confine himself to Fish Commission work, but he would engage in the discussion of topics foreign to Fish Commission work.

Q. With whom?—A. With employés, and thus interfered with the work of other employés by loud talking. I have known him to engage in such discussions for two hours at a time.

Q. Would he frequently do that?—A. Yes, sir; quite frequently.

TESTIMONY OF ALBERT J. STOERZER.

ALBERT J. STOERZER, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Are you in the employment of the Fish Commission?—A. Yes, sir.

Q. When did you first enter the service?—A. In February, 1885.

Q. What was the nature of your work at that time?—A. I was appointed as a messenger.

Q. In which office?—A. When I was first appointed I worked for Mr. Gill, the disbursing agent.

Q. Were you afterwards transferred to Mr. Smiley's office?—A. Yes, sir; in the summer of 1885. The others were away, and I was put under Mr. Smiley, and then I continued under Mr. Smiley.

Q. What are your duties at present?—A. I am rated as a clerk, and issue the stationery and distribute the publications under the direction of the chief clerk.

Q. Are you more fully occupied now than you were under Mr. Smiley's administration?—A. I am well occupied now. While I was under Mr. Smiley I was still rated as a messenger, although I did clerical work almost all the time I was under him.

Q. You have now more responsible duties?—A. Yes, sir; I was appointed as a clerk from the beginning of last September.

Q. Under whose direction are you now engaged?—A. Under direction of the chief clerk.

Q. Have you seen circular order No. 19 in reference to the performance of duties by employes engaged on clerical and other work of the Fish Commission?—A. Yes, sir.

Q. With regard to attendance, etc.?—A. Yes, sir.

Q. From your observation do the employes of the office comply with the requirements of the order, that is, are they there at 9, and do they remain until 4 o'clock?—A. Yes, sir; as far as I know.

Q. Do you think they comply pretty fully with that order as a rule?—A. Yes, sir; so far as I know.

Q. What time do you generally reach the Fish Commission office?—A. I am there by 9 o'clock, and I have made it a practice always to be there before 9. My usual time, however, is from a quarter to ten minutes of 9.

Q. What time did Mr. Smiley usually reach the office when he was connected with the Fish Commission?—A. When the office was up at the Safe Deposit building it was usually about 10 o'clock, and last summer, I guess during August, it used to be 11 o'clock, although it was not always 11 o'clock. From half-past 10 until 11 and sometimes after that.

Q. At what time was he in the habit of leaving the office?—A. He usually left at 4 o'clock, I think, but in the afternoons sometimes he would go out at 12 or after 12 and stay out for an hour or two and then come back and stay until 4 o'clock.

Q. So that he did not comply very fully with order No. 19?—A. No, sir.

Q. You think he did not comply with the order to come at 9, but would come late and go out for an hour or so and come back and stay until 4 o'clock?—A. Yes, sir.

Q. About how many hours a day did Mr. Smiley serve in the office when you were there?—A. From three to three and a half hours I should say.

Q. Was not the registering and returning of the letters and circulars materially delayed by the tardiness of Mr. Smiley?—A. Yes, sir; because the mail was brought in and laid on his desk until he saw it before it was registered, and in 1889, I think, several times the Commissioner sent for the mail before it had been registered, and so at last—although I never heard him give an order—Mr. Latimer used to register the mail and leave it on Mr. Smiley's desk. When it was sent for it was sent to the Commissioner; otherwise it remained on his desk.

Q. Unless it was sent for it laid on his desk?—A. Yes sir.

Q. About what time on an average would the morning's mail be inspected by Mr. Smiley and sent over to the Commissioner?—A. I do not remember exactly, but I think from 11 to half-past 11; between that time, I think.

Q. Have you heard any expressions of dissatisfaction at the manner in which Mr. Smiley discharged the duties of his office, especially during the last year of his connection with the Fish Commission?—A. The general expression all round among the clerks of the office about his management of affairs, and one instance I specially remember was last summer while Mr. Rathbun was acting Commissioner, he wanted a certain book in the library, and I inquired of it from Mr. Smiley; Mr. Rathbun wanted to know whether they had more than one copy of it, and I think Mr. Smiley gave some answer; said he did not know, or something like that. Mr. Rathbun wanted to know if he did not know what he had in the library.

Q. What was the general opinion among you clerks there as to Mr. Smiley's promptness and good administration of his office?—A. It was not very favorable; it was not favorable.

Q. Do you think the affairs of that office are better managed now than they were while Mr. Smiley was there?—A. Yes, sir; I think so.

Q. You do?—A. Yes, sir.

TESTIMONY OF HARRY P. PARKER.

HARRY P. PARKER, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. Are you in the employment of the U. S. Fish Commission?—A. Yes, sir.

Q. How long have you been in the service?—A. Since March, 1884.

Q. Under whom have you served?—A. Under Professor Baird and Colonel McDonald.

Q. And Mr. Goode?—A. Yes, sir.

Q. Do you work in the office which was under the charge of Mr. Smiley?—A. Yes, sir.

Q. What was the nature of your work under Mr. Smiley?—A. In his office it was type-writing, stenography, and clerical work.

Q. What are your duties at present?—A. Stenography, type-writing, and clerical work.

Q. Did Mr. Smiley keep you fully employed at work?—A. The last part of his time he did not.

Q. For how long a period were you sometimes without work when you were under Mr. Smiley's direction?—A. As near as I can remember sometimes two or three hours.

Q. How has this been when you have worked for others in the Commission?—A. It has not been true in regard to others.

Q. In what other offices or divisions have you been engaged?—A. In the division of fisheries, and a short while for the chief clerk, and I was also employed for a while with Col. John Gay, inspector of stations.

Q. At what time did Mr. Smiley generally arrive at the office?—A. I think generally you might say about 10 o'clock; somewhere in the neighborhood of 10 o'clock, although I was in another room. The only way I know that is, I used to go to him some mornings before 10 o'clock for work and he would not be there, and I inquired if he was and the messenger would say he was not in.

Q. Usually about 10 o'clock he would get in?—A. Yes, sir.

Q. About how many hours did he generally remain in the office each day?—A. As well as I could know, I think he staid there not over four; less, but not over four.

Q. He went away before 4 o'clock usually?—A. Yes, sir.

Q. Have you seen a copy of circular order No. 19 in reference to the hours which clerks and other employés in the office are required to devote to public business?—A. Yes, sir.

Q. When and where did you first see it?—A. I saw it about in the summer of 1888, after it was issued.

Q. After Colonel McDonald came in?—A. Yes, sir.

Q. What have you to say in reference to the charge of laxity of discipline generally among employés at the office? It has been stated that you did about as you pleased; came and went away when you pleased.—A. It is not true.

Q. You think, as a rule, the clerks are there promptly at 9 o'clock?—A. Yes, sir.

Q. And they stay until 4?—A. Yes, sir.

Q. They do not leave without special permission?—A. No, sir; no one can do that. They must have permission. That is true of every clerk.

Q. Have you frequently heard expressions of dissatisfaction at the manner in which Mr. Smiley conducted his office, especially during the last year of his connection with the Fish Commission?—A. I have heard the clerks in the division complain of his treatment and policy, but I never heard any one outside of my division complain. I know there was dissatisfaction; at least, I understand there was dissatisfaction.

Q. You say clerks in the division complained; what was the ground of their complaint?—A. In some cases they were made to do the work of other clerks. I myself sometimes would have to do other work. Mr. Smiley told one of the clerks, Mr. Latimer, that he might order me to do his work, I understood that; I did not hear it.

Q. Did you, as a matter of fact, do Mr. Latimer's work?—A. Yes, sir.

Q. What was he doing in the mean time?—A. I do not know what he did. On one occasion he went home; one Christmas eve, 1888, I think it was; I am not sure of the date. Mr. Latimer used to register letters, and on Christmas eve the office closed at 12 o'clock and he left the letters for me to register. I know he went home. There was an order issued by Mr. Smiley putting me under Mr. Latimer's jurisdiction. I was to report to him to be excused from duty, and report to him for work, and other things. Mr. Smiley asked me if I had any objection to it, and he told me the reason he did it was to push Mr. Latimer up. That is the reason he gave me; that it was to push Mr. Latimer and forward him.

Q. What office are you employed in now?—A. I am at the preent time in the division of fisheries.

Q. Has your compensation been increased since you first entered the service?—A. Yes, sir; several times.

Q. What pay did you get when you first went in?—A. Twenty-five dollars a month. The first increase was to \$30; the next increase was under Mr. Goode, to \$55; and the last, I think, about soon after Colonel McDonald was made Commissioner, during his administration, to \$70. I have had none since then.

Q. At the time of that last increase were your duties changed and increased; had you more to do?—A. Yes, sir.

Q. Why did they pay you more?—A. I had more to do. I did short-hand work from the first day I went in, and then I had clerical work. I was copyist first, and put up to clerk, but I did the short-hand all along.

Q. Each time your pay has been increased it has been because you have been called on to do more work?—A. I was recommended each time. As to Mr. Smiley going away before 4 o'clock, he would go away sometimes during the middle of the day and come back about half an hour before 4, and then stay until 4.

Q. He was not there steadily?—A. No, sir.

Q. And did not comply with order No. 19?—A. No, sir. I mean to say, his attendance was irregular. He was not absent any particular time so much, but he would be in the office an hour and go away and stay two hours.

TESTIMONY OF MARSHALL McDONALD—Recalled.

MARSHALL McDONALD, being recalled, testified as follows:

The WITNESS. I desire to make a brief explanation with respect to a statement which occurs in the list of scientific collaborators of the Commission (page 505), and which, as it now stands, might do injustice to one who has been a valued co-worker of the Commission for many years. I refer to Prof. W. O. Atwater, of Wesleyan University, Middletown, Conn., who is also now director of the office of Experiment Stations in the Department of Agriculture. The monographic report upon the chemical composition and nutritive value of economic fishes, cited in connection with his name in the place indicated, is based upon researches made in the chemical laboratory of Wesleyan University, beginning some time prior to 1880. These researches were carried on by Professor Atwater and several assistants, the expenses incidental to the same being partly paid by the Fish Commission and partly by private individuals interested in the promotion of scientific investigations at Wesleyan University.

It is estimated that not over one-half of the cost of the work was defrayed by the Commission, which has received all of its benefits. Preliminary accounts of the results obtained have been printed in the Fish Commission reports.

The completion of the monograph required some additional investigations and revisions, as well as the purchase of materials, during the years 1888 and 1889, the work being performed by the assistants in the chemical laboratory at Middletown, Conn., under Prof. Atwater's direction. No part of the expenditure of \$1,000, however, was for services by Professor Atwater, but it covered simply the pay of assistants engaged upon the work, cost of apparatus, reagents, etc. Prof. Atwater has received no compensation from the Fish Commission since he entered the Department of Agriculture.

By the CHAIRMAN:

Q. Will you inform the committee as to the manner of approving accounts for expenditures? Are accounts for expenditures ever paid by the disbursing officer of the Commission without the autograph signature of the Commissioner approving the same?—A. Never in a single instance. The autograph stamp is only used for requisitions asking authority to incur expenditures which are already authorized under

general regulations or covered by instructions issued by the Commissioner from time to time. In further explanation of this matter I submit letters of explanation from the chief clerk and the disbursing officer of the Commission, as follows:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., August 1, 1890.

SIR: In answer to your letter of July 31, 1890, to inform you whether, in any single instance, vouchers have been paid upon a stamped impression of your signature. I beg to state emphatically that such has never been done, but that each and every voucher, both the original and duplicate copies, bears your autographic signature.

Very respectfully,

HERBERT A. GILL,
Disbursing Agent.

I concur in the above statement made by Mr. Gill.

A. C. ADDISON,
Examiner of Accounts.

Hon. MARSHALL McDONALD,
U. S. Commissioner of Fish and Fisheries.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., August 1, 1890.

SIR: In reply to your letter of July 31, requesting to be informed whether in any instance vouchers have been passed to audit, upon a stamped signature, I beg to say that in not a single case has this been done; every voucher involving the expenditure of money bearing the sign-manual of the Commissioner.

In this connection I beg to state that the autograph stamp is used for the approval of only such requisitions for stationery, labor, and supplies as are required for the conduct of the regular routine work of the Commission. Every requisition of an unusual character, or which does not come under such routine, or where the same is not covered by a specific assignment of funds, is referred to the Commissioner, by whom it is either approved in person or by whose direction at the time the autograph stamp of approval is affixed.

It may be interesting to note the condition under which stationery was issued during the administration of Professor Baird, when chiefs of division were authorized to make requisitions for such stationery, blanks, etc., as they needed, the approval of the Commissioner not being required in such case. It will be seen from the instructions in reference to this matter that the chief of the division of records and publications was allowed no discretion whatever as to the propriety of filling requisitions for stationery submitted by chiefs of division. The paragraph is as follows:

"The keeping, recording, and distribution of all stationery, blanks, circulars, etc., of the Commission: Chiefs of division will make requisition upon him for such blanks, stationery, etc., as they need, and he is not required to consider, in any respect, the propriety of such requisitions, but to furnish the same so far as consistent with all the demands upon the stock. The chief signing the requisition will be held responsible to the Commissioner both for the wisdom of the requisition and the use of the supplies. If a chief of division make requisition for supplies not in stock, he shall refer the requisition to the Commissioner, and so notify the person making requisition."—U. S. Commission of Fish and Fisheries; Laws and Regulations, 1882.

Very respectfully,

J. J. O'CONNOR,
Chief Clerk.

Hon. M. McDONALD,
U. S. Commissioner of Fish and Fisheries, Washington, D. C.

Q. Will you inform the committee as to Mr. Frank Blaisdell's connection with the U. S. Fish Commission; when appointed; what positions he has occupied; what has been the character of his work; when discharged, and for what reasons? Please give a general statement covering the entire period of his connection with the Commission.—A. Mr. Blaisdell was first employed under the direction of the Commissioner of Fisheries in making a survey in connection with the Great Falls

fishways in June, 1888, and subsequently in making plans and specifications of the modified construction it was proposed to erect. This work was done under the authority of the Secretary of War, and the expenses for the same were paid out of the appropriation for the erection of the Great Falls fishways.

On July 6, 1888, Mr. Blaisdell being then at work in the preparation of the plans and specifications above referred to, I found it necessary, in consequence of irregularities in the administration of the engineer office, to make changes in the personnel of the office, and designated Mr. Blaisdell as the engineer officer of the Commission, intending to confirm him in this position should he show the necessary expert qualifications. This assignment continued until September 11, 1888, when I became satisfied that Mr. Blaisdell lacked the expert qualifications and professional experience necessary to discharge satisfactorily the duties of engineer officer of the Commission. I therefore recalled his appointment as engineer, but continued him on temporary service in connection with the surveys and plans of the new stations which had been provided for by Congress. When these were completed I did not feel that I could with propriety and due regard for the public service continue him on duty at a compensation of \$150 per month. He was neither rapid nor accurate in his work; was ignorant of constructive engineering, yet intolerant of suggestions and control.

Accordingly, on July 5, 1889, I notified Mr. Blaisdell that his services at the then rate of compensation would be discontinued on and after July 7, 1889, and he was assigned to temporary service as draughtsman in the engineer office, under Lieutenant Bayley, at a compensation of \$100 per month. He was continued in this position until May 1, 1890, when he was discharged. In any event his services would have been discontinued with the close of the fiscal year. The immediate occasion of his discharge, however, was a knowledge of the fact that Mr. Blaisdell was engaged in circulating statements to the discredit of the Commission and to the detriment of the public service—statements which the evidence placed before this committee will show to be false in every particular.

The following official communications give the history of Mr. Blaisdell's connection with the U. S. Fish Commission:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., July 6, 1888.

DEAR SIR: You are hereby assigned to duty as engineer of the U. S. Fish Commission and will take charge of the property, records, maps, etc., of the engineer office and the direction of the personnel thereof, and such others as may be from time to time assigned to duty therein. You will immediately get together all the correspondence relating to the station under construction at Duluth, Minn., with a view to preparing and transmitting promptly such additional instructions as may be necessary for the continuance of the work without interruption or delay.

You are particularly directed to enforce prompt attendance during office hours on the part of all employes under your direction. You will make yourself acquainted with the current work and routine of the office and expedite the completion of the work now in hand.

Your compensation will be at the rate of \$150 per month.

Very respectfully,

M. McDONALD,
Commissioner.

FRANK BLAISDELL, Esq.,
U. S. Fish Commission.

U. S. COMMISSION OF FISH AND FISHERIES,
Wood's Holl, Mass., September 11, 1888.

DEAR SIR: I have determined to discontinue the services of a civil engineer as a part of the permanent force of the Commission, the expense of the maintenance of such office being much larger than is necessary for the engineer work we have. My experience assures me that it is more satisfactory, as well as economical, to employ expert engineer service as needed, you are therefore notified that your services will be discontinued on and after October 1. You will please give like notice to Mr. Lang. The decision I have arrived at in reference to this is based upon my experience as to the needs of the Commission and a due regard to proper economy in the expenditure of public moneys, and not that such duties as devolved upon you have not been satisfactorily discharged. It will give me pleasure to aid you as I may be able to secure such employment as you may find open under other Departments of the Government.

Very truly yours,

M. McDONALD,
Commissioner.

FRANK BLAISDELL, Esq.,
Engineer's Office, U. S. Fish Commission, Washington, D. C.

U. S. COMMISSION OF FISH AND FISHERIES,
Wood's Holl, Mass., September 14, 1888.

DEAR MR. BLAISDELL: The reorganization of the engineer offices and the reduction of force has been determined upon after most careful and deliberate consideration and will be carried out. The routine of the office and the care of the drawings and other property and the ordinary preparation of tracings, etc., involves responsibilities and duties that can be fully discharged by a draughtsman at \$60 or \$75 per month. Expert service involving the employment of a civil engineer is only needed occasionally, when constructions are to be made for new stations, and these emergencies will be provided for as they arise, by the temporary employment of engineers of skill and experience in regard to the particular class of work it is necessary to carry on. When it is in my power to give you work of this character it will afford me pleasure to do so, but most of our work of the kind referred to is of a character in which you have not the experience necessary to prepare the plans. Had you not better make an effort to secure one of the places under the Supervising Architect of the Treasury? Your work has been under the observation of the Architect, and from the close and influential relations which I understand you hold to the principal officials in the office and the influence you can bring to bear you should certainly stand a good chance of appointment to a position which will be permanent and in the direct line of promotion. A civil engineer is not needed on the permanent force of the Commission, such position is in its nature temporary since no occasion for expert engineer service will exist after the plans and construction of the new stations are completed. If I can serve you in any way it will give me great pleasure to do so.

Very truly yours,

M. McDONALD.

U. S. COMMISSION OF FISH AND FISHERIES,
Wood's Holl, Mass., September 29, 1888.

DEAR SIR: I have instructed the disbursing officer that you will be continued on duty at the rate of \$150 per month so long as employed, you will also receive your reasonable expenses while in the field, and will arrange to proceed at once to Bucksport, Me., and report to C. G. Atkins, superintendent of the Craig's Brook Station, and make under his direction surveys, plans, and estimates for the proposed construction at that station.

Very respectfully,

M. McDONALD.

FRANK BLAISDELL, Esq.

U. S. COMMISSION OF FISH AND FISHERIES,
Wood's Holl, Mass., September 29, 1888.

DEAR SIR: In your letter of a recent date you undertake criticisms both of myself and of the employes of the Commission which can be excused only by your want of knowledge of the affairs of the Commission and of the duties, responsibilities, and qualifications of those engaged in its work.

It is true that Mr. Gorham has given me great anxiety and embarrassment at times on account of his occasional lapses from temperance. On the other hand, his thorough knowledge of the stations of the Fish Commission, and of the apparatus and appliances of fish culture in use by the Commission has relieved the Commissioner from that minute attention to the details of construction which would be necessary for him to give if the work was committed to an engineer officer who was without this special knowledge and experience. Mr. Gorham, moreover, as a draughtsman, is rapid, skillful, and accurate, and accomplishes much more work in a given time—work of the highest grade—than any engineer or draughtsman I have had about me. Yet, in consequence of his unfortunate habits, I have felt compelled to discharge him from the permanent roll of the Commission. I shall, however, give him employment in such temporary work as requires expert service, since I feel that the interests of the Government will be thereby promoted.

In placing you in charge of the engineer office I had contemplated continuing you as engineer officer of the Commission. In permitting accounts to be rendered by Mr. Carroll for board in excess of charges heretofore made, you did not exhibit that watchfulness over the interests of the Government which you should have displayed. Upon inquiry I found that the extra charges were made to cover personal expenditures not chargeable to the Government. I overlooked the matter as the result of inadvertence, but it was nevertheless a serious blunder.

Considering the embarrassments that have arisen in connection with our engineering work, and in view of the fact that it is more economical and convenient to employ expert service when needed, I have determined to dispense with a civil engineer as a part of the permanent force of the Commission, and place a draughtsman in charge of the maps and records of the office. I have assigned Mr. Rogers temporarily to this duty. If I find he is not competent I will discharge him and employ some one else. I can not be governed in my determination, however, by statements made in a personal communication from you, upon which it would not be proper for me to take official action. If you, as engineer of the office at the time, will reduce to writing, over your official signature, the statements you have made to me about Mr. Rogers, I will have the matter fully investigated by a board of inquiry on my return to Washington.

Very respectfully yours,

M. McDONALD,
Commissioner.

FRANK BLAISDELL, Esq.,
U. S. Fish Commission, Washington, D. C.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., January 12, 1889.

SIR: You will proceed at once to Neosho, Mo., by the most direct route, for the purpose of making an accurate topographical survey of the tract of land in the vicinity of Neosho, donated to the U. S. Fish Commission for a fish-hatching station. The entire area given to the United States, as well as the portion conveyed under perpetual lease covering the spring and the flow from the spring is to be surveyed. The contour lines indicating the relief of the ground are to be placed not more than 1 foot apart vertically. The water will necessarily have to be carried from the spring by a conduit. This may be either under ground or overhead, and data must be collected with a view to determining which plan for conducting the water is most desirable. It is possible it may be found necessary to raise the level of the water at the spring for the purpose of getting the proper elevation to deliver it to the highest point of the ground, and you are directed to make a special examination and report with reference to the necessity and practicability of this.

Immediately on your arrival at Neosho you will confer with Messrs. Lee D. Bell & Co., real estate agents, informing them of your purpose, and ask their co-operation and assistance in any direction you may find desirable.

Having completed this work you will return at once to Washington, D. C.

Very respectfully,

M. McDONALD,
Commissioner.

FRANK BLAISDELL, Esq.,
Engineer, U. S. Fish Commission.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., April 24, 1889.

DEAR SIR: Mr. W. B. Bayley, Engineer of the Commission, has been placed in direction of all matters relating to the construction of buildings and erection of the necessary plant for the Lake Erie station. You will report to him, and prepare, under his direction, such plans and specifications relating to this station as he may direct.

Very respectfully,

FRANK BLAISDELL, Esq.,
U. S. Fish Commission.

M. McDONALD,
Commissioner.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., June 4, 1889.

DEAR SIR: I will have no further occasion for your services after the completion of the work now in hand under the direction of Mr. Bayley, which work will not probably continue further than the 15th, or at the farthest, the 20th of the present month.

I give you notice in advance in order that you may have time to make your arrangements for occupation elsewhere.

The work upon which you are engaged is under the direction of Mr. Bayley, the Engineer Officer of the Commission, and you will carry out his instructions in all matters relating to the same.

Very respectfully,

FRANK BLAISDELL, Esq.,
U. S. Fish Commission.

M. McDONALD,
Commissioner.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., July 5, 1889.

DEAR SIR: Your services at the present rate of compensation will be discontinued after July 7. Temporary service as draughtsman in the Engineer's Office, under the direction of Mr. Bayley, at a compensation of \$100 per month, will be required for several months. Should you desire to continue on work in the office at \$100 per month you will report to Mr. Bayley on July 8 for assignment to duty.

Very respectfully,

FRANK BLAISDELL, Esq.,
U. S. Fish Commission.

M. McDONALD,
Commissioner.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., August 30, 1889.

DEAR SIR: In reply to yours of August 20, I beg to say that I consider the compensation allowed to you fully equivalent to the grade of service required to be rendered, and I cannot approve of any increase in the same, nor will I be able to continue such service longer than the necessity for it exists.

Very respectfully,

FRANK BLAISDELL, Esq.,
U. S. Fish Commission.

M. McDONALD,
Commissioner.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., September 2, 1889.

DEAR SIR: I am directed by the Commissioner to say that it embarrasses him very much to have to receive personal charges of the character indicated in the inclosed letter. Immediately before the Commissioner's departure from Washington early in July a similar charge was received from Dr. Rust, which was referred to you for explanation, but up to the present time nothing has been heard from you in reference to it.

Yours, truly,

FRANK BLAISDELL, Esq.,
U. S. Fish Commission.

J. J. O'CONNOR,
Chief Clerk.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., April, 4, 1890.

SIR: In reply to the instructions contained in your letter dated April 3, for me to prepare and submit to you a statement of the work Mr. Frank Blaisdell has been and is now engaged on, and also his efficiency and regularity in attendance upon the performance of duties assigned him, I have to say, Mr. Blaisdell was first employed with me in preparing the plans of the building for the U. S. Hatchery at Put-in Bay, Ohio. As to his abilities as an architect, not having had sufficient experience myself in that line, I do not feel qualified to judge. I can say, however, that many faults were found by the builder and contractor in the designs of constructions of the building, making it necessary to go over the plans and make many changes before the construction of the building could be carried out.

Mr. Blaisdell was subsequently employed under my directions in making the plans and specifications for the steam and water distributing plant for the same building. He is now employed in making the outline drawings of a steamer for Put-in Bay. As a mechanical draughtsman, while his work is neatly done, it is evident he has had no experience in designing machinery.

In regard to his regularity in attendance, since my last report to you on this subject, dated February 15, I have no cause to complain.

Respectfully,

W. B. BAYLEY,
Past Assistant Engineer, U. S. Navy.

HON. MARSHALL McDONALD,
U. S. Commissioner of Fish and Fisheries.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., April 26, 1890.

SIR: Your services as draughtsman will not be required beyond the close of the current month and your compensation will cease on and after May 1, 1890.

Very respectfully,

M. McDONALD,
Commissioner.

F. BLAISDELL, Esq.,
U. S. Fish Commissioner.

Q. You stated when before the committee previously that you would make, if desired, a connected statement in regard to the Great Falls fishways. Are you prepared to do so now?—A. Yes, sir. I have here arranged in proper sequence the correspondence between the Secretary of War, the Chief of Engineers and others, and the U. S. Commissioner of Fisheries, in reference to the Great Falls fishways, and also reports that were made from time to time in regard to the progress and condition of the work. These I will submit in regular order, prefacing each with such statements as will give a full and connected history of this work.

THE GREAT FALLS FISHWAYS.

The importance of providing fishways at the Great Falls of the Potomac with the object of extending the spawning grounds of the shad and herring and thus aiding natural reproduction, was formally brought to the attention of Congress by Professor Baird, the U. S. Commissioner of Fisheries, in June, 1882. Acting upon his recommendation an amendment appropriating \$50,000 for this purpose was incorporated in the bill making provisions for increase in the water supply of the city of Washington, which became a law July 12, 1882.

The bill further provided that the same should be erected in accordance with plans and specifications to be furnished by the Commissioner of Fish and Fisheries. The importance of the work proposed in the interest of the fisheries, the expediency and propriety of the General

Government undertaking it, and the measures taken to carry out the provisions of the law so far as they related to the Commission of Fisheries, are detailed by the Commissioner in his annual report for 1882, as follows (p. 49, *et seq.*):

22.—NEED OF A FISH-WAY AT THE GREAT FALLS OF THE POTOMAC.

The importance of maintaining at their maximum of production the valuable fisheries of the Potomac can hardly be overestimated, in view of the extent to which they furnish food for home consumption and for transportation, and also of their agency in reducing the expense of living to the poorer portion of the population. The fish involved in this consideration are the shad, herring, rock, white perch, and black bass, together with other fish coarser in quality and lower in price.

Old records dating back to colonial times bear testimony to an abundance of production, which, read in the light of present experience, seems little short of marvelous, although after all credible when we consider the favorable conditions for natural production which were then afforded.

The broad estuary of the Potomac River, extending for a distance of more than 100 miles, from Point Lookout to the Great Falls, offered through its whole length numerous flats and bars where the shad could spawn, rarely molested by the intrusion or device of man. Its reedy shores and extensive tracts of marsh land, covered with aquatic grasses, furnished everywhere a nidus and a nursery for the countless million of eggs of the glut herring (*Pomolobus stivalis*).

Into the numerous creeks tributary to the main river, which have their origin in the swamps of the interior, the branch herring (*Promolobus vernalis*) entered to find at their sources a suitable resting place for its eggs and a safe habitat and temporary abiding place for its young.

How the hand of man has changed all this will be evident from the following considerations: Access to the sources of the smaller tributaries of the Potomac, which drain the tide-water region, has been almost universally barred by mill-dams placed at the head of tide. The conversion of the woodland along their banks into arable fields has rendered turbid their once clear waters, and with every rain a muddy torrent is sent down, loaded with fine sediment, which settles upon and stifles every embryo of shad or herring which may have found a resting place in the reaches below tide level. In addition, fykes and stake nets, weirs and pound or trap nets bar access of mature fish to these streams almost as effectually as the dams prevent their ascent.

In the main river the favorable natural conditions which formerly existed have disappeared before the encroachments of man. Cities have grown up along its banks which each year discharge into its waters an increasing volume of sewage, gas tar, and other deleterious substances to pollute the water and render it unfit for healthy development of the eggs that may be deposited. Large seines occupy every reach where the fish congregate to spawn, or stretch their broad arms across the channel to intercept the schools of shad and herring in their upward migrations. From every headland pound nets stretch their meshes a thousand feet or more from shore to guide the unwary fish into the traps, which are set on the edge of, and often in, the navigable channel.

Hundreds of gilliers, with nets a hundred fathoms long, stretched across the channel, drift up and down, on ebb and flood, unceasingly, and with their fine-spun nets, almost invisible, obstruct ascent as effectually as if strong dams of stone or timber barred the passage.

Such being the condition of things on the Potomac at the present time, the conclusion was readily reached that if the spawning-grounds of the shad and herring could be enlarged by taking in the long reaches of river that lie above the Great Falls a great gain could be secured. This, however, could only be done by providing convenient passage for them over or around this obstruction.

Accordingly, when the necessity of an increased water supply for the city of Washington was brought before Congress by the Commissioners of the District of Columbia, I addressed a letter to Maj. W. J. Twining, then Engineer Commissioner of the District, calling his attention to the propriety of including, in any proposition for the completion of the dam at the Great Falls, the construction of a suitable fish-way to admit the ascent of shad, salmon, striped bass, herring, sturgeon, etc., to the upper waters of the Potomac River. Subsequently, in response to the invitation of the Committee on the District of Columbia in the House of Representatives, I addressed them the following communication:

U. S. COMMISSION FISH AND FISHERIES,
Washington, D. C., June 1, 1882.

Hon. HENRY S. NEAL,

Chairman Committee on District of Columbia, House of Representatives :

DEAR SIR: In response to the inquiries made by your committee through the honorable Mr. Garrison, I would submit the following:

In 1871, in compliance with an act of Congress, I was designated by the President to conduct an inquiry into the causes operating to diminish the supply of food-fishes on the sea-coast and the lakes of the United States. The investigations had made but little progress before I became convinced that the obstructions in our rivers, whilst not the only cause, were one of the main factors in determining the reduction in the numbers both of the anadromous fishes, such as the salmon, shad, and herring, and the salt-water species, the food of which consists largely of the anadromous species referred to. In the case of the salmon, shad, and herring (alewives) the effect was direct and immediate. The obstructions in some rivers have entirely excluded these fishes from their spawning-grounds, rendering the waters barren in a few years; in others the reduction in the spawning areas has entailed a corresponding diminution in the productive capacity of the river, and caused important and remunerative fisheries to become comparatively valueless.

In the case of the salt-water predaceous species, the effect of obstructions in the rivers, whilst indirect, has been not the less potent in effecting a reduction of their numbers by diminishing their food supply.

In my annual reports to Congress I have had frequent occasion to revert to the disastrous effects of dams in our rivers in determining a reduction in the supply of our more important food-fishes, and to urge the erection of fish-ways as a most important and indispensable adjunct to the restoration of our fisheries by artificial propagation, a work so wisely inaugurated and so beneficently sustained by liberal appropriations.

Usually the work of construction of fish-ways may appropriately be left to the States themselves, or to the coercion of State laws brought to bear upon the owners of dams. In those cases, however, where the General Government has created or maintains obstructions in our streams it seems eminently proper and in essential harmony with the work of artificial propagation, inaugurated and sustained by the Government, that suitable provision should be made to provide sufficient passageway for fish over the obstructions.

My views in regard to the expediency and propriety of the General Government undertaking the work at the Great Falls have already been expressed in a letter to the Commissioners of the District, a copy of which is inclosed for the information of your honorable committee.

I can only add to the argument presented in that letter that the water supply requisite for the fish-way will be necessarily under the control of the District government, and must be subordinated to the necessities of the water supply of the District. This renders it necessary that the fish-way, when built, should be operated subject to the entire control of the authorities of the District government.

I may state in conclusion that the opening of the upper waters of the Potomac and its tributaries to the ascent of fish can not have other than a most beneficial effect upon the production of the river. That such a result may be attained there is no reason to doubt. The difficulties that may present themselves are mainly those of construction, and are entirely within the resources of the engineer to overcome.

I have the honor to be, very respectfully,

S. F. BAIRD,
Commissioner.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., March 24, 1882.

DEAR SIR: I would respectfully suggest the propriety of including in any proposition for the completion of the dam at the Great Falls the construction of a suitable fish-way to admit the ascent of shad, salmon, striped bass, herring, sturgeon, etc., to the upper waters of the Potomac River. Prior to the building of the original dam, it was possible for many of these varieties of fish to reach their spawning-grounds; but of late years this has been rendered impossible, and, consequently, the supply has most materially decreased. Many of the fish of the Potomac must have access to the upper waters of the river for the propagation of their kind, suitable spawning-grounds not occurring below the dam.

Inasmuch as the injury above alluded to was brought about by an act of the United States, it seems eminently proper that the same agency should remedy the difficulty, especially as the locality where such fish-way alone can be built is the property of the United States. The legislatures of Maryland, Virginia, and West

Virginia are highly in favor of the improvement in question, and I see no impropriety in the granting of this proposition.

At the proper time I shall be happy to furnish a plan of construction upon the most feasible and efficient scale. The expense of this additional work will make but a small item in the total. It is important that for such construction some such proviso as that below should be added to the bill as it now stands.

Yours, very respectfully,

S. F. BAIRD,
Commissioner.

Maj. W. J. TWINING,
Engineer Commissioner, D. C.

"Provided, That a suitable construction shall be built to admit of the upward passage, at all seasons of the year and at all stages of the water, of shad, salmon, herring, striped bass, sturgeon, etc., the same to be erected in accordance with the plans to be furnished by the U. S. Commission of Fish and Fisheries."

The committee accepted these recommendations, and reported to the House the original bill amended, so as to provide for suitable fish-ways at the Great Falls of the Potomac.

The bill, which became a law July 12, 1882, appropriated \$50,000 for the construction of the fish-ways, and directed that the same should be erected according to plans and specifications to be furnished by the United States Commissioner of Fish and Fisheries.

Immediately after the appropriation became available, I detailed Col. M. McDonald, chief of the division of distribution in the U. S. Fish Commission, to take charge of the preparation of the plans and specifications, and to proceed at once to arrange for the necessary surveys. Colonel McDonald reported to Maj. G. E. Lydecker, Engineer Commissioner, in October, and was authorized by him to organize a field party and complete the necessary surveys, the expenses being certified to him for payment.

Mr. F. S. Eastman was designated as chief of the field party, and, in company with Colonel McDonald, made a reconnaissance of the ground. This developed four practicable sites for the erection of the fish-way. The one immediately at the Great Falls on the Maryland bank of the river was definitely determined on for reasons given by Colonel McDonald in his report.

The necessary minute survey of the site selected was deferred from time to time in consequence of the serious indisposition of Mr. Eastman; and the fatal termination of his illness making it necessary to secure the services of another engineer, Professor Hilgard, Superintendent of the United States Coast and Geodetic Survey, kindly detailed Mr. Eugene Ellicott, one of his staff of field assistants, for the purpose. Unavoidable delays threw the field work into the most inclement season of winter, and necessitated the maintenance of the party in the field for a longer time, and adding proportionately to the cost of survey. This work is now completed, and the map of the site proposed submitted. The preparation of the plans and specifications will proceed as rapidly as is consistent with the careful study of all the conditions involved, and an observance of the requirements necessary to insure ultimate success.

In his annual report of the following year (1883, p. lxxii), the Commissioner of Fisheries, Professor Baird, reports progress as follows:

FISH-WAY OVER THE GREAT FALLS.

Reference has been made to this work in a previous report. Since then the surveys of the Great Falls have been completed, and a site has been selected for the construction of a suitable fish-way, which will enable shad, striped bass, and other food-fishes to ascend to the upper portion of the Potomac.

After careful consideration of the different varieties of construction offered, a plan of fish-way, suggested by Colonel McDonald, has been adopted, and he has been instructed to have prepared the necessary working drawings for the purpose, to be submitted to the contractors for estimates. Should these be within the appropriation, it will be recommended to the Secretary of War for such further action as he may think proper.

On June 2, 1884, I made a report to the Commissioner, submitting plans and specifications of the fish-ways for the Great Falls of the Potomac River, which were approved by him and transmitted to the Secretary of War.

The annual report of 1884 contains no reference to the Great Falls fish-ways, but the report of the following year (1885, p. lxxiii), gives a résumé as follows:

FISH-WAY OVER THE GREAT FALLS.

Reference has been made to this work in previous reports. Since then a site has been selected for the construction of a suitable fish-way, which it is hoped will enable shad, striped bass, and other food-fishes to ascend to the upper portions of the Potomac.

A plan of fish-way suggested by Colonel McDonald, who prepared the necessary working drawings for the purpose, was adopted and recommended to the Secretary of War for such further action as he might think proper.

A contract having been given out by the direction of the Secretary of War for the construction of the fish-way, work was pushed forward during the summer of 1885. The conditions of the contract required the entire work to be completed on October 31 of the present year. Five sections were at that date in process of construction, and high water occurring about that time found none of the six sections completed, and put an end to the work for the season. The lowest or sixth section was most advanced towards completion, needing only the setting of the line of coping provided for in the plans and specifications to insure the permanence and durability of the construction. It suffered little or no injury from the ice of the winter, and needs only to be completed as planned to render this part of the construction permanent.

The work remaining to be done at the end of the year is as follows:

(1) The erection of a weir-dam about 40 feet long and 5 feet high from the abutment of the fish-way to the opposite shore, the object of this being to regulate and control the supply of water to the fish-way and at the same time to provide for the discharge of surplus water.

(2) Cleaning out the channel below the (proposed) weir-dam, so that the water flowing over the dam may be discharged into the river below by the side of the fish-way instead of over the lower end, as is now the case.

(3) Placing and securing of the 12-inch coping to cover the rubble masonry walls forming the sides of the fish-way.

(4) The removal of the loose rock piled up at the lower end of the fish-way and excluding fish from access to it.

The matter will be brought to the attention of the Secretary of War in the spring of 1886, with the request that at least section 6 be completed at once. An additional appropriation may be required for completing the other sections.

The report of the Commissioner refers only inferentially to the suspension of the work in consequence of the damage occasioned by the high water occurring October 31, 1885.

December 17, 1885, Maj. J. G. Lydecker transmitted to General J. B. Newton, Chief of Engineers, "a report by Capt. T. V. Symons, corps of engineers, of an examination made by him into the conditions of the fish-ways at the Great Falls, with reference to the effect of the flood in the Potomac following the several days of heavy rain-fall in the latter part of October," as follows:

OFFICE OF THE WASHINGTON AQUEDUCT,
Washington, D. C., November 5, 1885.

MAJOR: I have the honor to report that yesterday I made an examination into the condition of the fishways as far as the high water would permit.

Sections 2, 3, and 4, which were in process of construction, are still covered with water, and it is impossible to determine at present the extent of damage done to them by the high water.

It will not be practicable to examine these sections until the water goes down very much or the deflecting dams are rebuilt. Section 5 was nearly completed. The side-walls were completed with the exception of a very few stones, the coping, and the through bolts. All else was completed, the iron and timber work being in place and thoroughly bolted together and to the bottom and side-walls.

It has been almost completely destroyed. The side and head walls have been torn away and the mass of timber and iron lifted bodily, turned completely over and deposited bottom upward on the rocks about a hundred yards further down the river, near section 6. An examination of this work indicates that before it gave way and was uprooted it suffered greatly from the action of the water and the water-borne bodies coming in contact with it. The floor was badly cut and broken, the grating bent and the ends pulled out and broken off, and the upper ends of the cell partitions bruised and battered into broom-like condition. It is my opinion that had No. 5 remained in place it would have been so badly damaged that its efficiency as a fishway would have been materially interfered with.

Section 6 escaped with comparatively little injury, as far as can be now ascertained.

This section is protected by the backing up of the water from the main channel of the river and thus deadening the currents down the Maryland channel and by the deflection from it of the main currents of the Maryland channel, which in high water run to the east of it. The wreck of No. 5 lies considerably to the east of the line joining the location of 5 and 6.

The temporary deflecting dam above section No. 2, which deflects the water coming over the Aqueduct dam from the Maryland channel, has been very badly injured, large sections being carried away. This deflecting dam is necessary to allow the work to be carried on in any of the sections below the first.

It is now so late in the season that it is doubtful if this dam could be repaired and any work done on the lower sections this season. This must then be considered as the close of the season's operations on the fishways. The contractor has really done about three-fourths of the entire work of constructing the fishways.

The high water resulting from the storms of October 29 and 30 has carried away a large part of this work, including the whole of section 5. The remaining portions must be left in an unfinished condition during the coming winter and spring, subject to the floods and floating ice incidental thereto. It is highly probable that what has been done will be in a very large measure destroyed before another season's work can commence, and the work of building the fishways will practically have to commence again.

This would seem to be a proper time to consider the facts and lessons learned during the progress of the work up to the present time and the conclusions to be derived therefrom.

Ever since the actual work of construction began the impression has been growing upon me that the fishways, as planned, were not of sufficient strength to withstand the terrific strains that would be brought on them. In the construction of nearly every section greater strength was given than was provided for in the plans. Authority was requested from the Commissioner of Fish and Fisheries, through Colonel McDonald, the designer, to double the thickness of all masonry side-walls unsupported by natural rock side-walls, and to triple the thickness of the masonry in the overflow dam. This authority was granted; it was about all the modification that could be attempted with the expectation of completing the work with the money available for the purpose. Besides this, concrete was substituted for rubble about the head-walls, and the dimensions of the stones in the masonry walls were many times the size required by the specifications.

Notwithstanding everything that was done, the section of the fishways that was practically completed was unable to stand the first flood that came, and to my mind the evidence is conclusive that the fishways as planned are totally inadequate in strength and general character for the purposes intended, and that every cent which is further expended on them will be wasted, unless very material modifications are made in the plans, involving the expenditure of large amounts of money, two or three times the amount of the original appropriation.

To make the fishways as planned and located safe and efficient, the amount of water reaching them must be regulated in such a manner as to keep from them all heavy floods and masses of floating ice and timber and to so regulate and control the flood waters of a river like the Potomac would require work of the most solid character, costing large sums of money.

On the other hand, if the fishways are built with a view to withstand the action of the river in times of flood, the plan of the work must be very materially changed and far more solid and expensive methods of construction adopted.

I beg to submit this report to you in order that a decision may be arrived at as to further action in the matter.

Very respectfully, your obedient servant,

THOMAS W. SYMONS,
Captain of Engineers, U. S. Army.

Maj. G. J. LYDECKER,
Corps of Engineers, U. S. Army, Washington, D. C.

A copy of this report was forwarded by the Chief of Engineers to the Commissioner of Fisheries for his information.

The Commissioner replying under date of January 16, 1888, acknowledges the receipt of the report referred to, and transmits the report of Marshall McDonald in reference to the same matter, as follows:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., January 16, 1886.

GENERAL: On the receipt of the report of Capt. T. W. Symons as to the condition of the Great Falls fishway, which you were kind enough to send me, the papers were referred to Mr. Marshall McDonald, under whose supervision the plans approved and submitted by me were prepared.

The McDonald fishway was adopted, as in my opinion its form produced the conditions of current favorable to the ascent of fish in a more perfect manner than any other form which had heretofore been devised.

That the condition of current produced by a fishway when completed on the design submitted would be favorable to the accomplishment of the ends desired, was the limit to which I could undertake to express an opinion. The details and supervision of the construction were necessarily left to the Engineer Department.

I beg to forward herewith the report of Mr. McDonald as embodying his opinion formed after a careful personal examination of the work.

The importance of having a fishway of the form recommended, at the Great Falls, is so great that I can not too strongly urge that the matter be carefully considered, and, if possible, the damage repaired and the work completed.

If the means appropriated are not sufficient I trust that an estimate will be submitted to Congress for the completion and protection of the fishway.

Very respectfully,

SPENCER W. BAIRD,
Commissioner.

Brig. Gen. JOHN NEWTON,
Chief of Engineers, U. S. Army, Washington, D. C.

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., January 13, 1886.

DEAR SIR: I respectfully return herewith copy of letter of Major G. J. Lydecker, U. S. Engineers, dated December 17, 1885, and addressed to Brigadier-General John Newton, Chief of Engineers, U. S. A., transmitting "a report by Capt. T. W. Symons, Corps of Engineers, of an examination made by him into the conditions of the fishways at the Great Falls, with reference to the effect of the flood in the Potomac following the several days of heavy rain-fall in the latter part of October."

The conclusion arrived at is that the "Fishways as planned, are totally inadequate in strength and general character for the purpose intended."

Major Lydecker, in his letter of transmittal, substantially indorsed the conclusions arrived at by Captain Symons, and approves the recommendations made by him.

On the 12th of November, some days after the inspection upon which he based his report, was made by Captain Symons, I visited the Great Falls and made as careful an examination of the condition of the fishways and of the damage done by the flood, as the high stage of water permitted.

The condition of the work and the extent of damage done I found to be as reported by Captain Symons. But the conclusions reached by me, from a careful study of the nature and extent of the damage done by the flood, are entirely opposed to those expressed by Captain Symons in his report.

The damage which must necessarily and inevitably occur, where a structure is exposed to the violence of floods and drift when in an incomplete and vulnerable condition, furnishes no criterion by which to judge of the solidity, strength, and permanence of this same structure, when completed.

The entire evidence, therefore, upon which Captain Symons rests to support his conclusions that "The fishways, as planned, are totally inadequate in strength and general character for the purposes intended," is the fact that the iron and timber superstructure of No. 5 was torn from its stone foundations and hurled, like a giant catapult, one hundred yards down the stream.

An inspection of this vast mass of timber and iron, as it lies stranded and bottom upwards upon a ledge of rock, will furnish to any competent engineering expert most conclusive and convincing evidence of the strength of the construction of the superstructure, or fishway proper.

Though indented and battered and splintered in parts by the mass of debris sent whirling down the stream by the breaking of the temporary deflecting dam, and by the massive blocks of stone which were to furnish the material for the coping of the guard or side walls, yet the only material damage was the shivering or splintering of the exposed ends of the wooden cell partitions—a result to be expected, since the heavy coping stones, which in the completed structure would, by their strong projection, have protected the ends of the cell partitions from the concussion of drift material, were not in position when the flood came on.

This line of heavy coping stones capping the guard walls of rubble masonry and protecting them from abrasion and disintegration, would have proved, as it was designed to be, the key to the strength, solidity, and permanence of the whole structure.

Firmly bound by wrought-iron bolts to the solid masonry below (see accompany-

ing general plan), they could not have been wrested from their position by any force not sufficient to pick up and transport en masse the entire wall. And as long as the line of coping remained intact, it would have been impossible for the iron and timber superstructure to be torn bodily from its foundation and carried down the stream.

The remarkable and exceptional strength of the *superstructure*, built strictly in accordance with the plans and specifications approved by you, is attested by the fact that the construction gave way along that plane where it should have been by many odds the strongest, and where it would have been the strongest had sufficient and evident measures been taken to secure the superstructure to its foundations.

This will be evident by reference to the general plan (a copy accompanies this letter), in accordance with which all the sections were designed.

The location of the fishway section having been determined upon, the requisite grade was established either by cutting or concrete filling, or both, so as to form an inclined plane rising 1 foot in 6.

Resting upon the incline, and extending from outside to outside of the fishway, are sills of timber 6 inches square. These are placed at distances of 4 feet from center to center, and are to receive the lower floor of the superstructure. They are firmly secured to the solid rock or concrete below by wrought-iron expanding bolts, and are, moreover, weighted down by the mass of masonry in the retaining or side walls.

The intervals between the sills were to be filled flush with concrete, so as to furnish a perfectly smooth and even slope to receive the lower flooring of the superstructure of the fishway.

Had the bolts which secured the sills to the foundations of solid rock or concrete been of sufficient length and properly expanded, it is certain that the bond of iron to stone would have been the last to yield to force.

The fact that the rupture or lesion took place along what should have been the plane of greatest strength by the drawing of the anchoring bolts out of the rock and concrete, indicates that the catastrophe to No. 5 is to be attributed to the defective execution of the plans given, rather than to defects in the plans themselves.

This conclusion is fully borne out by an inspection of the wreck of No. 5. The bolts used to secure the sills to the foundations are of uniform length, whether the foundations were of solid rock or of concrete. In those parts where the foundations were solid rock, as was the case in the lower part of Section V, the bolts were long enough probably to give a firm bond, if properly expanded; but where set in green concrete, as most of them were, ordinary engineering precautions should have suggested increasing the length as well as adopting efficient means for strengthening the bond between bolt and concrete.

It was not only at the discretion of the engineer in charge of the construction to do so, but it was his duty to adopt such additional means of guarantying the solidity of the construction as his judgment and experience showed to be necessary.

Again, the bolts used were the ordinary split bolts, and most of them bear no marks of ever having been expanded. Indeed it is doubtful if it were practicable to expand them, where they were forced into holes drilled in green concrete.

A fair review of the statements submitted above, and a reasonable interpretation of those contained in the report of Captain Symons, warrants the following conclusions:

I. That it is not known that sections 2, 3, or 4 (no work had been done on No. 1) have suffered material injuries or damage from the flood in the Potomac River in the latter part of October and 1st of November, the continuous high water since having prevented any examination.

II. That the work on them was at that stage when it was most exposed to injury by flood; and it is to be expected that they have been more or less damaged, but such damage under like circumstances is inevitable in all constructions not thoroughly protected from floods.

It is one of the risks which the contractor takes, and for which he estimates, or should estimate, in making his bids. The damage, or even the destruction of works in progress, by floods, does not imply any defect in the plans and specifications of the work.

III. That the timber and iron superstructure of No. 5 was in place, and the guard walls or rubble masonry almost complete; but the heavy coping which was to form the top course of these walls and be thoroughly bound to them and the solid rock below by wrought iron through bolts, thus forming the secure bond and key to the strength and solidity of the construction, was not in position, and the work was therefore in such an exposed condition that serious damage was to be expected from high water; and therefore nothing can be predicated by reason of such damage as to the strength, solidity, and permanence of No. 5, when completed according to the plans and specifications furnished by the Commission of Fisheries.

IV. That the uprooting of the superstructure of No. 5 from its foundations took place along what was, or should have been, the plane of greatest strength, and it is to be attributed to the fact that the means adopted to secure the superstructure

to its foundations were inadequate and not such as even ordinary engineering precautions would have dictated.

V. The floating timbers and massive blocks of stone which were whirled down the Maryland channel by the flood, and which ground and pounded their way over the fish-way sections, were either the debris of the broken temporary deflecting dam or blocks of stone which had been piled up in the vicinity of the fish-way sections to furnish material for masonry constructions.

The set of the current of the flood water was along the location of the overflow channel which was to be excavated to carry off excess of water from the fish-way sections, but which was not completed when the flood came.

The drift brought down by the high waters from above followed the set of the current, little or none passing over the fish-way sections.

Had the work been completed when the flood came and the bond of masonry and concrete hardened and consolidated by exposure, and all loose material removed from the site of the fish-ways, as provided for in the contract and specifications, the completed structure would have been exposed to the force of water alone and would doubtless have stood the flood with little or no damage.

VI. The construction of a permanent deflecting dam on or about the site of the present temporary construction will, as suggested by Captain Symons, completely protect all the sections below No. 1 from drift or high water, and as such dam could be built in great part of trussed timbers, the cost of it need not be very considerable.

I would therefore suggest the advisability of recommending to the Chief of Engineers that immediate steps be taken for the construction of the permanent deflecting dam above referred to, and that meanwhile the work of construction of the fish-ways under the existing contract be suspended, the contract terminated, and equitable settlement made with the contractor for work and material already furnished, and estimates made and submitted for the additional appropriation necessary to complete the fish-ways and auxiliary constructions.

Very respectfully,

MARSHALL McDONALD,

In charge surveys, plans, and specifications, Great Falls Fishway.

Prof. S. F. BAIRD,

U. S. Commissioner, Fish and Fisheries, Washington, D. C.

In May, 1886, under instructions of the Commissioner, I visited the Great Falls of the Potomac for the purpose of observing the working conditions of the sixth or lower section of the fish-ways, and reported as follows:

U. S. COMMISSION OF FISH AND FISHERIES,

Washington, D. C., May, 1886.

DEAR SIR: In obedience to your instructions I proceeded to the Great Falls of the Potomac May the 3d to make the necessary arrangements for observing the working conditions and efficiency of the sixth or lowest section of the series of fish-ways now under construction there.

The construction of the fish-ways was carried on under a contract, the conditions of which required that the entire work should be completed on the 31st of October, 1885. The high water occurring about that date found none of the six sections constituting the series of fish-ways completed. Five sections were under construction and in a condition to be damaged by the high water. The lowest or sixth section was most advanced toward completion, needing only the setting of the line of coping provided for in the plans and specifications to insure the permanence and durability of the construction.

A careful examination of number six shows that it has suffered little or no injury from the floods and ice of the past winter, and that it is in perfect working condition and needs only to be completed as planned to render this part of the construction permanent.

The work remaining to be done is as follows:

(1) The erection of a weir-dam about 40 feet long from the abutment of fish-way to the opposite shore, the object of this being to regulate and control the supply of water to the fish-way, and, at the same time, to provide for discharge of the surplus water.

(2) To clear out the channel below the weir-dam, so that the water flowing over the dam may be discharged into the river below by the side of the fish-way, instead of over the lower end, as is now the case.

(3) Placing and securing of the 12-inch coping to cover the rubble masonry walls forming the sides of the fish-way.

(4) The removal of the loose rock now piled up at the lower end of the fish-way and excluding fish from access to it.

This work may be undertaken at once and, if prosecuted actively, may be finished in time to have a thorough test of the efficiency of the fish-way the present season.

The most expensive part of the work will be the coping. This, however, is necessary for the permanence of the fish-way, and not for its proper working, and its setting may be deferred until low water during the summer.

The construction of the waste-weir and the removal of rock from the overflow channel, and the foot of the fish-way is necessary to secure the proper working of the fish-way.

This work is of such character that it can be best done by day labor, under a competent superintendent. There is, I am informed, still unexpended and available of the appropriation about \$10,000; and I respectfully recommend that the matter be brought to the attention of the honorable Secretary of War, with the request that he will authorize or direct the completion of number six in accordance with the plans and specifications.

Very respectfully, your obedient servant,

M. McDONALD.

Prof. S. F. BAIRD,

U. S. Commissioner of Fish and Fisheries, Washington, D. C.

In transmitting copy of this report, the Commissioner of Fisheries, under date of June 9, 1886, addressed the honorable Secretary of War as follows:

WASHINGTON, D. C., June 9, 1886.

SIR: A year or two ago Congress made an appropriation of \$50,000 for the placing of a fishway at the Great Falls of the Potomac, for the purpose of allowing the upper passage of migrating fish in a locality owned by the United States, the selection of a plan to be made by the U. S. Fish Commission, and the work to be carried out by the United States engineers.

After carefully considering all the known methods, I finally selected a plan invented by Colonel McDonald, an officer of the Fish Commission, and the estimate for its construction coming within the amount of the appropriation, I reported the fact to the War Department, which had the matter put in hand under the direction of the United States engineers.

Owing to very heavy rains supervening before the sections of the fish-way could be properly strengthened, a considerable amount of damage was done to the work, and operations have remained in abeyance for some time past. I directed Colonel McDonald to visit the locality, and make a report upon the present condition of the work, which I herewith submit to you for your information.

If there is no good reason to the contrary, I would respectfully ask that the work be continued, at least to the extent of completion of the lowest section; as by this means we shall be able to determine whether it will actually answer its proposed purpose. I understand that there are sufficient funds in hand for doing this, and it is probable if more are required to complete the entire work they can be obtained from Congress.

Very respectfully, your obedient servant,

S. F. BAIRD,
Commissioner.

Hon. W. C. ENDICOTT,
Secretary of War.

The action taken in reference to the recommendation of the Commissioner of Fisheries is shown by the following correspondence:

WAR DEPARTMENT,
Washington City, July 8, 1886.

SIR: I have the honor to acknowledge the receipt of your letter of the 9th ultimo, inclosing a copy of a report of Col. Marshall McDonald, of the U. S. Fish Commission, in regard to the present condition of the fish-way of the Great Falls of the Potomac, the construction of which was commenced last year under the direction of Maj. G. J. Lydecker, Corps of Engineers, but upon which operations have been suspended for some time past, and requesting that the work be resumed, at least to the extent of completion of the lowest or sixth section of the fish-way.

In reply I beg to invite your attention to the inclosed copies of reports of the 23d ultimo from the Chief of Engineers, and of the 14th and 19th ultimo from Major Lydecker, on this subject.

I have approved the recommendation of the Chief of Engineers "that work upon the sixth section of the fish-way, together with the other work referred to, be commenced at the earliest practicable moment and prosecuted to completion in accordance with the provisions of section 3709, Revised Statutes."

Very respectfully, your obedient servant,

WM. C. ENDICOTT,
Secretary of War.

Prof. SPENCER F. BAIRD,
*Commissioner, U. S. Commission of Fish
and Fisheries, Washington, D. C.*

OFFICE OF THE WASHINGTON AQUEDUCT,
Washington, D. C., June 14, 1886.

GENERAL: I have the honor to acknowledge the receipt of letter from the Acting Chief of Engineers dated June 9, 1886, relative to the fish-ways at the Great Falls of the Potomac, requesting that an examination be made as soon as the stage of water will permit, with a view to reporting upon their present condition and submitting an estimate of the cost of their reconstruction.

On the 12th instant I visited the site of the work, and have now the honor to report that, preparatory to the proposed examination, it will be necessary to reconstruct the temporary deflecting dam which diverted the flow from the Falls branch of the Potomac, in which the fish-ways are located. Until this is done the fish-ways will remain submerged at any stage of the river. With this purpose in view I have this day made application for a remittance of \$500 to defray the cost of the work, which will probably be from \$300 to \$500, depending upon the varying stages of the river during the period of reconstruction.

When the fish-ways become exposed to view I will confer with the U. S. Commissioner of Fish and Fisheries, and ascertain what modification of the original plan of construction may be considered advisable by him in the work of restoration and completion.

Very respectfully, your obedient servant,

G. J. LYDECKER,
Major of Engineers, U. S. A.

Brig. Gen. JOHN NEWTON,
Chief of Engineers, U. S. A., Washington, D. C.

OFFICE CHIEF OF ENGINEERS, U. S. ARMY,
June 23, 1886.

Respectfully submitted to the Secretary of War, referring to and in connection with the report of Maj. G. J. Lydecker, Corps of Engineers, upon the communication of the Commissioner of Fish and Fisheries, this day submitted, and with recommendation that the reconstruction of the deflecting dam which diverted the flow from the Falls branch of the Potomac, in which the fish-ways are located, be authorized at the estimated cost given.

JOHN NEWTON,
Chief of Engineers, Brigadier and Brevet Major-General.

OFFICE CHIEF OF ENGINEERS, U. S. ARMY,
June 23, 1886.

Respectfully returned to the Secretary of War, inviting attention to the following copy of the report of Maj. G. J. Lydecker, Corps of Engineers, to whom it was referred.

It is recommended that work upon the sixth section of the fish-way, together with the other work referred to, be commenced at the earliest practicable moment and prosecuted to completion in accordance with the provisions of section 3709, Revised Statutes.

OFFICE WASHINGTON AQUEDUCT,
Washington, June 19, 1886.

"Respectfully returned to the Chief of Engineers, U. S. A.

"To complete the sixth section, and to do the other work suggested in the inclosed report by Mr. Marshall McDonald, will be a simple matter as soon as the flow of water through the Falls branch is interrupted, as proposed in my letter of the 14th instant. The unexpended balance of the appropriation for the fish-ways is \$9,376.31.

"This section is much less liable to damage from freshets, drift, etc., than any of the others, and when completed will afford a good test of the practical working of the system. I most respectfully recommend that the work be commenced at once, as requested by the Commissioner of Fisheries. It is recommended further that the work be done by hired labor, as it will not be practicable to specify in advance what is necessary to be done.

"G. J. LYDECKER,
"Major of Engineers, U. S. A."
JOHN NEWTON,

Chief of Engineers, Brigadier and Brevet Major-General.

The status of matters relating to the Great Falls fish-ways on June 30, 1887, is described by the Chief of Engineers in his annual report for the fiscal year 1887 (pp. 335, 336), as follows:

ERECTION OF FISH-WAYS AT GREAT FALLS OF THE POTOMAC.

No work was in progress on the fish-ways at the beginning of the year, operations having been suspended in the fall of 1885, in consequence of the destruction of the greater part of them by floods.

During the months of August and September, 1886, the dam which intercepted the flow of water through the channel in which the fish-ways were located was rebuilt, and at the request of the Commissioner of Fisheries the sixth section was restored and completed in order to test the practical working of the system. It is assumed that the result will be duly reported by the United States Commissioner of Fisheries, and that he will likewise take action looking to the completion of the other sections.

The officer in charge of the work of construction is of the opinion that it will cost upwards of \$50,000 to complete the fish-ways in such substantial manner as to withstand the violent floods of the Potomac, but it is presumed that the estimate for this purpose will be submitted to Congress from the office of the Fish Commissioner, as in the case of the original appropriation.

In this connection attention is invited to the following extract from the report of Maj. G. J. Lydecker, Corps of Engineers, under whose direction the work of construction has been done.

I do not understand that this department is called upon to submit any estimate for this purpose; nor does it appear, in fact, that there has been any specific legislation devolving the construction of these fish-ways upon the War Department, though the intent of Congress has been so construed; the appropriation for the work was originally made in the act entitled "An act to increase the water supply of the city of Washington, and for other purposes," approved July 15, 1882, and simply provided for the erection of suitable fish-ways at the Great Falls of the Potomac and at the dam to be constructed under the provisions of this act, in accordance with plans and specifications to be prescribed by the United States Commissioner of Fish and Fisheries. This act specifically authorizes and directs the Secretary of War to do certain work pertaining to the increased water supply, but is silent as to any duty or responsibility on his part in relation to the fish-ways. It would, therefore, seem desirable that, if further appropriations be made for these structures at the falls, Congress should more definitely assign the duty and responsibility of its disbursement.

The original appropriation was \$50,000, of which there had been expended to June 30, 1887, \$44,365.18, leaving \$5,634.82 as the balance then available.

Amount available July 1, 1886.....	\$9,376.31
Amount expended during the year	3,741.49

Balance available June 30, 1887.....	5,634.82
--------------------------------------	----------

On June 11, 1886, in response to a resolution of the House of Representatives calling for information relative to the erection of fish-ways at the Great Falls of the Potomac, the acting Secretary of War, General S. V. Benét, transmitted the following correspondence:

[House Executive Document No. 272, Forty-ninth Congress, first session.]

FISH-WAYS, GREAT FALLS.

Letter from the Acting Secretary of War, transmitting letter from the Acting Chief of Engineers, inclosing report from Major Lydecker, in response to a resolution of the House calling for information relative to the erection of fish-ways at the Great Falls of the Potomac.

WAR DEPARTMENT,
Washington City, June 11, 1886.

The Acting Secretary of War has the honor to transmit to the House of Representatives a letter of the 8th instant from the Acting Chief of Engineers, and the accompanying copy of a report of the 2d instant from Maj. G. J. Lydecker, Corps of Engineers, the same being transmitted in response to House resolution of the 22d ultimo, calling for information as to what progress, if any, has been made in the erection of fish-ways directed to be placed at the Great Falls of the Potomac, under the act approved July 15, 1882, to increase the water supply of the city of Washington, and the act amendatory of said act, approved February 26, 1885; also as to

what amount of the sum appropriated for said fish-ways has been expended, and how much is reported available for their erection, and whether the sum heretofore appropriated is sufficient for such erection.

S. V. BENÉT,

Brigadier-General, Chief of Ordnance and Acting Secretary of War.

THE SPEAKER OF THE HOUSE OF REPRESENTATIVES.

OFFICE OF THE CHIEF OF ENGINEERS, U. S. ARMY,
Washington, D. C., June 8, 1886.

SIR: I have the honor to return herewith the resolution of the United States House of Representatives of May 22, 1886, which was referred to this office, directing the Secretary of War "to inform the House what progress, if any, has been made in the erection of the fish-ways directed to be placed at the Great Falls of the Potomac, under the act approved July 15, 1882, entitled 'An act to increase the water supply of the city of Washington, and for other purposes,' and the act amendatory of said act approved February 26, 1885," etc., and to invite attention to the accompanying copy of the report thereon from Maj. G. J. Lydecker, Corps of Engineers, to whom it was referred, which, it is hoped, will afford the desired information.

It appears that the construction of the fish-ways was progressing until the end of October, 1885, when the works were submerged by a sudden and high rise of the river, which put an end to the operations at the Great Falls, doing great damage to the fish-ways. The fish-ways are still submerged, and it is impossible to state precisely the condition of the submerged sections. Major Lydecker is of opinion that they are practically destroyed. The balance remaining of the appropriation (\$9,376.31) is totally inadequate, and Major Lydecker states that he is unable to give any intelligent estimate of the amount required for their construction, since he has no knowledge as to what modifications, if any, in the original plan may be contemplated by the Fish Commissioner.

Very respectfully, your obedient servant,

JOHN G. PARKE,
Acting Chief of Engineers.

Hon. WM. C. ENDICOTT,
Secretary of War.

OFFICE OF THE WASHINGTON AQUEDUCT,
Washington, D. C., June 2, 1886.

GENERAL: I have the honor to return herewith the resolution concerning the erection of fish-ways at the Great Falls of the Potomac River which was agreed to in the House of Representatives on the 22d ultimo, and subsequently referred to me for report.

The resolution is as follows:

"Resolved, That the Secretary of War be directed to inform the House what progress, if any, has been made in the erection of the fish-ways directed to be placed at the Great Falls of the Potomac, under the act approved July 15, 1882, entitled, 'An act to increase the water supply of the city of Washington, and for other purposes,' and the act amendatory of said act approved February 26, 1885; also what amount of the sum appropriated for said fish-ways has been expended, and how much is reported available for their erection, and whether the sum heretofore appropriated is sufficient for such erection."

The act approved July 15, 1882, to which reference is made in the foregoing resolution, provided and appropriated in relation to the fish-ways as follows:

"To provide for the erection of suitable fish-ways at the Great Falls of the Potomac and at the dam to be constructed under the provisions of this act in accordance with plans and specifications to be prescribed by the United States Commissioner of Fish and Fisheries, \$50,000, or as much thereof as may be necessary."

After the passage of the above act the work of preparing plans and specifications, including the necessary preliminary surveys, was duly commenced under the directions of the Commissioner of Fisheries, and continued until June 7, 1884, when the detailed plans and specifications were forwarded to this office. On their receipt it appeared that the plans involved the adoption of the McDonald system of fish-ways, which is protected by letters patent, and that a claim for royalty on account of its use was likely to be submitted; in fact, on the 18th of July, 1884, the secretary of the McDonald Fish-way Company filed a claim for \$12,000 royalty, and the matter having been submitted to the Secretary of War, I was instructed to suspend all opera-

tions looking to the erection of fish-ways until this claim was disposed of, or until further orders.

Accordingly nothing more was done until the spring of 1885, when, on the 18th of March, the McDonald Fish-way Company executed a full and free license to the Government to use all its patents in connection with the erection of these fish-ways, and steps were at once taken to place the work under contract. Advertisements for proposals were published April 15, 1885, bids opened May 8, and contract awarded to John E. Lyons, of Baltimore, Md. Operations under this contract were fairly under way by the end of the next month (June, 1885), and were continued with commendable vigor by the contractor until the end of October, 1885, when the works were submerged by a sudden and high rise of the river, which put an end to operations, doing great damage to the fish-ways, substantially as described in the following extract from a report made to me, under date of November 5, 1885, by my assistant, Capt. T. W. Symons, Corps of Engineers, under whose immediate directions operations on the fish-ways had been prosecuted:

"I have the honor to report that yesterday I made an examination into the condition of the fish-ways as far as the high water would permit. Sections 2, 3, and 4, which were in process of construction, are still covered with water, and it is impossible to determine at present the extent of damage done to them by the high water. It will not be practicable to examine these sections until the water goes down very much or the deflecting dams are rebuilt. Section 5 was nearly complete. The side walls were completed with the exception of a very few stones, the coping, and the through-bolts; all else was completed, the iron and timber work being in place and thoroughly bolted together and to the bottom and side walls. It has been almost completely destroyed. The side and head walls have been torn away and the mass of timber and iron lifted bodily, turned completely over, and deposited bottom upward on the rocks about a hundred yards farther down the river, near section 6. An examination of this wreck indicates that before it gave way and was uprooted it suffered greatly from the action of the water and the water-borne bodies coming in contact with it. The floor was badly cut and broken, the grating bent, and the ends pulled out and broken off, and the upper ends of the cell partitions bruised and battered into a broom-like condition. It is my opinion that had number 5 remained in place, it would have been so badly damaged that its efficiency as a fish-way would have been materially interfered with.

"Section 6 escaped with comparatively little injury so far as can be now ascertained. This section is protected by the backing up of the water from the main channel of the river, and thus deadening the currents down the Maryland channel, and by the deflection from it of the main currents of the Maryland channel, which in high water runs to the east of it.

"The wreck of number 5 lies considerably to the east of the line joining the location of 5 and 6.

"The temporary deflecting dam above section No. 2, which deflects the water coming over the aqueduct dam from the Maryland channel, has been very badly injured, large sections being carried away. This deflecting dam is necessary to allow work to be carried on in any of the sections below the first. It is now so late in the season that it is doubtful if this dam could be repaired and any work done on the lower sections this season. This must then be considered as the close of the season's operations on the fish-ways. The contractor has really done about three-fourths of the entire work of constructing the fish-ways. The high water resulting from the storms of October 29 and 30 has carried away a large part of this work, including the whole of section 5. The remaining portions must be left in an unfinished condition during the coming winter and spring, subject to the floods and floating ice incidental thereto. It is highly probable that what has been done will be in a very large measure destroyed before another season's work can commence, and the work of building the fish-ways will practically have to commence again."

Since the date of this report the fish-ways have remained under water, and it is still impossible, as it was then, to state precisely the conditions of the submerged sections. I would state, however, that in my judgment they are practically destroyed.

In the mean time all attempts to complete the work under the contract with Lyons has, with the approval of the honorable Secretary of War, been abandoned, and settlement made with him for work done and material actually delivered. This action was taken in pursuance of my recommendation, based on the conviction that the fish-ways as planned were totally inadequate in strength for the locality, and that it would simply be a waste of money to attempt to complete them as contracted for. At the time operations were suspended the contractor had completed about three-fourths of the work involved in his contract.

The amount expended from the sum appropriated for the fish-ways up to March 10, 1886, the date of final settlement with the contractor, is \$40,623.69, and the balance now available for their erection is \$9,376.31; this balance is totally inadequate, nor can I give any intelligent estimate of the amount required for that purpose, because

I have no knowledge as to what modifications, if any, in the original plan and location of the work, may be contemplated by the United States Commissioner of Fisheries with a view to insuring its stability.

Very respectfully, your obedient servant,

G. J. LYDECKER,
Major of Engineers.

Brig. Gen. JOHN NEWTON,
Chief of Engineers, U. S. A.

On November 23, 1886, Prof. S. F. Baird, the Commissioner of Fisheries, requested Major Lydecker, U. S. Engineers, to "direct such additional surveys to be made as are necessary to furnish the basis for the estimates of the additional appropriation needed to complete the fish-ways."

On December 16, 1886, Major Lydecker replied to the Commissioner, that "after consultation with Colonel McDonald in relation to the completion of the fish ways at the Great Falls, and full consideration of the structural conditions required to insure their stability, I am of the opinion that an additional appropriation of not less than \$25,000 will be needed to secure the object in view."

WASHINGTON, D. C., *November 23, 1886.*

DEAR SIR: In view of the importance of maturing the estimates for the completion of the fish-ways at the Great Falls at as early a date as practicable, I respectfully request that you will direct such additional surveys to be made as are necessary to furnish the basis for the estimates of the additional appropriation needed to complete the fish-ways.

Colonel McDonald is instructed to be ready at any time to give such assistance, should you desire it, as may be called for in determining location of No. V, and in preparing plans for section to be placed in permanent deflecting dam, should such location be determined on.

I have also instructed him to prepare working model of proposed modified design for No. V and submit the same, when completed, to your inspection and criticism.

A copy of report from Mr. McDonald is herewith transmitted.

Very truly yours,

S. F. BAIRD,
Commissioner.

Maj. G. J. LYDECKER,
U. S. Engineers.

WASHINGTON, D. C., *November 23, 1886.*

DEAR SIR: By appointment of Major Lydecker, U. S. Engineers, I accompanied him to the Great Falls, and with him and the engineer immediately in charge of the fish-way constructions, made careful examination of the condition of the incompletd sections, with the view of determining such modifications of plans or location as might be deemed necessary to afford thorough protection from high water and drifting timber and ice. The questions presented for solution are questions of construction under extraordinary difficulties, and I would prefer to mature the plans for the completion of the work under the immediate advice and suggestion of Major Lydecker. I respectfully ask, therefore, with the view of avoiding delay in the matter, that you request Major Lydecker to make at once such recommendations in regard both to the construction and location of the remaining sections and the auxiliary protective works as in his judgment may assure the permanence of the completed works.

It is desirable that such additional surveys as may be necessary in order to obtain estimates for the completion of the work should be made at once, and the estimates ready to be placed before the Committee on Appropriations at an early period of the session.

In the case of No. 5 a change of site will doubtless be necessary, the present site being left as an overflow channel for flood water. For this section a modified plan, simpler in construction and of much greater strength and solidity, has been designed in wrought iron. This, it is believed, will be equally efficient in operation as the present design, but some experimental investigations are now in progress to settle this question definitely. The new design can be erected at a cost in no event

greater than the one now adopted, and estimates based on the present design will cover the cost of the proposed modified or alternate plans.

Nos. 2 and 4, as reported to you in a previous communication, were not materially injured, and the damage received can be repaired at trifling cost. It will probably be found desirable to complete them without modification of plan.

A serious defect in them arising from the liability of the water conduits to become obstructed by stone and gravel can be obviated by a very simple and ingenious device proposed by Major Lydecker. This consists in arranging access of water to the conduits in such way that stone and gravel are effectually trapped between the bulkheads under the open grating, whence they can be easily removed.

No. 3 is a short section, and can be completed on either original or modified plan. No. 1 can be provided for in connection with the construction of the proposed permanent dam to keep out flood water.

Very respectfully, your obedient servant,

M. McDONALD,
Chief Division of Distribution.

Prof. S. F. BAIRD,
U. S. Commissioner of Fisheries, Washington, D. C.

OFFICE OF THE WASHINGTON AQUEDUCT,
Washington, D. C., December, 15, 1886.

SIR: After consultation with Colonel McDonald in relation to the completion of the fish-ways at the Great Falls, and full consideration of the structural conditions required to insure their stability, I am of the opinion that an additional appropriation of not less than \$25,000 will be needed in order to accomplish the object in view.

I would state that a precise estimate, based simply on the number of yards of masonry, feet of timber, pounds of iron, etc., and predicated on the lowest prices bid at the last letting of the work, might indicate that \$20,000 would suffice; but this would leave no margin for the uncertain condition of weather and flood by which the actual cost of construction in this exposed locality must be affected, as so clearly shown by past experience.

Very respectfully, your obedient servant,

G. J. LYDECKER,
Major of Engineers, U. S. A.

Prof. S. F. BAIRD,
U. S. Commissioner of Fisheries, Washington, D. C.

Estimates to cover the additional amount recommended as necessary for the completion of the fish-ways were duly transmitted by the Commissioner to the Committee on Appropriations of the House of Representatives, and the matter here rested until February 1, 1888.

The deficiency bill passed on this date provided, among other items, for the completion of the erection of suitable fish-ways at the Great Falls of the Potomac, authorized by the act entitled "An act to increase the water supply of the city of Washington, and for other purposes," approved July 15, 1882, \$25,000.

On April 23, 1888, the present Commissioner of Fisheries addressed a communication to the Hon. W. C. Endicott, Secretary of War, stating that it was desirable to make certain changes of location, and certain modifications in some of the details of construction, with the view of giving greater solidity as well as better efficiency to the constructions, and requested him to authorize the expenditures for the necessary surveys, and for the preparation of the plans and specifications.

Replying under date of May 17, 1888, the honorable Secretary of War authorized the work proposed, and directed that the expenses should be paid out of the balance remaining of the original appropriations of \$50,000 made in 1882, as follows:

WAR DEPARTMENT,
Washington City, May 17, 1888.

SIR: I have the honor to acknowledge the receipt of your letter of the 23d ultimo, on the subject of modifying the present plans for the construction of the fish-ways at the Great Falls of the Potomac, and suggesting that the expenses should be provided for out of the appropriation for fish-way construction.

In reply I beg to state that the expenses of the necessary surveys at the Great Falls will be paid by Maj. G. J. Lydecker, Corps of Engineers, from the balance of the appropriation for "fish-ways," but it is suggested that the plans and specifications for the work of construction now proposed should be furnished by the Commissioner of Fish and Fisheries as provided in the act of July 15, 1882.

Very respectfully,

WM. C. ENDICOTT,
Secretary of War.

M. McDONALD, Esq.,
Commissioner, U. S. Commission of Fish and Fisheries, Washington, D. C.

The additional surveys authorized were completed under my direction by Mr. Frank Blaisdell, and the preparation of the plans and specifications was undertaken in the engineer office of the Fish Commission under my personal supervision and direction until some time in July, when my official duties called me to the New England coast. The plans were completed and transmitted to me at Wood's Holl, Mass., on August 7, 1888. When received the season was too far advanced to permit arrangements to be made for the completion of the work that season, had the plans been in such detail as to permit the preparation of the minute specifications which would be required, should the Secretary of War decide (as he did decide) that the work should be done by contract.

No further action was taken until my return to Washington, when I transmitted the plans to the Secretary of War with the following communication:

U. S. COMMISSION OF FISH AND FISHERIES,
Washington, D. C., November 13, 1888.

SIR: I have the honor to report that the surveys necessary to furnish the data for the preparation of the plans and specifications for the completion of the Great Falls fish-ways, and which were authorized by your letter of May 17, 1888, have been finished; and the maps, plans, and general specifications of the work proposed are herewith respectfully transmitted.

The work, as originally planned, contemplated six separate fish-ways or fish-way sections, surmounting a total vertical ascent of 71 feet. When work was suspended several years ago in consequence of damages resulting from high water, none of these sections were completed. On the upper section (No. I) no work had been done. The lower section (No. VI) was substantially completed and in working order, but lacked the stone coping required for the protection and preservation of the superstructure. The intermediate sections were in various stages of construction, No. V being nearest completion.

All the sections under construction were more or less damaged by the flood, the damage being greatest to No. V, the entire superstructure of which was torn from its foundations and floated down-stream. No. VI was not materially damaged, and was subsequently completed by Maj. G. J. Lydecker, U. S. Engineer, under instructions from the War Department, and is now in efficient working order.

In submitting plans for the completion of the work, I have found it desirable to change the location of Nos. IV and V to positions less exposed to the violence of the floods, and to introduce in all the sections modifications of design which give greater simplicity to the constructions, assure greater strength and permanence, and reduce very greatly the cost per running foot. Better efficiency is also attained, and the clogging or choking of the fish-way by floating timber, or by sand and gravel, is effectually prevented.

The new locations of Sections IV and V are shown in sheet 1.

Details of the modified designs as applied to Sections IV and V are shown in sheet 2.

Sections No. II and No. III suffered little damage from the flood. The superstructures of these were not in place at the time, and the foundations and side walls are in good condition and can be completed at little cost. Details of the new design adapted to these sites are shown in sheets 3 and 4. Details of the same design adapted to the waste-way in the center of the sixth section are shown in sheet 1, figures 1 and 2.

RESUME OF WORK TO BE DONE.

Sections IV and V.—It is proposed to change the locations of sections Nos. IV and V, and adopt the new locations shown on map of recent survey made under authority of the War Department (See sheet 1.) These sections will be built according to plans shown on sheets 1 and 2. A deflecting dam will be built from the head of section IV

across the present channel, so as to divert a sufficient volume of water to fill the fish-way sections.

Section VI—The central trough of Section VI will leave a fish-way 5 feet wide constructed in same, to be made as shown in figures 1 and 2, sheet 1. It is also proposed to repair damage to floating and grating of Section VI, and remove the rock from the sides and entrance to same.

Sections II and III will be reconstructed on their present sites, according to plans shown in sheets 3 and 4.

Section I.—In the construction of Section I it is proposed to build the same along the base of the dam, adapting it to the irregularities of the ground, and crossing the dam by an opening 10 feet wide and 2 feet deep about 150 feet from the shoulder of the dam, near the intake of the water for aqueduct. The dam at this point is solidly buttressed on its lower side by ledges of rock, and may be cut through without any danger of weakening it.

Auxiliary constructions will be as follows:

(1) The completion of temporary dam to keep out water during progress of construction.

(2) The construction of a riprap-deflecting dam to turn the water which now passes down the water channel back into the channel at the head of No. 6, it being of the utmost importance to deliver the largest practicable volume of water into the river through and alongside of No. 6 in order to invite the entrance of fish.

A permanent dam near the site of the present temporary dam, though not essential to the permanence of the fish-ways as now designed, is desirable in order to control the volume of water passing down the fish-way sections and to cut off the water at pleasure when it is desirable to do so.

It is evident from the above resume of work to be done, that it can not well be executed by contract. Latitude must be allowed in construction which can not well be provided for in plans and specifications. The work should, in my judgment, be executed under intelligent and expert supervision and by day labor. The material for the superstructure—the iron deflecting plates, the bolts, and the timbers required—could be provided by contract; but the work of construction could be better done, and I think more cheaply done, by carrying it on as I have above indicated.

In view of the provision incorporated in the last river and harbor bill, it seems probable that fish-way constructions will be an important matter in connection with river and harbor improvements. It would appear desirable, therefore, that the present work should furnish the opportunity for study and experience that may find useful application elsewhere.

I would therefore respectfully recommend that the responsible direction of this work be placed under the Commissioner of Fish and Fisheries, and that either an officer of engineers be assigned to the immediate charge of the same, or the Commissioner of Fish and Fisheries be authorized to employ a competent civil engineer to superintend the construction.

Very respectfully,

M. McDONALD,
U. S. Commissioner of Fish and Fisheries.

Hon. W. C. ENDICOTT,
Secretary of War.

The matter remained in abeyance during the winter, and on April 13, 1889, the Secretary of War, referring to my communication of November 4, 1888, replied as follows:

WAR DEPARTMENT,
Washington City, April 13, 1889.

SIR: I have the honor to acknowledge the receipt of your letter of November last, submitting plans for the proposed completion of the Great Falls fish-ways.

The plans have received the approval of the Chief of Engineers, and there seems to be no objection thereto with the exception of the cut proposed in section 1 of this work. On this subject Col. John M. Wilson, Corps of Engineers, states that, in his opinion, the cut must necessarily weaken the dam unless the work is done in the most careful manner, and the bottom and sides of the cut substantially protected. The Chief of Engineers, in reporting on the subject, remarks that "in view of the increased service the dam will be called on to supply upon the completion of the 42-inch main recently authorized by Congress, and of the possible injury to the dam, a cut through its crest should not be authorized in the position suggested, which is not far distant from the effluent gate house, and it is recommended that the Commissioner of Fish and Fisheries be requested to modify the plans so as to avoid the location suggested, and to place it nearer to 'Conn's Island.'"

The Department, concurring in the views of these officers, I beg to request that

modified plans be submitted for the proposed cut in section 1, so as to conform to the suggestion of the Chief of Engineers, and to ask that a tracing of this section be furnished, as one does not appear to be with the papers in the case.

Very respectfully,

REDFIELD PROCTOR,
Secretary of War.

Prof. MARSHALL McDONALD,
Commissioner of Fish and Fisheries, Washington, D. C.

Subsequent correspondence relating to certain modifications of plans to avoid weakening the water-supply dam and to the execution of the work is as follows:

WAR DEPARTMENT,
Washington City, May 2, 1889.

SIR: Acknowledging the receipt of your letter of the 18th ultimo, in connection with previous correspondence on the subject of the Great Falls fish-ways, I have the honor, pursuant to your request, to submit a plan of the dam deemed necessary in the construction of the new fish-way, and to ask that you cause to be prepared drawings and specifications for a fish-way so designed as to avoid cutting the dam.

It is proper to add that the Chief of Engineers, in submitting this matter, recommends that the work be done by contract under the supervision of an inspector to be nominated by you; Colonel Wilson, Corps of Engineers, to be held responsible for the proper disbursement of the funds only, and that this meets with the approval of the Department.

Respectfully,

REDFIELD PROCTOR,
Secretary of War.

HON. MARSHALL McDONALD,
Commissioner of Fish and Fisheries, Washington, D. C.

WASHINGTON, D. C., May 14, 1889.

SIR: I have the honor to acknowledge the receipt of your communication of May 2, transmitting plan and section of the water-supply dam at the Great Falls of the Potomac, and requesting that I "cause to be prepared drawings and specifications for a fish-way so designed as to avoid cutting the dam."

The fish-way proper, wherever located, will be built below the dam, and its erection will not involve any cutting or other interference with the dam, as by means of it the fish ascending will be brought to the level of the crest of the dam. The amount of water necessary to keep the fish-way full and in efficient working condition, will be afforded by the overflow from the dam; and when there is not less than 8 inches of water passing the crest fish will have no difficulty in passing from the pool at the head of the fish-way into the level above the dam. In lower stages of the river, to facilitate their passage over the crest, it is desirable to provide suitable depth for swimming-way, either by a depression in the crest-line, or by a culvert under the coping, the crest-line and coping remaining intact. The depression in the first case may be of moderate dimensions, its object being solely to furnish a sufficient depth of swimming-way, the amount of water passing above the established crest-line being sufficient at the lowest stages of the river to keep the fish-way full.

In the second case, the intake of water being by the culvert under the coping, this should be of sufficient dimensions to furnish all the water necessary for the working of the fish-way. The quantity, however, required for the purpose is insignificant, and would not affect appreciably the level of the water in the dam.

I have the honor to submit two provisional plans for crossing the dam, fulfilling, as far as practicable, the conditions imposed, the same being adapted to the location marked A A on the plan of dam furnished by the Chief of Engineers. Plan I is the more desirable construction, having consideration wholly with reference to fish-cultural requisites. Plan II will provide as efficient a construction, but the pool is liable to be filled by drift, and will require periodical cleaning. Should it be decided that neither the culvert through the dam, nor the depression in the coping can be allowed, I should still use Plan II, increasing the dimensions of the pool along the face of the dam, so that the overflow into it would be sufficient to keep the fish-way in operation at the lowest stages of water. Under the ordinary full stops of river prevailing to the 1st of July, it is probable that fish could usually pass the crest-line without difficulty.

As the migration of the shad up-stream is continued up to August, and the movement of the rock fish or striped bass is during the season of low water, it is desirable, for the best results, that they should be able to pass the dam at all stages, and this can not be accomplished except by the adoption of one of the plans submitted.

Very respectfully,

M. McDONALD,
Commissioner.

HON. REDFIELD PROCTOR,
Secretary of War.

WAR DEPARTMENT,
Washington City, May 31, 1889.

SIR: Referring to previous correspondence on the subject of the Great Falls fish-ways, I have the honor to acknowledge the receipt of your letter of the 14th instant, submitting two plans for a fish-way so designed as to avoid cutting the dam at that point.

In reply, I beg leave to state that I have approved the recommendation of the Chief of Engineers that plan No. 1 be adopted after modification providing for grooves 6" x 8" in the checks of the cut for the insertion of stop plank for use, should experience prove it necessary to prevent an undue lowering of the headwater at the intake of the aqueduct. Approval has also been given to the recommendation of the Chief of Engineers of April 29, 1889, previously communicated to you, that the work be done by contract under the supervision of an inspector nominated by you, and that Colonel Wilson be held responsible for the disbursement of the funds only.

Very respectfully,

J. M. SCHOFIELD,
Major-General, Acting Secretary of War.

HON. MARSHALL McDONALD,
Commissioner of Fish and Fisheries.

In pursuance of instructions from the Chief of Engineers, Col. J. M. Wilson, U. S. Engineers, then in charge of the work for the increase of the water supply, addressed me, under date of June 4, 1889, as follows:

OFFICE OF THE WASHINGTON AQUEDUCT,
Washington, D. C., June 4, 1889.

SIR: I have the honor to inform you that I have this day received from the Chief of Engineers your letter of the 14th ultimo to the Secretary of War, with various indorsements thereon, together with copies of the letter of the 31st ultimo to you from the Acting Secretary of War.

The Chief of Engineers has directed me as follows:

"Colonel Wilson will place himself in communication with the Commissioner of Fish and Fisheries, with a view to having detailed plans and specifications prepared, contracts drawn, and an inspector nominated. After approval by this office, the work will be carried out under the direction of said inspector, Colonel Wilson confining his supervision to seeing that the dam is not injured and that the disbursement of the money is properly made."

In view of the foregoing order I have the honor to request that you will please cause to be prepared and sent to me at your convenience, plans and specifications in detail of the proposed fish-ways and that you will nominate as inspector such person as you may deem fit to inspect this important work.

It has been the custom of this office to pay ordinary inspectors about \$100 per month, but in view of the character of your work which will probably require the services of an expert, I think his salary should be higher, probably from \$120 to \$140 or \$150 per month, depending upon his skill and capacity.

The plans and specifications should be complete, the latter entering into the minutest detail, as they become a part of the contract, and any omission, however trifling, may lead to complications with contractors.

As soon as these plans and specifications reach me, I will prepare advertisements inviting proposals and after the work is awarded will, subject to the approval of the Chief of Engineers, enter into contract for the work.

As soon as the contractor is ready to begin, I will notify you, and your inspector can then be appointed and assigned to duty.

In all payments upon vouchers, I shall request your certificates as to quantity of materials received, time employed, etc., and, based upon them, will make payments as required by the order of the Secretary of War.

If agreeable to you, I will be glad to see you at this office any day between 11 a. m. and 12.30 p. m., to consult in reference to this matter; or, if you prefer it, I will take pleasure in coming to your office any day you may mention after 4 p. m.

I am, sir, very respectfully, your obedient servant,

JOHN M. WILSON,
Colonel, U. S. Army.

HON. MARSHALL McDONALD,
Commissioner of Fish and Fisheries, Washington, D. C.

After conference with Colonel Wilson and acting in accordance with his suggestions, Mr. C. E. Gorham, the engineer officer of the Commission, was assigned the work of preparing the necessary plans and specifications. These were completed in July, but too late in the season to permit undertaking the work of construction until the following season, 1890.

During the winter of 1889-'90, the plans and specifications were carefully studied and revised, and have been ready for transmissal to the Chief of Engineers since April, 1890.

In submitting the plans, however, the duty of nominating a competent engineer officer as inspector is devolved upon the Commissioner of Fisheries, and he has not yet been able to find one available to whom he feels justified in committing the responsible direction of the work of construction. I consider it necessary in the Government interest to proceed with the utmost caution and consideration. It is far more important that the work should be well done than that it should be quickly done.

It is after all an experiment; we are not absolutely sure that effective means can be devised for passing shad over such obstructions as are offered by the Great Falls. We, however, feel very sure that it can be accomplished, and it is important that we should settle here the conditions as well as the probabilities of success or failure.

All expenditures on account of the fish-ways have been made under the authority of the Secretary of War. All disbursements have been made by the Officer of Engineers, in charge of the extension of the water-works.

The deficiency appropriation of twenty-five thousand dollars is intact, and there is also the balance remaining unexpended of the original appropriation. All is available for the completion of the work in accordance with the plans and specifications now ready for transmission.

At 3 o'clock and 40 minutes, p. m., the sub-committee adjourned to meet at the call of the chairman.

WASHINGTON, D. C., *September 15, 1890.*

The subcommittee met at 2 o'clock p. m. pursuant to call of the chairman.

Present: Senator Stockbridge (chairman).

TESTIMONY OF G. BROWN GOODE.

G. BROWN GOODE, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your full name?—A. G. Brown Goode.

Q. Where is your residence?—A. Washington.

Q. Are you employed in the Government service?—A. Yes; in connection with the National Museum.

Q. Please state in what branch of the service and what capacity?—A. I am assistant secretary of the Smithsonian Institution, in charge of the National Museum.

Q. Were you ever connected with the U. S. Fish Commission?—A. I have never been a salaried employé of the Fish Commission, but from 1872 to the time of Professor Baird's death I was in such intimate, personal, and official relations with him that I was constantly familiar with the work and did much volunteer work for it, and was in a certain way officially connected with it on two or three occasions. Shall I state them?

The CHAIRMAN. You may do so.

The WITNESS. In 1876 I was in charge of the exhibit of the Fish Commission at the Centennial. In 1877 I was employed as statistical expert in connection with the Halifax Fishery Commission, in the employ of the State Department. In 1879 I was appointed special agent in charge of the fisheries investigation of the Tenth Census, which was under the joint direction of the Census and the Fish Commission. In 1880 I was commissioner in charge of the display of the United States at the International Fishery Exhibition at Berlin, and in 1883 I was commissioner in charge of the exhibit at the International Fisheries Exhibition in London.

In the meantime I was constantly as a volunteer in charge of the report on the statistics of the fisheries; in fact, I think I had some honorary connection with the Commission, such as chief of the division of fisheries. In 1887, immediately after the death of Professor Baird, at the request of the President I assumed the Commissionership, which I held until the law was modified and the present Commissioner was appointed—about six months.

Q. You are undoubtedly aware that certain charges have been made affecting both the general administration of the Commission and the character of work now being carried on by it. Can you tell us anything about the internal affairs of the Commission since the appointment of Mr. McDonald as Commissioner, or have you had no opportunities to judge of that matter?—A. I have had the same opportunity that any person outside of the Commission and deeply interested in the work would have; and I have no hesitation in saying that I think the administration has been all that could be expected, and more than was expected. The Commission is efficiently organized, and is doing admirable work in every direction.

Q. In the scientific and practical branches?—A. Yes, sir; in both points of view.

Q. From your long acquaintance with the affairs of the Fish Commission and your acquaintance with the present Commissioner and his methods of business, state whether you would approve his methods?—A. In the first place, in regard to the personal attainments of the Commissioner. McDonald began his life almost as a pupil of Professor Baird, and as long ago as 1858 or 1859, when he was a mere boy, he was at the Smithsonian for one or two winters, and imbibed the principles of Professor Baird's work, and was always one of his most devoted disciples. I have known him ever since 1874. At the time he first became commissioner of fisheries for the State of Virginia, he showed so much enterprise, so much ingenuity and capacity in that work that as soon as the Commission had sufficient appropriations Professor Baird felt obliged to call him to his aid to take charge of the practical fishery work. There was no one else who could do it as well. I think he had not completed his scientific education, but he was enough of a scientific man to hold a scientific professorship at the Virginia Military Institute for a number of years, and only resigned that to come to the Commission. He is a man of great mechanical ingenuity. I think no one can deny that the most important inventions in modern fish-culture, in regard to fishways and matters of that kind, have been his. I had an opportunity to see that at the Fisheries Exhibition in London, where he received high awards, and where his apparatus was considered of the very best; and it was the apparatus devised and made practically by him that gave the United States its pre-eminence there in the matter of fish-culture.

Q. Has Colonel McDonald ever received any pay from the Government for the use of these various inventions?—A. I am not posted on that point. My impression is that he has not. I do not see how he could have received pay. He has, I think, received some royalties from the Scotch Government for the use of his fishway. I would not be positive of that. His work in fish-culture has been constantly in the direction of greater practicability and of greater economy in the handling of eggs, so that with the same force very much better results could be accomplished.

At the time of Professor Baird's death, Colonel McDonald was chief of the division of distribution, and had charge of almost all the work of the Fish Commission, with the exception of one or two stations, which were under the control of the Assistant Commissioner. I saw a good deal of his practical work during the six months I was Commissioner. I went with him on his car to one or two places, and was impressed with the fact that he was a very careful business administrator, and a very shrewd man. His whole thought, his whole life, was given to this thing. He thought of nothing else. He would not talk of anything else.

As regards his scientific attainments, he is not an investigator. His tendencies have been in the direction of mechanical and inventive science, but he is a man who has a broad conception of the needs of the work, and has also what is very important in such a position, the feeling that in such work science should be made tributary to practical work. He realizes that science must be cultivated for its own sake, because many things which are done without a practical result in mind lead to a practical result. But I think the key-note of his administration has been that every move should produce some definite practical result.

Q. Did you not, while acting as Fish Commissioner, in the fall of 1887, adopt certain regulations embodying an organization which thereby became established?—A. I did. I may state, Mr. Chairman, that the organization was based upon a report which had been prepared before Professor Baird's death, and submitted to him by a committee of his own appointment, a committee of three of the best men in the Commission. I know of my own personal knowledge that it had Professor Baird's approval, and if he had lived longer he would undoubtedly have put it into use.

Q. Here is a pamphlet which is said to contain those regulations and to define that organization. Do you recognize them as the ones established by yourself?—A. Yes, sir. It has my signature to it.

Q. We suppose that you considered that there was sufficient reason for providing such an organization. Did any definite organization exist during the lifetime of Professor Baird?—A. Practically no organization. Professor Baird held every line in his own hands. No one else could have done that. And if Professor Baird had not worked so hard his friends think he would have lived longer.

Q. Therefore before his death he had this plan of organization in view?—A. He had it deeply on his mind, and was constantly talking about it. He was so employed in the midst of other matters that he was unable to break the chain of the existing organizations, but he was leading to it.

Q. What was your purpose in making this organization? Did you expect thereby to promote the efficiency of the work or to provide for its better conduct through the agency of responsible chiefs?—A. That was my intention, and my intention also was to put the work of the Commission in such a way that it would be thoroughly intelligible to people outside; to put the thing—that was the request that President Cleveland made to me when I took the place—to put the thing on a thoroughly practical, business basis, in such manner that Congress and he could understand it.

Q. We notice that the organization provides for four divisions of the service. The first, entitled "administration," appears to be essentially the Commissioner's office. The others are scientific inquiry, statistics of the fisheries, and fish-culture. Do you consider that those divisions represent a natural subdivision of the branches of work with which the Commission is charged?—A. I do.

Q. Had that system been in operation long enough before you resigned the commissionership for you to judge of its merits then?—A. No. I should be sorry to say that it had. I think I should want at least a year to observe it before I would have been thoroughly satisfied with it.

Q. We understand that the same organization has been continued under Mr. McDonald. Do you consider that he was justified in so continuing it?—A. I think he was.

Q. Do you know anything about the working of the system under his administration, whether it has worked smoothly?—A. I think it has.

Q. Do you consider that, in its main features at least, the present system of organization meets all the actual requirements of the Fish Commission service?—A. I can not now see how it could be improved.

Q. Have you kept yourself informed respecting the work that has been carried on by the division of scientific inquiry of the Commission during the past two years?—A. Only in a general way, of course. There has been very little, comparatively, published, although I know that a great deal has been prepared for the printer. So far as it is possible in advance of the publication of the results to judge, I am of

the impression that the work is of great importance. In fact, I know that many of the men who have been intrusted with special subjects are the very best in the country, in the world, for them. I have no doubt the results will be of the greatest importance.

Q. A paper has been presented to the committee which is said to explain briefly the functions of that division as they have been interpreted by Commissioner McDonald. Here is a copy of it. Will you please give us your opinion of it in as brief a manner as possible? The principal question is, Does the plan he proposes seem to meet the requirements of the Fish Commission work? Does it provide for the economic results for which the Commission has been established, and is it sufficiently comprehensive in its scope? Furthermore, does it seem to you practicable to carry on the work as there proposed? When Professor Rathbun was before the committee he was asked to explain fully the scope of the work under his direction. Are you acquainted with Mr. Rathbun?—A. Very well.

Q. Do you consider him competent for the position he occupies?—A. Undoubtedly. I have always grudged him the Commission; we can not spare him to the Commission.

Q. You know his general plan of work; do you think it is as good as any that could be adopted?—A. I think he is carrying out as nearly as can be in the absence of the professor, Professor Baird's ideas, and is extending them in the direction Professor Baird would have extended them if he had had full vigor and health.

Q. From your knowledge of the workings of the Commission under the present commissioner, do you think that it has been his plan and purpose to carry out in a general way the general plans of Professor Baird?—A. Undoubtedly.

Q. He was an appointee of Professor Baird's?—A. Yes, sir. He has superadded to that the idea of bringing into shape the results of a great many things which Professor Baird began and was not able to complete.

The Commission under Professor Baird was still in the formative state, and he was branching out into new things and many things in which important results had been attained, but had not the time to bring them together. McDonald is not only carrying out Professor Baird's ideas in the way of making new discoveries, but he is clinching the nails which Professor Baird drove, so that all his good work is being saved.

Q. It has been expressly charged in this connection that the scientific branch of the Fish Commission was being run by the present Commissioner solely or chiefly in the interest of the National Museum. That the steamers and field parties are employed to gather specimens simply to to enrich the collections of the National Museum and to provide for its exchanges with foreign institutions. Can you give us positive information in respect to that subject?—A. Mr. Chairman, that is almost too absurd to deserve any notice, but since you have asked the question, I will say that that is the only ground of dissatisfaction I have with the Commission. Often in three months under the old administration the Museum received more material from the Commission than it has under three years of McDonald's commissionership. In fact while the Fish Commission used to be in more intimate relations with the Museum than any other department of the Government, there are now two or three others, the Geological Survey, the Bureau Ethnology, and the Department of Agriculture, which are in closer relations to the Museum than the Fish Commission, and while there are the pleasantest relations

between the Museum and the Commission, I never could see why that policy of close co-operation, such as the Geological Survey and the Department of Agriculture find profitable, should have been abandoned by the Commission.

Q. Have you reason to suppose that any part of the work of the Commission is now being conducted for that purpose, or with that object in view; or does the field-work appear to go on without reference to the National Museum?—A. The field of work undoubtedly goes on without reference to the Museum, not that the present Commissioner would not willingly do all in his power to assist the Museum, but his mind seems to be so concentrated on the practical results that he does not feel justified, I think, in turning aside.

Q. Is it not true that they furnish you a good many duplicates of specimens?—A. They furnish us with the first set of specimens after they have been worked up. Previously the collections were all turned into the Museum and were distributed by the Museum in the name of the Commission. Now we get one set, and that is precisely what the Museum of Comparative Zoology in Cambridge gives us in all fields in which we are interested. In other words, the Commission is doing its own work, and it does for the Museum what is required by law, and but little more. I think the Commissioner would like to do more, and I hope he will see his way clear to do it after a while.

Q. Does not the Commissioner send to the National Museum the type series of specimens collected by the field parties, after they have been studied by specialists, as permanent records of the work?—A. Yes sir.

Q. Is this not in accordance with an act of Congress?—A. It is required by law, and has been for forty years.

Q. Do any of the Fish Commission employés hold positions in the National Museum?—A. There are three of the Fish Commission men who have always held honorary curatorships in the Museum. An honorary curatorship is a curatorship without pay. The services are voluntary, and the work which the honorary curator does in the Museum is supposed to be for the benefit for the department with which he is connected as well as for the Museum.

Q. Have those persons received any salaries or compensation?—A. None whatever.

Q. Has this matter of securing Museum curators from the Fish Commission been arranged recently or is it of long standing?—A. It is practically as old as the Commission. These men when they came in the Fish Commission service usually came in through the Museum, and proving good Museum officers gradually became volunteer officers of the Fish Commission, and were transferred, meanwhile retaining their old places in the Museum.

Q. Do the services of these curators in the National Museum appear to have interfered with their duties on the Fish Commission?—A. On the contrary, I think their efficiency has been increased by it. They have had opportunities in the way of materials to study and books and matters of that kind, which the Fish Commission is not in position at present to afford.

Q. Do any other departments of the Government supply curators to the National Museum in this same way?—A. Yes, sir. We have from the Geological Survey seven, one from the Bureau of Ethnology, three from the Department of Agriculture, one from the medical corps of the Navy, and sometimes quite a number of aids detailed from the Navy as well, and we have one retired Army officer, that is, as curator.

Q. Does Dr. T. H. Bean hold any position in the National Museum

besides that of curator of fishes?—A. Hardly a position. He is, however, chairman of the committee on publications, and has been since the organization of that committee.

Q. Does he receive any pay from the National Museum?—A. None whatever.

Q. What are the functions of the committee on publications, and what position does Dr. Bean hold upon it?—A. He is chairman of that committee. The function of the committee is to pass judgment upon all papers which are offered for publication in the Proceedings and Bulletins, and to render professional advice as to the manner of publication, and the style of illustration. In fact, it is an advisory board having charge of all matters in relation to publications.

Q. He has charge, has he not, of the publications of the Fish Commission?—A. He has now.

Q. Do you consider him a competent man for that position?—A. I know no one more competent.

Q. How long has he been chairman of the committee on publications?—A. The committee was organized, I think, in 1886, but before the committee was organized he was not only chairman, but committee, too. The publications started in 1878, and from that time until now his has been the controlling voice in regard to them.

Q. Do you consider that Dr. Bean possesses the requisite experience and judgment to qualify him for that position?—A. Unquestionably.

Q. Is it only recently that he has so qualified himself, or do you consider that he has been competent for some years?—A. He certainly has been fully competent for ten years; for twelve years, for that matter.

Q. Do you think that the Fish Commission publications are more difficult to edit than those of the National Museum?—A. I think they are less difficult.

Q. Would you consider Doctor Bean qualified to edit the Fish Commission publications?—A. Why, certainly.

Q. Do you know why he was relieved of that work about 1883?—A. I did not know that he was relieved. My recollection of that is something like this: I think the Fish Commission Bulletin was started in 1881. It was modeled upon the lines of the Museum Proceedings, and Professor Baird knowing of Doctor Bean's work in that connection, asked him to take charge of the Bulletin until it was put into proper shape; he asked him to start it. I do not think he ever had any special appointment. He was simply told to take the thing and to put it into shape. After the Bulletin was fairly started it seemed unnecessary that a man of Doctor Bean's scientific attainments should give his time to the work. He, finding it irksome, asked to be relieved from the editorship in order that he might give his time to his ichthyological work, and Professor Baird was very willing to accede to his request. But it was at his own request, I am quite sure.

Q. Was there any dissatisfaction at the manner in which he performed the work? Was he removed because of incompetency, or did he relinquish the position voluntarily?—A. He resigned, and if I am not greatly mistaken I knew of a letter written by Professor Baird to him in which he expressed the highest appreciation of him and satisfaction with his work.

Q. It was not because he was incompetent, then, that he discontinued?—A. No, sir; not by any means.

[Not long before Professor Baird's death, appreciating the importance of a regular organization for the Commission, he appointed a committee

of his own employes to report a plan of organization, which plan was adopted by Professor Goode during his administration of the office, and has been continued by the present Commissioner. An extract from said plan is appended.]

ORGANIZATION.

11. The Commissioner will control the general policy of the Commission. His immediate staff and the routine of his office will be such as he shall specify.

12. The operations of the Commission arrange themselves naturally under the four following divisions:

- I. Administration;
- II. Scientific Inquiry;
- III. Statistical Inquiry;
- IV. Fish Culture.

To one of these four divisions all employes now or hereafter to be appointed will be assigned by the Commissioner.

I.

13. The Division of Administration will comprise:

- a. The Office of the Commissioner;
- b. The Office of Accounts;
- c. The Office of Property;
- d. The Office of Records and Publications.

14. The Office of the Commissioner will be the office of general control and direction of the affairs of the Commission.

15. The Office of Accounts will be in charge of the disbursing agent.

16. The Office of Property will be in charge of the property clerk. In this office will be kept a full record of all property of the Commission, with the exception of specimens, records, and books.

17. The Office of Records and Publications will be in charge of the record clerk. In this office will be kept the official records, and through it the publications of the Commission will be distributed and accounted for.

18. The record clerk will have charge of all reports and papers approved for publication by the Commissioner which are not otherwise provided for.

19. He will keep a full record of the plates or cuts for illustration of the publications of the Commission, and make an annual report of the same for the information of the Commissioner.

20. A committee on publications will be appointed by the Commissioner, to which will be referred for final action all matter presented for publication. The secretary of this committee will act as editor, and it shall be his duty to see that the manuscript presented for publication is in proper form for printing; to edit the same during its passage through the press; and to satisfy himself that the proofs are properly examined, either by the authors of the papers, or in their absence by persons skilled in the subjects of which the papers treat.

II.

21. The Division of Scientific Inquiry will be under the immediate control of a person of proved scientific ability, who will be entitled assistant in charge of scientific inquiry, and who will direct and apportion the scientific and other researches intrusted to him by the Commissioner, determine the methods and means to be employed, receive and examine the reports of the investigators appointed, and generally direct and co-ordinate the original researches and scientific observations of the Commission in the interests of economy and unity of action. He will be directly responsible to the Commissioner for the accuracy and value of the results presented.

22. To this division will be assigned:

- a. Collaborators in scientific research;
- b. Persons employed in special investigations and experiments of a practical character;
- c. Volunteer aids and persons detailed by other branches of the Government to assist in scientific research, under the orders of the Commissioner; and such clerks and laborers as may be necessary.

23. To this division belong the "investigations and inquiries" concerning the supply of food fishes of the sea-coast and lakes of the United States contemplated by the act creating the Commission. (See par. 4.)

24. The assistant in charge will receive and examine all reports submitted by persons engaged in original research, under direction of the Commission, and all correspondence upon subjects relating to the business of his division which may be referred to him by the Commissioner. When such correspondence calls for new investigations, he will designate to the Commissioner the person or persons to whom the work should be assigned, and, when necessary, furnish estimates of the probable cost, both as to time and materials required.

25. He will keep himself informed as to the progress of the work under his direction, either by correspondence or by personal inspection, for which latter he may from time to time request the authority of the Commissioner.

26. In his annual reports he will present a detailed account of the operations of his division for the year past, embodying such reports or parts of reports from his subordinates and collaborators as he recommends for publication; statements of the cost of the work of his division for the year and of the results accomplished; and his recommendations as to the operations for the year to ensue. These recommendations will be accompanied by estimates of the amount and character of the work which may reasonably be expected, the number of assistants and quantity of new apparatus required, and the probable cost in detail of each item.

27. Specialists in scientific research, or aids who are in the permanent employ of the Commission, may be given charge of subdivisions of its work or of stations for investigation. Those so detailed and persons temporarily employed for special investigation will, so far as responsibility for property and the official business of the Commission is concerned, conform to the regulations established for superintendents of stations and for persons in separate charge. The details and methods of the work itself will be specified in each case by the assistant in charge of the division.

III.

28. Division of Statistical Inquiry. The organization of this division will be defined hereafter by a circular order.

IV.

29. The Division of Fish Culture will be under the immediate control of an assistant appointed by the Commissioner, who will be entitled assistant in charge of fish-culture, and will have the general direction of hatching and distributing stations, of railway cars, launches, and other vessels employed in the hatching and distribution of fishes and of their eggs, and of the superintendents and other employés connected with this part of the work of the Commission. He will receive and examine the reports of the superintendents of stations, and will be directly responsible to the Commissioner for the efficiency and economy of the work of his division.

30. To this division will be assigned:

- a. Superintendents of stations;
- b. Spawn-takers and other persons employed in fish culture;
- c. Messengers in charge of fish-cars, and the necessary clerks, attendants, and laborers.

31. The assistant in charge will keep himself fully informed as to the work done at the different stations, the results obtained, and the expenditures incurred, and will, from time to time, with the authority of the Commissioner, make or direct personal inspection of the stations in order that he may be prepared to present to the Commissioner such recommendations as will develop and expand the practical work of the Commission, promote efficiency, and control expenditures.

32. In addition to the officials above named, who are in the pay of the Commission, there are, under the orders of the Commissioner:

- a. Officers and enlisted men of the Navy, detailed for service in the vessels of the Commission;
- b. Officers and enlisted men of the Navy, detailed for shore duty, under the orders of the Commissioner;
- c. Officers and enlisted men of the Navy, temporarily detailed to aid in scientific research with the Commission, either afloat or ashore.

GENERAL INSTRUCTIONS.

33. All persons connected with the Commission are expected to be familiar with its regulations and circular orders and to render cheerful obedience to their superiors for the time being and a hearty co-operation with the purposes of the Commission.

34. The Commissioner may, by circular order, assign to a single person the duties of two or more of the subdivisions of the operations of the Commission hereinbefore defined.

35. Superintendents of stations and all employés acting independently will keep a daily journal of the operations of their stations or parties, noting therein the char-

acter of the work performed, the receipt or issue of property, official correspondence, the approval or certification of bills, the movements of subordinates, and all matters of importance connected with their work. This daily journal, being independent of note-books, property records, or letter-books, and intended to serve as a running index to the operations of the station or party to which it refers, is to be kept with brevity, omitting details which properly belong to other records.

36. Matters or events which appear to be of especial interest should be reported at once, through the regular channel, to the assistant in charge of division.

37. The orders of assistants in charge of divisions, employés in charge of office, superintendents of stations, or persons in charge of parties, must be obeyed whether approved by the subordinate receiving such orders or not. In case of difference of opinion, however, the subordinate may demand that the order be issued in writing, and, if the circumstances appear to him to justify such action, may remonstrate in writing to the assistant in charge of his division, through the regular official channel. (See sec. 47.) If, after a reasonable delay, there be no reply to his remonstrance, he may address a copy directly to the Commissioner, it being understood that trivial or unreasonable remonstrances or complaints will be regarded as serious acts of insubordination. In no case will the fact that a remonstrance or complaint has been forwarded be considered as a valid excuse for delay or failure to obey an order issued by lawful authority.

38. Original bills or vouchers for property purchased will not be certified for payment by the assistant in charge of division unless accompanied by satisfactory evidence that the property has been received and duly accounted for to the property office, and that the purchase has been authorized by the Commissioner.

39. Requisitions which are not in official form will be returned for correction by the assistants in charge of divisions to the persons sending the same; and they will not be submitted to the Commissioner for approval until the rules governing requisitions shall have been strictly complied with.

DAILY DUTIES.

40. The following are regular daily duties of employés charged with separate responsibility.

- a. Enter changes in daily record of property, according to the prescribed form, at the time of their occurrence.
- b. Answer and file letters received and copy the replies (in letter-book.)
- c. File receipts, invoices, and approved requisitions.
- d. File unsettled bills, and duplicates of bills forwarded to office of accounts.
- e. Enter details of the day's work in note-book.
- f. Write up daily journal.

41. The note-book referred to under "e" is to be the record of the details of the daily work of the station, office, or party, and is to be kept with sufficient fullness to enable the writer to furnish, on demand, a statement of the methods pursued in the work under his direction. The mode of entry must necessarily vary with the kind of work done; but it is recommended that, for uniformity, all note-books shall be of uniform size, and of a prescribed standard. Such books will be issued on properly approved requisition.

MONTHLY DUTIES.

42. (a) Before the end of each month all persons who have made purchases on behalf of the Commission will forward to the office of accounts the original bills for such purchases, indorsed with their certificates to their correctness. Whenever possible it is desirable that duplicate bills shall be procured from the seller, so that one copy may be retained, for future reference, in the files of the station or party purchasing. (b) Sign and certify to monthly pay-rolls of employés. (c) Fill and forward statement of leaves granted during the month.

ANNUAL DUTIES.

43. Make out and forward annual report, including a summary statement of the work for the year; reports of special researches or experiments of importance; a list of employés, and report of changes in the force during the year; statement of leaves granted during the year; recommendations regarding the operations for the year to ensue, including estimates of probable expenditures required, and recommendations as to changes in the force and material considered to be desirable.

CORRESPONDENCE.

44. Official correspondence is such as relates to the business of the Commission.

45. Official letters shall be written upon letter paper not exceeding 8 x 10 inches, so that when folded twice it will be contained by one of the regular official envelopes of the Commission.

46. The "penalty envelope" (to be procured by all authorized persons, upon requisition, from the office of records and publications) shall never be used without a postage stamp when private or personal matter of any kind is introduced into an official letter.

47. All official correspondence must be forwarded through the regular channel, that is, through the hands of the official of the Commission next superior to the writer. Letters not addressed to the next superior shall be forwarded unsealed, and the official receiving them shall indorse them either "Forwarded," "Approved and forwarded," or with such comments as the interests of the service may appear to demand.

48. Official communications from superiors to subordinates will be subject inversely to the same rule of transmission.

49. When an official letter, forwarded through the regular channel, remains unanswered after a reasonable delay, the writer may, if he thinks that the interests of the service so require, forward a copy directly to the person addressed by the original letter, stating the facts and his reasons for so doing.

50. It is expected that copies of all official letters will be kept by their writers and that files of letters received will be preserved.

51. All official correspondence by employes of the Commission serving on ship-board, relating to the work of the ship, must be forwarded through the commanding officer.

CIRCULAR ORDERS.

52. There is no provision of law for the exercise of authority in the Commission by any person other than the Commissioner. When it becomes necessary that the Commissioner shall delegate authority to any person in the Commission, whether it be for general purposes (as in the case of assistants in charge of divisions or stations) or for specific purposes, the same will be announced in a circular order, of which one copy shall be communicated to each of the persons attached to the station or concerned in the duty affected, one copy furnished to each assistant in charge of division and superintendent of station, and one copy filed in the Commissioner's office.

53. Such circular orders will be numbered consecutively, will state specifically the nature and extent of the authority delegated, and, when they relate to special duty, the duration of its continuance.

54. Circular Orders will be issued in relation to the following subjects:

- a. Changes in or additions to the regulations;
- b. Instructions affecting the general policy of the Commission.
- c. Delegations of authority by the Commissioner to subordinates affecting others than the persons designated.
- d. Appointments to the office of assistant in charge of division or office, superintendent of station, or to the charge of an independent station or party.
- e. Appointment of Inspector, or Board of Survey.

INSPECTION AND BOARDS.

55. Annually, or more frequently in the discretion of the Commissioner, an inspection of each station will be provided for by a circular order.

56. The report of the inspector will relate to the following subjects:

- a. Mode of keeping the property record;
- b. Condition of property and precautions for its care and preservation;
- c. Condition of property reported as unserviceable or for repair;
- d. Completeness of the records and file of circular orders;
- e. The needs of the station of whatever kind.

57. The report of the inspector shall be forwarded in writing, directly to the Commissioner, within ten days from the completion of the inspection.

58. Boards of survey upon property will consist of not less than two persons, and will examine and report upon the property in question according to prescribed form.

59. When it is decided to order an examination of candidates for an employment in the Commission, which is exempted by law from the operation of the civil service rules, the Commissioner will detail a Board for the purpose, made up of employes of the Commission, one of the members of which shall be a person skilled in the duties of the position to be filled.

60. Special orders will relate to the movements or duties of individuals when only the person ordered is affected. Special orders need not be numbered consecutively or communicated to others than the person addressed.

LEAVES OF ABSENCE.

61. No employe shall absent himself from duty except on Sundays and legal holidays without permission from his official superior. In case of sickness or unexpected detention notice must be promptly sent by the employe so detained to his superior, stating the cause and probable duration of his absence.

62. Persons absent on account of sickness will furnish physicians' certificates or other evidence satisfactory to their official superiors that the absence is necessary.

63. Assistants in charge of division, persons in charge of office, and superintendents of station are authorized to verbally grant leaves of absence not exceeding one day in duration to persons under their direction. They may also grant leaves of absence not exceeding two and one-half days in any calendar month, but will give the authority in writing and forward a copy to the Commissioner. Such leaves shall not be granted to the detriment of the work of the Commission except in very urgent cases. All applications for leave exceeding two and one-half days at a time shall be referred to the Commissioner for his approval.

64. A record of leaves granted will be kept in the office of accounts.

APPOINTMENTS.

65. All appointment of employes will be made by the Commissioner, and will be subject to the rules established for the "Regulation and Improvement of the Executive Civil Service," in so far as those rules are applicable to the Commission.

66. Employes whose duties are exclusively professional are exempted from examination by the civil service rules. The Commissioner may, however, in his discretion, either request the special certification of candidates for such employment from the Civil Service Commission, as provided by Rule VII, par. 5, or direct an examination as to the fitness of the candidates by a board composed of employes of the Commission.

67. In addition to the necessary professional tests, every such examination by a Board of employes of the Commission shall exact at least the minimum requirements of the civil-service rules respecting general examinations. (Rule VII.)

68. Candidates presenting evidence, by publication of original researches or diplomas or certificates from scientific or technical schools of good standing, indicating that they are properly qualified in the professional branches required, may be exempted from examination, at the discretion of the Commissioner.

G. BROWN GOODE,
Commissioner.

NOVEMBER 1, 1887.

TESTIMONY OF SAMUEL LEROY PRITCHARD.

SAMUEL LEROY PRITCHARD, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your name?—A. Samuel LeRoy Pritchard.

Q. Where do you reside?—A. Washington.

Q. Are you in the Government service?—A. Yes, sir.

Q. Please state in what branch and what capacity.—A. In the statistical department, division of fisheries of the United States Fish Commission.

Q. Were you serving in the statistical office of the Fish Commission during all of last fiscal year?—A. Yes, sir.

Q. Were any clerks from the fisheries division of the Census Office quartered there at intervals during that time?—A. There were some clerks from the Census Office. I do not know what division they were from.

Q. They were from the Census Office?—A. Yes, sir.

Q. Can you recall the months during which they were there?—A. They were there at odd times between September, I think, and February or January—the middle of January.

Q. Last year?—A. Yes, sir.

Q. Can you state how many different clerks were there altogether, and how many were generally there at a time?—A. Well, they would average from three to four, sometimes five and sometimes three.

Q. Were you given any official relations with those clerks?—A. I was told to give them the records from which to get the information they desired.

Q. Did you pick out from the files the records which they made use of, and explain their contents, etc.?—A. Yes, sir.

Q. Were they given all the accommodations they required, and were they treated with proper civility?—A. Most assuredly, sir; so much so, in fact, that they always thanked me when leaving for the courtesy, etc.

Q. Did they seem to be satisfied with the treatment they received?—A. Yes, sir.

Q. Did the demands of the Census clerks for information and explanations interfere at all with the progress of your own work or with that of other clerks in the office?—A. Well, they did sometimes, and as soon as they were gone I found that the records were mixed up to such an extent that it required considerable time to search them out.

Q. Were the Fish Commission clerks in the habit of conversing with those from the Census Office during hours of work, excepting on matters of business?—A. No, sir.

Q. Did the Fish Commission clerks pay constant attention to their own work, or were they in the habit of idling and of neglecting their duties?—A. So far as I know they paid attention to their own work.

Q. Were they in the habit of reading newspapers during office hours, or of doing other things which might interfere with the conduct of their business?—A. Well, sir, part of the duties of the chief of the room is receiving slips, newspaper articles relating to the fisheries of the country, and he used to read them over before filing them away.

Q. They are not in the habit of spending their time reading newspapers?—A. No, sir.

Q. Do you know if any of the Fish Commission clerks in the statistical office twitted the Census clerks and commiserated them for having to work so hard under Mr. Smiley, remarking at the same time that they had an easier time in the Fish Commission?—A. No, sir.

Q. You did not hear anything of that kind?—A. No, sir, not at all.

Q. Do you know of any such conversations with respect to the clerks of any other office of the Fish Commission?—A. No, sir, I do not.

TESTIMONY OF HUGH M. SMITH—Recalled.

HUGH M. SMITH, being recalled, testified as follows:

By the CHAIRMAN:—

Q. At times during the last fiscal year, certain Census Office clerks, who were sent down to the Fish Commission building to obtain information from the files, were quartered in the statistical office of which you have charge. Mr. C. W. Smiley states that those clerks invariably reported to him about the laziness and the looseness of affairs at the Fish Commission. Clerks were reading newspapers in office hours, and were not attending to their work as they should have been. They also said that they were twitted and commiserated for having to work so hard under Mr. Smiley, while in the Fish Commission it was very different. What can you say about that? Did you ever hear any such talk from them?—A. No; they never said anything to any one in the office about that.

Q. Is it true that the clerks in the statistical office were in the habit of spending their time reading newspapers and so on.—A. Not at all, sir.

Q. Were you at the statistical office in Washington during the entire fiscal year 1889-'90?—A. I was away in the fall from about the middle of August until the middle of October.

Q. Who was in charge of the office while you were away?—A. Mr. Ravenel.

Q. Were any Census clerks of the fisheries division at work in that office during that time?—A. Yes, sir.

Q. While you were in Washington should you not have been cognizant of any matters going on in your office that came under the observation of the Census clerks during office hours?—A. Yes, sir.

Q. Can you throw any light upon the subject of the charges made by them to Mr. Smiley?—A. Well, I think that Mr. Smiley was misinformed. I do not think that the census clerks who were sent down there had sufficient knowledge of our work to pass any judgment on it. Generally speaking, I should say the charges are without any foundation.

Q. Are not the clerks under your charge subject to the same regulations as the other clerks of the Fish Commission in respect to their duties and the general office discipline?—A. They are.

Q. Was it the case that some of your clerks, at the time the Census clerks were in your office, did not conform to those regulations? If so, please explain the circumstances.—A. The only possible ground there could have been for such a charge was that we receive a large number of newspapers and newspaper clippings bearing on the fisheries, and it has been the duty of one or more of us to look over these, and to get out certain data to be used in our work.

Q. That might explain the comments of the Census clerks that your clerks spent their time reading newspapers?—A. Yes, sir.

Q. They were looking up matter to be preserved?—A. Yes, sir.

Q. Did you detail any one of your clerks to get out the records as they were required by the Census clerks?—A. I did.

Q. What was his name?—A. Mr. Pritchard.

Q. He is still in the employ of your office?—A. Yes, sir.

Q. Were the Census clerks treated with proper civility in your office? Did you give them all the accommodations they needed, and were the records so explained to them that they might have no trouble in obtaining the facts they were looking for?—A. Every accommodation was extended to them. We went to the trouble of getting out extra tables and desks for them, furnishing stationery, pens, ink, paper, etc.

Q. And explained the records so that they might have no trouble in obtaining the facts they desired?—A. Yes, sir; nearly every one in the office has, at one time or another, put himself out in order to elucidate the records in the interests of the Census Office.

Q. Did the assistance thus rendered interrupt the work of your office to any extent?—A. It did at times, considerably.

Q. Did the Census clerks leave the records of your office in as good shape as they found them?—A. No, sir; they were left in quite bad order. In fact, some of the things that we had a record of have never been found since they left. We suppose they are there, but they have been so misplaced that we could not find them.

Q. If the reports concerning laxity of discipline, etc., emanating from the Census clerks, did not apply to your office, to what office or offices could they have had reference, and what opportunities had those Census clerks for making observations in respect to that matter?—A. I do not know to what other office they could have had reference. For a short time after coming to the Fish Commission they were in Mr. Smiley's room, that is, the room formerly occupied by him.

Q. They had nothing to do with the other offices except the statistical office?—A. No, sir, not at all.

TESTIMONY OF W. DE C. RAVENEL.

W. DE C. RAVENEL, being duly sworn and examined, testified as follows:

By the CHAIRMAN:

Q. What is your name?—A. W. de C. Ravenel.

Q. Where is your residence?—A. Washington, just at present; Falls Church, properly.

Q. Are you employed in the Government service?—A. Yes, sir.

Q. Please explain in what branch, and in what capacity.—A. I have been acting as superintendent since I came in. I was superintendent of St. Jerome's Station.

Q. Where is that?—A. On the Chesapeake Bay, just six miles north of Point Lookout. That station was given up in 1887, and I then took charge of the Battery Station on the Susquehanna River. I have also been engaged in collecting statistics along the coast during parts of the last three winters.

Q. Were you acting in charge of the statistical office of the Fish Commission during any part of last fiscal year, while Dr. H. M. Smith was absent from Washington?—A. I think from about the 8th of August to November, the latter part of October.

Q. Last year?—A. Yes, sir.

Q. During that time were any clerks from the fisheries division of the Census Bureau quartered in that office?—A. There were.

Q. How many of those clerks were present there at a time?—A. Three ladies and one young man—four was the largest number.

Q. Can you tell how many clerks were there altogether?—A. No, sir.

Q. They changed?—A. I know of two different men who were there at different times. There may have been five altogether, but four is what I recollect.

Q. Mr. C. W. Smiley, in charge of the fishery census, states that those clerks invariably reported to him about the laziness and looseness of affairs at the Fish Commission. Clerks were reading newspapers in office hours, and were not attending to their work as they should have been. They also said that they were twitted and commiserated for having to work so hard under Mr. Smiley, while in the Fish Commission it was very different. Do you know anything about that?—A. Not anything that I can recollect. During Captain Collins's absence his paper files were sent up to the office, and it was my duty to look them over, and to mark them, etc. I really do not know of anything else of that kind.

Q. You did not hear any talk about your having an easy time and those poor Census clerks having to work so hard?—A. I doubt if I should have commented upon it without knowing who they were.

Q. While you were acting in charge, should you not have been cognizant of any matters going on in your office that came under the observation of the Census clerks during office hours?—A. I certainly should have. I may have been off on leave for a few days.

Q. Were not the clerks under your charge subject to the same regulations as the other clerks of the Fish Commission in respect to their duties and the general office discipline?—A. Certainly.

Q. Was it the case that some of the clerks under your charge at the time the Census clerks were in your office did not conform to those regulations? If so, please explain the circumstances.—A. I know of

one case. Mr. Snell, who did a great deal of work at home, occasionally came late. He worked during lunch hour, and frequently after office hours, and made up more time than the legitimate time for work in the office.

Q. Were your clerks in the habit of conversing with those from the Census office, during business hours, on matters not connected with the work of the Census?—A. Not that I am aware of. I do not think that a conversation was ever started by us in any instance, because I really did not know the names of the people who worked in the office.

Q. Those clerks who came to the Census Office attended to their work, as a rule?—A. Yes, sir.

Q. And you attended to yours?—A. Yes, sir. Of course we answered a good many questions. They were green about the work.

Q. Were the Census clerks treated with proper civility in the office? Did you give them all the accommodations they needed; and were the records so explained to them that they might have no trouble in obtaining the facts they were looking for?—A. They were certainly treated with courtesy, and everything in the world was done to make their work easy, and at very serious inconvenience to ourselves. I frequently had to have work done in advance for them, stopping men doing our work, and at all times we gave them any information they wanted at serious inconvenience.

Q. Did the assistance thus rendered interrupt the work of your office to any extent?—A. Frequently we were interrupted half an hour at a time.

Q. Did the Census clerks leave the records of your office in as good shape as they found them?—A. They left them in very bad shape. They were very much mixed up. I suppose it was due to their greenness in the matter. I called the attention of the young man in charge to it, and he said he would be more careful in the future, but they were still very much mixed up, and it was months before they were straightened out.

Q. If the reports concerning laxity of discipline, etc., emanating from the Census clerks, did not apply to the statistical office while you were in charge of it, or otherwise present, to what office or offices could they have had reference, and what opportunities had those Census clerks for making observations in respect to that matter?—A. I am under the impression that some of the clerks worked in the library, which used to be under Mr. Smiley. I do not know whom it was under then. I think Mr. Latimer. That is the only place except our office.

At 3 o'clock p. m. the subcommittee adjourned.

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 24, 1891.—Ordered to lie on the table and be printed.

Mr. WASHBURN presented the following

APPEAL TO THE SENATE FROM THE NATIONAL CONVENTION OF THE REPRESENTATIVES OF THE COMMERCIAL BODIES OF THE UNITED STATES, ON BEHALF OF HONEST INSOLVENTS, CONSUMERS, RETAILERS, WHOLESALERS, MANUFACTURERS, COMMERCIAL, INDUSTRIAL AND PROFESSIONAL BODIES AND THE PEOPLE AT LARGE, PRAYING FOR THE CONSIDERATION AND PASSAGE OF THE TORREY BANKRUPT BILL AT THE PRESENT SESSION, AND CALLING ATTENTION TO THE FACT THAT THE PEOPLE ARE IN FAVOR OF IT, AND THAT THE ONLY OPPOSITION OF MOMENT, OUTSIDE OF CONGRESS, IS FROM A FEW GREAT HOUSES WHO HAVE SELFISH INTERESTS IN OPPOSITION TO ITS ENACTMENT; WITH AN APPENDIX CONTAINING SPEECHES IN FAVOR OF BANKRUPTCY LEGISLATION, THE NAMES OF THE OFFICERS AND COMMITTEEMEN OF THE NATIONAL ORGANIZATION, THE BODIES WHICH HAVE INDORSED, AND THE CITIZENS WHO HAVE PETITIONED FOR THE ENACTMENT OF THE TORREY BANKRUPT BILL.

WASHINGTON, D. C., *February 17, 1891.*

TO THE HONORABLE THE SENATE OF THE UNITED STATES:

We, the undersigned, as the officers and chairmen of committees of the National Convention of the Representatives of the Commercial Bodies of the United States, on behalf of honest insolvents, consumers, retailers, wholesalers, manufacturers, commercial, industrial, and professional bodies, and the people at large, respectfully but earnestly appeal to you for the consideration of the Torrey bankrupt bill, which, if enacted, will make more secure the property rights of the whole people, and release hundreds of thousands of your honest fellow-citizens from their hopeless bondage of debt.

To the Senators who are favorable to bankruptcy legislation:

To the Senators who believe that the power conferred by the Constitution to enact laws upon the subject of uniform bankruptcies should be exercised, and that the Torrey bill is a wise embodiment of the laws contemplated, we appeal to stand steadfast in their convictions and to insist at all hazards upon the final enactment of that measure at this session. By so doing they will provide for the release from debts they

can never pay, of hundreds of thousands of honest, earnest men who have been the subjects of misfortune without their own fault; their release will restore them to the great army of men who conduct the commerce of the country, and enable them to better support their families and educate their children. The passage of that bill will lessen the perpetration of fraud, prevent commercial failures, make it possible for debtors who are hard pushed to have meetings with their creditors for the protection and advancement of their mutual interests, and in all respects substitute equitable dealings for selfish strife in reference to the transactions on credit by which the debtor and creditor classes are created.

To the Senators who are opposed to bankruptcy legislation :

To the Senators who are opponents of the proposed legislation we earnestly appeal for the consideration of the subject, because large numbers of their constituents have prayed for it, and all of their material interests will be promoted in the event the consideration shall be followed by the passage of the bill.

We are conscious that they can encompass the defeat of the measure at this session by postponement. We earnestly appeal to them not to do so, but to permit the bill to be voted upon, to the end that the commercial bodies of every State, the petitioners from every part of the country, the men who are interested in the subject, but who have remained silent, and those citizens who, by their depressed financial conditions and the toil incident thereto, are not fully advised of the movement in behalf of this legislation, or whose voices are too weak to be heard at the National Capitol, may know whether the Senate will or will not give heed to the earnest and repeated appeals which have been made in person and by petitions, resolutions, memorials, addresses, and letters in favor of this bill.

*To the Senators who are favorable and those who
are opposed to bankruptcy legislation :*

To the Senators who are friendly and those who are opposed, we appeal for the immediate passage of the bill, and direct attention to the fact that the mainspring of action of every opponent outside of Congress of this legislation is selfish.

The only opposition of moment, so far as we know, to the enactment of this bill comes from or through a combination of a few great houses, headed by one which has most industriously opposed the legislation asked for by the people. It has attempted to arouse prejudices against the proposed law because of wrongs which were perpetrated under the bankrupt law of 1867. Every protest against this measure which has been filed at the present session, save about three, is on a printed blank, with copies of which this house has flooded the country.

Most of the great houses in every line have supported our cause in the belief that its success would lessen the perpetration of fraud and because they were willing to take equal chances with their competitors and accept reciprocal rights and responsibilities with the persons from whom they purchase and to whom they sell.

The members of the house referred to, and of the few other great houses in sympathy with it, have selfish interests in seeking to defeat the enactment of this bill, among them the following :

The bill prevents the giving and receiving of preferences; they in their own selfish interests wish the perpetuation of the present dissimilar provisions of the several State laws, as they are by the espion-

age exercised over their patrons, and the ability of their large corps of lawyers, enabled to secure preferences by voluntary means or compulsory processes and collect the whole amount due, or apply the whole of the debtor's estate to the payment of their claims, and then require the payment of the balance out of future earnings as a condition precedent to permitting them to use their names and enjoy all the rights of free-men in relation to property.

The bill is designed to enable honest insolvents to secure discharges from their indebtedness over and above the amount paid by their estates in dividends; they prefer to secure by compulsory process, if necessary, such parts of their claims as they can, and then pursue the debtors the rest of their lives to secure the balance if possible.

The bill makes it possible to have creditors' meetings when a debtor becomes pressed and needs the advice and assistance of his creditors both for his and their benefit; they are said to have private meetings with their debtors and their attorneys, and unless the debtors will secure their claims, irrespective of the rights of other creditors, levy under compulsory processes upon their property, no matter whether there are or are not grounds for their so doing.

The bill provides for arbitrations and compromises; they can afford to "bulldoze" their debtors and associated creditors who have less capital invested in business than they have, and enforce the acceptance of their dictatorial terms or block any form of adjustment, although it may be satisfactory to the debtor and all the other creditors.

The bill provides for the increase and maintenance of confidence between business men in different parts of the country, and will thereby enable customers who can buy now only from certain houses in near markets to buy in all accessible trade centers; the present imperfect State laws enable them in effect to own their debtors and force them to continue as their customers by preventing their competitors from selling to them for fear of being swindled.

In other words, the great house in question and others which pursue a like course do not want a law for the greatest good to the greatest number because they find it financially profitable to promote distrust, encourage strife, and have their business rights adjusted by a different set of laws every time a State line is crossed, instead of by the provisions of a uniform, equitable act, which provides for a quick and inexpensive administration of bankrupts' estates. They prefer to be judge, jury, and executioner of the rights of their debtors, instead of having them determined according to the provisions of a general and equitable law under which all persons will be treated alike.

The issue so far as the people are concerned is unmistakably between a few great houses in opposition to the bill and the mass of honest insolvents, consumers, retailers, wholesalers, manufacturers, commercial, industrial, and professional bodies, and the people at large in favor of the bill.

Politics are not involved in the issue. The subject of bankruptcy has not been contained in party platforms. All of the political parties contain many friends and a few opponents of the bill.

Sectionalism has not played any part in the discussions which have been engendered. The men who are dependent upon credit in their various callings irrespective of the places of their residence realize that one of the resultant effects of the enactment and enforcement of the bill will be to extend their credit, enlarge the number of sources from which they may derive credit, protect them from precipitate com-

pulsory processes, and avoid controversies between their creditors, which, irrespective of the result as between them, of necessity bring about the destruction of the debtors' property, the dissipation of their good will, and engulfment in debt, all of which could be avoided by substituting for the selfish rule by which preferences are given the equitable rule by which a pro rata distribution will be made to all creditors of the same class and the debtors be discharged.

The men who are the recipients of credit are also its dispensers, and in their capacities as such, without regard to the latitude or longitude of their habitations within this country, are desirous of having the rule of equality of all people of equal rights applied as a substitute for the rule of "might makes right," or "the end" (the collection of a debt) "justifies the means" (the commission of perjury in attachment and replevin suits by making false statements as to the grounds for such actions, the unnecessary destruction of property, and the dissipation of good will by the commencement of compulsory processes against honest, solvent, but temporarily embarrassed men in business).

There is no class controversy involved, as the leading men in all classes demand the recognition of the rule of the greatest good to the greatest number, and say that the passage of this bill will be a compliance with their demand.

The debtors and creditors of every section, of every shade of political conviction, and of every calling join in saying that this bill is comprehensive of their best interests, and the members of each class say that it is not inimical to them by giving greater rights than it ought to members of the other class. There is among the archives of Congress a very large number of expressions upon the subject of this bill, and yet there is not one by a debtor saying that he wants his rights enlarged or the creditors rights abridged, and not a single complaint from a creditor asking for additional safeguards for his property interests or remedies as against his debtor in addition to those provided. The conclusion is irresistible that the bill is a fair and absolutely just measure.

There does not prove to be an issue between the country and town folks in regard to this bill; both are desirous of enforcing the rules of common honesty and willing to live and act under the provisions of this measure, which will if enacted fully protect their rights and define their responsibilities.

It is the old familiar struggle of the people against organized, selfish capital in one of its many forms. The latter may temporarily be the victor, as it frequently is, but the former are ultimately bound to triumph, as they always do.

The men who conduct the commercial, industrial, and professional transactions of the country and the honest, unfortunate insolvents submit that their lives are measured by the same span as yours; that they have the same interest as you in the promotion of the welfare of the whole people; that their moral responsibility in relation to this measure is, by reason of their recommendation of it, the same as yours will be when you consider and vote upon it, and that their duties are the same as yours to their dependents, their fellow citizens, and their God. They speak to you, who enact legislation for the protection of the life, liberty, and property of the people; they do not ask aught for themselves which is not to be enjoyed by every citizen of our great country, but do ask for a law which shall inculcate morality by the prevention of fraud, enforce the rules of equity in the marshaling and distributing

of the assets of insolvents, and recognize the public policy which justifies the discharge of honest insolvents.

In view of all which the undersigned earnestly appeal to you to pass the Torrey bankrupt bill at the present session.

Respectfully submitted.

JAY L. TORREY,
President.

PETER NICHOLSON,
Treasurer.

JAMES T. WYMAN,
Secretary.

WM. E. SCHWEPPE,
Chairman of the Executive Committee.

LOWE EMERSON,
Chairman of the Congressional Committee.

BREEDLOVE SMITH,
Chairman of the Bankruptcy Literature Committee.

WM. T. BAKER,
Chairman of the Finance Committee.

JAS. O. BROADHEAD,
Chairman of the Presidential Committee.

ADDRESSES

OF THE

CHAIRMAN AND MEMBERS OF THE PRESIDENTIAL COMMITTEE
OF THE NATIONAL CONVENTION OF COMMERCIAL
BODIES IN LAYING BEFORE

HIS EXCELLENCY, BENJAMIN HARRISON,

PRESIDENT OF THE UNITED STATES,

THE TORREY BANKRUPT BILL,

AT THE WHITE HOUSE, ON MONDAY, NOVEMBER 18, 1889.

ADDRESS OF COL. JAMES O. BROADHEAD,

Chairman of the presidential committee of the National Convention of the Representatives of the Commercial Bodies of the United States, ex-president of the American Bar Association, ex-president of the National Bar Association, and ex-member of Congress.

Mr. PRESIDENT: We, as the presidential committee, have been intrusted with the pleasant duty of laying before you the labors of two national conventions of the representatives of commercial bodies, organized to formulate and secure the enactment by Congress of an equitable, uniform bankrupt law, and to respectfully petition you to recommend to Congress in your forthcoming message the enactment of such a law in the form adopted. We have come to-day from all parts of the United States to perform that duty.

The wisdom of the fathers of the Republic in vesting the Congress of the United States with the power to establish a "uniform system of bankruptcy throughout the United States" was never more manifest than it is at the present day. The commercial relations existing between the several States are more extended and more intimate than they ever were before; the facilities of transportation have served to multiply the products of agriculture and manufactures and increase the demand for the necessities and luxuries of life, and the commercial activity of our people has therefore found a wider field for its exercise.

The most important effect of an equitable and permanent system of bankruptcy is to establish upon a firm basis the commercial interests of the country, to assure to those who deal in the products and manufactures of the various sections of our widely extended territory, as well as the producers and manufacturers themselves, that in dealing with their customers they will all be treated alike, that no local influences or local legislation will enable a debtor in failing circumstances to abuse the confidence which has been given him by a distant creditor, but that one law will govern all.

This assurance will extend and strengthen commerce, and afford, as I believe, the best safeguard against monetary crises such as have occurred from time to time, and from which all suffer in a greater or less degree.

Heretofore it has only been when one of those monetary revulsions came, and for a time paralyzed the trade and commerce of the country, that our national legislators were driven to the enactment of temporary bankrupt laws, and the result has been hasty and improvident legislation.

Now, that our country is blessed with a prosperity unsurpassed in its previous history, is the time in our judgment for calm, deliberate, and wise legislation on that subject.

The representatives of commercial bodies from various parts of the United States have held four national conventions, two at Washington in 1881 and 1884, respectively, and one at St. Louis and one at Minneapolis in 1889. These conventions have had the subject of bankruptcy

alone under consideration. As a result there has been adopted and recommended for enactment a measure named the Torrey bankrupt bill.

We submit a printed copy of this bill, in the belief that upon an examination of its provisions you will find that it meets many of the objections which have been made to former acts, and that under it bankruptcy proceedings will be less expensive and more expeditious, and that better safeguards are provided against mismanagement and fraud on the part of the officers who are charged with the settlement of bankrupt estates than under preceding similar laws.

Its provisions are briefly summarized as follows:

Original jurisdiction in bankruptcy matters is conferred upon United States district courts in the States and Territories, and the supreme court of the District of Columbia.

The referees, who take the place of the registers under the former law, are limited in number, in this, that there can not be more than one for each Congressional district within the territory of the bankrupt court. Their territorial jurisdiction is fixed and may be changed from time to time by the tribunal which appoints them, and the number of referees is limited to those before whom there are pending at least fifty bankruptcy cases. The court may order the transfer of cases from one referee to another. The compensation of the referee is to be fixed by the judge, but is not to exceed the sum of \$1,000 per annum, and \$10 for each case concluded before him, and actual and necessary expenses, all of which is to be paid out of the National Treasury. Referees are not paid the \$10 fee due from the Government in each case until it is concluded and the papers are returned into the clerk's office.

The referees will hold the first and subsequent meetings of creditors and dispose of such matters in controversy as may arise at such places within their respective districts as will best serve the convenience of parties interested.

* * * * *

Trustees take the place of assignees, under the old law; they are nominated by the creditors at their first meeting. The trustees, under the direction of the court, may submit matters in controversy to arbitration, and the finding of the arbitrators will have the same force and effect as reports and findings of masters in chancery. In this respect it differs from the former law, both as to the mode of appointing arbitrators, their number, and the effect of their award. Matters in controversy may also be compromised or litigated. The trustees receive a fixed compensation, not to exceed a certain percentage upon the amount of money paid out in distributions to creditors. Trustees are not paid commissions, except upon dividends paid to creditors.

Litigation may be conducted in such State courts as will be most convenient to the parties interested.

Dividends to creditors may be declared at any time by order of the judge of the bankrupt court, and the referee is required to declare a dividend within thirty days after a claim is allowed, if the cash in hand in excess of the amount necessary to pay preferred debts, and in excess of claims which will probably be allowed, equals five per centum or more.

The petition of a bankrupt for a discharge must be filed after two and within six months after the adjudication of bankruptcy, unless it appear that he was unavoidably prevented from filing his petition for discharge within the six months, and then he may be permitted to file it within twelve months. Discharges will not be granted unless the applicants are honest men and have conducted their business accord-

ing to reputable business methods. A discharge may be set aside within two years after being granted if it shall transpire that the same was fraudulently obtained.

In cases of involuntary bankruptcy the proceedings may be instituted by three or more creditors whose demands equal or exceed \$500. If the number of creditors is less than twelve, one or more creditors whose demands equal or exceed \$500, may commence proceedings. The proceedings against the bankrupt must be instituted within six months after the commission of the act of bankruptcy in cases of involuntary bankruptcy. The acts of bankruptcy are more numerous and explicit than under any preceding act.

Any person owing debts to the amount of \$500 may become a voluntary bankrupt, upon the surrender of all his assets for the benefit of his creditors.

A compromise may be offered by a bankrupt after he has filed his schedule of assets and list of creditors and been publicly examined as to the causes for his failure, the amount and whereabouts of his assets, and his dealings with his creditors and others. If an offer of compromise is for 50 per cent. or more, and is concurred in, in writing, by a majority of the creditors and the amount to be paid or securities to be given have been deposited, subject to the order of the court, all of the creditors will then be notified and at a time fixed by the court the question of the confirmation of the composition will be considered. A compromise may be set aside within 6 months after being confirmed if it shall transpire that the same was fraudulently obtained.

The bankrupt will be allowed the exemptions provided by the laws of the State in which he lives.

The criminal provisions of the bill are most stringent. The bankrupt may be imprisoned, with or without hard labor, for a period not to exceed 3 years, for fraudulent acts perpetrated before or after being adjudged as such, or for the destruction of evidence, or the wrongful removal of property. Bankruptcy officers may be punished by imprisonment for a period of not more than 2 years, or by a fine of not more than \$5,000 for embezzlement or fraudulent appropriations of the estate. It is confidently anticipated that this provision will have a salutary preventive effect, and will stop, to a great degree, many fraudulent practices that are now openly perpetrated.

The costs of administration under this bill are more economical than it has heretofore been thought possible to make them. The clerk of the bankruptcy court is to receive a filing fee at the institution of every case of \$10, and not to receive any further fees. Estates which pay dividends in excess of \$5,000 will pay to the Government 1 per cent. on the total amount. One-half of 1 per cent. will be paid by all estates in which a composition is confirmed.

In its general scope the bill interferes but slightly with the laws of the several States, aside from those upon the subject of insolvency. Its machinery is comprehensive and yet simple. The safeguards with which it surrounds an estate are ample to prevent it from being lost or improperly appropriated. The provisions are most complete for a speedy distribution of the assets to the creditors. Expensive and tedious delays are most carefully guarded against, and on the whole it seems calculated as a proper substitute for the many incongruous and inefficient State insolvency laws, and promises to meet with the approval of the unfortunate debtor as well as the unfortunate creditor, and to prove a material aid in sustaining and fostering the commercial interests of the country.

These provisions of the bill submitted to you are referred to for the purpose of showing that the process of winding up the estate of a bankrupt is better guarded, more expeditious, and less expensive to the parties concerned than it has been under any former law, State or Federal.

We believe that this bill is just to the debtor and the creditor, that if adopted it will give a renewed stimulus to the trade and commerce of the country, that it will inspire confidence and extend credit where it is most needed, and that it will establish business of all kinds throughout the whole country upon a more enduring basis.

We, therefore, most earnestly petition you, in the name of the commercial interests of the country to recommend to Congress the enactment of a uniform, equitable bankrupt law in the form here presented.

ADDRESS OF MR. JOHN M. BARTLETT, OF MINNEAPOLIS.

MR. PRESIDENT : After the able manner in which this great question has been presented I would not ask for further consideration, but that the constituency I in part represent, would expect me to assure you of their hearty coöperation in having enacted by the coming Congress a national bankruptcy law. The commercial bodies of the city of Minneapolis expect its members who are honored with a position on this committee, whose duty it is to acquaint you with the sentiments of the commercial interests of the country upon this question, to urge you to bring before Congress, in your forthcoming message, the necessity for the enactment of a uniform bankruptcy law; believing, as they do, that such a law would have a beneficial effect in harmonizing and adjusting that business confidence so essential to our commercial and national interests, which have for the past few years been perceptibly out of harmonious adjustment.

For three years last past, while Congress has been discussing a national bankruptcy law, the board of trade and chamber of commerce of the city of Minneapolis have been unreservedly committed as favoring the enactment of such a law and have unanimously declared in favor of the Torrey bill since its final revision at a meeting called for that purpose at Minneapolis, September 3 and 4, 1889, and represented by nearly all the leading commercial bodies in this country.

The National Board of Trade, at its recent meeting in Louisville, adopted a resolution favorable to the passage by Congress of the Torrey bankruptcy bill; this meeting, national in its character, must be considered as a fair representative of the needs of the people, and its opinion entitled to consideration as the superiority of the features embodied in that measure over those of any other previous bill or legislation upon the bankruptcy question.

The New York *Times* well says, in speaking of the Torrey bill—

It is in substance a law to protect the honest merchant, to punish the dishonest merchant, and to provide for a prompt, equitable distribution of the assets of bankrupts at a minimum cost, and that it would be difficult to frame a definition of the legitimate ends of a national bankruptcy law that should be more comprehensive and more sound than this.

The necessity for a new bankruptcy law has induced many States to enact insolvency laws. It is no doubt true that such legislation by States is actually harmful to the commercial interests of the country.

Such legislation being confined to the limits of the State in which it is enacted renders uncertain and dangerous credits, which under a national law would secure to business that commerce between the States so essential to commercial prosperity, and one of the fundamental principles of our Constitution.

The claim is made, no doubt with some justice, that home creditors have preference in nearly all failures where settlements are made under State laws.

I believe I express the almost unanimous sentiment of the business men of this country when I assure you that a national bankruptcy law is demanded and expected at the earliest date that Congress can properly give that due consideration to the matter which its importance demands.

ADDRESS OF HON. LOUIS BUSH.

President of the New Orleans Board of Trade, Limited.

MR. PRESIDENT: The Constitution of the United States confers on the Congress special power and authority "to establish uniform laws on the subject of bankruptcy throughout the United States."

This grant of power is one of many proofs of the wisdom of those who enacted that remarkable instrument. They doubtless foresaw the growth of the country in extent and in population, and in consequence considered the vast increase in business which such development must bring, and the magnitude to which would grow interstate and international intercourse and commerce. They undoubtedly realized that numerous and possibly conflicting and contradictory systems of insolvency in the several States might lead to grave inconvenience and serious loss, and they therefore provided this important and salutary clause.

The interstate interests of our country are so diversified and the commercial relations of the States so important and blended one with the other, that a general system of fair and equitable expeditious liquidation between debtor and creditor is indispensably necessary to avoid heavy losses and remove vexatious delays. In truth, our internal trade and commerce is the principal foundation upon which rests, and must continue to rest, our prosperity.

A law is, therefore, imperatively necessary within the scope of constitutional authority, to regulate these relations, that the debtor or creditor from every State may know that wherever his claim is asserted he is under the protection of a statute which guarantees his rights. Nay, it may even be truthfully said that such a law serves forcibly to unite more firmly the various States which form our compact of union; for, by its operations, we would be made to feel that we are not only citizens of the State of our residence, but that we are likewise citizens of the United States. Nothing, then, can be more proper than a general statute which is framed with such a comprehensive view to benefit the people of our country.

Since the repeal of the law of 1867, on bankruptcy, the entire mercantile community of our country has been relegated to some forty different systems of State insolvency, to the great detriment, it may well be said, of the honest creditor, as well as the injury, at times, of the unfortunate debtor. Such State systems are necessarily local in

character and jurisdiction. They can not bind the foreign creditor who declines to take a part in the proceedings. They can not discharge the honest debtor from the claims of foreign creditors, unless they choose to come in and be bound by the action of the State court.

Such local systems, then, are of little if any use in interstate and international commerce, by far the largest and most important business of our country. In fact, they frequently paralyze our commerce, and often have the effect of retarding the progress of important mercantile transactions.

We need, therefore, for the full protection of the honest creditor and the full relief of the honest and unfortunate debtor, a national system of bankruptcy, as contemplated by the Constitution, the enactment of which should be hastened, that our commercial expansion and advancement in the development of the resources of our country may not be hampered or retarded.

We should not be wedded to any particular methods in such a matter. They should be as simple, expeditious, and economical as possible; and, in this, it is respectfully submitted and urged that the Torrey bill, which has received the approval and recommendation of the national convention of the representatives of a great part of the commercial bodies of this country, meets the requirements of the situation, and should receive the favorable consideration of Congress.

To your especial attention, Mr. President, we ask leave to present this bill, and respectfully request that, if upon such investigation as the importance of the subject demands, you should deem it wise that it should receive legislative sanction, you should be pleased to place the subject before Congress in such form as will subserve the general interests of our people.

ADDRESS OF HON. JOHN H. DOYLE, OF TOLEDO, OHIO,

President of the National Bar Association.

MR. PRESIDENT: I would select a period of the greatest commercial evenness and tranquillity in which to frame, discuss, and enact a law establishing a uniform and equitable system of bankruptcy. There is enough in the financial and business history of every people to give to the thoughtful legislator all the benefit of experience needful to direct his mind to the necessity of such a law, and the agencies to make it most effectual and beneficial. There is the closest analogy between the motives which prompt the wise man, in his days of average prosperity, to provide against the possible reverses which may come to him, and the enactment of laws which are to govern the whole body of men in their financial relations with each other and with government. Financial and commercial disturbances come into the history of nations at very unexpected times. The greatest preventive is commercial and financial honesty. Any law or system of laws that will aid in securing that ought certainly to be adopted. It would seem to be self-evident that laws which would so adjust the rights and remedies of parties that creditors would be unable, by combinations with their debtors, to secure unfair advantages; and debtors unable to make either unlawful preferences or dishonest concealments; but would protect the rights of each, would tend as far as legislation ever can to promote such honesty, and that the framing of such a law could best be done when the temptation to make bad law to meet special cases of hardship did not exist.

I am not at all in accord, therefore, with the view so often urged, that because of existing commercial prosperity the needs of a bankrupt law are not immediate or pressing. Pressure and excitement are the worst adjuncts or motives to legislative action, and the poorest promoters of legislative wisdom. A bankrupt law should be so framed as to be neither an instrument of oppression in the hands of the creditor nor a place of refuge from honest demands for the debtor. It should preëminently be a system of equity, and should be considered and adopted in a purely judicial atmosphere and spirit. It should not be a forced product from any unnatural or abnormal condition of either great financial disaster, or the reverse. It should be uniform, not only as a question of territory, but also of time and circumstances.

Like all systems of equity, it should be enduring and of universal application. Its aim should be to prevent both fraud and oppression. It should require honesty and good faith, and when those exist it should relieve from undue hardship, inequitable forfeitures, and unmerited misfortune.

For these reasons I urge the attention of the President and Congress to the subject now. I will not go into a discussion of the merits of the system of bankruptcy. That would only be to repeat what has been so often said, and what must be familiar to all whose position or duty has led them to any consideration of the subject. Resolutions have been passed, quite generally, by the various trade organizations in my section of Ohio, declaring the belief that a proper law of this kind will enable honest bankrupts to be discharged from their burdens; honest creditors to realize the advantage of having estates quickly and economically administered; give confidence and security to the trade of the country, and remove the difficulty that is found in the divers insolvent laws of the States, in securing justice by an approach to speed and uniformity. State lines should be purely imaginary in the commerce and business of the country. The telegraph makes contracts of the greatest importance, between citizens of States most remote from each other, possible in a few minutes of time, and the great highways of travel and carriage are built and operated without reference to boundary lines, making prompt delivery and exchange of the commodities of the most distant places a daily affair.

Uniformity in the laws and remedies governing these transactions is the great need of the time. And how to secure it is now occupying the attention of many of the thinking men of the nation. While this may not be attained in the very near future so far as the laws governing the contracts themselves are concerned (those being matters largely within the control of the States), Congress has the power to give uniformity in the matter of the enforcement of claims arising out of them and uniformity in the tribunals in which they shall be enforced. This power exists in Congress alone. It is conferred upon it by the Constitution. Even if it were possible to obtain from the States uniform laws on the subject, so that the legislature of each State would enact the same statute, and no constitutional difficulties were encountered, there would, nevertheless, be the same conflict of construction by the State courts that we now find in the interpretation of other statutes of exactly similar language.

There is but one court of last resort to give construction to a national bankrupt law. It is therefore only by act of Congress that uniformity in enactment and uniformity in construction can be secured.

These are a few of the many reasons which present themselves to my mind for favoring the adoption of such a law and its deliberate

consideration now, in a time of comparative commercial quiet, when the judgment of Congress may be exercised in its provisions in a spirit of deliberation, and for suggesting the matter to the Executive, very respectfully and with diffidence, as a proper matter to call to the attention of Congress. I can not close without especially urging that any such law should be framed so as to accomplish two results, viz.: speed in its administration and the least expense to the parties consistent with its successful operation.

I have examined the Torrey bankrupt bill and approve of it. It seems to me to be plain, effective, and capable of speedy and economical administration.

ADDRESS OF DR. LEONARD J. GORDON,

President of the Board of Trade of Jersey City, New Jersey.

MR. PRESIDENT: On behalf of the Board of Trade of Jersey City, New Jersey, I beg leave to submit some observations in favor of a national bankrupt law.

In a country like the United States, within whose limits is carried on an enormous commercial traffic, anything that secures a merchant against loss, total or partial, or acts as a preventive of fraud in commercial transactions, will so strengthen the feeling of confidence, so essential to extensive business, as to materially contribute to the stability of domestic commerce and the permanent prosperity of the business world.

In the extensive commerce of this country credit is a conspicuous and essential feature. Cash payments are the exception, credit is the rule. A merchant's capacity to do business therefore depends upon the credit and confidence he enjoys in the business world. The stronger his credit the greater his business. Increase of credit therefore is virtually an increase of capital. Thus it follows that whatever tends to strengthen or increase mercantile credit contributes directly to the growth of trade, and so by inevitable sequence to the general prosperity of the people.

Bearing in mind, then, the intimate relations between mercantile confidence and credit and the general welfare I call your attention briefly to one of the conditions in business which tends to impair confidence and hinders the growth of trade. I refer to the incongruous and inadequate insolvency laws of the different States of the Union. Every State has its own policy and system in the treatment of insolvents. Some are strict; some are loose; some practically offer a premium upon fraud; some are crude and inadequate to the exigencies of modern trade. The result is that every merchant whose business extends beyond the confines of his own State is compelled to take risks, the extent of which he is unable to estimate. If his debtor fail, he is compelled to take his chances under the law, perhaps of a distant State, the provisions of which are familiar to the bankrupt, and perhaps have afforded him an opportunity to place his assets beyond the reach of just claims. In another instance the assets of his debtor are whittled down by the expenses and charges incident to their management under a cumbersome and complicated insolvent law. All this is not only exasperating and harassing in business, but it operates directly to lessen the volume of trade.

Again, if we turn from the discussion of the practical difficulties of the present trade conditions, to the consideration of the theory and reason of the case, the need of uniform system in matters of insolvency will be no less apparent. States do not trade with States, but individuals trade with individuals. Individuals of one State trade with merchants of another, nay, of many States. Trade takes no account of State lines or political divisions. It is as boundless as the nation, and is limited only by the national confines of our country. Why, then, should matters vitally interwoven into the life of all trade be left to the shifting, varying, and conflicting policies of different States? Trade is national, and every consideration of logical consistency—the eternal fitness of things—requires that its regulation should be national.

These considerations demonstrate the need of a national bankrupt law. Such a law should be framed so as to embody the following features: (1) It should be practical, concise and comprehensive. (2) It should establish a uniform system of moderate salaries, instead of excessive fees. (3) It should make it impossible for a debtor to be discharged from his legal obligations without a complete disclosure of his condition and a full surrender of his assets. (4) It should forbid preferences, or surround them with such safeguards as to amply protect creditors. (5) It should be drawn so as to secure merchants against fraudulent mortgages, bills of sale, or confidential indebtedness to relatives or friends. (6) It should replace the conflicting and incongruous laws of the different States. (7) It should avoid the delays, unjust charges, and excessive fees of the old bankrupt law. It should, in short, be so framed as to allow proceedings in bankruptcy to be entered and prosecuted with the least possible delay and with a minimum of expense, and secure to the creditor the maximum percentage of his debt.

Such a measure, we believe, is the bill known as “the Torrey bill to establish a uniform system of bankruptcy throughout the United States.” We believe it has been carefully drawn, with intelligent regard to the interests of all merchants, and that it is a practical embodiment of the valuable features of all insolvent laws. If enacted into a law we believe it would decrease failures, stop sacrifice sales, prevent fraudulent transfers and pocket judgments, stop the repudiation of honest debts, protect the honest merchant, assist the unfortunate bankrupt, create confidence, enlarge credit, and contribute materially to the growth and stability of trade.

We trust, therefore, that you may see your way clear to recommend this measure to the attention of Congress at the ensuing session.

ADDRESS OF MR. B. F. JOHNSON, OF RICHMOND, VIRGINIA.

Mr. PRESIDENT: We approach you in behalf of nearly all of the leading business organizations in this country to ask that you will embody in your next annual message to Congress suggestions of approval in regard to the passing of a law which we consider of vital importance to the great business interests of our country.

You, sir, in your professional capacity, have undoubtedly seen the injurious results flowing from defective and conflicting State laws for the collection of debts. These laws, while intended to be beneficial to the debtor class, are in fact frequently injurious to both debtor and cred-

itor; and consequently we feel the necessity of a national law that will protect the business interests of all the citizens of the United States regardless of location.

The last national bankrupt law was cumbersome and expensive, and very properly excited the disgust of those who were hampered by its burdensome and exacting conditions. A large number of our fellow-citizens, smarting under the injustice of that law, were loth to recommend the passage of another national bankrupt law; but as the business of each year is closed up the active business men of this country realize more and more strongly the necessity for a just and equitable national law that will protect alike the honest debtor and creditor.

The representatives of the largest and strongest bodies of business men, irrespective of politics or geographical lines, have met in several national conventions, and are now prepared to lay before Congress and strongly recommend the passage of an equitable law, known as the Torrey bankrupt bill. We can assure you that our wisest and most careful business men have approved this bill, which, if it could be passed substantially in its present shape by Congress, would prove a great boon to our business community; would strengthen confidence and extend and more firmly establish satisfactory business relations between all points of our common country.

We desire a law by which the man residing in Florida or California can do business with the same feeling of confidence and satisfaction in Maine or Texas that he could with business houses in his own State.

It is a well-known fact that in many of the States of our country the collection laws are very defective; that, instead of being a help and a strength to the members of the business community, they are constantly a temptation to the unscrupulous and dishonest to cheat and swindle.

We recognize the fact that human nature is weak at best, and, instead of countenancing or encouraging laws that will produce such an effect, we desire to establish such national laws and encourage the establishment of such State laws as will build men up morally and offer every incentive to them to conduct their business on the highest plane.

The provisions as set forth in this bill are such as to favor the honest and upright man who conducts his business on right principles, and to make it very difficult for those who are so inclined to deceive, cheat, or in any way defraud.

Besides its unwieldy proportions and unsatisfactory features, the old law enabled unscrupulous lawyers and greedy officials to charge exorbitant fees. In some instances the expenses entirely dissipated the whole of small estates.

An examination of this bill to be introduced in Congress will show you that provision has been made to administer every estate in the most careful and economical manner. We feel, sir, that the passage of this law substantially in its present shape would be a triumph in the art of law-making of which this administration might justly be proud. It contains some important clauses and points not set forth in any bill previously considered by Congress.

We fully appreciate the fact that you have many duties of very great importance constantly pressing upon you; but, without egotism, we do think that in the consideration of this question you will find it of greater importance than any that is being agitated at the present day. We trust that after examining fully this bill you can conscientiously recommend it to Congress in such strong terms that the representatives of the people will realize fully the necessity of prompt action, and that

before the coming of the new year we may have this important law enacted, which will so greatly tend to strengthen and promote the general business interests of our country.

We do not wish to tax your time too severely in laying before you at great length the importance of this bill, the urgent necessity of which is doubtless already very apparent to you.

We beg leave to state that we are not pleading for personal interests; but that we come as the representatives of the great business interests of every State in the Union, and they through us utter, as with one voice, the great necessity for a just and equitable national bankrupt law.

As faithful and loyal citizens we trust that you will be divinely guided in the consideration of this, as of every important question, and wish that the blessings of heaven may rest upon you and those who are engaged in making and executing the laws of our land.

ADDRESS OF MR. WILLIAM J. McMANIGAL, OF OHIO.

Mr. PRESIDENT: I represent my own interests as an insolvent, and in speaking for myself am confident that I voice the sentiments of thousands of good citizens in this broad land who will be benefited personally by the enactment of an equitable uniform law. Benefited not to the detriment of anybody, but for their own good and the best interests of the community in which they live.

I was one of the unfortunate victims of the panic of 1873 and 1874. At that time I was somewhat extensively engaged in business in Pennsylvania, and, owing to circumstances which it is unnecessary for me to explain, I lost my entire property, real and personal, including my household goods. I did not claim my exemptions, but simply gave up to my creditors everything I had and was left penniless. My property was greatly sacrificed. At any other time it would have been sufficient to pay my debts, but at that time it was not, and as a result I was rendered insolvent and helpless to pay the balance of my indebtedness.

Soon after being impoverished by that panic I moved to Ohio, and since then have been supporting my family by working upon a salary, and am still so engaged. It is needless to say that the competition among men without means for positions which pay a salary is so great that salaries are not such as to enable a man to support a family and educate his children and at the same time make any headway as against an indebtedness upon which interest is accruing.

I have several times been offered the use of capital and an interest in a profitable business, which I confidently believe would have enabled me to regain my position in the mercantile world and to have saved enough to have eventually paid off my indebtedness; but the fact that this cloud of debt hung over me prevented an acceptance of the very considerate offers made.

I respectfully submit that the creditors of an insolvent man would not be financially harmed by his discharge, because the obligations of such a person are worthless, and if he is honest a discharge would enable him to endeavor, at least, to regain his position and to eventually liquidate his indebtedness. If he were inclined to ignore the obligations of his contracts and to follow the selfish instincts, the obligations are worthless anyhow, and hence I conclude that the discharge of an insolvent is of no practical detriment to the creditor, and that the re-

removal of his embarrassment of indebtedness gives him an opportunity, if he can, to avail himself of the lessons of past errors or to overcome misfortunes and to add to the material wealth of the community in which he lives.

Many of the best men in the country have been unfortunate in the investment of their capital, and as a result have become insolvents; but either by the discharge under the former bankrupt laws or by the voluntary release of creditors have been enabled to prosecute their life work and to again become useful and influential citizens.

I therefore respectfully submit that the wisdom of the discharge of honest insolvents is supported by the experiences of the past, dictates of public policy, and the humane policy of giving to every citizen an opportunity to work out his own destiny, and that the same is not in mitigation of the best interest of the creditor classes.

The Torrey bankrupt bill wisely provides, as I think, for the exemptions to the unfortunate debtor according to the laws of the State in which he lives. It is a part of civilization that the home of the unfortunate should be protected, and it is but embodying the wisdom of past legislation to have retained this provision in this measure.

As the representative of honest insolvents, I rejoice that the criminal provisions of this bill have been so framed as to draw a line between men who have become involved in misfortune without the perpetration of criminal acts and those whose misdeeds are directly responsible for their unfortunate position. It is one of the curses of poverty that those who suffer that affliction as the result of honest misfortunes are placed upon a level with those who have arrived at that position through their own dishonest acts. This measure visits condign punishment upon the latter class, while it grants to the former an honorable discharge and affords an opportunity for their again rising to the position which they are entitled to occupy.

As the self-appointed representative of the unfortunate honest insolvents of this country, who look to this administration and to the coming Congress for relief, I respectfully submit that a law which provides for the discharge of the honest insolvents, makes provisions for the reasonable exemptions for the head of a family, and provides an adequate punishment for dishonest debtors is a law that is satisfactory from our standpoint.

ADDRESS OF MR. EDWARD C. ROGERS,

President of the American Paper Manufacturers' Association of the United States.

MR. PRESIDENT: It gives me great pleasure to come before you at this time in the interest of a great manufacturing industry. I come with representatives from other great commercial bodies to solicit your good offices, and to ask you to recommend to Congress in your forthcoming message the enactment of an equitable bankrupt law. Such a law would be a national blessing, and would bring to the business men of our country a measure of relief which they have sought for these many, many years. Some basis ought to be found where all the States of our Union can rest on common ground and feel that their interests are identical.

The paper manufacturing and jobbing interest of this country has long felt the need of such a law, and gladly will they join hands with

all other commercial interests, to the end that all may be done that can be to bring about such desirable legislation.

From our estimate of your character we know you would favor only what is just and right, and we ask for nothing else.

ADDRESS OF HON. WM. G. WHIPPLE,

Mayor of Little Rock, Arkansas.

Mr. PRESIDENT: While I recognize that there are some serious objections which can be reasonably urged to any bankrupt act, yet I am satisfied that a large majority of the business men in this section of the Union would favor a bankrupt bill substantially like the Torrey bill.

Among the many reasons which might be urged I will dwell upon only one, viz: the equality secured by that measure to all the creditors, the equal distribution of the assets of the estate, with certain classes of proper and worthy exceptions, thus regulated by law.

The practice of preferences which obtains in assignments in my own and other States, and which under the present system of State regulation may be authorized in every State, is almost criminally disastrous to the interests of the general average creditor. He is placed entirely in the power of his insolvent, or at least failing, debtor and left to his uncovenanted mercies. The creditor goes on delivering goods to his debtor, relying on his credit and expecting, and having a right to expect, fair and equitable treatment, having no means of insuring such treatment in case of a break up except through the favorable exercise of the power of the debtor, until the debtor gets ready to quit business, when he suddenly stops, makes an assignment under our law, and therein effectuates such a disposition of his assets as best comports with his sovereign will and pleasure, exercising this power in the form of preferences, which may, and usually do, absorb the entire estate, and leave nothing but blasted hopes to the large majority of the creditors. The debtor selects the favored objects of his bounty, pays them liberally and often in full, and gladdens their hearts. Of course, they are supposed to be honest debtors; sometimes they are not, often their debts are dishonestly swelled and padded, and it is but a poor consolation to the defrauded creditors to be assured that this is illegal, when the true state of the case can be, and so often is, buried beyond all chance of being unearthed.

And while this mockery of justice and fair dealing is going on the honest creditor goes away empty handed. This is not an assignment; it is downright robbery. And this is no fancy sketch, for this is what often actually happens under this State system of preferences, and which under such a system is really unavoidable. Of course, the intention of the law-giver is a good one. In allowing preference he is but copying the common law. But the objection lies to the real and unavoidable operation of such a law.

And there seems to be but one practicable mode of remedying this crying evil, and that is by Federal legislation, to be enforced by the Federal courts. Such legislation will operate over the whole country, be known to all, and bring about the very most desirable consequence when a merchant breaks down, and that is a fair and just apportionment of what property he has left. Such a law would permit a more satisfactory basis on which to do business and extend credit.

The vender would know better what to depend on, and a healthy influence would be brought to bear on the debtor merchant. He would be under less temptation to suspend his efforts to go on, and under a stronger inducement to put forth his every energy to keep on his feet and weather the storm, knowing that in case of failure his relatives, "his cousins and his aunts," could not be so readily protected, but would have to share the fortune of his other creditors.

The result, as is confidently believed, would be fewer failures and greater commercial energy and prosperity.

I have not exhausted this point, but probably have said all I ought to, for your time is precious.

I confine myself to the single point, and leave the many other considerations, perhaps equally cogent, to be urged by others.

BANKRUPTCY.

THREE ADDRESSES

OF

THE AUTHOR OF THE TORREY BANKRUPT BILL.

A CONSIDERATION OF THE PROVISIONS OF THE BILL, AT
THE BANQUET OF THE BOSTON BOOT AND SHOE
CLUB, BOSTON, NOVEMBER 20, 1889.

RESULTS THAT WILL BE OBTAINED BY BANKRUPTCY LEGISLATION, AS
ANTICIPATED AT THE ANNUAL BANQUET OF THE ASSOCIATED
WHOLESALE GROCERS, ST. LOUIS, DECEMBER 30, 18-9.

A NATIONAL BANKRUPT LAW; CONSTITUTIONAL PROVISIONS; FORMER
ACTS; THE POPULAR DEMAND, AND THE BILL AS OUTLINED
BEFORE THE AMERICAN BANKERS' ASSOCIATION,
SARATOGA, N. Y., SEPTEMBER 4, 1890.

A CONSIDERATION

OF THE PROVISIONS OF THE BANKRUPTCY BILL AT THE BANQUET OF
THE BOSTON BOOT AND SHOE CLUB, NOVEMBER 20, 1889.

BY COL. JAY L. TORREY.

The Boston Boot and Shoe Club tendered a banquet at Young's Hotel, Boston, on the 20th of November, 1889, to Col. Jay L. Torrey, of St. Louis, the author of the Torrey bankrupt bill; Hon. George F. Hoar, United States Senator from Massachusetts; Hon. John Lowell, ex-United States circuit judge and author of the Lowell bill; Hon. Patrick A. Collins, ex-Congressman and the chairman of the last National Democratic Convention, and Hon. Henry Cabot Lodge, and Hon. John W. Candler, members of Congress.

Mr. Horace B. Parker, the toastmaster, in a complimentary speech introduced Colonel Torrey, who was greeted with applause, and spoke as follows:

MR. PRESIDENT, GENTLEMEN: I beg to thank you for your very kind reception and to express my appreciation of the honor I enjoy in being your guest.

Mr. President, your considerate words of encouragement and compliment are applicable to my associates as well as to myself. We have labored assiduously, and believe that we will ultimately accomplish the end in view, but the possibility of such a result must be attributed, for the most part, to the earnest men with whom I am associated and the good cause that we together represent rather than to my individual merits or labors.

Four national conventions have been held since the repeal of the law of 1867. All of them have had for their object the securing of the enactment of an equitable bankrupt law. The last convention unanimously adopted a bill and considerately gave it my name. It has since been indorsed by the Associated Wholesale Grocers of St. Louis, the New York Board of Trade and Transportation, the Boston Merchants' Association, the Missouri Bar Association, the National Board of Trade, and other commercial bodies in all parts of the country, and the prospects are that in the near future it will receive the approval of all the commercial bodies in the entire country with the exception of a very few in number which have heretofore been opposed to the enactment of any law upon that subject.

The bill is divided into five chapters, the subjects of which are courts, officers, bankrupts, creditors, and estates. The chapters collectively contain 77 sections and there is a heading or catch-word to each section, which truly indicates its contents.

The United States district courts have original jurisdiction in bankruptcy. Litigation relating to the estate may be conducted in the State court most convenient to the parties litigant.

Controversies may be arbitrated, compromised, or litigated under the direction of the courts of bankruptcy.

But two offices are created by the act, the referee or assistant judge and the trustee or representative of the creditors in the handling of the property of the bankrupt.

The referees are to be appointed by the United States circuit courts. Their salaries will be \$1,000 per annum, and \$10 for each case after it is disposed of, and the records returned to court. They are bonded officers. They are precluded from purchasing directly or indirectly any of the assets of estates. The maximum number of referees is the number of Congressmen from the States. The minimum number is one for each judicial district, and such additional number as shall respectively have at least 50 cases pending before them continuously. Their territorial districts will be assigned to them by the court, and may be changed from time to time. They are authorized to dispatch such business as may be referred to them from time to time by the courts, and in the absence of the judges issue warrants for the arrest of bankrupts and seizure of their property, and to make adjudications in certain cases. All contested matters decided before them may, upon application, be certified into court and there be finally determined. They must furnish to parties in interest information, upon request, concerning estates which are pending before them. The records in each case are kept in separate books, in the same manner that records are now kept in United States courts, and when the cases are concluded, are returned into court and constitute a part of the records of the court.

The trustees are nominated at meetings of creditors and are appointed by the judges. They are to reduce the estates to cash and distribute them in dividends to the creditors as expeditiously as the best interests of the estates will permit. They are to give bonds. The cash in their hands is to be deposited in a bank designated by the courts. The banks must give bonds for the safe keeping of the funds. The trustees are to account for all moneys received, whether as principal or interest. They may be removed for cause and in the event of removal the courts may deprive them of all commissions from the estates. Their compensation is 5 per centum on dividends paid out to the amount of \$5,000, 2 per centum on the next \$5,000, and 1 per centum on all over \$10,000. When there are successive trustees in a single estate but one commission will be paid to all who have acted. Information must be given by those officers to parties in interest upon application concerning estates being administered by them. Their accounts are open to the inspection of creditors. One or three trustees may be nominated for a single estate as the creditors may prefer. If three are nominated, they act by a majority and receive but the single compensation.

The expenses of administering estates must be reported in detail under oath, and shall not be allowed or paid until approved by the court.

A clerk's fee of \$10 shall be paid upon the filing of every petition and shall constitute a payment in full of the clerk's fees for the case.

Estates which pay in dividends over \$5,000 shall pay to the Government 1 per centum of the amount paid out. In case of compositions one-half of 1 per centum on the amount shall be paid to the Government.

Acts of bankruptcy, in brief, consist of concealment to avoid arrest, or the service of civil process; concealment of property to avoid its being levied upon; departure or absence with intent to defraud creditors; failure for 30 days to secure the release of property levied upon; a conveyance of property with intent to defraud creditors; a declaration of insolvency; an assignment for the benefit of creditors; procuring the entry of a judgment to defraud creditors; the return of an execution unsatisfied; suspension of the payment of commercial paper for 30 days; giving a preference while insolvent, or the speculation in options while insolvent.

Compositions may be offered before or after being adjudged a bank-

rupt, but not until there has been filed in court a schedule of assets and a list of creditors and until the debtor has been examined in open court or at a meeting of his creditors concerning the reasons for his failure, the amount and whereabouts of his assets, and his transactions with creditors and others for the preceding 6 months. If the offer is for 50 per centum or more it may be considered, after a majority of the creditors in number and amount have accepted it in writing and the amount to be paid or securities to be given have been brought into court. If the offer is for less than 50 per centum, at least three-fourths in number and amount of the creditors must accept in writing and the money or securities to be paid must be delivered to the court before the composition will be considered. When the conditions precedent to the consideration of a compromise have been complied with, the court will cause all creditors to be notified, and thereafter at a designated time will consider the proposition, and if it is for the best interests of all the creditors, and the bankrupt has not been guilty of an act which would bar his discharge, will confirm the composition. Compositions will be set aside within 6 months after being confirmed if it transpires that they were secured by fraud.

A discharge must be applied for after 2 and within 6 months after adjudication. If the bankrupt can convince the judge that he was unavoidably prevented from applying for his discharge within that time it may be applied for within the next 6 months, but can not be applied for after the expiration of that time; that is to say, 12 months after the adjudication. A discharge will not be granted if the bankrupt was a merchant, manufacturer, or trader, whose annual transactions exceeded \$5,000 and failed to keep proper books of account from which his true condition might be known, committed any felony, committed perjury, failed to act in good faith concerning the administration of his estate, made a preference which has not been surrendered, made a false statement concerning his affairs, conspired to defeat the operations of the act, made a fraudulent transfer of his property, or neglected, without satisfactory excuse, any duty as a bankrupt. A discharge may be set aside within 2 years after being granted, if it transpires that the same was fraudulently obtained.

The exemptions of the bankrupt are such as are provided by the laws of the State in which he lives at the time of filing the petition.

Claims which have been proven in bankruptcy become judgments in the event the bankrupt is not discharged, and execution may be issued thereon in the same manner as upon judgments of courts after trial, hearing, and verdict.

The criminal provisions of the bill are very severe upon defaulting officers, fraudulent bankrupts, and dishonest creditors. The maximum punishment is a \$5,000 fine and 3 years in the penitentiary at hard labor.

The first meeting of creditors is to be held after 10 and within 30 days after the adjudication at a place most convenient to the parties in interest. Subsequent meetings will be held as occasion may require. They may be held upon notice or upon written consent of the creditors. There will be a final meeting of the creditors when the estate has been administered and is ready to be wound up.

Notices will be sent to creditors of each step in the proceedings of administration of the estate, and at all times they will have an opportunity to be heard as to the advisability of proposed proceedings.

Claims are to be proven by the oath of the creditor or his representative; unless contested they will be allowed, as a matter of course, upon being filed.

Preferences are forbidden, and if given, the property or its value may be recovered by the trustee. If excessive fees have been paid to attorneys by the bankrupt, the sum in excess of a reasonable amount may be recovered.

Securities held must be reduced to cash or the values thereof determined by agreement, arbitration, compromise, or litigation, and the amount credited upon claims before they can be proven.

Liens given for a present consideration and in good faith are upheld. Such as are given for the securing of preferences are forbidden and declared void.

The entire machinery of the bill is designed with particular reference to expediting business, *e. g.*, the clerk is paid upon the filing of the petition the entire amount that he is to receive for his services in the case. The referee is paid his fee per case only after it has been concluded and the records thereof have been returned to court. The trustee receives his per centum only upon dividends paid out. It is therefore manifestly to the interest of each of these officers to expedite the transaction of the administration of the estates in which they are interested.

The greatest economy will be practiced in the administration of the law. It is possible that the estate of a voluntary bankrupt may be administered upon the payment of the ten-dollar filing fee and the amount required for the publication of the notice.

In general, there are no unnecessary proceedings. Records are not duplicated. Fees are not multiplied. Officers are interested in expediting the administration of estates. Creditors are not inconvenienced, and are put to as little expense as possible. Deceit, chicanery, and sharp practice are prohibited. There is not the slightest opportunity for extravagance or jobbery of any kind. The bill is designed to enable honest men to do business upon an honorable basis and to put dishonest men in the penitentiaries. [Great applause.]

In the preparation of the bill we have earnestly endeavored to have every sentence in it clear and concise, to have the meaning thereof perfectly apparent upon a single reading, and have endeavored to prevent its being clouded or modified by other provisions of the bill. Where language has been used a second time, as for example, in the section enumerating the acts of bankruptcy, the section providing under what circumstances a discharge can be granted, and in the criminal provisions of the bill, the phrases used are identically the same, to the end that the construction of one would be the construction of the others, and to avoid, so far as possible, the confusion incident to an endeavor to convey the same idea by different language.

We are delighted and surprised by the unanimity of sentiment that seems to prevail throughout the country in behalf of the measure. We have received several hundred clippings from newspapers all over the country, and in every instance they seem favorable to the cause and in all respects, except two, favorable to our particular bill. One of the papers referred to it as identical to the old law, and suggested that a new law ought to be drafted. The editor has since read the document, and now urges the Senators and Representatives from his State to support it. The other expressed the opinion that a better bill than ours has been drafted. This is probably the most encouraging indorsement that any bill of similar importance has ever received. It leads us to hope that we will be able to secure the passage of the bill by the Fifty-first Congress.

The bill was, on the 18th instant, laid before the President of the United States by the Presidential Committee, of which Col. James O. Broadhead, of Missouri, an ex president of the American Bar Association and of the National Bar Association, is chairman. A series of able addresses by the chairman and members of that committee were delivered to the President, and in reply he delivered a short address, in which he referred to the desirability of the enactment of a permanent law upon that subject, instead of one designed simply to clear away wrecks after a catastrophe. It is not expected, of course, that he will recommend a particular measure, but it is earnestly hoped that he will call the attention of Congress to the fact that the members of the commercial world are, with a single voice, demanding legislation upon that subject.

The bankrupt law enacted in 1867 was a failure, not because the principles involved therein were of themselves wrong, but because it was not, in many instances, honestly administered, and under it wrongs were perpetrated which would not have been possible had the principles been accurately stated and properly protected. The pernicious fee system, which came gradually into vogue and assumed such proportions as to absorb estates, rendered the law unavailing and it was therefore repealed. This unfortunate ending of a law, which should have been properly amended instead of wrongfully amended, has made it difficult to secure the enactment of a new law.

Primarily a bankrupt law makes provision for taking possession of and distributing to the creditors the estates of insolvents and dishonest men, and then discharges, or withholds a discharge, from the bankrupt, conditioned upon whether he is an honest or a dishonest man.

There ought not to be objection, from the standpoint of an honest man, whether he be a debtor or a creditor, to having the estate of an insolvent man taken and divided between the persons entitled to it, because the obligation of such person was to pay, dollar for dollar, for the property which was acquired and which became part of the estate, and since his management or mismanagement has been such as to make a compliance with his contract impossible, it is but just that his creditors should be satisfied *pro rata* to the end that they shall not incur a greater loss. The same reasoning applies with greater force to the man who has agreed to pay for the property which has become a part of his estate, but who has been guilty of dishonesty which is likely to result in the dissipation of his estate.

I know of but two classes who are opposed to the foregoing view. They are, first, the men who believe, or seem to believe, as a pretext for opposition to the enactment of such a law, that it is not worth while to undertake further legislation upon the subject because the last law was a failure. Our friends say in reply, that it is the history of all laws that approximate perfection is only arrived at by experience, and the fact that the old law resulted in the enrichment of officers, rather than financial gain to the creditors, does not in the slightest degree affect or modify the business necessities for a carefully drawn measure which shall amply protect the interests of the debtor, and secure the rights of the creditor promptly and economically. We believe that our measure answers the demands of the honest men interested in the subject. We have the courage of our convictions and unbounded confidence that Congress will enact our bill. The second class is composed of influential corporations and firms who prefer to rely upon the principle that "might makes right" rather than the principle that "equality is equity." We beg to express our opinion to this class that it is not

profitable to them as a business proposition, and to respectfully suggest that the principle they invoke is one that is alike dangerous to the individual, to them in their business capacity, and to the body politic at large.

It is therefore respectfully submitted that neither of the grounds of opposition are tenable, and that the gentlemen who oppose the adoption of such a law ought to be in favor of its early enactment.

The fact that the several States have enacted insolvency laws is an unanswerable argument in behalf of the necessity of such laws. The fact that the right to abrogate the obligation of contracts and to pass uniform laws upon the subject of bankruptcy was reserved by the Constitution of the United States to Congress, prevents the several States from enacting complete laws upon the subject of insolvency. It therefore follows that the members of the commercial world can not secure efficient legislation except by Congress.

The proposition to discharge an honest bankrupt who has surrendered his assets for the benefit of his creditors, is supported by sound public policy, by the dictates of human sympathy for the unfortunate, and is, in my judgment, not in derogation of the practical rights of the creditor.

Sound public policy requires that every citizen should have a free and unrestricted opportunity to add to the wealth of the community to his full capacity. The one who has failed in business will have learned an invaluable lesson, either one of his want of capabilities, or one of how to avoid the errors which occasioned his failure. As a citizen he should be unrestricted as to what vocation in life he shall pursue. He ought to be, by his experience, a more valuable citizen and should be at liberty to prosecute such calling and in such way as will best serve his need of providing for his family and adding to the aggregate accumulation of wealth. If he is an honest man he ought to be discharged from the obligation to the end that he may be, if he can, a proprietor, instead of a salaried clerk. If he is held down by the burden of debt he is ordinarily forced into competition with the great army of day laborers and salaried workers and it is not possible that he can make any considerable payment of obligations and at the same time provide for the education and maintenance of the average family. If the purpose of the creditor in preventing the discharge is to secure the payment of the amounts due, I respectfully submit that it is unavailing. In an extended practice of the profession of law, covering a period of 15 years, I have never known of a man who has been able to pay off a large indebtedness out of such returns as could be secured in any clerical capacity. I have known of a number of instances in which honest men, who have been discharged from their obligations as bankrupts, have succeeded in recovering their position and in accumulating a sufficient amount of money by fortunate speculation to enable them to pay their debts, principal and interest, to their own delight and the gratification of their creditors.

My conclusion, therefore, is, that claims against insolvents, whose estates have been distributed in part to their creditors are worthless, and that the cancellation of them is no practical loss to the creditor, but, on the contrary, is advantageous to the individual debtor and to the community at large.

The struggle for the securing of preferences is pernicious, both as to the debtor and the creditor. I have known of frequent instances in which a nervous creditor began the exercise of a surveillance over the affairs of a suspected debtor, with the result of destroying his

confidence in the possibility of success and in alarming other creditors, and which in the end resulted in a man who was in effect solvent, and who under ordinary circumstances would have been able to continue in business, being totally annihilated in a financial sense simply by the watchful care incident to the possibility of securing preferences. I respectfully submit that the enactment of our law will have a conservative influence upon the course of creditors as against their debtors, and will provide an adequate remedy in the event of actual insolvency or wrong and prevent many men from being forced unnecessarily into bankruptcy.

We know that our cause is just, believe that it is the most important measure before the next Congress, have unbounded confidence in our ability to so present the matter as to secure favorable consideration, and are therefore prepared to continue the campaign until the title "Torrey bill" shall be superseded by one that is protected by a flag, backed by an army and navy, and which will in all respects command the respect of civilized people, that is, *a law of the United States*. [Applause.]

I hope and believe that the working of the law when enacted may prove a justification of your enthusiasm on this occasion. [Applause.]

RESULTS THAT WILL BE OBTAINED

BY BANKRUPTCY LEGISLATION, AS ANTICIPATED AT THE ANNUAL BANQUET OF THE ASSOCIATED WHOLESALE GROCERS OF ST. LOUIS, ON DECEMBER 30, 1889.

THE TWELFTH TOAST: ASSOCIATION ENTERPRISE.

RESPONSE BY COL. JAY L. TORREY.

. Mr. PRESIDENT AND GENTLEMEN: The subject of enterprises is interesting, because it is hopeful; it is agreeable to speak of, because it involves a consideration of new and novel ideas. The promotion of enterprise is a work of progress, and promises rewards both in glory and accumulation.

This theme is particularly interesting in connection with this organization, because of the splendid achievements it has accomplished in the past and the promise which the future offers for carrying forward undertakings that will benefit, not its members alone, but also the community at large, and which will add to the material prosperity of the times in which we live.

The history of bodies, such as yours, usually conforms to the history of the individual man, manifesting, as a rule, the three stages of inefficient youth, buoyant manhood and decrepit old age. In this organization the rule finds its exception. At the first meeting of the men who were its organizers, it at once assumed all the vigor and strength of manhood. Up to date there are no indications that the organization will ever reach decrepit old age. I assert with confidence that so long as there is good-fellowship to be enjoyed, new business problems to be solved, and fresh enterprises to be advanced, this body will remain in the vigor and strength of manhood. It may be that as time passes the locks of the patriarchs will whiten, and that the burdens of the day will be borne by hands less calloused than theirs with labor, but for all time the influence of the trio of presidents, Messrs. Peter Nicholson, Joseph W. Goddard, and William E. Schweppe will be felt, their examples imitated, and the work that they have undertaken carried on. [Applause.]

Many, many works of enterprise have been initiated, prosecuted, and aided during the five short years of its organized existence. Among them I name the establishment and successful operation of the credit system; the reduction of freight rates from the seaboard; the arraignment of the railroads before the Interstate Commission; the modification of the contract system of selling certain classes of goods; the establishment of the Interstate Grocer; and your present movement to secure the enactment of a national bankrupt law. [Applause.]

Within a single year, and as the outgrowth of the banquet of last December, a national body has been organized which, in the interest of commerce, has formulated and recommended to Congress for enactment the Torrey bankrupt bill. The measure has been introduced in the House of Representatives and in the Senate, and the indications are that when we assemble a year from to-night your representative will be able to rehearse the details of the agitation which culminated in the bill becoming a law.

A bankrupt law was enacted as early as the years 1542-'43, in the thirty-fourth and thirty-fifth years of the reign of Henry VIII. This was strictly a proceeding in equity. The marginal note is in these words:

The chancellor, treasurer, etc., shall take order with bankrupts' bodies, lands, and goods for the payment of their debts.

The preamble of this act expresses, in quaint language, the causes which led to its enactment. It says:

Whereas divers and sundry persons craftily obtaining into their hands great substance of other men's goods do suddenly flee to parts unknown [something familiar about that. Laughter and applause] or keep their houses, not minding to pay or restore to any, their creditors, their debts and dues, but at their own wills and pleasures consume the substance obtained by craft of other men for their own pleasure and delicate living, against all reason, equity, and good conscience: Be it therefore enacted, etc. (5 Stat. at L., p. 132.)

By this act power was given to the Lord Chancellor and other officers of the crown, not only to take the body, lands, and goods of the bankrupt, but also to attach his debts and property of other kinds in the hands of other persons. If any aggrieved party should make complaint—

Knowing, specifying, or suspecting any of the "goods or debts of such offender to be in custody, use, occupying, keeping, or possession of any person, or that any person is so indebted to such offender," then the chancellor and other persons had power to "send for and *convent afore* them by such process, ways, or means as they should think convenient" the suspected persons and examine them in such ways and by such means "as the said lords by their discretions shall think meet and convenient, for and upon the specialty, certainty, true declaration, and knowledge" of such debts or goods being in their possession. If such person "upon such examination do not disclose, plainly declare and show the whole truth of such things as he or they shall be examined on," such persons forfeited double the value of the goods, etc., received or concealed by them, and the amount so forfeited was distributed among the creditors of the bankrupt *pro rata*.

The provisions against proving fictitious debts against the bankrupt's estate are in the following language:

If after such person or persons shall keep his or their houses or flee to parts unknown, as is aforesaid, any person or persons do fraudulently, by covin or collusion, claim or demand any debt, duty, or other thing by writing or otherwise, of any such offender or offenders, other than such as he or they can and do prove to be due by right and conscience in form aforesaid, and the same to proceed *bona fide* without fraud or covin, then every such person or persons so craftily demanding or claiming any such debt, duty, or other thing as is aforesaid shall forfeit and lose double as much as he or they shall so claim or demand.

If the bankrupt shall have "deceitfully, by covin or collusion, suffered or caused any other person or persons to recover against him or them any debts, goods, chattels, wares, or merchandises without just cause and title so to do, proceeding *bona fide* without fraud or covin," such goods so fraudulently recovered were to be delivered up to the just creditors of the bankrupt, and the fraudulent recovery can not be enforced against the bankrupt so long as there were any just debts unpaid. But after all the just debts should be paid then the party holding the fraudulent judgment could enforce it against the bankrupt, the language of the act being—

And nevertheless after that the said true debts and duties shall be fully satisfied and paid as is aforesaid, as well the body of the said offender as his lands, tenements, goods, and chattels shall be charged and liable to the execution of the said recovery (that is the fraudulent recovery) according to the tenor, force, and effect of the same.

If the bankrupt left the country, proclamation was made that he return within three months, and that—

If the said person within three months next after he shall have knowledge of such proclamation, or as soon after as he conveniently may, do not repair and yield his body as is aforesaid, that then the body of all and every such offender shall be judged, taken, and deemed to all intents and purposes out of the king's protection.

And all his property was to be distributed equally *pro rata* among his creditors.

Any third person who should "willingly help to aid, embezzle, or convey any such person or persons out of the realm and without the king's domain into any foreign realm or place, knowing the said person or persons to depart or withdraw themselves or convey their said goods, etc., for the cause and intents aforesaid" should suffer such punishment as the said lords should deem meet.

The act provided for equal distribution of the bankrupt's property, but expressly precluded the bankrupt from any discharge from his debts.

It seems, notwithstanding this act of Henry VIII, which made bankruptcy proceedings merely proceedings in equity, bankrupts increased, and need of a more stringent law was felt, for the act of 13 Elizabeth commences with this preamble:

Forasmuch as notwithstanding the statute made against bankrupts in the 14th year of our late sovereign lord, King Henry VIII, those kind of persons have and do still increase in great and excessive numbers, and are like more to do if some better provision be not made for the repression of them and for a plain declaration to be made and set forth who is and ought to be taken and deemed for a bankrupt; therefore be it enacted, etc.

The grounds of bankruptcy are then set forth as follows:

If any merchant or other person using or exercising the trade of merchandising, by way of bargaining, exchange, rechange, bartry, chevisance, or otherwise in gross or by retail; or seeking his or her trade or living by buying and selling; being subject born of this realm or any of the queen's dominions or denizen; sithence the first of the present Parliament, or at any time hereafter, shall depart the realm, or begin to keep his or her house or houses, or otherwise absent himself or herself; or take sanctuary; or suffer himself or herself willingly to be arrested for any debt or other thing grown or due for money delivered, ware sold, or any just or lawful cause or good consideration or purposes; hath or will suffer himself or herself to be outlawed, or yield him or herself to prison, or depart from his or her dwelling house or houses; or intend or purpose to depart or hinder his or her creditors.

In the fifth year of the reign of George I (1729) another act was passed which was extended by the act of 15 George II. This latter act contained some severe provisions. It seems that commissions had been issued against a number of persons who were bankrupts within the meaning of the act of George I, but who claimed that the writs were without force or effect against them because the act had expired. The act of George II, after reciting this fact in the preamble and also reciting that—

Whereas many persons have and do daily become bankrupts, not so much by reason of losses and inevitable misfortunes as to the intent to oblige their creditors to accept such their unjust proffers and composition and to defraud and hinder their creditors of their just debts;

selves within forty-two days after notice published in the *London Gazette* it went on to provide that if such persons did not surrender themselves and did not thereafter conform to the statutes they should be deemed guilty of a felony. This act, as well as that of George I, provided for an allowance to the bankrupt and for his discharge, and these were the first acts which provided in any way for the release of the bankrupt from his debts.

Other acts were passed from time to time. The last one was in 1883 and is now in force.

In the United States a bankrupt law has been in force from 1800 to 1801; another from 1841 to 1843; and the last from 1867 to 1878.

Large numbers of men, prominent by their business ability and who take a deep interest in the commercial well being of the country, have taken part in this agitation in behalf of a national bankrupt law for many good reasons.

It is apparent to the most casual observer that the insolvency laws of the separate States ought to be superseded by one harmonious, uniform national law. Under the Federal Constitution it is not possible for any State to discharge a bankrupt from debts due creditors in other States. He must still remain liable for the excess of his debts over the amount paid by his estate in dividends, since the States are forbidden to pass laws impairing the obligation of contracts. Congress alone can meet the demand for an equitable, uniform law.

Commercial credit will be promoted by the law which has been recommended by the national convention. It will give confidence to the men who handle the commerce of the country, and in so doing will enlarge the credit of every man engaged in trade and thereby increase the purchasing power of money.

The insolvents will be divided in two classes, honest and dishonest; the former will be discharged from their indebtedness, but not the latter.

The estates of persons who cannot or will not pay their debts will be taken charge of by and be distributed among the creditors.

The measure will give stability to financial transactions by engendering confidence and by doing away with the uncertainties which beget suspicion and breed trouble.

This measure will furnish a safe and equitable guide for the settlement of transactions which are now left unsettled by the varying rules of law in more than forty States.

Dishonest men will be prevented from outdoing their honest competitors by chicanery and fraud and in turn swindling their creditors.

Large concerns will be prevented from securing an assignment for their benefit from small debtors, and thereby collecting dollar for dollar of their indebtedness, while other creditors, of the same class, are prevented from collecting any part of their dues.

The unfair appropriation of assets through the instrumentality of judgments by confession and attachments by connivance can be set aside by honest creditors.

The estates of insolvents will be protected from the depredations of persons holding fraudulent claims.

Creditors will have ample opportunities to investigate the transactions of their debtors and to secure such part of the assets as they may be entitled to equitably.

The bankrupt and other persons may be examined under oath as to the whereabouts of assets and concerning all matters pertaining to the administration of the estate.

The prompt compromise by arbitration of controversies at small expense will be promoted as a substitute for prolonged, vexatious and expensive litigation.

Officers in charge of the estate of insolvents who embezzle, fraudulently appropriate, expend, or transfer such assets will be punished by fine and imprisonment.

This law will prevent the purchase of goods by persons who do not intend to pay for them.

Persons will be punished who obtain, on credit, goods from one person in order to pay their debts due to another.

Men who are in business, and who have obtained goods on credit, which have not been paid for, will be punished if they pledge, pawn, or dispose of such goods otherwise than in the ordinary course of business.

The secreting, concealing, removing, mutilating, or falsifying of books, deeds, writings, or documents relating to property, is declared to be a crime and will be punished by imprisonment.

Insolvents are forbidden to attempt to account for missing property by fictitious losses or expense.

A bankrupt will be imprisoned who conceals from his trustee any of the property belonging to his estate.

Heretofore dishonest men have so far imposed upon the confidence of the better classes; have so frequently taken advantage of the ineffectiveness of State laws by committing commercial wrongs; have engendered so much suspicion between the business men of different sections, that those who entertain the purpose of dealing fairly and living acceptably have, with one accord, demanded the legislation embodied in this measure at the hands of Congress.

The work thus far accomplished has been attended with great expense and is everywhere recognized as purely unselfish.

I am told that objection will be made to the enactment of a national uniform law by the lawyers in Congress who reside at a distance from the place of sitting of a United States court and who fear that by the enactment of such a law their business will be interfered with. The fear is not well founded. In the first place the law will give a conservative tone to the demands of creditors and, as a result, there will not be the same precipitate action that is now experienced. Under the present system the creditor, on the one hand, is suspicious that other creditors will attach the debtor, or that the debtor will make an assignment with preferences, and as a result is only too ready himself to attach. On the other hand, when the debtor realizes that preferences are out of the question and that an attachment will not prevail, or, at least, that bankruptcy proceedings may be instituted and thus render nugatory the advantage sought to be attained by an attachment, he will be more independent and cherish a greater degree of hope that he can pull through what may only be a temporary stringency. The result will be that commercial collections of the better class will increase rather than diminish. In the second place the law provides that the territorial jurisdiction of the several United States courts shall be divided, and that a referee shall be assigned to such territory, and that hearings may be had at the time and place most convenient to the parties in interest. More important still, controversies affecting the property of the estate may be litigated in the State courts and in the counties where the parties reside. I therefore conclude that the lawyers will be benefited instead of injured. Still, if it were true that the enactment of the law would decrease the collection business, I submit that this fact ought not to be urged against the desired legislation, since the credit of every client of every lawyer in the country will be strengthened and promoted and the good thus caused should outweigh the objection above stated.

There is every reason for confidence that the verdict of Congress will be in favor of a national law, in support of a national commerce, and

that the law which is the product of your enterprise will be the one selected as best calculated to answer the necessity.

You have occasion to be proud of your work thus far and to be satisfied with the outlook for the enactment of the bill. I confidently believe that ere long the people as a whole will be proud of the law and satisfied with its administration. [Applause.]

Through this agitation you, as the Associated Wholesale Grocers, have become known in every town and hamlet in the United States, to the members of Congress, and to the officials of the Government.

More good will be accomplished than has been anticipated if the national movement which you have inaugurated on the part of the commercial bodies is hereafter imitated where there is a national need to be supplied or a national wrong to be corrected.

The combined effort of the good men banded together in commercial bodies may not succeed in exterminating tendencies to do wrong on the part of individuals, but it will exercise a powerful influence against the commission of wrongful acts and in securing the swift and adequate punishment of wrongdoers. I sincerely hope that the time has come when united effort will be made for our individual good, for our collective good, and for the good of our Government. [Applause.]

A NATIONAL BANKRUPT LAW.

ADDRESS OF COL. JAY L. TORREY BEFORE THE AMERICAN BANKERS' ASSOCIATION,
SARATOGA, SEPTEMBER 4, 1890.

Mr. President and Gentlemen: I shall speak to you upon the subject of a national bankrupt law under headings as follows: (1) The provisions of the Constitution relating to bankruptcy; (2) the laws of 1800, 1841, and 1867; (3) the present popular demand for the enactment of a bankrupt law; and (4) the Torrey bankrupt bill—(a) the form of the bill; (b) the courts and officers; (c) voluntary and involuntary bankruptcy; (d) acts of bankruptcy; (e) compositions; (f) liens; (g) the bankrupt's exemptions; (h) safeguards against the fraudulent concealment of property; (i) the penalties prescribed for wrongdoers; (j) the discharge of honest insolvents, and (k) economy and expedition in the administration of bankrupt estates.

(1) THE PROVISIONS OF THE CONSTITUTION RELATING TO BANKRUPTCY.

Mr. James Madison, in the introduction to the Madison State Papers, refers to the necessity for a provision in the Constitution upon the subject of bankruptcy as follows:

Among the defects which had been seriously felt was a want of uniformity in cases requiring it, as laws of naturalization and bankruptcy, a coercive authority operating on individuals, and a guaranty of the internal tranquillity of the States.

When Article 16 of the Constitution was presented requiring that full faith and credit should be given to the acts of the legislatures and to judicial proceedings of each State Mr. Charles Pinckney, of South Carolina, moved to commit the article with the following proposition:

To establish uniform laws upon the subject of bankruptcies and respecting the damage arising on the protest of foreign bills of exchange.

Mr. Gorham was for agreeing to the article and committing the proposition. Mr. Madison was for committing both.

On the question for committing article 16, with Mr. Pinckney's motion, representatives of the States voted as follows:

Connecticut, New York, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia, aye (9). New Hampshire and Massachusetts, no (2).

Mr. Rutledge, from the committee to whom were referred sundry propositions together with Article 16, reported that additions be made to the report as follows: After the word "States," in the last line on the margin of the third page, add "to establish uniform laws upon the subject of bankruptcies."

When the clause in the report "to establish uniform laws upon the subject of bankruptcies" was taken up Mr. Roger Sherman observed that "bankruptcies were in some cases punishable with death, by the law of England, and he did not choose to grant a power by which that might be done here."

Mr. Gouverneur Morris said that this was an extensive and delicate subject; he would agree to it because he saw "no danger of abuse of the power by the Legislature of the United States."

On the question of agreeing to the clause, Connecticut alone voted in the negative.

The Committee on Style, etc., composed of Mr. Johnston, Mr. Hamilton, Mr. G. Morris, Mr. Madison, and Mr. King of the convention, divided the subject, and by its chairman reported the section as we now have it with the exception of a change of "an" for "a" as follows:

To establish an uniform rule of naturalization and uniform laws upon the subject of bankruptcies throughout the United States.

A very careful examination of Elliott's State Convention and Debates on the Federal Constitution, Story on the Constitution, Rawle on the Constitution, and the Constitutional Convention by Jameson fails to disclose any opposition to the granting to Congress the exclusive power to legislate upon the subject, either by the members of the convention or of the State legislatures, when submitted for ratification.

The wisdom of vesting the power in the Congress of the United States to enact uniform laws upon the subject of bankruptcies is apparent to the most casual student of governmental philosophy. Our forefathers doubtless foresaw that interstate commerce would assume great proportions as the nation progressed in its career, and realized that State laws upon the subject must of necessity prove inadequate to meet the demands of commerce.

(2) THE LAWS OF 1800, 1841, AND 1867.

Congress has exercised the power of enacting bankrupt laws but three times since the adoption of the Constitution. The first law was enacted in 1800 and was repealed a year later; the second was enacted in 1841 and was repealed during the second year thereafter; the last act was passed in 1867 and remained a statute 11 years. Each of the three laws mentioned was enacted to meet an emergency, and was repealed as soon as its purpose had been accomplished.

(3) THE PRESENT POPULAR DEMAND FOR THE ENACTMENT OF A BANKRUPT LAW.

The demand of the people for bankruptcy legislation at this time is not local nor from a particular class, but comes from all parts of the Union and from all classes of citizens.

There have been held four national conventions since the repeal of the bankruptcy law of 1867, and each of them has had for its sole object the securing of the enactment by Congress of a bankruptcy law which should grant relief to honest insolvents and be an impartial protection to the business interests of the whole country. The first and second of these conventions were held in Washington City in 1881 and 1884, respectively. The third was held in St. Louis during the spring of last year and the last one was held at Minneapolis last September.

Commercial bodies in all parts of the country have passed memorials and resolutions and citizens have signed petitions favoring the enactment of a bankrupt law, and representatives of those bodies have organized a national body for the sole purpose of securing bankruptcy legislation.

The bodies which have taken action in favor of the passage of the bankrupt law and the individuals who are members of the organization which has been formed to promote the agitation are summarized by States and Territories as follows:

[Revised February 27, 1891.]

	Bodies and petitions.	Officers and commit- teemen.		Bodies and petitions.	Officers and commit- teemen.
Alabama	1	7	Nebraska	18	3
Arkansas	9	8	Nevada	1	0
California	9	5	New Hampshire	3	0
Colorado	7	4	New Jersey	5	3
Connecticut	7	1	New Mexico	1	1
Delaware	1	1	New York	54	18
District of Columbia	2	0	North Carolina	4	2
Florida	3	3	North Dakota	2	3
Georgia	5	6	Ohio	40	25
Idaho	2	1	Oregon	8	4
Illinois	81	29	Pennsylvania	35	13
Indiana	11	7	Rhode Island	4	2
Indian Territory	1	0	South Carolina	2	2
Iowa	15	10	South Dakota	2	3
Kansas	15	4	Tennessee	10	4
Kentucky	6	12	Texas	28	8
Louisiana	11	10	Utah	0	1
Maine	10	1	Vermont	1	2
Maryland	5	4	Virginia	6	2
Massachusetts	50	11	Washington	3	1
Michigan	27	12	West Virginia	5	3
Minnesota	28	17	Wisconsin	15	9
Mississippi	7	5	Wyoming	1	0
Missouri	58	31			
Montana	1	1	Totals	619	299

The appeal to Congress for the enactment of this law occurs at a time of comparative calm and should be heeded, and a law should now be passed because at this time it is probable that the action of Congress will be a wise interpretation of the needs of all the people. If action should be delayed, it may unfortunately be the case that the national legislative body will be called upon to act in response to the selfish demand of a particular class who may need relief from the burdens of indebtedness brought about, not by their own inability, but by a public panic. There does not seem to be any reason at this time why a bill can not be passed which is just in all its provisions to the debtors, the creditors, and the Government.

The merchants of the country, in so far as they purchase commodities upon time are debtors, and in so far as they sell commodities upon time are creditors, and for the most part constitute the debtor and creditor classes of the country; in their dual capacity of debtors and creditors, they are interested in holding the scales evenly between these two classes. As they are taking the chief part in the agitation designed to secure the enactment of this measure, it goes without saying that strenuous efforts have been made in behalf of the formulation and presentation of a perfectly fair law.

If Congress had, upon its organization, passed an acceptable uniform bankrupt law, and from time to time amended it, to meet the ever progressive conditions of commerce, not a single one of the State insolvent laws would have ever have been formulated or enacted.

The State legislatures have enacted bankruptcy or insolvency laws because the people demanded them, and the Congress of the United States would not heed their demands. The State legislatures could not

enact complete laws, because of the restrictions in the Federal Constitution as to the obligation of contracts, and because of the reservation to Congress, in explicit terms, of the power to enact such laws. The States are not to be censured, but commended, in coming to the relief of their citizens so far as they can.

The laws enacted by the States are each, of necessity, defective, and in the aggregate they are incongruous and contradictory. To the practitioner they are productive of a large income; to the wearer of judicial ermine their enforcement involves intellectual gymnastics, and to the business man they are of great annoyance and expense. The very existence of insolvency laws, as a part of the codes of the several States, is a solemn protest against the policy of inaction on the part of Congress, and constitutes an unanswerable argument in favor of the enactment of a uniform bankrupt law.

Congress is derelict in the exercise of but a single power reserved to it by the Constitution, and that is the power to enact uniform laws upon the subject of bankruptcies. *The people have demanded* that this power shall be exercised, and they confidently anticipate that the demand will be complied with by the present Congress.

(4) THE TORREY BANKRUPT BILL.

(a) *The form of the bill.*

The bill as originally drafted and as passed by the House of Representatives is analytically arranged by being divided into five chapters and the chapters into sections. Each chapter is devoted to a subject and each section to an idea. Every section has a catch-word or title expressive of what it contains. (*See birds-eye index at the close of this address.*)

(b) *The courts and officers.*

The district courts of the United States have original jurisdiction in bankruptcy proceedings.

The section of the bill relating to suits against bankrupts' estates and those brought by trustees to enforce the rights of bankrupts' estates as reported by the Committee on the Judiciary of the Senate is as follows:

Suits by the trustee shall be brought in the courts where the bankrupt might have brought the same if he had been entitled to recover therein. Suits to recover property in the possession of the trustee, including suits for the foreclosure of mortgages upon real estate, shall be brought in the court having jurisdiction thereof if they had been brought against the bankrupt. Suits for the establishment of liens against the personal property of the bankrupt, or the fund in the possession of the trustee, shall be brought in the district court of the United States where the proceedings in bankruptcy are pending.

The offices created are but two. They are the referee, or assistant judge, and the trustee to represent the creditor.

The referee is to be appointed in the States by the United States circuit courts at a time when there are two judges upon the bench, one of whom is the district judge, and in the Territories and the District of Columbia by the supreme courts. He may be removed by the same tribunal for cause, or because his services are not needed, or by reason of the fact that the number of cases pending before him has fallen to below fifty. This officer is not to be related within the third degree of consanguinity or by marriage to the judge. He will be paid by the Gov-

ernment a salary of not to exceed \$1,000 and \$10 per case administered before him, when actually concluded, and his actual and necessary office expenses.

The trustee will be appointed by the creditors and perform his duties under the direction of the court. He will give bonds. All moneys must be deposited in a designated depository, and all amounts must be paid out by check or draft.

The compensation to the trustee will be a commission not upon the income or outgo of the estate but on the dividends actually paid to the creditors. The amount will be 5 per centum on the first \$5,000, 2 per centum on the second \$5,000, and 1 per centum on additional amounts.

(c) *Voluntary and involuntary bankruptcy.*

The distinction between voluntary and involuntary bankruptcy relates only and solely to who files the petition. The right and duties of a person who files his own petition and of the person against whom a petition is filed by his creditors are identical. There is no difference between the creditors. Their rights and the method of exercising them are identically the same.

It has been suggested by some thoughtless friends of the poor man that a voluntary system without the involuntary features would operate in the interest of that class.

In view of the reciprocal nature of transactions, pursuant to which the debtor and creditor classes are created, it seems as though there ought to be no discussion as to the desirability of a law, if we are to have one, which should provide equitably for the rights of both classes. It is said by the gentlemen who support a voluntary system of bankruptcy only, that while they are willing that the unfortunate poor man may release himself from the burden of his debts, they are unwilling to make it possible for the creditors to take the initiative as against a dishonest or failing debtor.

I do not see how the voluntary system could be provided for without, at the same time, working a very great hardship as against the creditor class. For example, this bill provides that enforced liens, created within 4 months of the time of the institution of the proceedings, shall be set aside, and that preferences which have been given within that time may be recovered by the trustee. If it were simply attempted to provide by law for a voluntary system, under like circumstances the debtor would simply wait until the expiration of such 4 months before filing the petition, and as a result the creditors and trustees acting in their behalf would be helpless to prevent the perpetration of open and glaring wrongs.

One of the greatest evils which the proposed legislation is intended to remedy is that of securing preferences by instituting attachment proceedings by connivance, in such manner that it can not be detected, with the result of enabling favored creditors to receive the full amount due them, and in many instances to prevent large parts of the estate being carried away by friends and relatives pursuant to proceedings founded upon fraudulent claims. I do not think that these wrongs can be remedied except by the provisions of an involuntary system pursuant to which every bankrupt will be required to make a complete showing as to his transactions, and a complete surrender of all of his assets to be divided ratably among his creditors.

The advocates of the voluntary system, as it seems to me, are anxious to curry favor with the poor debtors. I think, if they are per-

mitted to enact such a law, that they will prove to have been the debtors' worst enemies, because the enactment of such a law would unquestionably result in a contraction of credits and the debtor would thereby be the sufferer.

Legislation in behalf of commerce which tends to enforce legitimate mercantile transactions, and require of every member of the commercial world fair dealing, and prevent trickery and punish fraud in all its forms, tends directly to the extension of the credit system, gives to every honest man an opportunity to do business under the most advantageous circumstances, reduces the rate of interest upon money borrowed, and in every way promotes the welfare of the honest man, discourages the entrance of dishonest men into the field as competitors, and in all respects tends to the betterment of the condition of the members of society.

It is a matter of great interest to our commercial classes to consider what effect the passage of a voluntary bankrupt act without the involuntary features would have upon the commercial credit and standing of our merchants in the markets of the country. In other words, if unusual advantages were granted to our debtor classes how would their brethren of the creditor classes, both in our own and other States, view the subject?

In general terms the greater the collateral or the more valuable the security, the greater the credit extended on account thereof and the less the interest paid. For example, if a person wishes to borrow a sum of money and offers United States bonds as collateral security, or unincumbered real estate of many times the value of the amount sought to be borrowed, he will have no difficulty in securing a prompt loan at a low rate of interest. The reason is, of course, that in the event the money is not returned it can be surely and promptly collected by a sale of the property upon which a loan has been created. The same thing is true in another form, in this, that if a merchant of steady habits, good character, and large resources in property applies for credit, he has no difficulty in obtaining it in large amounts and in purchasing goods at a low figure; while his less fortunate brother, whose character is unknown, or is unfortunately bad, and who has little or no property, is not able to secure credit except in a limited degree, and can not purchase goods except on short time at high prices.

It might be possible by legislation to so increase the rights of the debtor class, or the borrower of money, and to dwarf the rights of the creditor in realizing upon indebtedness as to really depreciate the value of United States bonds as collateral and unincumbered real estate as a pledge for money loans. The same might be true as to the merchant of good character and ample means. All citizens will agree that any such legislation would be to the manifest detriment of the debtor classes, to say nothing of the moral effect it would produce upon the community.

I respectfully submit that the results as above outlined will be obtained by the passage of a law which will enable the debtor to deliberately prepare to enter into bankruptcy without the possibility of having his preparations interfered with by the institution of involuntary proceedings; and hence that the enactment of such a law ought to be avoided in behalf of the debtor classes with the same persistence that opposition would be urged to, say, the repeal of all laws for the collection of debts.

The friends of the debtor will note a number of safeguards which have been included in the present bill for his protection, as follows:

Under the present laws a single creditor, irrespective of the amount of his claim, may institute proceedings which will probably be the forerunner of other proceedings, while if the bankrupt law be enacted it will require three creditors whose aggregate claims exceed \$500, over and above securities held, to file the petition, unless there are less than twelve creditors in number, in which event one creditor may file the petition provided his claim is, in excess of securities held, equal to or over \$500.

Under the present insolvency laws in every case in which the creditors, or any considerable portion of them, resort to compulsory process, the debtor is at once at a disadvantage; his property is taken from him and in lieu thereof there is, in most of the States, executed a bond which is presumably good at the time of its execution, but which may be worthless by the time the question of his right to recover thereon is finally determined. The debtor must always confront the possibility of having his property seized, separated and sold at sacrifice sales, not that he has committed or contemplates the commission of any fraud, but simply because of a panic among his creditors and the inevitable scramble for precedence. The fact that liens have been acquired by compulsory process by the most diligent of the creditors is ordinarily sufficient to prevent the possibility of a compromise by which the debtor would be enabled to preserve the good will of his business and to continue it.

Under circumstances such as these with this bill in force a composition might be effected without delay and upon favorable terms without the institution of bankruptcy proceedings, because of the possibility of the institution of such proceedings and of the impossibility of seizure by individual creditors, and in the event it should become necessary to secure an adjudication, the debtor would be entitled to the exemptions provided by the laws of his own State, and, in general terms, if an honest man, would be able to secure his discharge.

The creditor in the present chaotic state of the laws not only has to watch the debtor, but the other creditors as well. He has not only to fear a failure on the part of his customer, but must confront the possibility of the giving of a preference by the debtor, the acquiring of a compulsory lien by his competitor, or the entire disappearance or conversion of the property on the faith of which he based his extension of credit. If the law under discussion be enacted the equitable rule of distribution will be enforced, and all of the evils, those that are real and those that are imaginary, will be avoided.

The men of affairs in this country do not want any one-sided law. There is no demand for any such law from any source. The demands which have been presented have been for the bill as it stands.

The masses of the people of this country are honest, they love equality and insist on an equitable adjustment of differences in every relation of life.

(d) Acts of bankruptcy.

The amended section as reported by the Committee on the Judiciary of the Senate defines acts of bankruptcy as follows:

Any person shall be adjudged a bankrupt if he has within 6 months prior to the filing of a petition in bankruptcy against him (1) concealed himself to avoid arrest under, or the service of, civil process; (2) departed or remained away from his residence or place of business with intent to defraud or delay his creditors; (3) procured, or allowed to remain for 40 days, any attachment of his property upon mesne process with intent to give a preference thereby, or, being insolvent, in having suffered judgment to be rendered against him; (4) made a conveyance, gift, or transfer of all, or any part, of his assets with intent to defraud or delay his creditors; (5) made a written

declaration of his inability to pay his debts and filed it in court; (6) made an assignment for the benefit of his creditors; (7) procured or suffered a judgment to be entered against himself with intent to defraud or delay his creditors; (8) secreted his assets to avoid their being levied upon or attached under legal process against him; (9) suffered an execution against him to be returned *nulla bona*; (10) suspended and not resumed payment of his commercial paper for 30 days; (11) voluntarily petitioned to be adjudged a bankrupt; (12) while insolvent for the purpose of giving a preference made a conveyance, mortgage, or pledge of any of his property or suffered any of his property to be taken or levied upon by process of law or otherwise, or permitted the creation of any lien on any of his property; or (13) while insolvent made a contract or contracts personally or by agent or broker for the purchase or sale of a commodity or commodities with an intention not to receive or deliver the same, but merely to receive or pay a difference between the contract and the market price thereof at a time subsequent to the making of such contract or contracts; or (14) who within 3 months next prior to the filing of the petition against him has obtained credit by knowingly making a false statement or representation involving his financial condition, property, or ability to pay.

(e) *Compositions.*

Practitioners, as well as litigants, will remember that the old law provided that after the institution of proceedings the defendant could offer terms of composition before he had made a showing as to the amount or the whereabouts of his assets, and without any regulations as to the terms upon which the same should be offered, or provisions as to payment in the event the same was accepted and confirmed. It was a practice for the debtor to test the credulity of his creditors by offering terms, apparently favorable to the creditors, and if the same were promptly accepted to withdraw his proposition under some pretext or other, and then offer other terms less favorable to the creditors and so on, as long as the creditors were patient and the process bid fair to be profitable.

The present bill contains a clause upon the subject of composition by which the debtor who is honest and desires to compromise his indebtedness will be enabled to do so readily and quickly, while on the other hand the creditor will have ample assurance that he is not being imposed upon, because he must be provided by the debtor with the schedule of assets and the list of liabilities. The bankrupt and other persons having knowledge of his assets must be examined in open court or at a meeting of the creditors before the composition will be considered. The money to be paid or the securities to be given must be deposited with the court before the confirmation will be considered. If it is confirmed the money or securities will be paid or delivered to the creditors as directed by the court. At the hearing the composition will be confirmed if the court shall be satisfied that it will be for the best interests of the parties concerned, and that the debtor has not been guilty of any of the acts which would prevent a discharge. If it is a case in which fraud or dishonesty has been practiced, or if the court is satisfied that the composition will not be for the best interests of all the creditors, the composition will not be confirmed and the case will be proceeded with in bankruptcy. If it transpires after the confirmation of a composition that the same was obtained by the practice of fraud or the commission of perjury it may be set aside at any time within 6 months after the confirmation.

(f) *Liens.*

The Committee on the Judiciary of the Senate reported an amended section upon liens as follows:

Rights, remedies, liens, defenses, and estoppels, legal or equitable, which would have been available to any creditor whose claim is provable under this act, had no bankruptcy proceedings been instituted, shall be available to the trustee to the extent of such right, remedy, lien, defense, and estoppel for the benefit of the estate.

A lien created by or obtained in or pursuant to any suit or proceeding at law or in equity, including an attachment upon mesne process or a judgment by confession, which was begun against a person within 4 months before the filing of a petition in bankruptcy by or against such person, shall be dissolved by the adjudication of such person to be a bankrupt; or if the dissolution of such lien would militate against the best interests of the estate of such person the same shall not be dissolved, but the trustee of such person, for the benefit of the estate, shall be subrogated to the rights of the holder of such lien and empowered to perfect and enforce the same in his own name with like force and effect as such holder might have done had not bankruptcy proceedings intervened. If any such lien shall have been realized upon, the amount shall be paid to the trustee by the officer or beneficiary, less the amount of the taxable costs in favor of the creditors and officers in such suit or proceedings incurred in good faith.

Liens which were given by the bankrupt prior to the filing of the petition, in good faith and not in contemplation of or in fraud upon this act, and for a present consideration, which have been recorded according to law, if record thereof was necessary in order to impart notice, shall not be affected by this act.

(g) The bankrupts' exemptions.

The bill as introduced in Congress provided that the bankrupt should be entitled to such exemptions as were provided for by the laws of his State in force at the time of the filing of the petition. It was not amended by the Committee on the Judiciary of the House, was not referred to in the debate in the House, and has not been amended by the Committee on the Judiciary in the Senate.

Many friends of bankruptcy legislation think that we ought to have an exemption law the same in every State, but there seem to be insurmountable objections to such a law. Investigation shows that the new States have uniformly started out with very large exemptions, and that they have been gradually reduced as the States became older. There are a number of reasons why this should be so. The exemptions vouchsafed to a poor man are not intended primarily for his individual protection, but for the protection of his family. In a new State the items which go to make up the modest wants of a household are more expensive than in the older and better settled States. It is probable that the new States are inhabited in the beginning by a large number of individuals who have migrated for the purpose of getting a new start, and who are anxious not to be interfered with by creditors from their former homes, and this feeling has had its effect upon the legislative bodies, and as a result large exemptions have been provided.

What would be our position if we attempted to fix an exemption of the same amount in all the States of the Union? A Congressman would not be justified, from a political standpoint, in voting to reduce the exemptions in his State by the enactment of a national law. If a law were presented providing for exemptions satisfactory in amount to the Congressmen from, say, Illinois, I imagine that the amount provided would not be large enough to satisfy those from the newer States, while, on the other hand, it would be too large to secure the approval of the representatives of the older States. As to the practical side of the proposition, therefore, I believe that it is impossible to agree upon uniform exemptions. For the reason stated, ordinary exemptions should be larger in the newer States. It would be inequitable and unjust to the honest poor man who is the head of a family in one of the new States, where the necessities of life are much dearer than in the older States, to have only those exemptions which are allowed in the older States; and, on the other hand, it would be a great injustice to the creditor classes to allow, in the older States, the large exemptions to the debtor which are absolutely required in the newer States.

I therefore conclude, as a practical proposition, that it is not feasible to pass a law providing for an exemption of the same money value, or consisting of the same articles, in all of the States; as an equitable proposition, while such a section might sound as though absolute uniformity had been obtained; still the difference in the purchasing power of money and the value of identical articles in different parts of the country would constitute quite as great a variation from uniformity as would be experienced under the several State exemption laws.

(h) Safeguards against the fraudulent concealment of property.

Under the present order of things men too frequently get rich by failing. The proposed law is designed to prevent a dishonest man and his property parting before bankruptcy and meeting after the creditors have been fooled, the proceedings ended, and a discharge procured. A person against whom a petition has been filed either by himself or other persons, is required to file a schedule of assets and a list of creditors. To err in the making out of these papers in a substantial respect either by omission or by the insertion of untruths is declared to be a penitentiary offense. This seems to be all that can be done to secure a truthful showing from the prospective bankrupt. To the end that these statements may be probed, and if untrue, that the facts may be shown, it is provided that the bankrupt and all other persons having knowledge of his affairs may be examined on oath, either in court or before a designated officer. The commission of perjury in such examinations is in like manner a penitentiary offense. It does not seem possible that more could be done in the direction of looking for the facts in the case.

The trustee or representative of the creditors is vested with the title to the property of the person against whom proceedings have been begun as of the date of the institution of the proceedings, and is vested with all the rights enjoyed by judgment creditors in relation to the setting aside of fraudulent conveyances. The trustee is thereby clothed with ample authority to recover all property in which the bankrupt had an interest at the time the proceedings were begun. It does not seem possible to do more under the form of law than this provision includes in the direction of securing to the creditors the property to which they are entitled. The trustee can, without limit of time except as provided by the statute of limitations in the several States, pursue the property of the bankrupt wherever it may be found.

If we knew of additional safeguards against the fraudulent concealment of assets we would be glad to insert them.

(i) The penalties prescribed for wrongdoers.

The penalties of imprisonment for not to exceed 2 years and fines of not to exceed \$5,000 are prescribed in the bill for the wrongdoing of officers.

It is certainly the part of wisdom to exact at the hands of officers who are exercising important trusts, as provided in this bill, a strict performance of their duties and to provide severe penalties in order to prevent wrongdoing, and to punish such officers as shall be guilty of the forbidden acts.

There are two sections of the bill which relate to the anticipated wrongdoing of the bankrupt. The one relates to acts committed before the filing of the petition, and the other to acts committed after it. The

penalty in each case is imprisonment for a period not to exceed 3 years.

The bill has been criticised because of the above provisions; I submit in reply that honesty is the best policy and that it ought to be enforced as against bankrupts as well as other persons, and it is not a defensible position to say that a person, within six months prior to the filing of the petition shall not be punished if he willfully, and with intent to defraud his creditors, commits perjury concerning his property or acts, or obtains on credit property with intent not to pay for it; obtains on credit property from one person with the intent to prefer another creditor; disposes of his property, which was obtained on credit and has not been paid for, otherwise than in the ordinary course of business; makes away with any of his property to prevent its being administered in bankruptcy, or secretes or makes away with his books or documents relating to his property.

I do not think for the same reasons that it is defensible to say that the bankrupt shall not be punished if, after the filing of the petition, he willfully, and with intent to defraud his creditors, attempts to account for any of his property by fictitious losses or expenses; conceals from his trustee any of his property; in case of the proof of false or fictitious debts against his estate fails to disclose the same within 1 month after being possessed of such knowledge; makes any false oath concerning his property or acts in any proceeding in bankruptcy; makes any payment or gives any advantage, or the written promise of either, to any creditor, with intent to affect the proceedings under this act; makes any substantially false valuation of his property in his schedule of assets, or omits from his schedule of assets any of his property; omits from the list of his creditors any person to whom he is indebted in any substantial amount, or includes any person to whom he is not indebted, or lists a creditor for an amount substantially more than the true indebtedness, or makes away with or falsifies any of his books or documents relating to his property.

It is respectfully submitted that the acts here enumerated and the perpetration of which is forbidden, will not be perpetrated by honest men, and that if they are perpetrated by dishonest men, such perpetrators ought to be punished.

I am conscious that there are large numbers of the members of the mercantile world who now practice many of the acts here forbidden, and consider it an evidence of shrewdness to do so; such practices are morally wrong. They are commercially wrong, are detrimental to the proper conducting of business, and are besides calculated to decrease rather than to increase the volume of commercial transactions.

I therefore respectfully submit that the enactment of these statutes will have a deterrent effect upon such wrongdoers, and that good morals and good business will be promoted thereby.

The bill imposes penalties of imprisonment for not to exceed 3 years, or fine not to exceed \$2,000, or both, upon creditors for wrongdoing.

All of us ought, in my judgment, to agree that these provisions are required to guard against imposition by the holders of fraudulent claims, and that class of creditors who in times past have felt justified in "padding" their claims to the end that the per centum realized might equal the principal of their *bona fide* claims.

It is respectfully submitted that the foregoing provisions require at the hands of the bankruptcy officers, the bankrupt, and the creditors, only such conduct as becomes honest men, and that their enactment and enforcement will prevent the recurrence of the scandals which arose out of the administration of the old law.

It is anticipated that the prospect of being deprived of the advantages of fraudulent mercantile transactions, with the possibility of a term in the penitentiary, will well-nigh exterminate the fraudulent mercantile adventurers who have for years been thriving in all parts of the country.

It is unfortunate but nevertheless true that there are many men able and competent to conduct business upon a large scale, whose moral perceptions are so obtuse that it is necessary to forbid the enactment of wrongful practices and to fix a penalty for the perpetration of the same in order to prevent them from practicing frauds and deceptions, which are demoralizing in a moral sense and destructive of property rights in a business sense.

There is no question but that the passage of this bill will exercise a desirable moral influence in the prevention of commercial wrongs which are now openly perpetrated but which are forbidden in this measure. For example, it is now considered smart practice by many men to spirit away property, falsify books, destroy records, and to purchase goods upon credit, convert them into cash and leave to the creditor nothing but the poor consolation of attaching the remnant of goods and garnishing debtors who owe accounts which are worthless.

There is a thoughtless class of opponents to the enactment of a bankruptcy law who suggest that the possibility of securing a discharge will beget a reckless disposition upon the part of the debtor, and that he will be likely to take speculative chances in cases where he would not do so under the present conditions. I respectfully submit that the point is not well taken, and that the effect would be quite the reverse. Under the laws of most of the States there is no legal objection to the purchase of goods on credit and to their sale outside of the ordinary course of business. An act of this kind under the proposed law might result in the application of the debtor's assets to the payment of his debts *pro rata* and in his serving a term in the penitentiary. It is competent for a debtor in failing circumstances in almost any of the States to purchase goods on credit and apply them to the payment of the debts of a favored creditor, by some one of the many forms of preferences, that is, by a conveyance direct, by the giving of a chattel mortgage or lien, by a confession of judgment, or by an attachment connivance. A similar act, under the provision of this bill to which I have referred, would subject the individual in question to a term in the penitentiary, while the act pursuant to which a fraudulent preference was given would be annulled, if it occurred within a period of 4 months preceding the date of the adjudication, and the property would be restored to the estate.

There is no adequate provision in the laws of any of the States, so far as I am advised, by which the bankrupt can be compelled to show the reason of his failure, the whereabouts of his assets, or the nature of antecedent transactions. It is here provided not only that the bankrupt may be examined, but that any person having knowledge of his affairs may be examined touching transactions of interest to the creditors.

In most of the States the assignee of the debtor can not attack any of the transactions or conveyances of his assignor because he stands as his representative; but it is especially provided in this measure not only that the assignee may do so, but that it is his duty to attack all proceedings which are forbidden by the act pursuant to which property was transferred by the assignor.

Under the provisions of the law now in force, the honest and the dishonest insolvents are all in one class. The conditions will be different

upon the enactment of this bill; under its provisions the honest insolvent will be awarded his discharge and will have an opportunity to exercise his capabilities, whatever they are, without let or hindrance, while the dishonest insolvent will be punished for his infractions of the law.

Fire insurance rates are based upon statistics as to the number of accidental fires, and allowance is made for the work of the incendiary. Business risks are based on the losses incident to the ordinary vicissitudes of trade with a per centum added for acts of dishonesty. The consumers have to pay the per centum which is added. If the laws are so confused or so inadequate in their provisions that dishonesty runs rampant, the per centum will be very large; if a law shall be enacted which shall reduce acts of dishonesty and the losses incident thereto to the minimum, the consumer will not have to pay the larger per centum.

The arrest of the bankrupt to prevent his departure from the district within the first 6 months after the adjudication is in the interest of the proper administration of the estate. The arrest is only to be made after the application has been made to the court, and it has been judicially determined that he is about to depart from the district, and that his departure will interfere with the proper and advantageous administration of the estate. The bankrupt will be brought forthwith before the court upon being arrested.

If the bankrupt has escaped to another district he may be brought back in the same manner, and upon the same terms, as if he were an individual who had committed a criminal offense under the laws of the United States and had been indicted.

We do not want too many penalties, but we must have a sufficient number to prevent the law from being used, metaphorically speaking, as a fire escape down which scoundrels may climb to the highway of financial safety after having thrown their assets out of the window into the hands of a trusted accomplice.

Under the old law, prosecutions for violation of the act and the perpetration of commercial wrongs which were forbidden were few and far between. It is possible, under the provisions of this bill, to make the violations of it very unpopular, and to visit swift and adequate punishment upon such persons as do violate its provisions.

It is a well-worn saying that "competition is the life of trade." This should be modified so as to be applicable only to honest competition. Dishonest competition is the death of legitimate trade, and where dishonest competition is practiced to any large extent the result can not be other than to drive from the field of legitimate trade the honest men, and to surrender the affairs of commerce to the dishonest men.

One of the worst forms of competition that our legitimate merchants have to contend with is that of the individual who buys goods upon credit, with the intent not to pay for them, disposes of them at sacrifice sales, and then swindles his creditors. This law can have no better or more praiseworthy purpose than to prevent such species of robbery.

(j) The discharge of honest insolvents.

A discharge in bankruptcy in order to be granted must be applied for after 2 and within 6 months following adjudication. If the bankrupt fails therein and can convince the judge that he was unavoidably prevented from applying for his discharge within that time it may be applied for within the next 6 months, but can not be granted upon an application made after the expiration of 12 months after the adjudica-

tion. A discharge will not be granted if the bankrupt was a merchant, manufacturer, or trader, whose annual transactions exceeded \$5,000, and who failed to keep proper books of account, from which his true condition might be known, or who has committed any felony or perjury, failed to act in good faith concerning the administration of his estate, made a preference which has not been surrendered, knowingly made a materially false statement concerning his affairs to any person for the purpose of obtaining credit or of being communicated to the trade, conspired to defeat the operation of the act, made a fraudulent transfer of his property, or neglected, without satisfactory excuse, any duty as a bankrupt.

A discharge may be set aside within 2 years after being granted, if it transpires that the same was fraudulently obtained.

The proposition to discharge an honest bankrupt is supported by sound public policy and the dictates of human sympathy for the unfortunate, and is not in practical derogation of the material rights of the creditor.

Sound public policy requires that every citizen should have a free and unrestricted opportunity to add to the wealth of the community to his full capacity. The one who has failed in business has learned an invaluable lesson, either the one of his want of capabilities, or the one of how to avoid the errors which occasioned his failure. As a citizen he should be unrestricted as to what vocation in life he shall pursue. He ought to be, by his experience, a more valuable citizen, and should be at liberty to prosecute such calling and in such way as will best serve his necessities and enable him to add to the aggregate accumulation of wealth. As an honest man he ought to be discharged from his obligations to the end that he may become, if he can, a proprietor instead of a salaried clerk. If he is held down by the burden of debt he is ordinarily forced into competition with the great army of day laborers and salaried workers and it is not possible that he can make any considerable payment of obligations and at the same time provide for the education and maintenance of the average family. If the purpose of the creditor in preventing the discharge of the bankrupt is to secure the payment of the amount due, I respectfully submit that it is unavailing. It is not likely that a man will be able to pay off a large indebtedness, out of such returns as could be secured in any clerical capacity, but there are instances in which honest men, who have been discharged from their obligations as bankrupts, have succeeded in recovering their position and in accumulating a sufficient amount of money by fortunate enterprises to enable them to pay their debts, principal and interest, to their own delight, and to the gratification of their creditors.

Mr. Clay, during the debate prior to the passage of the law of 1841, made in the Senate of the United States an eloquent appeal in behalf of honest insolvents, as follows:

Mr. President, power and duty are often synonymous. The possession of the exclusive power to pass laws on the subject of bankruptcies by the General Government, draws after it a high and responsible obligation and duty to the States, to the Union, and to the people, the performance of which that Government is not at liberty to elude or neglect.

The right of the State (I use the term in its broadest sense) to the use of the unimpaired faculties of its citizens as producers, as consumers, and as defenders of the commonwealth, is paramount to any rights or relations which can be created between citizens and citizens. But an honest and unfortunate debtor borne down by a hopeless mass of debt, from beneath which he can never rise, is prostrated and paralyzed and rendered utterly incapable of performing his duties to his family or his country, to say nothing of the dictates of humanity, nothing of the duties of a

parental government to lift up the depressed, to heal the wounds, and cheer and encourage the unhappy man who sees in the past, without his fault, nothing but ruin and embarrassment, and, in the future, nothing but gloom and despair. I maintain that the public right of the State, in all the faculties of its members, moral and physical, is paramount to any supposed rights which appertain to a private creditor. This is the great principle which lies at the bottom of all bankrupt laws, and it is this which gives to the States the right to demand the passage, and imposes upon Congress the duty of enacting a bankrupt system.

The number of bankrupts now in the United States has been estimated, by respectable authority, as high as 500,000, and, with their families and connections, the total number of all who are interested in the passage of a bankrupt system has been stated as large as 2,000,000.

I hope and believe that this is an exaggerated estimate. But the number is undoubtedly very great, be it what it may; and it comprehends many of our most active, enterprising, and intelligent citizens. Who can think of them without the liveliest sympathy in their present hopeless condition, without being irresistibly prompted to exercise all the powers with which we are constitutionally invested, to raise them up from the depths of despair in which they lie, and bring them back to the enjoyment of life, the support of their families, and the service of their country.

The Declaration of American Independence, which announced our existence as a nation, solemnly proclaims, as a self-evident truth, that the right of every individual person to life, liberty, and the pursuit of happiness is unalienable. Does the wretched bankrupt, sunk down and overwhelmed by perhaps unmerited misfortunes, against which no human foresight or prudence could guard, enjoy the benefit of this maxim? He is not, indeed, deprived of life; but he drags out a miserable and lingering existence, without one cheering hope. The humanity of progressive civilization has exempted his person from incarceration in the dark cells of a public jail; but the liberty which is granted to him enables him only to see more distinctly, in the light of heaven, and intensely to feel the misery of his condition. Stripped of all motives to human exertion, with the incubus of an immovable mass of debt upon him, surrounded by a family, sharing, without being able to alleviate, his sorrows and sufferings, he is mocked by the privilege of "the pursuit of happiness," pronounced to be unalienable in the most memorable declaration of human rights that was ever promulgated to the world. Let us, sir, make that guaranty substantial, practical, available, by fulfilling the duty imposed upon us in the power delegated in the Constitution to pass this law.

Commerce is but legitimate speculation, and experience teaches that a very large percentage of its votaries are sooner or later overcome by its vicissitudes, and must either be relieved by a wise exercise of the rights guaranteed by the Constitution or be left beneath an unsurmountable burden of indebtedness.

There is a large class of good people who believe in the iron rule that if the individual can not pay his debts he should owe them, but the great mass of human beings realize that many debts are unjust, that many of the financial responsibilities which are incurred by the individual are not foreseen or anticipated, and believe that it is better policy to discharge the honest unfortunate and thereby give him a hope for the regaining of his financial position in the world, and the better enable him to provide for those who are dependent upon him, and they are therefore willing that this wise provision of the law should be exercised under proper restrictions.

All civilized governments grant exemptions to poor men. It is of course upon the theory that the helpless ones of every family should be protected, both for their benefit and to prevent the possibility of their becoming public charges. These provisions of the law are simply to the effect that the creditor may enforce his process against the debtor, except that there shall be exempt therefrom certain articles needed in the household and a modest homestead upon which to live. The giving of a discharge to an honest insolvent is but an exemption in another form; that is, instead of saying that property of a certain description and a homestead of a certain value shall not be subject to compulsory process, the law provides that all debts, except those of a fiduciary character, incurred prior to a certain date, shall not be collectible by law.

The most frequent reply that is made to him who advocates the discharge of a bankrupt by law is the statement that any honest man can procure a discharge from his creditors, provided he is entitled to it. This allegation is not true. In many cases the creditors of the unfortunate debtor become dispersed, rights are transferred, and obligations descend by the laws of distribution from deceased creditors to minor heirs, and in many cases it is impossible to tell who the creditors of a debtor are. There are many large houses which make it a rule never to grant discharges upon any terms except that of payment of dollar for dollar of the indebtedness. There are many large houses and small houses, too, for that matter, which ostensibly accept settlements, but attach thereto certain conditions secretly which are abhorrent to men possessing instincts of fair play.

To have a uniform law, pursuant to which discharges will be granted to those who deserve them, will prevent the present practices in relation to discharges, which amount to fraud and moral perjury on the part of the debtors, and to blackmail upon the part of the creditors. The change will amount to substituting a standard of honesty for the determination of the question as to whether a man shall or shall not be discharged, instead of a varying standard which may be erected by the whim or caprice of the several creditors.

Under the old law men were occasionally discharged from their obligations who were not thought, by the best people cognizant of the facts, to be entitled to such consideration. The measure now under discussion was framed with very great care to prevent a recurrence of this wrong. I am not an enthusiast of the kind that believes it is possible to attain perfection in a world inhabited by human beings and whose laws are administered solely by them, but I believe that the measures for the prevention of wrong contained in this bill are as full and as simple as they can be made, and that there will never be a case in which a man not entitled to a discharge will receive one if the creditors are vigilant in the premises.

My conclusion, therefore, is, that claims against insolvents, whose estates have been distributed in part to their creditors, are worthless, and that the cancellation of them is no material loss to the creditors, while it is advantageous to the individual debtors, and to the community at large, and that discharges ought to be granted to honest bankrupts.

(k) Economy and expedition of the administration of bankrupt estates.

If this bill were a duplicate of the old one it ought not to be passed. I do not understand that any of the friends of this movement have a word to say in behalf of or in defense of the former law. That measure was enacted at the close of the war in compliance with the demands of a particular class. It was faulty in its provisions; it was administered under unfavorable circumstances; many of the persons who availed themselves of its provisions did not have any estates; many of the officials absorbed to a large extent the estates confided to them; and the conditions then prevalent made it possible for it to be used to the detriment of the better classes, and hence it was repealed at the instance of the people.

The delays under the old law were very numerous, and in many cases for a long time. This was chiefly because of two reasons. The first was that the procedure provided under the law was not such as to facilitate the administration of estates; and, second, the officers who were

charged with the responsibility of conducting the business were interested in a financial way in prolonging the administration. It is one of the marked features of the present bill that its machinery is simple and easily adapted to the peculiar circumstances which invariably attend the various cases coming before the courts, and is designed to make quick results the rule and not the exception, as under the old law.

One of the chief evils which we hear spoken of, with the greatest frequency, in connection with our former bankruptcy experiences, is the long delays in closing up estates.

The theory of this law is that in order to secure quick results from the persons having in charge the administration of the law, we must so compensate them that they will be pecuniarily interested in performing their duties promptly, and in securing the settlement of the estates as soon as it can be done for the best interests of the creditors.

The trustee who handles the estate, reduces it to cash, and pays it over to the creditors, receives a commission, not upon the income or outgo of the estate, nor on the property which he handles at an estimated valuation, but upon the dividends actually paid to the creditors. The manner of the payment of this commission will interest this officer in keeping the expenses as low as possible and in having the dividends as large and payable as quickly as the best interest of the creditors will permit. The compensation stated for the referee is a fixed annual salary, and a fee per case as before provided.

It is therefore obvious that the three officers who are to perform the chief duties in the administration of the estates are each of them pecuniarily interested in expediting the business before them. The result will be a prompt administration under the new law.

Another of the evils attending the administration of the last act was that of the fee system, which to a large extent absorbed the assets of estates, and in addition was productive of excessive delays in their administration. For example, the register received a fee for every hearing had in administering estates, a fee for every paper which was certified to by him; a fee for every memorandum of proceedings conducted before him, which was transmitted to the clerk of the court, and so on, *ad infinitum*. The approximately corresponding officer, under the proposed law, will receive a small annual salary and a small fee per case when the case is concluded and the records have been certified and returned to the clerk's office.

The assignee under the old order of things received a commission on all moneys paid out, a fee for every meeting he attended, a fee for every account submitted to meetings of creditors, and so on, *ad nauseam*. The approximately corresponding officer, as provided by the measure under consideration, is the trustee. His entire compensation will consist of a small commission upon amounts paid creditors as dividends. The sums paid to him, both by reason of the manner in which the computation is made as to the amount due and by the time of payment, will be an inducement to him to expedite the administration of the estates before him, and to keep the expenses at a minimum.

The district clerk formerly was compensated according to the schedule of fees, which provided that his every official act resulted in a diminution of the assets of the estates. Under the provisions of this bill, the same officer will be paid a fixed fee of \$10, and will receive it in advance at the time of the filing of the petitions in the case. This arrangement will not only result in very great economy in the estates administered, but will add to the speed in their administration.

It has been a difficult problem to solve, how to provide for the compensation of the referees, so as to prevent their being interested in delaying proceedings and multiplying fees. The plan finally determined upon is to have them paid by the Government and at the same time to have the Government reimbursed for the outlay on that account, by the payment of a percentage by every estate which is administered, or in which a composition is confirmed; this method of compensating the referees or assistant judges is but in accord with the recognized duty of the Government to pay its judiciary out of the national treasury. This plan will annually save millions of dollars to bankrupt estates without, in all probability, costing the Government a dollar. If this plan were objected to because of the possible expense to the Government I would in reply simply submit that, since the Constitution reserves the right to Congress to pass laws upon this subject, it also imposed a responsibility to do so, and that of paying the necessary and reasonable expenses of its enforcement.

There are citizens of the United States, resident in every State in the Union, who are honest insolvents, and who will probably take the benefit of this measure if it shall be enacted. There are other citizens who will enforce its provisions as against their debtors, in the event it is placed upon the statute books. I do not consider it any reply to these citizens to say that the Government will not enact the law pursuant to the terms of the Constitution, because it will create an expense in addition to those already incident to the conducting of the Government. It is the duty of the legislators to see that the expenses which it incurs are not out of proportion to the good that it is expected to accomplish, and that they are not in any respect excessive. When such expenses are kept down to such a basis the additional expense is but reasonable, and is necessary in order to give to the citizens their full rights under the Constitution.

We confidently believe that we have reduced the expenses to the estates, the creditors and the Government to the minimum, and made the best possible provisions for expedition in the administration of the estates.

IN CONCLUSION.

This bill was prepared in the interest of honest men. In its every sentence care has been taken to fully guard the rights of the weak and curb the power of the strong; to adjust every burden where it belongs; to fix every responsibility on the shoulders by which it should be borne, and in all things and to the greatest degree to equitably adjust the rights of the two great classes, the debtors and creditors, each of which in the grand aggregate of amounts exactly balances the other, and whose voluntary transactions constitute the commerce of the world.

Gentlemen, I thank you for your kindness. [Applause.]

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 26, 1891.—Submitted and ordered to be printed.

Mr. DOLPH submitted the following

RESOLUTION :

Resolved, That the Secretary of War be directed to furnish to the Senate such information as he may possess concerning the progress and condition of the work of the construction of a canal and locks at the Cascades of the Columbia River in the State of Oregon, the estimated cost of the completion of the same, and the time which will be required for such completion, together with copies of all reports of the engineers in charge of the work since his annual report concerning the same.

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 26, 1891.—Submitted and ordered to be printed.

Mr. ALLISON submitted the following

RESOLUTION:

Resolved, That the Secretary of the Treasury be directed to transmit to the Senate a list of all claims allowed by the several accounting officers of the Treasury Department under appropriations the balances of which have been exhausted or carried to the surplus fund under the provisions of section 5 of the act of June 20, 1874, since the allowance of those already transmitted to Congress during the present session, and also a list of judgments of the Court of Claims requiring an appropriation at the present session, not already transmitted.

THE STATE OF NEW YORK

IN SENATE

JANUARY 1, 1874

REPORT

OF THE COMMISSIONERS OF THE LAND OFFICE

IN RESPONSE TO A RESOLUTION PASSED BY THE SENATE

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 27, 1891.—Presented, referred to the Committee on Privileges and Elections, and ordered to be printed.

Mr. STEWART presented the following

MEMORIAL OF WILLIAM H. CLAGETT, CLAIMING TO BE ELECTED A SENATOR FROM THE STATE OF IDAHO FOR THE TERM OF SIX YEARS COMMENCING MARCH 4, 1891, TOGETHER WITH A PAPER PURPORTING TO BE A CERTIFICATE OF ELECTION BY THE LEGISLATURE OF SAID STATE, AND OTHER PAPERS.

To the President of the Senate of the United States :

This is to certify that at a meeting of the joint assembly of the members of the two houses of the legislature of the State of Idaho, duly convened at twelve o'clock meridian, on Wednesday, the eleventh day of February, A. D. 1891, in the hall of the house of representatives in the capitol for the purpose of electing a United States Senator from the State of Idaho for the term of six years beginning March fourth, A. D. 1891, a majority of the members elected to each house being present, the journal of each house for the preceding day was read, and it appearing therefrom that on Tuesday, the tenth day of February, A. D. 1891, each house openly, by a *viva voce* vote of each member present, a majority of each house being present and voting, voted for a Senator in Congress from said State to fill said term, and that the same person had not received a majority of the votes in each house, the joint assembly thereupon proceeded to choose, by a *viva voce* vote of each member present, a person for Senator, and William H. Clagett, a native-born citizen of the United States, over thirty years of age, and an inhabitant of said State, received a majority of all the votes of said joint assembly, a majority of all the members elected to both houses being present and voting, and was duly elected a United States Senator from the State of Idaho for the term of six years beginning on March fourth, A. D. 1891, to succeed William J. McConnell.

In testimony whereof, I have hereunto set my hand and caused to be affixed the great seal of the State.

Done at the capitol, in the city of Boise, the capital of Idaho, this fourteenth day of February, in the year of our Lord one thousand eight hundred and ninety-one, and of the Independence of the United States of America the one hundred and fifteenth.

NORMAN B. WILLEY,
Governor.

UNITED STATES OF AMERICA, *State of Idaho*, ss :

I, Norman B. Willey, governor of the State of Idaho, do hereby certify that I signed the foregoing certificate of the election of William H. Clagett as a United States Senator on the fourteenth day of Febru-

ary, A. D. 1891, as governor of said State, and that my signature thereto is genuine; and that I thereupon presented the same to A. J. Pinkham, the secretary of State for said State and requested him to countersign said certificate and attach the great seal of the State thereto, of which he is the legal custodian, and that he refused and still refuses so to do.

Witness my hand at the capitol in Boisé City, this fourteenth day of February, A. D. 1891.

NORMAN B. WILLEY,
Governor.

STATE OF IDAHO, *County of Ada*, ss:

Be it known, that on the fourteenth day of February, in the year of our Lord one thousand eight hundred and ninety-one, personally appeared before me, Jonas W. Brown, a notary public in and for said county, duly commissioned and sworn and acting as such, Norman B. Willey, the governor of the State of Idaho, personally known to me to be the person who executed the two foregoing certificates (and whose signatures thereto are personally known to me to be genuine), and he acknowledged to me that he executed the same and each of said certificates, and that his signature to each of said certificates is genuine.

In witness whereof, I have hereunto set my hand and affixed my official seal, at my office in Boisé City, in said county of Ada, the day and year in this certificate above written.

[SEAL.]

JONAS W. BROWN,
Notary Public.

STATE OF IDAHO, OFFICE OF THE SECRETARY.

UNITED STATES OF AMERICA, *State of Idaho*, ss:

I, A. J. Pinkham, secretary of the State of Idaho, do hereby certify that Jonas W. Brown, whose name is subscribed to the annexed instrument, was at the time of subscribing the same a notary public within and for the county of Ada, in the State of Idaho, duly appointed, qualified, and acting as such officer, authorized by the laws of the State to issue the same.

I further certify that the impression of seal to said certificate is a genuine impression of the seal of said Jonas W. Brown, and that the signature to said certificate affixed is in the handwriting of said officer.

In testimony whereof I have hereunto set my hand and affixed the great seal of the State.

Done at Boisé City, the capital of Idaho, this 14th day of February, A. D. 1891.

[SEAL.]

A. J. PINKHAM,
Secretary of Idaho.

Section 15, article IV of the constitution of the State of Idaho, provides:

* * * The seal of the Territory of Idaho as now used shall be the seal of the State until otherwise provided by law.

IN THE SENATE OF THE UNITED STATES OF AMERICA.

MEMORIAL OF WILLIAM H. CLAGETT, ADDRESSED TO THE SENATE
OF THE UNITED STATES.

SHELLABARGER & WILSON,
Attorneys for Memorialist.

To the Senate of the United States :

Your memorialist, the undersigned, William H. Clagett, a citizen of the United States, and a citizen and resident of the State of Idaho, respectfully submits to the Senate the following memorial, and the exhibits and accompanying documents therein referred to, in support of his right to a seat as Senator from the State of Idaho for the term beginning March 4, 1891.

The facts in the case, and also the provisions of law affecting this contest, may be summarized as follows:

The State of Idaho was admitted into the Union by act of Congress of date July 3, 1890. Previously to the enactment of said law admitting the State the people of the Territory had adopted the constitution which is referred to in said act of Congress admitting the State. The fourteenth section of article 21 of said constitution so adopted by the people of the Territory contains the following provision:

Within 10 days after the organization of the legislature both houses of the legislature, shall then and there proceed to elect, as provided by law, two Senators of the United States for the State of Idaho. At said election the two persons who shall receive the majority of all the votes cast by said senators and representatives shall be elected as such United States Senators, and shall be so declared by the presiding officer of the said joint session. The presiding officers of the senate and house shall issue a certificate to each of said senators, certifying his election, which certificate shall also be signed by the governor and attested by the secretary of state.

The said act of Congress admitting the State into the Union, including the recitals, reads as follows:

Whereas people of the Territory of Idaho did, on the 4th day of July, 1889, by a convention of delegates called and assembled for that purpose, form for themselves a constitution, which constitution was ratified and adopted by the people of said Territory at an election held therefor on the first Tuesday of November, 1889, which constitution is republican in form, and is in conformity with the Constitution of the United States; and

Whereas said convention and the people of said Territory have asked the admission of said Territory into the Union of States on an equal footing with the original States in all respects whatever: Therefore

Be it enacted, etc., That the State of Idaho is hereby declared to be a State of the United States of America, and is hereby declared to be admitted into the Union on an equal footing with the original States in all respects whatever; and that the constitution which the people of Idaho have formed for themselves be, and the same is hereby, accepted, ratified, and confirmed,

Section 20 of said act admitting the State reads as follows :

SEC. 20. That the legislature of the said State may elect two Senators of the United States, as provided by the constitution of the said State ; and the senators and representatives of said State shall be entitled to seats in Congress, and to all the rights and privileges of Senators and Representatives of other States in the Congress of the United States.

Sections 14, 15, 16, 17, 18, and 19, of the Revised Statutes of the United States, read as follows :

SEC. 14. The legislature of each State which is chosen next preceding the expiration of the time for which any Senator was elected to represent such State in Congress shall, on the second Tuesday after the meeting and organization thereof, proceed to elect a Senator in Congress.

SEC. 15. Such election shall be conducted in the following manner: Each house shall openly, by a *viva voce* vote of each member present, name one person for Senator in Congress from such State, and the name of the person so voted for who receives a majority of the whole number of votes cast in each house shall be entered on the journal of that house by the clerk or secretary thereof; or if either house fails to give such majority to either person on that day, the fact shall be entered on the journal. At 12 o'clock meridian of the day following that on which proceedings are required to take place as aforesaid the members of the two houses shall convene in joint assembly, and the journal of each house shall then be read, and if the same person has received a majority of all the votes in each house he shall be declared duly elected Senator. But if the same person has not received a majority of the votes in each house, or if either house has failed to take proceedings as required by this section, the joint assembly shall then proceed to choose, by a *viva voce* vote of each member present, a person for Senator, and the person who receives the majority of all the votes of the joint assembly, a majority of all the members elected to both houses being present and voting, shall be declared duly elected. If no person receives such majority on the first day, the joint assembly shall meet at 12 o'clock meridian of each succeeding day during the session of the legislature, and shall take at least one vote until a Senator is elected.

SEC. 16. Whenever on the meeting of the legislature of any State a vacancy exist in the representation of such State in the Senate, the legislature shall proceed on the second Tuesday after meeting and organization to elect a person to fill such vacancy in the manner prescribed in the preceding section for the election of a Senator for the full term.

SEC. 17. Whenever during the session of the legislature of any State a vacancy occurs in the representation of such State in the Senate similar proceedings to fill such vacancy shall be had on the second Tuesday after the legislature has organized and has notice of such vacancy.

SEC. 18. It shall be the duty of the executive of the State from which any Senator has been chosen to certify his election, under the seal of the State, to the President of the Senate of the United States.

SEC. 19. The certificate mentioned in the preceding section shall be countersigned by the secretary of state of the State.

On Monday, December 8, 1890, the legislature of the State of Idaho met pursuant to the proclamation of the governor, as required by section 14, article XXI, of the constitution of the State.

On the first day of the session, the house of representatives elected a speaker and principal officers, and on Tuesday, December 9, 1890, it completed the election of its officers; and thereafter and on that day all of its officers were sworn and entered upon their respective duties for the first time; and thereupon the house duly notified the senate of its organization.

On Monday, December 8, 1890, the senate took no steps toward electing any of its officers, but elected them all on December 9, 1890, and thereupon notified the house of representatives of its organization.

So that the 9th day of December, 1890, was the day on which the legislature was organized, within the sense of the word "organized," as found in said above clause of section 14, article XXI, of the constitution of the State, and in sections 14 and 15 of the Revised Statutes.

As said section 14, in the above quoted clause, provides that within ten days after the organization of the legislature both houses shall

then and there proceed to elect, as provided by law, two Senators of the United States for the State of Idaho, the said two houses, in separate meeting prior to the 16th day of December, 1890, and within the ten days aforesaid, passed a concurrent resolution in words and figures as follows :

Resolved by the senate, the house concurring, That the senate and house of representatives proceed to elect, as provided by law, United States Senators at the hour of 12 o'clock m. on Tuesday, the 16th day of December, 1890.

And the two houses, on the said Tuesday, December 16, 1890, pursuant to said concurrent resolution, did proceed to vote for a United States Senator, without a choice being had. On the next day, December 17, 1890, pursuant to the terms of said concurrent resolution and the provisions of said constitution of the State and the admission act, and of said section 15 of the Revised Statutes of the United States, the two houses met together in joint assembly and took two votes for a United States Senator, and failed to elect.

On the next day, December 18, 1890, the two houses again met in joint assembly, whereupon Senator Gunn offered in joint assembly the following resolution :

Resolved by the joint assembly of the senate and house of representatives of the legislature of the State of Idaho, That we proceed to elect two United States Senators to fill existing vacancies; and that after such election we immediately proceed to elect one United States Senator to fill the vacancy occurring March 4, 1891.

This resolution, offered for the first time in joint assembly, was strongly opposed, so far as that part of the resolution is concerned which provided for the election of a third Senator immediately after the election of the two to fill existing vacancies, and for whose election special provision had been made by the constitution of the State, the admission act and the concurrent resolution passed by the two houses acting separately, and upon which the joint assembly had convened. The resolution was adopted by a vote of 29 to 25, all the members elected to both branches of the legislature being present and voting on the resolution; it thus requiring 28 to constitute a majority of the joint convention, and to make an election.

Whilst the said resolution offered by Senator Gunn was pending Senator Gray offered an amendment thereto, as follows :

I move to amend the resolution to read as follows: "That we do now proceed to elect one Senator from north Idaho, and then proceed to elect one senator from south Idaho, to fill vacancies now existing."

This amendment was declared out of order by the Chair.

Senator Gray then withdrew his amendment, but offered the following as a substitute for the original resolution of Senator Gunn :

I move that the resolution read as follows: That we proceed to elect two Senators to fill the vacancies now existing.

Which substitute was rejected by the joint assembly, the vote standing 25 for and 29 against.

The question then recurred on the adoption of the original resolution by Senator Gunn, and the same was adopted by a vote of 29 ayes and 25 nays.

The joint assembly then, under the direction of the president, proceeded to the election of one United States Senator to fill an existing vacancy by a *viva voce* vote of each member present, and thereupon, on the first ballot, George L. Shoup was elected to fill one of the existing vacancies (he being then governor of the Territory and elected upon the Republican platform, hereinafter referred to), the vote standing 31

for said Shoup, 12 for William H. Clagett, 10 for Alexander A. Mayhew (Democrat), and 1 for W. J. McConnell.

Immediately upon the announcement of the vote a motion was made by Mr. Emery to adjourn, which motion was lost by a vote of 23 ayes to 30 nays.

The joint assembly then proceeded to the election of a United States Senator to fill the other existing vacancy, which vote resulted in the election of W. J. McConnell, who received 29 votes, William H. Clagett receiving 15, and George Ainslie (Democrat) receiving 10.

Immediately upon the announcement of this vote Senator Gray moved to adjourn, which was voted down by a vote of 25 ayes to 29 nays.

The joint assembly then proceeded, immediately after the election of the two Senators to fill existing vacancies, and after voting down said motion to adjourn, and as provided in the resolution of Senator Gunn, to elect a United States Senator whose term should begin March 4, 1891.

Prior to voting for this third Senator, by request of Senator Gray, who acted as spokesman of the entire minority, his protest to the election of a third Senator was entered on the journal.

The joint assembly then immediately proceeded to vote for a third Senator for the term beginning March 4, 1891, upon the expiration of the term of such one of the two Senators, theretofore just elected, as should draw the short term ending March 3, 1891.

On this ballot Fred. T. Dubois received 32 votes, William H. Clagett 12, and John Hailey, Democrat, 10. Immediately upon the announcement of the vote the joint assembly, by motion, dissolved.

On December 29, 1890, the credentials of the said George L. Shoup, William J. McConnell, and Fred. T. Dubois, were formally presented to the Senate by the Vice-President; which credentials are as follows:

EXECUTIVE OFFICE, STATE OF IDAHO,
Boisé City, Idaho, December 19, 1890.

To the President of the Senate of the United States:

SIR: Whereas it is certified to me by the presiding officers and clerks of the senate and house of representatives of the first session of the legislature of the State of Idaho that in joint session of the senate and house of representatives George L. Shoup was elected a Senator of the United States for the State of Idaho:

Now, therefore, I, George L. Shoup, governor of the State of Idaho, do hereby certify that at a joint session of the senate and house of representatives of said State, duly convened and held at Boisé City, Idaho, the capital of said State, on the 18th day of December, A. D. 1890, a majority of all the members of the legislature being present and voting, George L. Shoup received a majority of all the votes cast at said joint session for Senator of the United States for the State of Idaho, and was duly elected and so declared elected as said Senator by the presiding officer of said joint session under and by virtue of the provisions of section 14 of article 21 of the constitution of said State and as provided by law

Given under my hand and the seal of the State at Boisé City, Idaho, the day and year first above written.

[SEAL.]

GEO. L. SHOUP, *Governor.*

By the governor:

A. J. PINKHAM,
Secretary of State.

EXECUTIVE OFFICE, STATE OF IDAHO,
Boisé City, Idaho, December 19, 1890.

To the President of the Senate of the United States:

SIR: Whereas it is certified to me by the presiding officers and clerks of the senate and house of representatives of the first session of the legislature of the State of Idaho that in joint session of the senate and house of representatives William J. McConnell was elected a Senator of the United States for the State of Idaho:

Now, therefore, I, George L. Shoup, governor of the State of Idaho, do certify that

at a joint session of the senate and house of representatives of said State, duly convened and held at Boisé City, Idaho, the capital of the State, on the 18th day of December, A. D. 1890, a majority of all the members of the legislature being present and voting, William J. McConnell received a majority of all the votes cast at said joint session for Senator of the United States for the State of Idaho, and was duly elected and so declared elected as said Senator by the presiding officer of said joint session under and by virtue of the provisions of section 14 of article 21 of the constitution of the said State and as provided by law.

Given under my hand and the seal of the State at Boisé City, Idaho, the day and year first above written.

[SEAL.]

GEO. L. SHOUP, *Governor.*

By the governor:

A. J. PINKHAM, *Secretary of State.*

EXECUTIVE OFFICE, STATE OF IDAHO,
Boisé City, Idaho, December 23, 1890.

To the President of the Senate of the United States:

SIR: Whereas it is certified to me by the presiding officers and clerks of the senate and house of representatives of the first session of the legislature of the State of Idaho that, in joint session of the senate and house of representatives, a majority of all the members of both houses being present and voting, Fred T. Dubois was elected a Senator of the United States for the full term commencing March 4, A. D. 1891.

Therefore, I, Norman B. Willey, governor of the State of Idaho, do hereby certify that at a joint session of the senate and house of representatives of said State, duly convened and held at Boisé City, Idaho, the capital of said State, on the 18th day of December, A. D. 1890, a majority of the members of the senate and house of representatives being present and voting, Fred T. Dubois received a majority of all the votes cast at said joint session for Senator for the State of Idaho for the full term commencing March 4, A. D. 1891, and was so duly elected and so declared elected as said Senator for said term by the presiding officer of said joint session, as provided by law.

Given under my hand and the seal of the State of Idaho, at Boisé City, Idaho, the day and year first above written.

[SEAL.]

NORMAN B. WILLEY, *Governor.*

By the governor:

A. J. PINKHAM,
Secretary of State.

Accompanying these certificates and constituting a part of the credentials, was the certificate of the presiding officers of the two houses of the Idaho legislature and the chief clerk thereof, and which said certificate reads as follows:

STATE OF IDAHO, HALL OF THE HOUSE OF REPRESENTATIVES.

This is to certify that at a meeting of the two houses of the legislature of the State of Idaho in joint assembly held on Tuesday, the 18th day of December, A. D. 1890, at noon, a majority of all the members of each house being present and voting, it was found upon examination of the journals of the respective houses that upon Tuesday, the 16th day of December, A. D. 1890, being the second Tuesday after meeting and organization of the legislature, each house had by a *viva voce* vote voted for a United States Senator for the State of Idaho, and that the same person had not received a majority of all the votes cast in each house. Thereupon both houses in joint assembly on Wednesday, the 17th day of December, A. D. 1890, at noon, met and proceeded to ballot for a United States Senator for the State of Idaho, and the same person not receiving a majority of all the votes cast, said joint assembly adjourned and reconvened on Thursday, the 18th day of December, A. D. 1890, at noon, and proceeded to ballot for a United States Senator; whereupon said joint assembly by an open *viva voce* vote of the members present, all the senators and representatives being present and voting, did adopt the following resolution:

Resolved by the joint assembly of the senate and house of representatives of the legislature of the State of Idaho, That we proceed to elect two United States Senators to fill existing vacancies, and that after such election we immediately proceed to elect one United States Senator to fill a vacancy occurring March 4, A. D. 1891.

That thereupon the joint assembly of the legislature of the State of Idaho, every

member of each house being present and voting thereon, proceeded to choose and elect a United States Senator for the State of Idaho by a *viva voce* vote of each member present, and thereupon George L. Shoup received a majority of all the votes of the joint assembly, and was thereupon, by the presiding officer of said joint assembly, declared duly elected a Senator of the United States for the State of Idaho.

Thereupon, all the members of both houses of the legislature of the State of Idaho still being present, said joint assembly forthwith proceeded in the same manner, by *viva voce* vote of each member present, to choose and elect a second United States Senator for the State of Idaho, and then and there William J. McConnell received a majority of all the votes of the joint assembly, and was thereupon, by the presiding officer of said joint assembly, declared duly elected a Senator of the United States for the State of Idaho.

Thereupon, all the members of both houses of the legislature of the State of Idaho still being present, said joint assembly forthwith proceeded in the same manner, by *viva voce* vote of each member present, to choose and elect a United States Senator for the State of Idaho to fill a vacancy occurring March 4, A. D. 1891, and then and there Fred T. Dubois received a majority of all the votes of the joint assembly, and was thereupon by the presiding officer of the joint assembly declared duly elected a Senator of the United States for the State of Idaho for the term to begin March 4, A. D. 1891.

NORMAN B. WILLEY,
President of the Senate.

F. A. FENN,
Speaker of the House of Representatives.

CHARLES H. REED,
Chief Clerk of the House of Representatives.

M. C. ATHEY,
Secretary of the Senate.

Dated Boise City, Idaho, this 19th day of December, A. D. 1890.

These credentials of the three alleged Senators-elect were by order of the Senate, made December 29, 1890, referred to the Committee on Privileges and Elections, and placed on file; which committee, on January 6, 1891, reported that the credentials of George L. Shoup and William J. McConnell were properly certified, and entitled them to seats in the United States Senate; and thereupon they were respectively sworn into office.

On the same date the said committee, reporting on the credentials of the said Fred T. Dubois reported that it is the usage of the Senate to consider any question that may arise upon the credentials of a Senator at the session during the term at which the Senator is elected; and no reason appears for a departure from that usage in the present case; and they therefore recommend that the credentials be placed on file. (See Congressional Record, January 6, 1891, p. 958.)

Going back now for a moment to the above-quoted certificates by Norman B. Willey, president of the senate, Frank A. Fenn, speaker of the house of representatives, Charles H. Reed, chief clerk of the house of representatives, and M. C. Athey, secretary of the senate, such certificates, so far as they relate to the two Senators elected to fill vacancies, being the ones provided for in the last clause of said section 14, article 21, of the constitution of Idaho, are alleged to be incorrect in point of fact (as appears by the certified copies of the journals now on file with the committee, and affidavits hereto attached) in the following particulars:

(1) That the 16th day of December, A. D. 1890, was not the second Tuesday after the meeting and organization of the legislature, but was the first Tuesday. The following facts appear by the journal of the legislature, which has been above referred to, bearing upon the matter as to when the organization of the legislature was complete, in the sense of the word "organization," as found in section 14, article 21 of the constitution.

On Monday, December 8th, the first day of the session, the house of

representatives elected its speaker, sergeant-at-arms, and principal recording officer, namely, the clerk; and, on Tuesday, December 9, 1890, it completed the election of all its officers; and thereafter, and on that day, to wit: Tuesday, December 9, all of its officers were sworn, and entered upon their respective duties for the first time; and thereupon, on the same day, the house duly notified the senate of its organization.

On Monday, December 8, 1890, the members of both houses qualified by being sworn into office, but the senate took no steps toward electing any of its officers, its presiding officer being the lieutenant governor, who, under the constitution of the State, was *ex officio* president of the senate; but, on December 9, 1890, the senate elected all its officers, excepting a presiding officer, namely: its sergeant-at-arms, chief clerk, and the minor officers connected with that body; and thereupon, to wit, upon December the 9th, notified the house of representatives of its organization.

It thus appearing conclusively by the records of the two houses that no organization of the two houses of legislature, as such, was complete until Tuesday, December 9, it results that the second Tuesday after such organization was effected fell upon the 23d day of December, and not upon the 16th.

This is the first inaccuracy in point of fact contained in said certificate, and is a vital one.

(2) It is not correct, as stated in said paper accompanying the credentials of Fred T. Dubois, that it was ascertained on the 18th day of December, 1890, from an inspection of the journals of the respective houses, that Tuesday, December 16, A. D. 1890, was the second Tuesday after the meeting and organization of the legislature, for the reason that the journals aforesaid show conclusively to the contrary.

(3) It is not correct, as stated in said paper, that the journals of said houses showed that on the second Tuesday after the meeting and organization of the legislature, each house had, by a *viva voce* vote, voted for a United States Senator for the State of Idaho, and that the same person had not received a majority of the votes cast in each house, as the journals of the two houses show conclusively that this *viva voce* vote taken in the two houses acting separately, was taken on Tuesday, December 16, the same being the first Tuesday after the organization of the legislature, and not the second; and the entries as contained in the journals of the two houses relating to the organization thereof, are true in fact, and the recitals in said paper above stated are not correct.

Within three or four days after the 18th of December, 1890, twenty-three members of the legislature signed a protest against allowing the Hon. Fred T. Dubois to take his seat as a Senator from the State of Idaho; and which protest, together with the copy of the journal of the two houses of legislature, containing all entries relating to the organization of the two houses, and the proceedings resulting in the alleged election of the Hon Fred T. Dubois as United States Senator, were transmitted to the Senate of the United States in the month of January, 1891; and this protest of members, and a certified copy of the journals of the two houses, now on file with the committee on privileges and elections of the senate are hereby referred to, and made part of this memorial.

On January —, 1891, when the two Senators elected to fill existing vacancies, drew for terms, Senator William J. McConnell drew the term ending March 3, 1891; and thereafter, to wit, on the 6th day of

February, 1891, a joint and concurrent resolution was introduced in the State senate, which is in words and figures as follows:

Whereas, the present session of the legislature was organized on Tuesday, December 9, 1890; and

Whereas, the State constitution and the admission act required that two United States Senators should be elected within ten days after the organization of the legislature; and

Whereas, on Tuesday, the 16th day of December, 1890, the legislature, pursuant to the requirements of the constitution and admission act, voted for a United States Senator in the two houses, acting separately, and thereafter, as provided by law, met on December 17 in joint assembly and voted for a United States Senator, and thereafter, on December 18, 1890, again met in joint assembly and within ten days after its organization elected, in the manner provided by law, the Hons. George L. Shoup and William J. McConnell, United States Senators; and

Whereas, the legislature thereupon immediately proceeded to vote for Hon. Fred T. Dubois for the term ending March 4, 1891, in advance of the drawing for terms by the two Senators elect, in advance of the time fixed by law, without first voting in the two houses acting separately, and against the protest of members of the joint assembly; and

Whereas, upon full consideration of the facts, it is the opinion of the legislature that if the alleged election of said Hon. Fred T. Dubois is not void there is at least grave doubt as to its validity; therefore

Resolved by the Senate (the House of Representatives concurring). That at the hour of 12 o'clock meridian of the first legislative day after the passage of this resolution, the legislature will proceed to elect a United States Senator to succeed Hon. William J. McConnell, for the term beginning March 4, 1891, and that such election shall be conducted in all respects in the manner provided in section 15 of the Revised Statutes of the United States.

This resolution passed the Senate on the same day, and was concurred in by the House of Representatives on the 9th day of February, 1891. At 12 o'clock meridian, February 10, 1891, in pursuance of said concurrent resolution, the two houses voted separately for United States Senator for the term beginning March the 4th, 1891, without an election being had.

On the next day, at 12 o'clock meridian, the two houses met in joint assembly, a majority of all the members elected to each house of the legislature being present and voting, and voted for a United States Senator as the successor of said William J. McConnell for the term beginning March 4, 1891, and William H. Clagett received 28 votes, being a majority of all the members elected to both houses of the legislature, and was thereupon, by the presiding officer of the joint assembly, declared duly elected, as will appear by duly certified copies of the journals of the two respective houses filed with the committee.

That on February the 14th, 1891, the said William H. Clagett received the following certificate of election:

This to certify that at a meeting of the joint assembly of the members of the two houses of the legislature of the State of Idaho, duly convened at twelve o'clock meridian on Wednesday, the 11th day of February, A. D. 1891, in the hall of the house of representatives, for the purpose of electing a United States Senator from the State of Idaho for the term of 6 years, beginning March 4, A. D. 1891, a majority of the members elected to each house being present, the journal of each house for the preceding day was read, and it appearing therefrom that on Tuesday, the 10th day of February, A. D. 1891, each house openly, by a *viva voce* vote of each member present a majority of each house being present and voting, voted for a Senator in Congress from said State to fill said term, and that the same person had not received a majority of the votes of each house; the joint assembly thereupon proceeded to choose, by a *viva voce* vote of each member present, a person for Senator, and William H. Clagett, a native-born citizen of the United States, over 30 years of age, and an inhabitant of said State, received a majority of all the votes of the said joint assembly, a majority of all the members elected to both houses being present and voting, and was duly elected a United States Senator from the State of Idaho, for the term of 6 years, beginning on March 4, A. D. 1891, to succeed William J. McConnell.

In testimony whereof, I have hereunto set my hand and caused to be affixed the great seal of the State.

Done at the capitol in the city of Boisé, the capital of Idaho, this fourteenth day of February, in the year of our Lord one thousand eight hundred and ninety-one, and of the independence of the United States of America the one hundred and fifteenth.

NORMAN B. WILLEY,
Governor.

By the governor:

Secretary of State.

UNITED STATES OF AMERICA, *State of Idaho*, ss:

I, Norman B. Willey, governor of the State of Idaho, do hereby certify that I signed the foregoing certificate of the election of William H. Clagett as United States Senator on the fourteenth day of February, A. D. 1891, as governor of said State, and that my signature thereto is genuine; and that I thereupon presented the same to A. J. Pinkham, the secretary of state for said State, and requested him to countersign said certificate and attach the great seal of the State thereto (of which he is the legal custodian), and that he refused and still refuses to do so.

Witness my hand at the capitol in Boisé City this fourteenth day of February, A. D. 1891.

NORMAN B. WILLEY, Governor.

STATE OF IDAHO, *County of Ada*, ss:

Be it known, that on the fourteenth day of February, in the year of our Lord one thousand eight hundred and ninety-one, personally appeared before me, Jonas W. Brown, a notary public in and for said county duly commissioned and sworn and acting as such, Norman B. Willey, the governor of the State of Idaho, personally known to me to be the person who executed the two foregoing certificates, and whose signatures thereto are personally known to me to be genuine, and he acknowledged to me that he executed the same and each of said certificates, and that his signature to each of said certificates is genuine.

In witness whereof I have hereunto set my hand and affixed my official seal at my office in Boisé City, in said county of Ada, the day and year in this certificate above written.

JONAS W. BROWN,
Notary Public.

STATE OF IDAHO, OFFICE OF THE SECRETARY.

UNITED STATES OF AMERICA, *State of Idaho*, ss:

I, A. J. Pinkham, secretary of the State of Idaho, do hereby certify that Jonas W. Brown, whose name is subscribed to the annexed instrument, was at the time of subscribing the same a notary public within and for the county of Ada, in the State of Idaho, duly appointed, qualified, and acting as such officer, authorized by the laws of the State to issue the same.

I further certify that the impression of seal to the said certificate affixed is a genuine impression of the seal of said Jonas W. Brown, and that the signature to said certificate affixed is in the handwriting of said officer. In testimony whereof I have hereunto set my hand and affixed the great seal of the State.

Done at Boisé City, the capital of Idaho, this 14th day of February, A. D. 1891.

[SEAL.]

A. J. PINKHAM,
Secretary of Idaho.

STATEMEET OF FACTS.

In addition to the general facts disclosed by the preceding record and the documents above referred to, and as showing the illegality of Mr. Dubois's alleged election, the following specific facts are specially charged:

(1) That at the election in December, 1890, there were four Republican candidates before the legislature, namely: George L. Shoup, William J. McConnell, Fred. T. Dubois, and William H. Clagett. That the legislature on joint ballot contained 34 Republican majority; that the strength of these four Republican candidates on the first choice votes

were as follows: Fred. T. Dubois, 18; William J. McConnell, 9; William H. Clagett, 8, and George L. Shoup, 8. There being 54 members of the legislature, it took 28 to elect.

(2) That Messrs. Shoup and Dubois formed a combination to elect themselves, but lacked sufficient votes to make up a majority. They thereupon, on the night of December 17, after the first day's voting in joint assembly, enlarged their combination by embracing William J. McConnell therein, and by means of this combination a majority of the members of the legislature were induced to pledge themselves in writing that on the next day, December 18, they would, in joint assembly, take three ballots and elect George L. Shoup on the first ballot, William J. McConnell on the second, and that Fred. T. Dubois should receive the votes of the members entering the combination when the time should arrive when he could be elected, as provided by law, as I am informed by affidavits herewith filed and otherwise. Dubois, under the terms of the agreement between the three candidates, was to be elected for the term beginning March 4, 1891.

(3) That this agreement between the three candidates and many of their respective supporters in the legislature was not a concerted action between friendly elements, but consisted of a combination of elements in a large measure thoroughly hostile to each other, but which had coalesced for the purpose of securing the election of the three to the United States Senate, and involved a surrender of cherished animosities on the part of the three candidates, and particularly on the part of Messrs. McConnell and Dubois and many of their supporters in the legislature.

(4) That as stated in the record, the election of the two Senators to fill existing vacancies was required by the constitution and admission act to be done within 10 days after the organization of the legislature, while the Revised Statutes of the United States, above quoted, prescribing the method of electing a Senator to fill a vacancy to happen in the future, provide that the electoral proceedings shall begin on the second Tuesday after the organization of the legislature.

So that, to elect Messrs. Shoup and McConnell, as provided by law, the electoral proceedings had to begin at one time, while to elect Mr. Dubois, in the manner provided by law, they had to begin at a later date, the legislature having been organized on Tuesday, December 9, 1890, and the second Tuesday thereafter falling upon the 23d day of December.

(5) That the combination formed between the supporters of the three candidates was one of so little cohesion, in consequence of the bitter hostility between a large number of the members and the candidates whom they represented, that it was impossible to hold it together between the date of the election of Messrs. Shoup and McConnell and the time fixed by law for the election of Mr. Dubois.

That in consequence of this difficulty, Mr. Dubois and his supporters in the legislature knowingly brought about his alleged election on the 18th day of December, 1890, five days prior to the time fixed by law for the electoral proceedings to begin, so far as the term beginning on the 4th of March, 1891, was concerned; and induced, in connection with the two other candidates and their respective supporters, a majority of the legislature to proceed to elect him five days in advance of the time fixed by law and without taking a separate vote for the election of a Senator to fill the term beginning March 4, 1891, in the two houses acting separately; and furthermore, induced the joint assembly (convened for the sole purpose of filling the two vacancies provided for

in said section 14, article 21 of the constitution) to proceed to his election immediately after the election of Messrs. Shoup and McConnell; and that these violations of law in the legislature, on the 18th day of December, A. D. 1890, were entered upon and undertaken with full knowledge that the election of a third Senator at that time was contrary to law.

(6) That the proceedings on the night of December 17, 1890 (when the contracts were signed by the various members of the legislature supporting these three candidates) were kept as secret as possible so far as the other members of the legislature were concerned. When the joint assembly convened on the 18th, and Senator Gunn offered his resolution recited above, neither time nor opportunity was given to investigate the question as to the validity of the election of a third Senator at that time; but the whole thing was "railroaded" through with indecent haste and in such manner as wholly deprived the two houses of their legal power and duty to take a vote as to such election in the two houses acting separately. The fact is, as the journals show, that no vote in the separate houses as required by said section 15 was ever taken as to the said election of a Senator to the said term beginning March 4, 1891. This course of procedure contributed largely to the alleged election of Mr. Dubois. If an adjournment had been had after the election of the two Senators to fill existing vacancies the combination, because of its inherent weakness, would have fallen to pieces before the 23d day of December, 1890, and Mr. Dubois would not have been elected.

In proof of the statements herein contained reference is hereby made to all the documents referred to in this memorial, and in addition thereto to the affidavits presented herewith of 28 members of the present session of the legislature who participated in the electoral proceedings in December, 1890, and copies of which affidavits are made part of this memorial, the originals being on file with the committee.

PROPOSITIONS OF LAW.

It is not the purpose of your memorialist to make this paper a brief discussing the law points in the case, or present the authorities in support thereof. Should the committee so permit, and should it become necessary or appropriate to present a brief upon the law of the case, your memorialist will gladly, and at the convenience of the committee, present such brief. The design of this paper is simply to get before the Senate the documents which show the title of your memorialist to said seat, and which, as your memorialist claims, show that when the certificate presented by the Hon. Fred T. Dubois is taken in connection with the certified journals of the legislature and the other documents herein referred to it does not make a *prima facie* title in favor of said Dubois for the reasons stated in the propositions of law named below:

I.

By section 15 of the Revised Statutes (that being the statute controlling the election for the term beginning March 4, 1891) the legislature is prohibited from making an election of a Senator in joint assembly until after one or the other of two conditions precedent to entering upon such election in joint assembly has occurred.

One of these conditions precedent is that there shall have been a failure to elect by separate votes in the respective houses on the second

Tuesday after the meeting and organization of the legislature; the other that one or the other of the houses shall have failed to take proceedings in the separate houses for the election of a Senator on the second Tuesday after the organization. It was therefore impossible that this second condition precedent to the right to enter upon an election in joint assembly should have transpired prior to the 23d of December, because it could not be predicated of either house prior to the 23d of December that it had failed to take proceedings in the separate houses required by section 15 for the election of a Senator; and hence, the entering upon an election in joint assembly on the 18th of December is absolutely prohibited by law. This provision is not directory merely, but mandatory, and obedience to it is essential in order to give jurisdiction to the legislature to make an election of a United States Senator.

II.

It is a fundamental principle applicable to the law of elections that where a statute fixes a day upon which an election shall be made, and contains no conditions or provisions authorizing it to be made before that day, then the election must not be entered upon or made prior to the time so fixed by law. Such provisions of the statute are universally held to be mandatory and an election held before the time fixed by law is simply and absolutely void. The statute applicable to the present election is of that character.

III.

Whilst the statute controlling the election now in question is mandatory in prohibiting an election being entered upon before the second Tuesday after the organization of the legislature that is to make the election, yet it is a statute which authorizes an election to be made after the day named for commencing the election if, for any cause, such election is not entered upon on the said second Tuesday.

In other words the statute is one which is designed to prohibit the legislature from postponing an election beyond the session named in the statute, and it therefore imposes a continuing duty upon the legislature to make an election during said session, and if for any reason not begun on the day named, then as soon thereafter during said session as practicable and, if possible, before the vacancy actually happens. That this duty is a continuing one, as just stated, is shown not only by the general character of the statute and the mischiefs that are known to have caused its enactment, but is expressly shown by that term of the statute which provides that "if either house has failed to take proceedings as required by this section the joint assembly shall then proceed to choose," etc. Here is a clause which expressly, literally, and unambiguously requires that in the event that one or both houses shall fail to take proceedings on said second Tuesday for an election, as required by sections 14 and 15, then the statute commands them to do so after the said day named, to wit, after said second Tuesday.

IV.

Since in the present case the certified copies of the journal of the legislature show conclusively and expressly that no organization of the legislature was accomplished until the 9th day of December, 1890, and since they show that the pretended election of the Hon. Fred. T. Dubois,

if made, was made upon the 18th of December, it is therefore shown by the said journals that his pretended election was made at a time when it was impossible in law to make a valid election for said term beginning March 4, 1891; and, therefore, as against the journals, his certificate does not show any prima facie right for him to take his seat which he claims, and he ought not to be admitted to such seat and your memorialist be thus driven to the position of a contestant. On the contrary, the journals, taken in connection with the certificate presented by your memorialist, show that he is prima facie and on the merits entitled on the 4th of March, 1891, to take his seat as Senator for said term.

V.

Your memorialist further submits that, as a matter of political morality, public policy, and proper parliamentary practice, it is essential that, where the transactions which have resulted in rendering an election illegal are the fruits of an intentional fraud upon the law, there, and in every such case, it is appropriate for the legislature, required to pass upon such election, to take into consideration the fraudulent practices that have resulted in the pretended election. This is indispensable in order to prevent the certificate showing a prima facie right from having the effect, in any case, of giving a seat, even temporarily, to the party holding such certificate so obtained. It is for this reason especially that your memorialist has set forth in this memorial, and the affidavits hereto attached, the fraudulent combinations which have resulted in the alleged election of the Hon. Fred. T. Dubois.

WM. H. CLAGETT.

SHELLABARGER & WILSON,

Attorneys for Hon. Wm. H. Clagett.

APPENDIX.

AFFIDAVITS OF A MAJORITY OF THE MEMBERS OF THE LEGISLATURE OF IDAHO, SHOWING THE FACTS RELATING TO THE ALLEGED ELECTION OF HON. FRED. T. DUBOIS AND BEARING UPON THE QUESTION OF THE ILLEGALITY OF SUCH ALLEGED ELECTION.

STATE OF IDAHO, *County of Ada, ss :*

John A. Finch, J. S. Langrishe, J. F. Cameron, C. D. Porter, A. L. Scofield, John Hanly, Ira S. Sperry, and Henry Armstrong, being first duly sworn, do say under oath, each for himself and not one for the other, that we are all Republicans in politics and members of the present session of the legislature of the State of Idaho, and all voted for William H. Clagett for United States Senator at the election that was held in December, 1890, and again voted for him at the second election held in February, 1891; that as among all of the candidates before the convention in December, Mr. Clagett was our first choice, and we have supported him in both elections; that the four Republican candidates for Senator, namely Messrs. Shoup, McConnell, Dubois, and Clagett, all had their rooms commonly called headquarters at the Capitol Hotel in Boise City, and that these rooms all adjoined each other. That during all of the preliminary arrangements prior to and down to the close of the joint convention on December 18, 1890, being what was known and called the original Clagett men, we were almost constantly at his headquarters and consulted by him as to the various moves on the Senatorial checkerboard, and were advised as to his actions and motives on every proposition of any special importance; that the two sections of the State are divided by a very high range of mountains known as the Salmon River Range, running from east to west, over which there is no regular means of communication, and that it is practically impossible to go from north to south Idaho except by making a detour around through the States on the east or the west of Idaho; that this total separation of the two ends of the State in all matters of business connection gave rise years ago to a proposition to annex north Idaho to the Territory of Washington, and that this agitation was kept up for a period of many years, resulting in a very great alienation between the two sections, and especially on the part of the old inhabitants in the northern portion of the State.

That when the Republican State convention met at Boise in August, 1890, it was deemed wise to draw the people of the State together in bonds of mutual sympathy and support, and to that end it was proposed to insert a plank in the Republican platform in favor of equal representation of the two sections of the State in the Senate of the United States. That a resolution to this effect was reported by a minority of the committee on resolutions, was debated at length before the convention, was adopted by a vote of 61 to 39, and was then added to the Republican platform as a part thereof by the unanimous vote of the Republican convention; that four of the five northern counties are Democratic in sentiment or exceedingly doubtful, but that in consequence of the feeling of confidence which the insertion of that pledge in the Republican platform gave to the people, all five counties went Republican, and sent solid Republican delegations to the State legislature. That when we reached Boise we found that Mr. Dubois and Governor Shoup had formed a combination to defeat the pledge upon which the party had carried the State; that every effort was made by us and by Mr. Clagett to induce the Republicans of the legislature to abide by the platform upon which the State had been carried; that all of our efforts were a failure, because it was impossible to separate Mr. Dubois and Governor Shoup, or to induce or persuade either one of them to state that he intended to abide by the platform of his party; that Governor Shoup and Mr. Dubois together had 23 or 24 votes, and only lacked 4 or 5 of a majority; that between Mr. Dubois and Mr. McConnell there was a deep-seated feeling of hostility, and that Mr.

McConnell declared over and over again that under no circumstances would he ever form any combination or make any arrangement by which Mr. Dubois would be elected to the Senate as his colleague; that this hostility in part grew out of the fact that Mr. McConnell for reasons satisfactory to himself had refused to submit himself to the direction of the Republican State committee in the campaign before the election, and although a Republican had made an independent canvass of his own, calling his own meetings, and in every way repudiating the political authority of the State committee; that this feeling of hostility to our personal knowledge was shared by many of the supporters of Mr. Dubois.

That on the night of December 17, 1890, Messrs. Shoup and Dubois took Mr. McConnell into their combination for the purpose of securing the 4 or 5 votes necessary to secure the election of the two former, and that 17 of the 18 supporters of Mr. Dubois voted for Mr. McConnell, notwithstanding the repeated declarations of many of them of hostility to him and that they would never under any circumstances vote for him. That prior to this combination on December 17, we knew from many sources that Governor Shoup and Mr. Dubois were willing to form a combination with Mr. Clagett on the same terms as were afterwards obtained by Mr. McConnell, namely, that Mr. Dubois should be conceded an election to the term beginning March 4, 1891, while Governor Shoup and Mr. Clagett should be elected to fill existing vacancies, and draw for terms; that Mr. Clagett absolutely refused to accept any such terms, claiming that in case he should accept them that the party pledge would be dishonored, inasmuch as after March 4, 1891, the question as to whether north Idaho should have any representation in the Senate would then depend upon the mere chance of a drawing instead of upon the fulfillment of a party pledge. And these affiants do further say that from the whole tenor of Mr. Clagett's conversations with us of a confidential nature, we are entirely satisfied and know that he voluntarily accepted defeat rather than place his party in such a humiliating and defenseless position and leave the section of the State in which he resided unprotected in its interests as it would be in case he should be elected under the proposed arrangement and draw the term ending March 4, 1891.

We do further say that Mr. Clagett, from the time the election was held in December, always claimed that Mr. Dubois was not elected, and when in January the drawing for terms was had in Washington and Mr. McConnell drew the term ending March 4, 1891, thus depriving north Idaho of representation in the Senate, he suggested to us and to others that the only way to save the party from dissolution in consequence of the repudiation of the party platform was to hold another election and elect some one from north Idaho to succeed William J. McConnell for the 6 years beginning March 4, 1891; that in the second election Mr. Clagett was a candidate, but repeatedly stated that if any person acceptable to the northern portion of the State could be found who could poll the same strength as himself in the legislature, that he would without hesitation gladly support him; that the second fight which we and other Republican members of the legislature made for him was purely voluntary on our part, and was made for the purpose of redeeming as far as possible the record of the Republican party on this subject.

JONAS W. BROWN,
Notary Public.

STATE OF IDAHO, *County of Ada, ss:*

I, John S. Gray, being first duly sworn, say under oath, that I am 57 years of age, a Republican in politics, a member of the senate of the State legislature from Ada County, wherein is located the City of Boise, and am president *pro tempore* of the Senate. That when the Republican State convention in August, 1890, placed the plank in its platform pledging the party in effect to an equal representation of north and south Idaho in the Senate of the United States, I doubted the wisdom or propriety of the act, but inasmuch as the Republican convention after full discussion had adopted it as a measure which seemed to them to be both just and politic, I felt called upon as a Republican to support it in its spirit as well as in its letter, and have done so constantly from the beginning to the end.

That when the legislature convened I was in favor of electing Governor Shoup from the southern part of the State and Mr. McConnell from the northern part, but in consequence of the combination that was made between Messrs. Dubois and Shoup to take both Senatorships themselves in violation of the platform of the party, I was unable to carry out my own personal preferences, although I endeavored in every

honorable way so to do. Governor Shoup and Mr. Dubois together lacked only a few votes of a majority of the legislature, and refusing to recognize the platform as they ought to have done, and Mr. Dubois openly repudiating it, they finally succeeded in inducing Mr. McConnell to enter into the combination with them and thereby carry through the programme which resulted in the election of the three. That I had heard Mr. McConnell time and time again declare that under no circumstances would he ever have anything to do with Mr. Dubois in the way of combining or arranging with him for their election to the United States Senate; that he, Dubois, had abused him unreasonably during the canvass and made a personal fight against him. When on the night of December 17th I learned that Messrs. Shoup, McConnell, and Dubois had combined together, learning this fact from Mr. McConnell himself, I remonstrated with Mr. McConnell in the strongest possible terms, telling him that he had not kept the party faith nor done as he agreed with me from the time that we had commenced the Senatorial fight.

On the next day, December 18, when the joint assembly met, I opposed the resolution offered by Senator Gunn to go into the election of the third Senator at that time, because such an election was a gross violation of the law of Congress governing the election of Senators to fill vacancies to happen in the future; that the grounds which I urged before the joint assembly were as follows:

First, that our constitution required the election of two Senators only; that the admission act required two; that the governor in his proclamation convening the legislature specified that only two were to be elected, and that the concurrent resolution, under which the joint assembly convened, also provided for the election of Senators as provided by law, the law being that two Senators should be elected within ten days from the organization of the legislature.

Second, because no separate vote had been taken in the two houses acting separately, and no concurrent resolution fixing the time for the election of a third Senator had been introduced or passed in either house.

Third, because in the act of Congress it was illegal to anticipate the date for the election of the third Senator, or to elect him prior to the second Tuesday after the meeting and organization of the legislature, the legislature having been organized on Tuesday, December 9, 1890, and the second Tuesday thereafter falling on December 23, 1890.

Fourth, because it could not be ascertained to a legal certainty that there would be a vacancy after March 4, 1891, until after the two Senators elected had drawn for terms.

That quite an animated discussion followed the introduction of this resolution, but the majority obtained and created by means of this combination overrode all objections and passed the resolution to proceed immediately to elect the third Senator, after the two were elected, to elect whom the joint assembly had convened.

That after Governor Shoup and Mr. McConnell were elected I made a motion to adjourn, which was voted down, and that I thereupon entered a formal protest against the entire proceeding for the election of the third Senator, and requested that it might be entered upon the journal; that in making this protest I have reason to believe, and do believe, that I voiced the sentiment of the entire minority, who, by their votes and action, showed that they were opposed to the election of a third Senator, and agreed with me that the election at that time was contrary to law.

I have never, at any time, had any doubt as to the illegality of Mr. Dubois's election; and believing this to be the case, when the question came up the second time after Mr. McConnell had drawn the term ending March 4, 1891, and I saw that thereby north Idaho had been deprived of representation in the Senate which the Republican platform promised, I voted in favor of such new election, and voted for Mr. Clagett and supported him in all proper measures until the election was secured.

I do further say that on December 19, Mr. J. M. Ballentine requested in the house of representatives that the house journal should be so amended as to show in detail the various objections urged by me on behalf of the minority to the election of the third Senator; that I have read the amendment which he proposed to incorporate in the journal and that the same states correctly, in substance, the grounds of my objections except that it fails to specify the objection that the election was premature, the electoral proceedings not having begun on the second Tuesday after the meeting and organization of the legislature.

JOHN S. GRAY,
President of the Senate.

Subscribed and sworn to before me this 17th day of February, A. D. 1891.
[SEAL.]

JONAS W. BROWN,
Notary Public.

STATE OF IDAHO, *County of Ada, ss:*

Ira S. Sperry, being first duly sworn, says under oath that I am a Republican and a member of the present legislature of Idaho, and a representative from Nez Perces County, in north Idaho; that when I came to Boise to attend the legislature I was well acquainted with William J. McConnell, and barely acquainted with Messrs. Clagett and Dubois, and unacquainted with Governor Shoup, that the Senatorial canvass absorbed the attention of the entire legislature for sometime prior to its meeting and organization, and down to the 18th day of December, 1890; that Nez Perces and Latah Counties are the two northern counties in which the old annexation sentiment to Washington was the strongest; that I understood during the canvass that the plank in the Republican platform, which was universally understood by all parties as pledging equal representation in the Senate of the United States to the northern and southern sections of the State, was placed in the platform for the purpose of obliterating all old controversies and sources of dissatisfaction between the people of the two sections of the State, divided as these sections are by the practically impassable Salmon River Range. With that understanding I made my canvass before the people of Nez Perces County, and said county returned, unexpectedly to the State at large, a Republican delegation to the legislature. When I came to Boise it was with the determination to secure the fulfillment of the promises made in the platform and upon which the canvass in north Idaho had been conducted, and as I am informed, in a very large measure also conducted in the southern part of the State.

As between the two northern candidates my preference was for Mr. Clagett, who was also the choice of the Republicans of Nez Perces County, and I advocated his election from first to last, and also supported him when the matter was brought up in February for the second time. To my personal knowledge, Mr. Clagett was importuned time and again by the friends of Mr. Dubois to enter into a combination with Mr. Dubois and Governor Shoup by which Mr. Dubois was to be elected to the term beginning March 4, 1891, and Governor Shoup and Mr. Clagett were to be elected for the two short terms and draw for terms, and that he refused all such offers. I opposed the resolution offered by Senator Gunn in the joint assembly to elect the third Senator prior to the second Tuesday after the organization of the legislature, and I was opposed to electing this third Senator at any time until the two elected to fill existing vacancies had drawn for terms, as thereby there was no method by which the platform of the party could with absolute certainty be carried out and north Idaho with absolute certainty be secured equal representation in the Senate, and I was in favor of reelecting for the long term the man who should draw the short term ending March 4, 1891. In the joint assembly of December 18, the minority were taken largely by surprise for the reason that until the night of December 17 they had no knowledge of any combination having been formed for the election of the third Senator, and there was not sufficient time left prior to the meeting of the joint assembly on December 18 to examine strictly into the questions involved and to make an organized opposition to the programme. Judge Gray, however, in his opposition to the carrying out of this proposition voiced my sentiments, and so far as I know that of the entire twenty-five members voting against it, but the matter was carried through in spite of our opposition. I voted for Mr. Clagett on the first two ballots as against Governor Shoup and Mr. McConnell, and then voted to adjourn the joint assembly, being opposed to the election of a third Senator at that time. When the motion to adjourn was lost, having voted twice for Mr. Clagett, and knowing from the vote that it was impossible to elect him, on the last ballot I voted for Mr. Dubois because I believed that it was the general sentiment of the Republicans of Nez Perces County that Mr. Dubois should be elected as the Senator residing in south Idaho.

As I have before stated, the springing in the joint assembly itself of the proposition to elect the third Senator immediately after electing the other two, was premature to me, and I did not have time to examine the question as to whether it was or was not according to law, but that after the dissolution of the joint assembly there was a great deal of discussion in Boise City upon the subject, and in the public press of the State, and I thereupon proceeded to examine the matter as carefully as I was able to do, not being a lawyer, and came to the conclusion that Mr. Dubois had not been legally elected; and when the drawing for terms took place in Washington, and Mr. McConnell drew the short term ending March 4, 1891, seeing that north Idaho was left without representation, and the Republican party's promises were not fulfilled, I strongly favored holding another election, by which the mistakes and errors of the first election could be corrected, and advocated the election of Mr. Clagett, and voted for him.

I forgot to mention that in the first stage of the proceedings after I had heard of the combination between Shoup and Dubois, and before I had finally made up my mind as to whom I would support for Senators, I called on Mr. Dubois and told him that I had heard that he did not intend to stand by the platform of the Republican

party, assuring one Senator to north Idaho, and asking him if that was true; in reply he said to me that he did not think that that portion of the platform was binding upon the party.

IRA S. SPERRY.

Sworn to before me and subscribed in my presence by the said Ira S. Sperry, on this 16th day of February, 1891.

STATE OF IDAHO, *County of Ada, ss:*

I, J. R. De Lamar, being first duly sworn, do say under oath that I am 41 years of age, a Republican in politics, and a State senator in the present legislature, representing the senatorial district of Owyhee and Cassia Counties. That I was a delegate in the Republican State convention that met in Boise in August last, and am personally cognizant of all the facts relating to the adoption by that convention of a resolution which was inserted in its platform, pledging equal representation in the Senate of the United States to north and south Idaho respectively. That the question of the adoption of this resolution was considered in and out of the convention for the period of two days if not longer. That the growth of north Idaho in the last few years has been so great that the changed condition of the two sections was not generally known to the people of the southern part of the State. That in the discussion in the convention on the adoption of this resolution such a condition of things was manifest as rendered it both just and politic to place that plank in the platform, which was done after it was adopted, by the unanimous vote of the convention. On the adoption of the resolution I was excused from voting because I was a candidate for my present position, but my two colleagues voted in favor of it. From that time on very largely, to my personal knowledge as well as upon information, the Republican canvass was very largely conducted upon this resolution in the platform, and I am informed and believe that it was due to it that the northern end of the State sent an unbroken Republican delegation to the legislature.

When I came to Boise to attend the legislature, I was in favor of Governor Shoup and Mr. Dubois as United States Senators for the reason that after the election I had been informed by some of their friends in the southern end of the State that the people of the north did not care for this Senatorial representation. In that view of the case, if true, I was in favor of Messrs. Shoup and Dubois.

On the arrival of the northern members of the legislature, a conference was held at which I was present, and at which every northern member in the most positive terms stated the facts connected with it, and demanded the fulfillment of the pledge in the platform. I then saw that either Mr. Dubois or Governor Shoup had to be dropped so far as I was concerned, and as between the two my preference was Governor Shoup.

About this time I learned of the combination between Messrs. Shoup and Dubois to secure both Senatorships for themselves. On two occasions I visited Governor Shoup and asked him whether he intended to live up to the platform upon which he was elected; the only satisfaction that I could get from him was that he intended to use all honorable means to get himself elected to the Senate. From that time on down to the 18th of December, the Senatorial canvass resolved itself into the proposition as to whether the Republican party as represented in the legislature would or would not live up to the platform of the party. Governor Shoup and Mr. Dubois finally, to obtain the votes necessary to elect themselves started the three-Senator plan, and in the end induced Mr. McConnell to combine with them and bring into the combination the four or five votes necessary to elect all three. To this whole programme I was violently opposed, and fought it at every stage in which it came up in the joint assembly, and in every other way.

After the election was over its result was received by the people at large, and especially by the Republicans throughout the State, judging from the comments in the press and private advices, with a feeling of supreme disgust. The Republicans were especially indignant for the reason that they felt that the most solemn promises which a political party can make had been willfully endangered by its trusted leaders who succeeded in inducing a majority of the Republican members to assist them in this combination. In my own senatorial district and in the county of Ada, where I had the opportunity to witness the effect of this election, I found that very large numbers of old-time Republicans were threatening to leave the party, and many, to my certain knowledge, declared that they would never vote the Republican ticket again on account of the selfishness of the southern leaders who jeopardized the pledges of the platform. After Mr. McConnell drew the term ending March 4, 1891, and it became evident that the Republican platform was

completely dishonored, believing as I did that Mr. Dubois's election was wholly invalid because of the violations of law resorted to secure it, I earnestly advocated the holding of a second election, which finally resulted on the 11th day of February in the election of Mr. Clagett for the term beginning March 4, 1891.

I am satisfied in my mind that had Mr. Dubois deferred his election until the second Tuesday after the organization of the legislature he never could have been elected, as outside of the combination he formed with Messrs. Shoup and McConnell he only had eighteen votes, and some of whom, as well as some of the supporters of Messrs. McConnell and Shoup, were opposed to electing a third Senator for the reason that they intended to live up to the platform and allow one Senator to the north; or, in other words, if the northern Senator should draw the short term he should be eligible for reelection, and the north should not be cut off by the election of a third Senator at that time from the southern end of the State. And I have no hesitation in saying that in my mind there is not even the shadow of a doubt that Mr. Dubois owes his election directly and immediately to the violation by him and his supporters of the act of Congress governing the method and time of electing a Senator to fill a future vacancy, and that it was through and by means of this violation only that he was declared elected to the Senate of the United States.

And further I say not.

J. R. DE LAMAR.

Sworn to before me and subscribed in my presence by the said J. R. De Lamar on this 18th day of February, 1891.

JONAS W. BROWN,
Notary Public.

STATE OF IDAHO, *County of Ada, ss:*

I, Martin King, being first duly sworn, do say under oath, that I am a member of the present session of the Idaho legislature as a representative from Elmore county, in south Idaho. When I came to Boise to attend the legislature, although living in south Idaho, I came with the determination to carry out the Republican platform, which declared for equal representation in the Senate between the two sections of the State. It was the sentiment of the people of Elmore county, represented by me, that this plank in the Republican platform should be carried out in good faith, both parties in their State platforms having declared in favor of it. I am a Republican in politics, and my personal preferences, as well as the wishes of the Republicans of Elmore county, were in favor of Mr. Dubois as the Senator from south Idaho, and Mr. Clagett as the Senator from north Idaho. Among the Republicans of Elmore county there was a general antipathy to Mr. McConnell, for the reason that it was and is generally believed that he failed to do his duty as a Republican in the canvass prior to the popular election in October, 1890, while it was known that Mr. Clagett made an effective canvass through the State, paying no attention whatever to his personal aspirations for the Senate, but laboring with an eye single to the success of the Republican party.

When I reached Boise I found that Messrs. Dubois and Shoup were combining together, but did not have votes enough to elect either one, so they brought up what was called the three Senator proposition, so that they could both be elected, and to do this they tried to get the members supporting them to also support some man they would name. I heard the members say that there was only one man in the north they would support and that was William H. Clagett. About December 13, 1890, this matter was brought up in a meeting of the friends of Governor Shoup and Mr. Dubois in Mr. Dubois's headquarters, when all or very nearly all of their respective supporters were present, and while I will not say positively that every one of their supporters made the declaration that Mr. Clagett was the only man in north Idaho whom they would support, I do not think that by any possibility there could be more than two or three of the entire number who failed to make such statement. I know that so far as the supporters of Mr. Dubois and Governor Shoup were concerned, they were substantially a unit in favor of Mr. Clagett as against Mr. McConnell if a north Idaho man was to be elected at all according to the platform.

Several of Mr. Dubois's supporters were strongly in favor of keeping the platform in its spirit by according full representation to the two sections, but nearly all of the supporters of Messrs. Dubois and Shoup were in favor of the three Senator proposition, namely to insist upon it that Mr. Dubois should have the term beginning March 4, 1891, while Governor Shoup and Mr. Clagett should be elected to fill existing vacancies and draw for terms. Mr. Clagett, however, refused every overture from Messrs. Shoup and Dubois that fell short of a frank and complete performance of the party pledge, stating to me, as he did to all others so far as I have heard or could learn, that while he was perfectly willing to take his chances on an election on his

own merits in a fair ballot, that he would not consent to submit the good faith of the Republican party and the interests of his section to the chance of a drawing, when the platform has promised and the campaign had been conducted upon the positive pledge of equal representation; that if he should be elected to fill one of the vacancies and should draw the short term, the good faith of the Republican party would be compromised, and that even though he should draw the longer of the two short terms, it would still not be a performance of the promise. During the canvass I talked with his supporters frequently, and understood thoroughly his position on the subject.

Mr. Clagett at last put his ideas in writing and wrote an open letter to the Republican members of the legislature, in which he proposed, as the only way by which the party pledge could be unquestionably kept in good faith was to elect two Senators to fill existing vacancies, that they proceed to Washington and draw for terms, and when it was ascertained from what part of the State the man should come who drew the term ending March 4, 1891, to reelect him or elect some other person from his section of the State to succeed him. When the supporters of Messrs. Shoup and Dubois, who were desirous of having Mr. Clagett come into the combination on the terms before indicated, namely, to concede the long term to Mr. Dubois, found that he would not accede to these terms, it was then proposed that they should elect Mr. Clagett in spite of himself to one of the short terms. Mr. Clagett was approached on the subject, and he stated that if the members saw fit to elect him in spite of himself to one of the short terms, and at the same time fill the vacancy occurring March 4, 1891; that he had no power to help himself; but that if he should consent to such a programme, leaving the fulfillment of the party pledge subject to a chance in a drawing, and running the risk of North Idaho being without representation after March 4, 1891, he would be a party to a scheme which was certainly a failure to keep the party platform, and according as the chance of the drawing might fall would or would not be a complete repudiation of it, and he would not be a party to such a scheme.

The friends of Messrs. Dubois and Shoup then hunted around to find some other northern man other than Mr. McConnell, whom they could draw into the combination, and Captain Wells, the joint Senator from Latah and Kootenai counties was selected for this purpose; Mr. Dubois in particular wished to make himself absolutely safe in the possession of the term beginning March 4, 1891, by bringing some northern man into the combination who could bring to it the few votes necessary to carry out the three Senator idea; and somewhere from the 12th to the 14th of December, 1890, a meeting was held in Mr. Dubois' headquarters in which Captain Wells was introduced and began a speech to the members assembled there, suggesting himself as a compromise candidate from the north. Some of the supporters of Messrs. Dubois and Shoup refused to accept Mr. Wells as their candidate, and stuck to it that if a northern man was to be elected at all it should be Mr. Clagett; thereupon Mr. Wells said that he was a friend of Mr. Clagett, and could get his ear at any time, and he would go and see him, and insist upon his running for the term mentioned under the proposed arrangements; he did so, and finally came back and said that Mr. Clagett could not see his way clear to do so, or something to that effect, and to let the gentleman rest for a day or two, and he might come in, and he also stated that we could elect Mr. Clagett without the aid of any one of the 8 votes which he was known to have, or in other words, in spite of himself. Captain Wells also claimed in his talk to us all that night, that Mr. McConnell was virtually out of the race, and that therefore he, Captain Wells, who had supported Mr. McConnell, was free to take any course he might think advisable as to what man from North Idaho should be elected.

From the time of this meeting matters ran on until the night of December 17, when Mr. McConnell was taken into the combination by Messrs. Shoup and Dubois. On the 17th I was notified that there would be a meeting in Mr. Dubois' rooms at 9 o'clock at night, not knowing what the meeting was for; when I got there I found out that they were making a combination, or had made a combination, with Messrs. Shoup and McConnell for Messrs. Shoup and McConnell to be elected to fill existing vacancies, and Mr. Dubois to be elected to fill the term beginning March 4, 1891; I was told that a paper had been drawn up and signed by a part of Mr. Dubois' supporters, and then torn up, and a second paper was there in the room with the signatures of a large number of persons to it; I glanced over the paper but did not read it carefully, because I was so mad when I found out that they had entered into this combination that I did not care anything about any paper that they might have; although requested so to do, I absolutely refused to sign it or to have anything to do with the combination. After I refused to sign the paper, one of Mr. Dubois' friends called me out of the room to see Mr. Dubois himself, whom I met in the hall-way of the hotel. Mr. Dubois requested me to sign the paper, saying that it was the only way for him to be elected to the 6-year term beginning March 4, 1891. I told him in reply that I would do anything for him in the world, but that I would not enter into any combination that would elect Mr. McConnell.

I asked Mr. Dubois if he thought that he was doing right, and whether he did not

think that by taking the course he was taking, that he was running a serious risk of not being elected or not being seated, and he replied to me then by saying he was willing to take his chances on that. Mr. Dubois then asked me not to make any opposition to the plan that had been made, and I told him that I would see about that. I then left Mr. Dubois and told one of the friends of Mr. Clagett about the combination having been formed. There was a great deal of confusion that night, and members were flying to and fro, so that although I immediately began to see whether the combination could not be broken up, it was impossible to arrest the attention of members so that they could listen to my reasons and arguments against it. My particular reason for refusing to go into the combination, although I was a friend of Mr. Dubois, was because I believed that all such combinations were bad public morals, and that this one would be very injurious to the interests of the Republican party and of the State.

As the two houses had passed the concurrent resolution to elect two Senators to fill existing vacancies, when the joint assembly met the next day, December 18, I was ready to proceed with the balloting for those two Senators. When Senator Gunn introduced his resolution to elect the two, and immediately thereafter to elect the third, I voted for the resolution simply because some friend asked me that morning to do so as a favor to himself, and without thinking at the time that it cut any particular figure one way or the other; afterwards when I realized that it was an important matter, I was very sorry that I had made the promise, or voted for it. After Governor Shoup was elected and the motion made that the joint assembly adjourn, I voted for this motion, being entirely satisfied from my knowledge of the feeling of Mr. Dubois's supporters, that if an adjournment could be had for a period long enough to enable those who had signed the paper to reflect upon it and examine the question, that the combination could be broken and the Republican party saved the disgrace of an open repudiation of its platform. After the election of Mr. McConnell, when the second motion was made to adjourn, I voted against it because, seeing that it was impossible to obtain an adjournment by the previous vote which was taken as a test of the question of strength, and being a friend of Mr. Dubois, I felt that having done everything that I could up to that time to prevent the consummation of the scheme, my constituents would expect me to vote for Mr. Dubois when the matter was finally forced to the point of voting for or against him, and had it not been for what I knew prior to the meeting of the legislature to be the sentiment of my constituents, I would not have voted for him after he went into the combination, and in doing so I acted purely in a representative capacity.

Two days after this election, the legislature took a recess until January 5, 1891. I then returned to my home in Elmore County, and consulted the leading Republicans of the county and explained to them everything that transpired in connection with the Senatorial election. I told them that since the election I had examined the matter as carefully as possible in the light of discussion in the public press and otherwise, and had read the law of the United States relating to the election of Senators to fill future vacancies, and was satisfied that Mr. Dubois had not been legally elected, and stated that I had heard some rumors to the effect that the matter might be brought up again before the legislature was ended, and desired to know whether in case it was brought up again how the public sentiment of my county would stand on the subject. After hearing all the facts and circumstances, I was advised by every Republican, except one, whom I met, that in case a second election should occur, they would expect me to carry out the platform of the party and vote for Mr. Clagett, as against Mr. Dubois. And when the second election did occur in February, after the drawing, I supported him for that position, from the time it was agitated down to the time of his election.

And further I say not.

MARTIN KING.

Sworn to before me and subscribed in my presence by the said Martin King on this 16th day of February, 1891.

[SEAL.]

JONAS W. BROWN,
Notary Public.

STATE OF IDAHO, *County of Ada*, ss:

I, J. C. Martin, first duly sworn, do say under oath that I am 46 years of age, a Republican in politics, and a representative of Latah County in the present session of the legislature of Idaho. That long before the Republican State convention met in August, 1890, all through north Idaho, and also in portions of south Idaho, through the public press and otherwise, the public sentiment was aroused in favor of giving equal representation in the United States Senate to the two sections of the State. That when the Republican State convention met at Boise, as the result of long and earnest discussion, the party placed in its platform a plank declaring that justice to all sections of the State required that one of the United States Senators should be taken from north

Idaho; that this was and was understood to be a party pledge to that effect and entered more prominently into the canvass than any other one proposition, and on this pledge the Republicans succeeded in carrying every county north of the Salmon River Range, and sending an unbroken Republican delegation to the legislature, although all of the counties of north Idaho, with the exception of Latah, were either Democratic in sentiment or exceedingly doubtful.

I do further say that from my knowledge of the facts attending that election that it was due to this plank in the platform that the State went Republican; that it is a matter of public knowledge that the Democratic party in that campaign intended to place such a plank in their platform, and to make their principal fight to carry the State in the northern portion of it; that the Republican convention met first and anticipated the action of the Democratic convention by placing it in its platform, and that it was thereafter followed by the Democratic convention when it met, so that both parties were pledged to this proposition; that when the canvass opened the pledge of the Republican party was taken up by the great mass of the Republicans with the greatest enthusiasm, so that at an early portion of the canvass it became evident that north Idaho would go overwhelmingly Republican; and when this fact became evident, the Democratic managers lost confidence in their canvass and did not make, as I am informed and believe, even a vigorous canvass in the southern portion of the State, whereby the State was carried for the Republican party.

That when I came to Boise City to attend the legislature I did so especially for the purpose of seeing this pledge carried out in good faith by the election of some bona fide residents in North Idaho to one or two Senatorships, which at that time and theretofore were supposed to be only two that were to be filled; that when the drawing of the Wyoming Senators after the election took place, it was ascertained that in all probability one of the two Senators would go out on the 4th of March, 1891, and this fact was taken advantage of by Messrs. Shoup and Dubois when they found that by their combined strength they did not have a majority of the legislature, to start the third Senator proposition in the hope that they would thereby be able to obtain sufficient votes from some northern candidate, which, added to their own, would give them a majority, taking such northern candidate into the combination, upon a distinct understanding that Mr. Dubois should be elected to the 6-year term at this session of the legislature. I found that it was impossible to break the combination which Messrs. Shoup and Dubois had formed, although every effort was made to detach them one from the other, and induce them respectively to carry out in good faith the platform of their party, upon which one of them had received the suffrages of a majority of the people. Finally, on the afternoon of December 17, 1890, I was told by Mr. Brown, Mr. McConnell's nephew, who was largely managing his Senatorial canvass, that a combination would be formed for the purpose of electing Messrs. Shoup and McConnell for the short terms to fill existing vacancies, and Mr. Dubois for the term beginning March 4th, 1891; and that evening I met at Mr. McConnell's room Messrs. Wells, Green, Skatteboe, Brigham, and Wing, members from North Idaho, and Senator Gunn from South Idaho, who seemed to be managing the combination as among the members on behalf of Mr. McConnell. Mr. Wing refused to have anything to do with it, and shortly left.

A paper was gotten up in Mr. McConnell's room which I read and signed; the purport of the paper was that Mr. McConnell should be elected first, Governor Shoup second, and that when the proper time came, fixed by law, Mr. Dubois was to be elected. At the same time that this paper was being prepared and signed in Mr. McConnell's room, another paper, as I was informed, was being prepared and signed by the supporters of Mr. Dubois in the adjoining room occupied by Mr. Dubois, and I saw the gentlemen who were known as Dubois men all gathering into that room for such purpose. After we had signed the paper in Mr. McConnell's room, Mr. Brown took it out into the room of Mr. Dubois, from which he returned and told us that Mr. Dubois' friends had signed a paper, which, as a friend of Mr. McConnell, he would not consent to; that Senator Shoup, from Custer County, a brother of George L. Shoup, refused to accede to the proposition to elect Mr. McConnell first, and insisted upon it that his brother should be elected first; and that the paper which had been signed in Mr. Dubois' room was one that he would not consent to have the friends of Mr. McConnell sign; that Mr. Brown then returned to Mr. Dubois' room and after a while came back into Mr. McConnell's room and informed us that he had dictated a new paper for Mr. Dubois' supporters to sign, and that they were then engaged in signing the same, and that some of Mr. Dubois' supporters had left for the night and they were hunting them up to get them in to sign this second paper. The paper written in Mr. McConnell's room, signed by his friends, and myself among the number, was destroyed, and we afterwards, on the same night, signed the second paper drawn in Mr. Dubois' room and stated by Mr. Brown as having been dictated by him.

The only difference that I remember between the two papers was that instead of electing Mr. McConnell first and then Governor Shoup, it was changed to elect Governor Shoup first and then Mr. McConnell, and it was also understood that we

were to elect on the next day Governor Shoup and Mr. McConnell only, and were to elect Mr. Dubois when the time prescribed by law should arrive for electing the third senator. I did not read the paper signed by Mr. Dubois' friends and then brought to Mr. McConnell's room and signed by us; the paper was read in our presence by Mr. Brown, and its purport was as I have previously stated, that Mr. Dubois was to be elected, not at that time, but when the time arrived prescribed by law for the election of the third senator. It was understood that Mr. Dubois was to take his chances on being able to hold the combination together until this time should arrive, and I for one believed that it was utterly impossible for the combination to exist long enough to allow the second Tuesday after the meeting and organization of the legislature to arrive. If it had been proposed that Mr. Dubois should be elected immediately after the other two, I would not under any circumstances have gone into the arrangement, because I knew such election to be contrary to law, and also because, as a North Idaho man, I knew that if we elected the third senator at the same time as the other two it would endanger the result of my section of the State having any representation after March 4, 1891.

The above is the understanding which I and other supporters of Mr. McConnell who signed the paper had, and we never had any idea that it was contemplated to elect the third Senator immediately after the two vacancies were filled, until Senator Gunn offered the resolution to that effect in the joint assembly on the next day, December 18, 1890. I was taken completely by surprise by this resolution of Senator Gunn, and when Judge Gray, in the joint convention, offered his substitute to limit the election to the two Senators only, I voted for it, and voted against the passage of the resolution, and in favor of the motion to adjourn after the election of Mr. McConnell. After the second motion to adjourn was voted down and the joint assembly proceeded to vote for the third Senator, I voted for Mr. Dubois because the previous votes on the substitute and the adjournment showed that we could not prevent the third Senator from being voted for at that time, and I did not look upon the vote as amounting to anything, for the reason that his election was manifestly illegal, as I believed, on account of its violation of the acts of Congress relating to the election of a Senator to fill a future vacancy; and even then I would have voted for Mr. Clagett instead of Mr. Dubois for this third term, because of the trickery which had been practiced upon me and other friends of Mr. McConnell in the legislature in bringing on this election in violation of law, if I had not known that my vote, and others also who were in favor of Mr. Clagett, could not change the result.

I do further say from the facts above stated, and from all the circumstances attending and surrounding the so-called election of Mr. Dubois, that he owes his election, if elected at all, to a palpable violation of the laws of the United States, and that without such violation he could not have been elected; from my knowledge of the hostility existing between Messrs. McConnell and Dubois and many of their respective supporters, I am entirely satisfied that had the agreement been carried out to wait until the time came around prescribed by law for electing the third Senator, that long before this time arrived the combination would have dissolved by its own inherent weakness, and it was because of this knowledge evidently on the part of Mr. Dubois that they either changed the programme after I and other of Mr. McConnell's friends had signed the paper, or else he had deliberately obtained our signatures by false and fraudulent representations made to the effect that he was willing to take his chances of holding the combination together until the regular time prescribed by law for electing the third Senator.

I do further say that when Mr. McConnell drew the term ending March 4, 1891, and that had come to pass which I had always feared, that after that date north Idaho would be without a Senator; and the platform of the Republican party was dishonored, believing as I did that the interests of my State and the preservation of the good faith of the party were of paramount importance to all other considerations, and further believing that Mr. Dubois had not been legally elected, when it was proposed to hold a second election for a Senator to succeed William J. McConnell, I supported the movement, and voted for Mr. Clagett at all stages of the contest.

To summarize the whole matter, I came to Boise to get equal representation in the Senate for my section of the State. On account of the combination between Messrs. Shoup and Dubois, it was impossible to get it as it was pledged, and I was forced to take the step that I did in order to get the only thing that was possible as it seemed to me at that time, namely, a chance for north Idaho to draw a Senator; and when I found that this drawing, however brought about, left us completely out in the cold, I was determined, if possible, to still secure the principal object of my coming to the legislature, in the election of some northern man, so that our local interests might be protected and the good faith of the party kept intact. And further I say not.

J. C. MARTIN.

Subscribed in my presence and sworn to before me by the said J. C. Martin, on this 16th day of February, 1891.

[SEAL.]

JONAS W. BROWN,
Notary Public,

STATE OF IDAHO, *County of Ada*, ss :

William Wing, being first duly sworn, says under oath that he is 43 years of age, and a senator from the fourth senatorial district of Idaho, comprising Latah and Nez Percés Counties, in the present session of the legislature. That so far as relates to the election of United States Senators, I came to Boise City unpledged except by a resolution of the county convention of Latah County favoring William J. McConnell for first choice; that I was not at any time asked to define my position with regard to second choice except on the night or evening previous to leaving Lewiston for Boise City, when one person asked me how I stood in relation to Mr. Dubois's candidacy, and I said to him that if Mr. Dubois did not oppose the election of one Senator from the northern portion of the State as provided in the platform of the Republican party, that I could consistently support him, but if he did oppose that part of our platform, I would under no conditions support him. That upon arriving at Boise City I found the sentiment of the press so far as represented in the Boise Statesman, which was advocating Mr. Dubois's interests, to be that north Idaho did not claim or ask the carrying out of that part of the platform, and I found him in every way at all times opposing the interest of the party in his opposition to that part of the platform, and from that I considered myself entirely at liberty so far as my second choice for Senator was concerned.

When the concurrent resolution to elect two Senators passed the senate, I had no idea or expectation that in that joint convention provided for by that resolution a third Senator would be elected, and went into that joint convention expecting to elect two Senators and no more; that by the introduction of a resolution in that joint convention to elect a third Senator I found that it was the intention to bring on an election of the third Senator immediately after the election of the Senators to fill the two vacancies then existing and before the second Tuesday after the organization of the legislature. Senator Gray offered a substitute to this resolution, the effect of which was to limit the election to the two Senators to elect whom the original concurrent resolution had been passed; I voted in favor of that substitute; my vote is recorded in the journal as voting against it; when the substitute was voted down, the question recurred on the original resolution, which I voted against, but I am recorded in the journal as voting in favor of it; after the election of Governor Shoup I voted against the motion to adjourn, and am correctly recorded in the journal; I voted against this first motion to adjourn because we were there to elect two Senators, and the assembly having chosen to proceed with the election I did not consider that I was doing anything else except proceeding under the concurrent resolution.

After the second Senator was elected I voted in favor of the motion to adjourn and am so recorded in the journal; that I did not know until yesterday that I was recorded in the journal of the house as having voted against the substitute and in favor of the resolution, and I say without qualification or possibility of mistake that these two entries of my vote in the journal of the house recording the proceedings of the joint assembly are absolutely false; I intended to vote and did vote against every proposition that looked or tended in any way to the election of the third Senator prior to the time fixed by law; that my attention was called to the matter yesterday for the first time; the senate journal of December 19 contained no entries showing what had transpired in the joint assembly the day before, and the entire record was made up and kept in the journal of the house only. Had the senate journal contained entries of the proceedings of the joint assembly as appear to have been entered on the journal of the house I would on the 19th of December have discovered the error, if it was an error, instead of a willful falsification of the fact as I believe it to be, and had the same corrected; and I believe that this entry in the house journal of my vote, on tally, so far as I know having been kept except by Clerk Reed in the joint assembly, was purposely made to show that a majority of the senate in the joint assembly voted in favor of the resolution to elect the third Senator immediately after the others, Charles H. Reed, the clerk of the house, being a bitter, uncompromising, and unscrupulous partisan of Mr. Dubois.

After the election of the two Senators, to elect which the joint assembly was convened, I voted to adjourn, as I did not believe that under the law of the United States regulating elections of Senators the time had arrived for such election, and because it was impossible for me to tell who would draw the short term, whether it should be the Senator from the northern part of the State or from the southern part, for if by any chance Mr. McConnell should draw the term ending March 4, 1891, north Idaho would be left without a Senator, and if Mr. Shoup should draw the term ending March 4, 1891, I believed it to be the choice of south Idaho that he and not Mr. Dubois should be returned. But in any event I did not intend to leave north Idaho without a Senator as provided by the Republican platform of the State, nor take any steps that would jeopardize the interests of that section and the good faith of the Republican party. When this resolution offered and passed in joint convention was carried out by a vote for the third Senator, believing such vote to be illegal and void, I

was entirely indifferent as to who I voted for, and contemplated voting for a fictitious person, but believing it cut no figure one way or the other voted for Mr. Dubois. On the ballots taken under the first concurrent resolution, which I believed to be legal, I voted for William J. McConnell on the two separate ballots taken thereunder, as it was my purpose that a northern Senator should be elected, and finding that Messrs. Dubois and Shoup were opposed to that proposition, found my only safety lay in electing a northern Senator first. Believing at all times that the party platform was obligatory on every Republican, and the peculiar position of our State being such that a Senator from the northern portion was very important to our part of the State, I was opposed to any measure which should jeopardize our interest or violate our pledges and was desirous that the Senators elected under the constitution should have time to proceed to Washington and draw for terms, so that it might be known whether the Senator from the northern portion of the State or from the southern portion would draw the short term, so that we might elect his successor from whichever portion of the State the Senator who should draw the term ending March 4, 1891, might come, and I should have opposed this resolution which was offered and passed in joint convention if the same had been proposed in the senate, voting separately until such time as we could know the facts with regard to the drawing for terms, that we might conform our action to that result.

That this resolution could not have passed the senate is certain because that body consists of 18 members, and 9 were opposed to any election of Senator to fill the term beginning March 4 next, until such time as the drawing of terms should determine which portion of the State should be left without a Senator, or at least before the time that was fixed by law for electing, namely, the second Tuesday after the organization of the legislature, and this is shown by the fact that 9 senators voted against the resolution of Senator Gunn in joint assembly (although the journal shows only 8), and these 9 votes, being one-half of the senate, would have prevented the passage of the resolution; and that if the law had been complied with by taking a vote for the election of the third Senator in the two Houses, acting separately, or in waiting until the second Tuesday after the organization of the legislature, Mr. Dubois could not have been elected, and he owes his election to this failure on the part of the legislature to comply with the law.

Up to the evening of the 17th day of December last I had no reason to believe that the election of United States Senators from Idaho would be conducted otherwise than in all fairness to the four Republican candidates in the field; but on the evening of the 17th of December I was invited to attend a meeting, without knowing in full the purpose of that meeting; when I arrived at room number 1 in the Capital Hotel in Boise City where said meeting was to be held, the room being occupied by William J. McConnell, I found there congregated certain members of the legislature, who proposed then and there to draw up a paper obligating those present to vote on three separate ballots the following day for three United States Senators; on the first ballot to elect Mr. Shoup, on the second ballot to elect Mr. McConnell, to fill the existing vacancies, and at some future time, no one stating when in my presence or hearing, to elect Mr. Dubois on the third ballot, to fill a vacancy which should exist from and after March 4, 1891, and for the term of 6 years. To this proposition I refused to accede or to any proposition which should look to the election of any person to fill a vacancy until after the drawing of terms of the two Senators elected to fill existing vacancies; that I immediately left the room, but upon returning after about three-quarters of an hour, it was then stated to me by Mr. Green, a member of the house of representatives from Latah County, that all the others (supposing he meant those who had been present when I was formerly present in the room) had signed the paper and I had better sign it—at the same time putting his hand in his pocket as though attempting or about to draw out a paper for me to sign—but that I peremptorily refused to have anything to do with it, and he did not take a paper from his pocket.

The invitation which I received to attend this meeting at Mr. McConnell's headquarters came from a friend of Mr. C. McConnell, and was not accompanied by any explanation of the object of that meeting, but being immediately desirous of knowing the object of the meeting, I met in the hallway of the hotel Mr. Skatteboe, who is a member of the house of representatives from Latah County, with whom I was acquainted, and I asked him to tell me the object of that meeting; that he informed me of its object, to elect Mr. McConnell, Mr. Shoup, and Mr. Dubois as United States Senators, and that an agreement would be made and entered into for that purpose by those who were in attendance at that place; that I told him I was opposed to it and should oppose it if I went into Mr. McConnell's room, and he suggested that perhaps I had not better go in if I was opposed to the proposition, but I insisted that I had a right to know all that transpired with regard to the election of United States Senators, as well as any other legislative matter, and insisted on going in; and I found in passing from where I had this conversation with Mr. Skatteboe, that the friends of the respective candidates, Mr. Shoup and Mr. Dubois, as I passed their rooms,

were gathering in for some purpose, and it was stated in Mr. McConnell's room that they were then engaged in signing an agreement similar to that which was proposed in my presence to be written out.

I had up to the evening of the 17th of December supposed and believed that any combination which would result in electing Mr. McConnell and Mr. Dubois as United States Senators could not be effected because of the outspoken hostility of Mr. McConnell toward Mr. Dubois, and I heard him repeatedly state that he would enter into no arrangement by which Mr. Dubois and himself should be elected as United States Senators, because the feeling existing between them would preclude them from acting harmoniously together.

When the question of electing a successor of Mr. McConnell came up in the legislature in February, 1891, believing, as hereinbefore stated, that the election of Mr. Dubois was illegal and void, and believing that that part of the Republican platform which provided that North Idaho should be represented in the Senate of the United States by a norther Senator was an obligation resting upon the party, the same having been advocated during the political canvass by myself and being urged by me as a reason why north Idaho should present a solid Republican representation in this legislature. I favored this movement and the election of Mr. Clagett, because he was a north Idaho man, acquainted with our interests and abundantly able to look after our affairs in the Senate of the United States, and further because of Mr. McConnell's connection with this deal in which he had jeopardized our interests and betrayed his party, leaving north Idaho without a representation in the United States Senate, I could no longer have supported Mr. McConnell to succeed himself. And further I say not.

WILLIAM WING.

Sworn to before me and subscribed in my presence by the above named William Wing, this 17th day of February, 1891.

[SEAL.]

JONAS W. BROWN,
Notary Public.

STATE OF IDAHO, *County of Ada*, ss :

I, B. J. Briggs, being first duly sworn, do say under oath, that I am 31 years of age, a Republican in politics, and a member of the present Idaho legislature from Bingham County, in south Idaho; that the Republican county convention of Bingham County met after the State Republican convention had adjourned, and placed in its platform a plank to the effect that one of the two Senators to be chosen should come from north Idaho; that at that time it was not understood that there were to be more than two Senators, and I understood, as it was understood by all, that this resolution in the State platform pledged the party to equal representation of the two sections in the Senate of the United States. Shortly before the meeting of the county Republican convention in Bingham county, Mr. Patrie, who was afterwards the chairman of the county Republican central committee, and who was Mr. Dubois's principal manager in the senatorial election in December last, handed me a paper, which was subsequently adopted by the county convention of Bingham County as its county platform; that I was a member of the committee on resolutions in that county convention, and submitted, at the request of Mr. Patrie and as coming from him, this paper; that one of the resolutions of this county platform pledged the delegation in the legislature to support Mr. Dubois for the United States Senate. So that taking the two platforms together, the Republicans in Bingham County were pledged to support Mr. Dubois as the Senator from south Idaho, and were also pledged to support some person from north Idaho for the other senatorship.

When I came to the legislature I was in favor of the election of Mr. Dubois from the south and Mr. Clagett from the north, but in consequence of the combination entered into between Messrs. Dubois and Shoup, and the difficulties which were created by that combination, I found it impossible at that time to carry out my wishes and to completely fulfill the obligations of the platform. Messrs. Dubois and Shoup together had 23 or 24 votes, lacking only a few of a majority. In order to secure this majority they subsequently took into the combination William J. McConnell, of north Idaho, with the understanding that he should be elected to fill one of the vacancies and that Mr. Dubois should be elected for the full term beginning March 4, 1891. At the time the legislature met I was not personally acquainted with Mr. Dubois and knew but very little of him except what I had seen in the newspapers, most of which was complimentary of him. I believed him to be a sincere and ardent Republican, devoted to the interests of the party, and for that reason, and because of this pledge in the county Republican platform, I supported him and went into the combination, although with the utmost reluctance, in part because of my opposition to Mr. McConnell, from the north, by which Mr. Dubois was to be elected for the long term and Messrs. Shoup and McConnell to fill the vacancies.

That I am a farmer by occupation and know nothing of law, and when the legality of electing the third Senator was raised in the joint assembly on December 18 the two lawyers in the legislature, Mr. Lyttleton Price as the champion of Mr. Dubois, and Judge Gray as championing the other side of the question, argued the matter of the legality of the election to a considerable extent. Not being a lawyer I was unable to form any opinion of my own in view of the fact that the two lawyers in the legislature were of directly contrary opinions, and for that reason I naturally sided with the attorney who represented the agreement which I had made. I therefore voted for the resolution of Senator Gunn, and voted to carry through the entire understanding as set out in the paper which was signed on December 17, 1890. I was the better able to do this for the reason that I believed that under the circumstances as they existed it was the best that could be done in the direction of keeping the pledge contained in the Republican platform, my own idea always having been if I had been free to carry it out that the two Senators should be first elected, and after the drawing for terms that then the successor of the man who should draw the short term, whether from north Idaho or south Idaho, should be taken from his section.

After the election was over the result was received by the people and public press of the State either with extreme coldness or open condemnation. I do not know of but one paper in the State, namely, the *Boisé Statesman*, Mr. Dubois's special organ, which advocated and upheld the result, and in consequence of the criticisms that were made upon the action of the legislature and the general opinion expressed to the effect that the election of Mr. Dubois was not legal, I proceeded to investigate the matter to the best of my ability, making inquiries with reference to the legal points involved, and in connection with this, and about the same time, having been fully advised of all of the little matters attending the election, and of which I was in a large part ignorant of at the time the election was held, I came to the conclusion that the policies and methods of Mr. Dubois were of such a character that I looked upon him as the worst enemy which the Republican party had in the State of Idaho. In other words, I ascertained to my entire satisfaction that he was the head of an established ring of office-holders and office seekers in the State, and that he was using and had used the Republican organization virtually and solely for the purpose of promoting his private ends. For these reasons, when it was afterwards contemplated to hold another election, and especially after Mr. McConnell had drawn the term ending March 4, 1891, by which north Idaho after that date had no representative in the Senate, I advocated the election of Mr. Clagett from north Idaho, because I believed that it would be to the interests of the State at large, and also because it was necessary to take some action in order to prevent the practical dissolution of the Republican party, the general opinion appearing to be throughout the State that the party through its representatives had repudiated its promises.

And further I say not.

B. J. BRIGGS.

Sworn to before me and subscribed in my presence by the said B. J. Briggs on this 16th day of February, 1891.

[SEAL.]

JONAS W. BROWN,
Notary Public.

STATE OF IDAHO, *County of Ada*, ss :

H. M. Casey, being first duly sworn, says under oath that he is 41 years of age, and a representative in the present Idaho legislature from Kootenai, the northernmost county in the State; that between the northern and the southern sections of the State, owing to the geographical situation of the sections, there is no business connection whatever with the exception of those who have occasion to attend the sittings of the supreme court and sessions of the legislature, and it is very seldom that the citizens of the two ends of the State respectively ever have occasion to visit the other; that in consequence of this condition, and for the purpose of drawing the people of the two sections of the State together in mutual sympathy and support, after the State was admitted into the Union, the Republican platform provided as one of its planks that one of the two Senators should be taken from the northern part of the State, which at the election polled nearly 7,000 of the 18,000 votes; that four of the five northern counties are naturally Democratic, namely, the counties of Shoshone, Kootenai, Nez Percé, and Idaho, that is to say, Shoshone, Nez Percé, and Idaho are conceded to be Democratic counties, while Kootenai is doubtful; that in consequence of this plank in the Republican platform by which the people of our section of the country were assured protection to their material interests in the Senate of the United States, north Idaho sent an unbroken Republican delegation to the legislature.

When I came to *Boisé* I did so with the determination as a Republican to carry out the platform of the party, and secure to our section of the State a representation in

the Senate of the United States. Mr. McConnell and Mr. Clagett are both residents of north Idaho, and Mr. McConnell, living in the adjoining county of Latah, primarily received my support, Latah and Kootenai Counties being in one senatorial district and the Republican county convention of Latah County having expressed a preference for Mr. McConnell. For this reason among others I labored for the election of Mr. McConnell, although Mr. Clagett as a matter of personal preference was my first choice.

When the joint assembly convened under the concurrent resolution to elect Senators, as provided by law, it was understood by me, and so far as I know by every other member of the legislature, that its action was limited to the election of the two Senators to fill existing vacancies, and when the resolution on December 18 was introduced in the joint assembly to proceed immediately after the filling of the two vacancies to elect the third Senator, it was a usurpation of power on the part of the joint assembly, and, with the exception of those members who had entered the combination of Shoup, McConnell, and Dubois, was a profound surprise. Although I knew the combination had been formed as is hereinafter stated, I did not know the precise method by which it was intended to be carried out by the offering of the resolution in the joint assembly. This combination was strongly opposed by myself as one of the friends of Mr. McConnell, and I refused to have anything to do with it, and when I found that Mr. McConnell was determined to unite with Dubois and Shoup in the joint assembly of December 18, I cast the first two ballots in favor of Mr. Clagett as against Governor Shoup and Mr. McConnell, and on the third ballot, seeing that I could do Mr. Clagett no good by voting for him at that time, I cast my vote in favor of Mr. Dubois, for the reason that there were many persons in Kootenai County who favored him as the Senator from south Idaho, Mr. McConnell, a representative of north Idaho, having already been elected.

On the afternoon of the 17th of December, about 3 o'clock, Mr. McConnell's friends were invited to his headquarters. I went there and found Messrs. Green, Skatteboe, Martin, and Brigham, members of the legislature, and Mr. Brown, a relative of Mr. McConnell, who took a very active interest in his election. Mr. Brown stated to us that in a short time Captain Wells and Captain Gunn would be there, and they would have a proposition to place before us. Captain Wells is the joint senator from Kootenai and Latah Counties and Captain Gunn a senator from Alturas County, in the legislature. When they came they laid this proposition before us: That they had agreed to go in with Messrs. Shoup and Dubois and elect three senators; Shoup and McConnell were to be elected for the two short terms, and draw for their terms, and Mr. Dubois was to be elected for the long term. Captain Gunn stated that it was necessary to go in with Shoup and Dubois, because it was the only way in which north Idaho could get a Senator. No objection was made by any of those present until I was consulted, when I refused to have anything to do with such a combination, telling them that so far as those terms were concerned we could elect a wooden man according to that, and then take our hats and go home and get as good as they offered us. My objection to the whole business was that the Republican platform had promised in effect equal representation in the Senate to the two sections, and I for one did not propose to bring reproach upon my party, nor to sacrifice the interests of north Idaho, by carrying out a trade, as I understood it to be, between candidates who had theretofore been hostile to each other, and which left the interests of my section of the State and the good name of the Republican party to depend purely upon a question of chance; that I had heard Mr. McConnell many times speak in the most bitter terms of Mr. Dubois, and say he would rather cut off his right arm than to enter into any arrangement with him, and he said at one time, "I may not be elected, but there is one thing I can do: I will stop Dubois from being elected."

In the joint assembly on December 18 I voted against the resolution to elect the third Senator for the reasons that caused me to refuse to have anything to do with this combination, and the additional reason that I knew that the election of the third Senator at that time was contrary to law, because the legislature was organized on Tuesday, December 9, 1890, and the second Tuesday thereafter fell on December 23, 1890; and also believed from the debate in the joint assembly, in which Judge Gray spoke the sentiments of the minority and whose leadership we followed, that the election of the third Senator at that time was illegal because the two houses by the adoption of the resolution in joint assembly had been deprived of the right given to them by the act of Congress to take a separate vote in the two houses acting separately.

During the entire senatorial canvass, after I found that Messrs. Shoup and Dubois had combined to defeat the platform, I was determined, if possible, not only to elect a Senator from north Idaho, but to elect him before the one from south Idaho should be elected, because when I saw that the friends of Messrs. Shoup and Dubois in the legislature were willing to sacrifice the Republican party in the interest of two men I was afraid to trust them to elect a northern man after they had succeeded in electing one Senator from the south, believing as I did that if they had ever elected a south-

ern man first they would have followed it up if they could do so by electing both Senators from that section.

I always believed that Mr. Dubois was not elected, because his election was secured in violation of the laws of Congress, and after Mr. McConnell drew the short term, leaving north Idaho without a Senator after March 4, 1891, I embraced with eagerness the opportunity to elect his successor by choosing some other citizen of north Idaho, and thereby protecting the interests of our section and at the same time preserving the good faith of the Republican party. For this reason, and for this reason only, I worked and voted for Mr. Clagett at the time of the second election.

And further I say not.

H. M. CASEY.

Subscribed and sworn to before me this 16th day of February, A. D. 1891.

[SEAL.]

JONAS W. BROWN,
Notary Public.

STATE OF IDAHO, *County of Ada, ss:*

I, S. A. Swanger, being first duly sworn, say under oath, that I am 60 years of age, a Republican in politics, and a member of the house of representatives in the present session of the legislature of Idaho, representing Custer County, in the southern part of the State. That I was a delegate in August, 1890, to the Republican State Convention which met at Boise City, and was also a delegate to the county convention of Custer County, which convened after the adjournment of the State convention. That, in the State convention, the resolution declaring in substance that justice to all sections of the State required that one of the two Senators to be elected should be taken from north Idaho was earnestly and fully debated and adopted by a vote of 61 to 39, and, after adoption, by the unanimous vote of the convention added to the platform as a part thereof. That Lemhi and Custer Counties adjoin each other; that Governor Shoup is a resident of Lemhi County, and his brother, James M. Shoup, a resident of Custer County; and that the universal public sentiment in Custer County at the time of the two Republican conventions met was in favor of Geo. L. Shoup as one of the two senators who at that time, we all understood, were to be elected, and only two.

I came to Boise about 2 weeks before the legislature met, and remained there until it met. Recognizing the binding effect of the pledge contained in the Republican platform, I was in favor of electing Governor Shoup from the south end of the State and Mr. Clagett from the northern end, and labored to accomplish that result. That when the combination was finally formed between Messrs. Shoup and Dubois and McConnell I found that it was impossible, as it seemed to me at that time, to secure the election of Governor Shoup and carry out the wishes of my constituency without acquiescing in the arrangement. I felt at liberty at the time to do so for the reason that Mr. McConnell, a north Idaho man, was embraced in the combination, and his election on the basis of electing three Senators would at least be a partial compliance with the terms of the Republican platform of the State.

On the night of December 17, 1890, the arrangement was finally consummated, and I signed a paper which I did not read, but which I was informed purported to be a paper by which we were to elect Messrs. Shoup and McConnell to fill existing vacancies, and Mr. Dubois the term beginning March 4, 1891. That when the matter first came up that evening, I was told that Mr. McConnell's friends insisted upon electing him first; and as the only idea that I had in going into the arrangement was to make the election of Governor Shoup absolutely sure, I told them that if they did so I would have nothing whatever to do with it; that I wanted Governor Shoup elected first or I would not support either Mr. McConnell or Mr. Dubois. The paper was then drawn, as I was told, to elect Governor Shoup first and Mr. McConnell next.

Pursuant to this arrangement, when the joint assembly met on December 18 I voted for the resolution offered by Senator Gunn, and supported the proceedings all the way through, down to and including the election of Mr. Dubois.

Prior to the meeting of the joint assembly on December 18 I had heard the question discussed at various times as to whether three Senators could be elected at the same time, and I heard of telegrams having been received from Senators in the United States to the effect that they could be. I had no doubt myself but that they could be so elected, provided they were elected in the manner pointed out by law; but so far as the election of Mr. Dubois was concerned there was no separate vote taken in the two houses, no concurrent resolution passed by the two houses to that effect acting separately, and it was in advance of the second Tuesday after the meeting and organization of the legislature.

My object was to secure the election of Governor Shoup. I knew that the election of the two Senators to fill existing vacancies was legal, because we were pursuing the legal course pointed out by the constitution of the State, and the concurrent reso-

lution under which the joint assembly met. I did not believe that the election of Mr. Dubois was legal even when I voted for him; but, as I understood it, he was willing to take his chances on that. And as thereby I could secure the election of Governor Shoup and carry out the ardent wish of my immediate constituents in Custer County I voted to carry out the whole programme, leaving Mr. Dubois to take care of his own interests in the future.

The election of Mr. Dubois, under the circumstances, was not received with favor by the Republicans of the State generally, and afterwards when Mr. McConnell drew the short term ending March 4, 1891, and it became manifest that after that date north Idaho would be without a representative in the Senate, and the Republican party would stand before the people as not having kept in good faith its party pledge, I was desirous of doing everything that I could to remove the bad impression and effect which the so-called election of Mr. Dubois had upon the party in the State. And for that reason I advocated and favored the holding of a new election, and voted for Mr. Clagett as a north Idaho man to fill the term beginning March 4, 1891, and leave to the Senate of the United States the duty of determining as to whether he or Mr. Dubois is entitled to a seat.

The whole trouble about our senatorial matters here grew out of the fact that Mr. Dubois at all times claimed that he was entitled to and would have the term beginning March 4, 1891, and that he would be elected in advance of the drawing for terms by the two Senators elected to fill existing vacancies. Had it not been for his determination to this effect, the complications in the situation here in Idaho would not have arisen. I did not believe that Mr. Dubois, nor anyone else, had a right to dictate to the party as to who should fill any office within its gift, but he had sufficient force in the legislature to force through his plan of action in the manner hereinbefore stated. Prior to the meeting of the legislature I was barely acquainted with Messrs. Dubois, Clagett, and McConnell, and the first time that I got down on Mr. Dubois was when I saw that through his selfishness he was sacrificing the interests of the Republican party and of the State to promote his own personal ambition. And this consideration acted very strongly upon my mind in inducing me to favor the second election, in addition to the other reasons which I have previously stated.

And further I say not.

S. A. SWAUGER.

Sworn to before me and subscribed in my presence by the said S. A. Swauger, on this 16th day of February, 1891.

[SEAL.]

JONAS W. BROWN,
Notary Public.

STATE OF IDAHO, *County of Ada*, ss :

I, Walter H. Smith, being first duly sworn, say under oath, that I am 50 years of age, a representative in the present legislature of Idaho from Ada the capital county of the State, and in politics am a Republican.

That the Republican party at the State convention which met in August, 1890, placed in its platform a resolution declaring that justice to all sections of the State required that one of the Senators to be elected should be taken from north Idaho; that I recognized the justice and expediency of this action, and thoroughly and heartily supported it from the beginning.

When I came to the legislature my first choice for Senator from the southern part of the State was Governor Shoup, and as between the two candidates from north Idaho, my preferences were for Mr. Clagett. I voted for Governor Shoup in December when the vote was taken in the two houses acting separately, and also voted for him on both ballots on December 17, the first day the joint assembly met. When on the night of the 17th of December I learned that he and Messrs. McConnell and Dubois had entered into a combination to elect themselves on the terms and conditions that they did, I looked upon it as a transaction which I would not countenance nor support, and which I was violently opposed to, because it was a repudiation of the platform of the Republican party.

During the canvass preceding the election I was in and out of Mr. Dubois' headquarters frequently and was familiar with the sentiments, I think, of every one of the 18 men who were known as Dubois men, and that many of them were violently hostile to Mr. McConnell and expressed the utmost contempt for him, and declared that room, where all of his friends were congregated, and where nearly if not quite all of under no circumstances would they ever vote for him. I remember in particular one occasion, which, I think, was about December 15, when I was present in Mr. Dubois' them declared that under no circumstances would they ever vote for him as a Senator. And when I found out, on the night of December 17, that Messrs. Shoup and Dubois had taken him into their combination, I looked upon the whole transaction as a dead sell-out of many of the members supporting the three candidates, by which

the State was disgraced and the party dishonored. On the next day, December 18, when the joint assembly met, on account of my long-time friendship for Governor Shoup, I having served with him in the same regiment in the Army, I forgave him sufficiently his share in the transaction to vote for him on the first ballot, on which he was elected, and then voted for Mr. Clagett, as against Messrs. McConnell and Dubois.

Although I knew that this combination had been formed, I did not know until the joint assembly met that they were going to carry it out by the offering of a resolution to proceed with the election of the third Senator immediately after the first two were elected. This resolution offered by Senator Gunn took me entirely by surprise. The question at that time as to what the law was governing the election of a Senator to fill a future vacancy had not arisen, the concurrent resolution which brought us together having been, and been universally, understood to be a resolution for the election of the two Senators to fill the existing vacancies only. I understood that this legislature would be called upon to elect a third Senator sometime during the session, but when or how had never to my knowledge been brought up in discussion. When Judge Gray opposed the resolution of Senator Gunn, there was for the first time, so far as I know, a discussion as to the legality of electing the third Senator at that time, and without waiting until the second Tuesday after the organization of the legislature; and from this discussion I became satisfied that the whole proceedings were utterly null and void.

The result of the election in December was received by the Republicans of the State and the public press in a manner that satisfied me, if I needed to be satisfied, that the Republican majority of the legislature had made as grave a mistake as it was possible, and in my own county of Ada I heard, and heard of, a great many of the old stand-by Republicans declaring that they would never again vote a Republican ticket, because the party had proved itself so faithless to the promises it made to the people; and for a limited period of time I even felt myself as though I never would vote another Republican ticket, and remained of that opinion until it was suggested that Mr. McConnell had drawn the term ending March 4, 1891, and that a new election should be held to redeem the mistakes that had been made by the party in the first election. I eagerly embraced the opportunity to do so, and supported most heartily every movement in that direction, which finally resulted in the election of Mr. Clagett.

WALTER H. SMITH.

Sworn to before me and subscribed in my presence by the said Walter H. Smith, on this 18th day of February, 1891.

JONAS W. BROWN,
Notary Public.

STATE OF IDAHO, *County of Ada*, ss:

I, George W. Emory, being first duly sworn, do say under oath that I am a Republican in politics, and a representative from Custer County, in the southern portion of Idaho, in the present session of the legislature.

That when I came to the legislature at Boisé in December last I knew that the sentiment among the republicans of my county was that Governor Shoup should be one of the Senator selected; we at that time believing, as we had believed theretofore, that there were only two to be elected; the old settlers generally favored Governor Shoup, while those of more recent settlement inclined to Mr. Dubois. Not only myself, but, so far as I know, all of the Republicans in my county recognized the binding effect of the platform upon the party according equal representation in the Senate to the northern and southern ends of the State. In my county those who favored Governor Shoup as well as those who favored Mr. Dubois recognized the fact that both of them could not be elected without violating the platform.

Our county Republican convention met and sent delegates to the State convention, and afterwards reconvened and nominated the county and legislative tickets, and the platform adopted by the county convention in terms indorsed the platform which had been theretofore adopted by the State convention.

I made a thorough canvass of Custer County before the election in October, and visited every important precinct and nearly every precinct in the county, and that I never in a single instance heard any one question the fact that the platform with reference to the Senatorial question was binding upon every Republican.

When I came to Boisé to attend the legislature, as I was compelled to choose between Governor Shoup and Mr. Dubois. I favored the election of Governor Shoup from the south, and Mr. Clagett from the north. I found on reaching here that Governor Shoup and Mr. Dubois had combined together, and that Governor Shoup's canvass was being managed by his brother, Senator Shoup from Custer County, and although I labored assiduously with the friends of Governor Shoup, I utterly failed to cause

them to abandon the idea of electing both Shoup and Dubois at the expense of the Republican platform. That I attended a conference of the friends of Governor Shoup and Mr. Dubois, and it was announced and stated there in the conference by Mr. Dubois's friends that they did not consider the platform binding and would not be bound by it, and I stated to them that I did consider the platform binding, and my preference for the southern Senator was Governor Shoup, and as I stood firmly on that platform I believed in electing a northern Senator, and my choice was Mr. Clagett from the north, and that I should vote for those two men, which I did. I urged on the friends of Messrs. Dubois and Shoup at various times the fact that in my opinion if the platform of the Republican party was good enough to catch votes on, it was good enough to live by after the votes were gotten, and that if that part of the platform could be thrown aside, then any part of any platform could be disregarded by anybody.

When I found that the friends of Messrs. Shoup and Dubois were determined to violate the platform of their party I left the conference and never attended another. This conference was held after the legislature was organized, but its exact date I do not remember. Up to that time everybody seemed to be proceeding on the idea that there were to be but two Senators elected. The friends of Governor Shoup and Mr. Dubois found that they lacked a majority in the legislature, and about the time of this conference of which I have spoken, the idea of electing a third Senator began to be talked about to some extent. The friends of Messrs. Shoup and Dubois, for the purpose of electing those two candidates, found it necessary to take a north Idaho man into their combination, and they finally took in Mr. McConnell.

When the joint assembly met on December 18, 1890, and Senator Gunn offered his resolution to elect the third Senator immediately after the two were elected, I opposed and voted against the resolution, and against electing a third Senator at that time, for the reason that while I knew that this session of the legislature would be called upon to elect a third Senator, I also knew that they were not proceeding to elect him (on the 18th of December) in the manner and at the time provided by law. And for the reason that he was declared elected under proceedings that were taken in open violation of law, I am now and always have been entirely satisfied that his so-called election is totally null and void. While in the joint convention I voted for adjournments on the grounds already stated, and also because I believed that if the members of the legislature had a little longer time to think the matter over that they would not have elected Mr. Dubois and violated the platform, which belief was subsequently confirmed by the course taken by members at the second election after they had had full time and opportunity to investigate the question of Mr. Dubois's election. On every ballot taken for Senator in December I voted for Governor Shoup until he was elected, whether in the two houses or in the joint assembly, and on every ballot after he was elected I voted for Mr. Clagett.

The effect of the election in December was to create the feeling among lifelong Republicans of the State that on account of the violation of the party platform we had no show of winning in any future election, and so far as my knowledge extends this feeling affected the friends of Governor Shoup and Mr. Dubois themselves outside of a few who were willing to indorse anything that might be done by them on account of the strong personal interest they had in the result. And I believe, from a great many statements and facts which have come to my knowledge, that outside of what might be called the official class, consisting of office-holders actual and expectant, the result of that December election met with the almost universal disapproval of the people of the State.

Knowing as I did that when the Republican party had gone back upon itself by the action of a majority of its representatives in the legislature that it was sure to destroy the sense of party allegiance, which was impossible when its trusted leaders openly repudiated with contempt the professions of the party as contained in its platform, I favored strongly the holding of a new election to elect a Senator to fill the term commencing March 4, 1891. When the matter was brought up in February, 1891, I supported the movement for such election in all of its various phases until Mr. Clagett was elected; that I considered it my duty, not only to myself but to the Republican party and to the State, to use all honorable means to right the wrong that had been committed.

And further I say not.

GEO. W. EMERY.

Sworn to before me and subscribed in my presence by the said George W. Emery, on this 18th day of February, 1891.

[SEAL.]

JONAS W. BROWN,
Notary Public.

STATE OF IDAHO, *County of Ada, ss:*

I, Edwin C. Smith, being first duly sworn, do say under oath that I am 39 years of age, and a Republican in politics, and a State senator in the present session of the legislature of Idaho from Logan County, in the southern part of the State. That during the canvass preceding the popular election on October 1, 1890, it became manifest to me that a large majority of the Republicans of my county at that time favored the election of Mr. Dubois as one of the two Senators, it not being supposed until after the drawing for terms by the Wyoming Senators that there would be three to be elected by the present session of the legislature. I myself was a strong supporter of Mr. Dubois. I was only slightly acquainted with Mr. Dubois personally, and was not acquainted with the other three Republican candidates, and my support of Mr. Dubois was based upon the good opinion which I had of him as a representative man from the public press and the fact that my constituents also favored his election.

I further say that, owing to the manner in which he made his independent canvass, Mr. McConnell was exceedingly unpopular with the Republicans, or a very large number of them, in Logan County.

Personally I never approved of putting the plank in the Republican platform in favor of equal representation of north and south Idaho in the Senate, but when the State convention placed it there I acquiesced in it, and when I came to Boise City I intended, if possible, to secure the election of Mr. Dubois from the southern and some other person from the northern part of the State as the two Senators. Under all circumstances I was determined that Mr. Dubois should be elected. Matters ran along after the legislature convened, and there was a great deal of figuring done on various propositions, until finally the proposition was started to elect three Senators instead of two, giving Mr. Dubois the full term beginning March 4, 1891, and electing Governor Shoup and some northern man to fill existing vacancies and have them draw for terms. It seemed to me at the time that this plan offered an escape from the embarrassments under which I and other members of the legislature labored, and I adopted it for that reason. I made no trade of my vote whatever, but on the merits of the proposition, as I understood it, under the circumstances of the case, when the combination was formed to elect Governor Shoup and Mr. McConnell to fill the two vacancies and give Mr. Dubois the full term after March 4, 1891, I had no hesitation in agreeing to it.

I voted for the resolution offered in the joint assembly on December 18 by Senator Gunn, and in favor or against every motion as the case might be in order to carry out the idea of electing the third Senator; I did so because it gave Mr. Dubois the full term, and I wanted him to have it. In the joint assembly, on December 18 the question of the legality of proceeding with the election of the third Senator at that time was discussed, particularly by Judge Gray on the one side and Mr. Lytleton Price on the other, and telegrams were read from honorable Senators in Washington, which caused me to think that it was proper and legal to elect the third Senator at that time, and in voting as I did I considered that I had the best of authority, not being a lawyer, for the action taken by me. After the election on December 18 the question as to the legality of Mr. Dubois's election was very largely discussed, and a good many points were brought out in this discussion which I had not had my attention called to before, and which had the effect of causing me to have grave doubts as to his election, although on the whole I was still of the opinion that he was legally elected. Nevertheless, I would not, because of these ideas, have taken any steps whatever to reverse my action on December 18 had it not been that within 24 hours after the adjournment of the joint assembly on that day the various methods which had been pursued by Mr. Dubois and his particular friends in the legislature to secure a majority began to come to light; his lieutenants began to drop first one thing and then another, until I saw that his election was to say the least very largely a matter of jobbery, brought about by trading votes on various local propositions, including divisions of counties, which were expected to come before the legislature when it got down to its legislative work.

As the session progressed these facts became more and more manifest to my mind, until I became entirely satisfied that Mr. Dubois was the head and center of a ring which sought to dominate the State of Idaho, control all of its Federal appointments in its interest, and even control all the boards and offices in the State government itself. Believing as I did when I made this discovery that the continuation of such a condition of things would be disastrous to the interests of the State, and particularly after Mr. Connell had drawn the term ending March 4, 1891, and I saw the great dissatisfaction that there was in the State over the failure to give north Idaho a representative as required by its platform, I embraced the first opportunity that was offered to rectify as far as was possible the mistake which had been made, and therefore supported Mr. Clagett in his proposition of holding another election, believing that the Senate of the United States was better competent than I to pass upon the question of the legality of Mr. Dubois's election. If I had known on De-

ember 18 when I voted for Mr. Dubois that his election was contrary to law, I would not have supported him in his course, and if I had known at the time of the second election that Mr. Dubois was legally elected, I would not have taken any action to reverse it.

And further I say not.

EDWIN C. SMITH.

Sworn to before me and subscribed in my presence by the said Edwin C. Smith on this 18th day of February, 1891.

[SEAL.]

JONAS W. BROWN,
Notary Public.

STATE OF IDAHO, *County of Ada*, ss:

I, Joseph Hawkins, being first duly sworn, do say under oath, that I am 57 years of age, a Republican in politics, and a member of the present session of the legislature of Idaho, a representative from Owyhee County, in the southern portion of the State. That when I came to the legislature in December last, I was absolutely unpledged so far as men were concerned, but was pledged so far as the platform of the Republican party was concerned; that my first preference was for Governor Shoup for one of the Senators from the southern portion of the State, and as between Messrs. McConnell and Clagett my choice was Mr. Clagett as a Senator from the northern portion of the State, although my relations towards Mr. McConnell were very friendly.

That when the Republican State Convention met, as I am informed, two out of the three delegates from Owyhee County voted for the resolution pledging equal representation in the Senate to the northern and southern ends of the State, while the third delegate, Captain De Lamar, now a State senator from that county, was excused from voting because he was then nominated for the position of State senator; that from the time this plank was placed in the Republican platform to the close of the canvass, the Republicans of the State recognized it as being a party obligation, and it was the expectation of the great mass of the voting Republicans that it would be carried out in good faith not only as a matter of justice, but also as an act of expediency.

When I came to Boise to attend the legislature, I intended to support Governor Shoup as one of the Senators. During the canvass and down to a time after the legislature met, the Republicans of Idaho never expected that there were to be more than two Senators elected. This was not only my expectation, but it was also one of those public facts which nobody would deny. Although a friend of Governor Shoup, I found on coming to Boise that he and Mr. Dubois were so completely wedded to each other politically in the matter of the Senatorial election that it was impossible to tell where one ended and the other began. Being desirous to vote for Governor Shoup I used every exertion in my power by argument and persuasion with his friends that they should stand by the platform, and in several interviews with Governor Shoup himself I urged it upon him in the strongest possible way. The only satisfaction that I could get from him was that he was going to get there if he could, and use all honorable means to do so. Finding that it was impossible to break up this combination, I then made up my mind that to save the credit of the Republican party it was necessary to beat both Mr. Dubois and Governor Shoup, as neither of them would respect the pledge made by the party to the people.

When the vote was taken in the two houses acting separately, I cast my vote for Mr. McConnell as a mere compliment and at his special request, and to show my feeling for north Idaho in connection with the Republican platform. On the day of the first session of the joint assembly, two ballots were taken, and I voted both times for Governor Shoup; I did so in order to show him that he had more strength than I think he thought he had, and because thereby I hoped still to induce him to stand by his platform.

When the combination was formed on the night of December 17, 1890, between Messrs. Shoup, Dubois, and McConnell, and I saw that all three of those men had gone into the arrangement to bring reproach upon the Republican party in order to promote their own personal ends and ambitions, I refused to support or vote for either one of them, and in the joint assembly of December 18 I cast the entire three ballots there taken for Mr. Clagett, and voted for every proposition or against every proposition that came up, as the case may be, in order to break up the combination if possible and secure Mr. Clagett's election. I do further say that Judge Gray, in opposing the adoption of the resolution offered by Senator Gunn to elect the third Senator in advance of the time fixed by law, and for the reasons stated by him at the time, he voiced my sentiment, and his protest against proceeding to the election of the third Senator was made by himself alone but he acted as the representative informally of the entire minority, the haste, hurry, and confusion of the time prevent-

ing such minority from meeting together and organizing a regular opposition to the programme of the combine.

That while the Gunn resolution was under discussion, a dispatch was read to the joint assembly by speaker Fenn purporting to come from Congressman Sweet, and stating that it was the opinion of several eminent Senators in Washington that the legislature could proceed to elect the third Senator. The dispatch as read I understood was necessarily limited, although not so expressed, to the idea that the third Senator could be elected at this session of the legislature, and at the same time that the others were provided the election was conducted at the time and in the manner provided by law; but the effect of this telegram, as was manifest from their action in the joint assembly, upon the members supporting the combine was to persuade them that they could immediately proceed to elect the third Senator after electing the other two, without waiting for the coming around of the second Tuesday after the organization of the legislature, and that it was not material that the act of Congress relating to the election of such third Senator should be complied with. I know this was the case from declarations and expressions made to me; and Mr. K. O. Skatteboe, a representative from Latah County, and who voted for the combination, when the dispatch was read, stated to me as he sat by my side in the joint assembly, that that settled the question, that they could then proceed to elect the third Senator at that time.

On the same day that the second concurrent resolution passed the house on February 8, 1891, I had a conversation with said Skatteboe in which we were discussing the propriety of voting for Mr. Clagett, he being a north Idaho representative. He had stated to me theretofore that he intended to support Mr. Clagett, and in this conversation he declined to do so, stating to me that he was the last man who signed the Dubois paper in December, 1890, which formed the combination; that he did not read the paper but it was read to him by Mr. Lyttleton Price, and that within the last few days (referring to the date of the conversation) he had learned that there was a clause in that paper which he said was not read to him by Mr. Price when he signed it, to the effect that in case Mr. Dubois's election should be held invalid, the party signing the paper would repeat his vote at another time to return him to the Senate.

After the election in December the feeling throughout the State was intense on the part of Republicans that a majority of the Republican members of the legislature, led on by their trusted leaders, had deliberately gone back upon the platform of the party. To my personal knowledge I know and have heard of large numbers of Republicans who declared that they would never vote another Republican ticket for the reason that the party promises under the present leadership of the State were utterly worthless; and especially did I so hear them declare in my own county of Owyhee. That the effect of this deliberate repudiation of the platform by the party operated as its dissolution, for every one instinctively felt that if the most solemn promise contained in the platform could be violated with impunity, and any Republican leader could still be elected to the highest office in the gift of the people while repudiating the platform, that there was no longer any obligation on the part of Republicans to respect any platform that might be gotten up. That this election had the effect of weakening the feeling of party allegiance on the part of Republicans, and was driving many of them out of the party in disgust, when Mr. Clagett (Mr. McConnell in the meantime having drawn the short term ending March 4, 1891) proposed that a second election should be held for the purpose of furnishing a rallying point around which could gather the rank and file of the party who had lost faith in its future in this State. Believing as I did at all times that the so-called election of Mr. Dubois was a nullity, I embraced the opportunity thus offered to rectify as far as possible the wrong which had been done to the party, and supported the second electoral proceedings from the beginning to the end.

I do further say that from the multitude of facts and circumstances known to my personal knowledge or which have been certified to me by persons having personal knowledge of them, I am entirely satisfied not only that Mr. Dubois was not legally elected but also that he owes his election directly to an intentional violation on his part, and that of his supporters, of the requirements of the act of Congress as to the method and time for electing a Senator to fill a vacancy to happen in the future; and that in case Mr. Dubois had waited until the time fixed by law for electing the third Senator, the combination, without which he could not under any circumstances have been elected, would have been dissolved; and I thoroughly believe that the reason why the election of the third Senator was forced on immediately after the election of the other two was because Mr. Dubois knew that if he was not elected then, and in that way, he could not have been elected at all. That many fair-minded members entered that combination, and that in all human probability if the minority could have carried an adjournment prior to the election of the third Senator, so that the legal questions involved could have been discussed under other circumstances than the heat and hurry

which attended the sitting of the joint assembly, I have not a shadow of a doubt in my own mind but that the combination would have dissolved within 6 hours from the time of the adjournment.

And further I say not.

JOSEPH HAWKINS.

Sworn to before me and subscribed in my presence by the said Joseph Hawkins, on this 18th day of February, A. D. 1891.

[SEAL.]

JONAS W. BROWN,
Notary Public.

STATE OF IDAHO, *County of Ada, ss:*

Steven Dempsey, Green White, Edward S. Jewell, Frank Stennenberg, J. M. Balentine, B. H. Smith, John Q. Dryden, and Isaac Irwin, being first duly sworn, say under oath each for himself and not one for the other, that they are all members of the Democratic party and members of the present session of the Idaho legislature; that we all, with the exception of Mr. B. H. Smith, who had left town at the time the same was signed, signed the protest of members forwarded to Washington against the legality of Mr. Dubois's election; that this protest was signed because we were persuaded that his so-called election was wholly void. The facts and circumstances attending that election were such as reflected no credit upon the State. When the concurrent resolution passed the two houses that we would on Tuesday, December 16, 1890, proceed to elect United States Senators as provided by law, there was no law for holding an election at that time except to elect two Senators to fill existing vacancies as required by the constitution of the State, and it was universally understood by all the members of the legislature that that election was limited to the election of the two Senators to fill such vacancies.

It was with that understanding that we voted in favor of the concurrent resolution, as we were required to hold said election within 10 days from the organization of the legislature; that the legislature was organized on the 9th day of December, 1890, and that the second Tuesday after its organization fell on the 23d day of December, 1890; that after taking the separate ballot in the two houses on December 16 without a choice being had, the joint assembly convened on December 17 pursuant to the concurrent resolution, and the universal understanding among the members of the legislature as shown by their expressions on all occasions was that the joint assembly met to elect these two senators only. The balloting on the first day in the joint assembly resulted in no choice. On the next day, December 18, when the joint assembly met, Senator Gunn offered the resolution in the joint assembly to proceed to fill the vacancy occurring March 4, 1891, immediately after the other two Senators should be elected; that late on the night of December 17 we became advised of the fact that Messrs. Shoup, McConnell, and Dubois had formed a combination to elect themselves the next day, but we did not learn until a few moments before the meeting of the joint assembly on December 18 what the programme was nor how it was expected to be carried out. That the whole proceedings in the joint assembly indicated a cut and dried programme, and the rights of the minority were overruled in spite of the fact that Senator Gray, acting as the spokesman and representative of the minority of 25 members, argued and protested against the election of the third Senator, for the reason that such Senator could not legally be elected until the second Tuesday after the organization of the legislature.

That these affiants are informed and believe that the reason why no concurrent resolution was offered in either house to elect the third Senator at the same time that the others were elected was because such resolution could not have passed the Senate, and that the action taken in the joint assembly to violate the law as to the method of electing the third Senator, and the time for such election, was necessitated by the terms of the combination which in all human probability would have been dissolved if the election of the third Senator had been postponed until the time provided by law for such election. And these affiants aver and charge on knowledge, information, or belief that the election of Mr. Dubois was due entirely to the violation of law by him and others in bringing on the election of the third Senator by action taken in the first instance in the joint assembly instead of in the two houses acting separately, and in advance of the time fixed by law; that he owes his election to such violation of law, and that without it he could not have been elected; that this statement of opinion and belief is based upon a multitude of circumstances, some of which are known to one, and others to others of these affiants, which all tend to the conclusion stated above, and which call for in detail a thorough investigation on the part of the Senate of the United States.

And these affiants further say that during the session of the joint assembly on December 18, that Senator Gray, acting on behalf of the minority in such assembly,

in addition to objecting to the election of the third Senator for the reason that it was in advance of the time fixed by law, also objected that such an election at that time was in violation of the resolution of the separate houses calling the joint assembly together, and that such election at that time would be illegal for the further reason that no action had been taken thereon by the two houses acting separately, as required by the Revised Statutes of the United States; that on December 19, 1890, J. M. Ballentine, one of these affiants, offered an amendment to the journal of the house when the same was read upon that day, setting forth the reasons as stated by Judge Gray as the ground for his protest and that of the minority, and asked that the journal be amended accordingly; that such request or motion was denied by the house, which refused to place upon its journal such statement of fact as was strictly according to truth, and that the amendment thus rejected, but recorded in the journal as rejected, states the truth relating to the objections made to the election of a third Senator on December 18 by Senator Gray.

We do further say that during the debate that sprung up on the introduction of the resolution offered by Senator Gunn in the joint assembly for the purpose of carrying the resolution to its passage and showing that it was proper to elect the third Senator in advance of the time fixed by law and without taking a separate vote in the two houses, a dispatch, purporting to be from Congressman Sweet, was read by Speaker Fenn, in which it was stated that Senators Edmunds, Manderson, and others had stated that there would be a vacancy to be filled by this legislature after March 4, 1891, and that it was competent for the legislature to elect a third Senator to fill such vacancy; that this dispatch was evidently assumed by the supporters of Messrs. Shoup, McConnell, and Dubois as authorizing the legislature to proceed to elect the third Senator in the manner that was pursued, and that the requirements of the Revised Statutes of the United States as to the method and time of electing him were immaterial. And these affiants are wholly satisfied from what they saw in said joint assembly that this dispatch had the effect of overriding any scruples the members of the legislature supporting Mr. Dubois might otherwise have had to electing the third Senator at that time.

And these affiants further say that however it may have been among the Republican members of the legislature on the night of December 17, that the Democratic members who had no Democratic candidate with a headquarters were, until the joint assembly met, ignorant of the terms of the combination between Messrs. Shoup, McConnell, and Dubois, and only knew in a general way at that time that some combination had been formed between them, and that even this intelligence was conveyed to us only a few moments before the joint assembly convened. That the springing of the resolution offered by Senator Gunn was a complete surprise to us and that we were not prepared at that time to make any organized opposition to the adoption of the resolution or to consider, as ought to have been considered, the question of its legality; that had a concurrent resolution been offered in the two houses acting separately ample opportunity would have been allowed to examine the authorities and show the illegality of such action; and that by the course that was taken by the supporters of Messrs. Dubois, Shoup, and McConnell these affiants were deprived of one of the most valuable aids in the proper selection of a United States Senator; that if opportunity had been given quite a number of those who were embraced in the combination would themselves have receded from the proposition of electing the third Senator at the same time as the other two.

EXTRACTS FROM THE JOURNAL OF THE SENATE OF THE FIRST
SESSION OF THE LEGISLATURE OF THE STATE OF IDAHO OF
TRANSACTIONS HAD SINCE FEBRUARY 5, 1891, RELATING TO
THE ELECTION OF A UNITED STATES SENATOR TO SUCCEED
HON. WILLIAM J. M'CONNELL.

FORTY-SIXTH DAY.

SENATE CHAMBER,
Boisé City, Idaho, February 6, 1891.

* * * * *

INTRODUCTION OF RESOLUTIONS.

Mr. De Lamar introduced senate concurrent resolution No. 12, which was read.

Mr. De Lamar moved that the resolution be adopted.

Mr. Shoup moved to amend the resolution by inserting after "Dubois," in the last line, first page, "and Wm. H. Clagett."

Which motion was lost.

The question being on the adoption of the resolution, it was decided as follows:

The yeas and nays were called for.

ROLL CALL.

Those voting in the affirmative were Messrs. De Lamar, Dempsey, Finch, Jewell, Langrishe, Smith, White, Wing, and Mr. President—9.

Those voting in the negative were Messrs. Brigham, Gunn, McPherson, Rogers, Shoup, Underwood, Weiler, and Wells—8.

Absent—Mr. Branstetter—1.

So the resolution was adopted.

Mr. White moved that the vote by which the resolution was adopted be reconsidered, and that the motion to reconsider be laid on the table.

Which motion prevailed.

* * * * *

By order of the president, senate concurrent resolution No. 12 is spread in full upon the journal as follows:

Whereas the present session of the legislature was organized on Tuesday, December 9, 1890; and

Whereas, the State constitution and the admission act required that two United States Senators should be elected within 10 days after the organization of the legislature; and

Whereas, on Tuesday, the 16th day of December, 1890, the legislature, pursuant to the requirement of the constitution and admission act, voted for a United States Senator in the two houses acting separately, and thereafter, as provided by law, met on December 17 in joint assembly and voted for a United States Senator, and thereafter on December 18, 1890, again met in joint assembly, and within 10 days after its organization elected, in the manner provided by law, the Hons. Geo. L. Shoup and Wm. J. McConnell United States Senators; and

Whereas the legislature thereupon immediately proceeded to vote for Hon. Fred. T. Dubois for the term beginning March 4, 1891, in advance of the drawing for terms by the two Senators-elect, in advance of the time fixed by law, without first voting in the two houses, acting separately, and against the protest of members of the joint assembly; and

Whereas, upon full consideration of the facts, it is the opinion of the legislature that if the alleged election of said Hon. Fred T. Dubois is not void there is at least grave doubt as to its validity; Therefore

Resolved by the senate (the house of representatives concurring), That at the hour of 12 o'clock meridian of the first legislative day after the passage of this resolution the legislature will proceed to elect a United States Senator to succeed Hon. Wm. J. McConnell, for the term beginning March 4, 1891, and that such election shall be conducted in all respects in the manner provided in section 15 of the Revised Statutes of the United States.

FORTY-NINTH DAY.

BOISÉ CITY, IDAHO, *February 9, 1891.*

* * * * *

MESSAGE FROM THE HOUSE.

OFFICE OF THE CHIEF CLERK OF THE HOUSE OF REPRESENTATIVES,
Boisé City, Idaho, February 9, 1891.

Mr. President: I am instructed to inform your honorable body that the house of representatives has had under consideration and passed senate concurrent resolution No. 12, relative to election of United States Senator to fill vacancy occurring March 4, 1891, which is herewith transmitted.

Respectfully,

CHAS. H. REED,
Chief Clerk.

FIFTIETH DAY.

BOISÉ CITY, IDAHO, *February 10, 1891.*

* * * * *

The hour of 12 o'clock meridian having arrived, the president announced that under the provisions of senate concurrent resolution No. 12, the senate would proceed to vote for a United States Senator; the resolution was read, and the roll was called with the following result:

Those voting for William C. Clagett were Messrs. De Lamar, Dempsey, Finch, Jewell, Langrishe, Smith, White, Wing, and Mr. President—9.

Those voting for W. J. McConnell were Messrs. Brigham and Wells.

Mr. Branstetter voted for Joseph Kinney.

Mr. Gunn voted for J. L. Underwood.

Mr. McPherson voted for G. B. Rogers.

Mr. Rogers voted for M. M. McPherson.

Mr. Shoup voted for N. J. Sharp.

Mr. Underwood voted for James Gunn.

Mr. Weiler voted for D. P. B. Pride.

Total, 18.

No person having received a majority of all the votes cast, there was no election.

FIFTY-FIRST DAY.

BOISÉ CITY, IDAHO, *February 11, 1891.*

* * * * *

At 10:20 o'clock a. m. the president announced that he was about to sign senate concurrent resolution No. 12.

* * * * *

At 12 o'clock meridian the senate repaired to the hall of the house of representatives to meet the house in joint session.

* * * * *

IN JOINT ASSEMBLY.

The hour of 12 o'clock m. having arrived, the sergeant-at-arms announced, "The honorable senate of the State of Idaho in waiting," and by direction of the speaker the senate was admitted, the joint convention was called to order by the speaker of the house, the president of the convention. The rolls of the respective houses were then called. Absent, Messrs. McPherson, Rogers, Shoup, and Weiler, of the senate, and Mr. Hixon, of the house.

Senate concurrent resolution No. 12 was read.

The journals of the two houses so far as they relate to the election of United States Senator were read and the president announced as follows:

It appearing by the journals of the senate and house of representatives that the same person has not received a majority of votes in each house acting separately,

the joint assembly will proceed to choose for United States Senator the secretary will call the roll, beginning with the roll of the senate.

Mr. Price presented the following protest:

We the undersigned members of the house of representatives of the legislature of the State of Idaho protest against the proceedings for the election of a United States Senator from Idaho for the term to commence March 4, 1891, on the ground that said proceedings are illegal, null, and void, for the reason that the present legislature has already elected a Senator in Congress for said term.

D. R. Munroe, P. Fredrickson, F. B. Ethel, F. M. Merrill, Lytleton Price, F. A. Fenn, F. C. Ramsey, R. H. Caldwell, R. O. Skatteboe, Thomas Pyeatt, G. E. Mills, A. J. Green, J. C. Goodnight, James Lyon, E. S. Suydam.

The roll being then called, 32 votes were cast, of which William H. Clagett received 28; Alexander E. Mayhew received 2, R. H. Barton received 1, and John A. Finch received 1. Present and not voting, 17; those absent and not voting, 5. Those voting for Mr. Clagett were Messrs. De Lamar, Dempsey, Finch, Jewell, Langrisch, Smith, White, Wing, and Mr. President of the senate, and Messrs. Armstrong, Ballentine, Briggs, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Irwin, King, Martin, Porter, Scofield, Smith, W. H.; Smith, B. H.; Sperry, Stennenberg, and Swager of the house. Those voting for Alexander E. Mayhew were Messrs. Branstetter, of the senate, and Jones, of the house, Mr. Brigham, of the senate, voted for John A. Finch. Mr. Wells, of the senate, voted for R. H. Barton.

Those present and not voting were Messrs. Gunn and Underwood, of the senate, and Messrs. Caldwell, Ethel, Fredrickson, Goodnight, Green, Lyon, Merrill, Mills, Munroe, Price, Payeatt, Ramsey, Skatteboe, Suydam, and Mr. Speaker, of the house.

Those absent were Messrs. McPherson, Rogers, Shoup, and Weiler, of the senate, and Hixon, of the house.

Whereupon the president announced that William H. Clagett, having received a majority of all the votes cast, is declared duly elected.

On motion of Mr. Emery, the joint assembly dissolved.

F. A. FENN,
President of the Joint Convention.

CHARLES H. REED,
Secretary of the Joint Convention.

FIFTY-FOURTH DAY.

BOISÉ CITY, IDAHO, *February 14, 1891.*

At 2:10 o'clock p. m., Mr. President announced the result of the vote for United States Senator in joint convention on the 11th day of February, 1891, and handed the secretary the certificate of the presiding officer of the two houses, which was read as follows:

This certifies that in pursuance of senate concurrent resolution No. 12, relating to the election of United States Senator, passed by the senate February 7, 1891, and by the house of representatives, February 9, 1891, the senate and house of representatives met in joint assembly at 12 o'clock m., February 11, 1891, and that part of the journals of the senate and house of representatives relating to the election of United States Senator being read, and showing that the same person had not received a majority of the votes cast in each house acting separately, thereupon the joint assembly proceeded to choose for United States Senator, the vote being taken as provided by law, and it appearing that William H. Clagett had received a majority of all the votes cast, a majority of the members of both houses being present and voting, he, the said William H. Clagett, was thereupon declared duly elected.

Boisé City, Idaho, February 13, 1891.

JOHN S. GRAY,
President of the Senate.

F. A. FENN,
Speaker of the House of Representatives.

STATE OF IDAHO, *County of Ada, ss:*

I. M. C. Athey, secretary of the senate of the first session of the legislature of the State of Idaho, do hereby certify that the foregoing is a true and correct copy of the whole of all those portions of the journal of the said senate relating to the election of a United States Senator (since the 5th day of February, 1891) to succeed Hon. Wm. J. McConnell.

M. C. ATHEY.

EXTRACTS FROM JOURNAL OF THE HOUSE OF REPRESENTATIVES OF THE LEGISLATURE OF THE STATE OF IDAHO, FIRST SESSION.

SATURDAY, *February 7, 1891.*

The house having under consideration messages from the senate,

Senate concurrent resolution No. 12 was read.

Mr. Price moved that the resolution be indefinitely postponed.

Mr. Emery moved that the motion to indefinitely postpone be laid on the table; upon which the ayes and nays were taken with the following result:

Ayes: Messrs. Armstrong, Ballentine, Briggs, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Irwin, King, Martin, Porter, Scofield, Smith, W. H., Smith, B. H., Sperry, Strunenberg, and Swauger—19.

Nays: Messrs. Caldwell, Ethel, Frederickson, Goodnight, Green, Hixon, Jones, Lyon, Merrell, Mills, Munro, Price, Pyeatt, Ramsey, Skatteboe, Suydam, and Mr. Speaker—17.

So the motion to lay on the table was agreed to.

Mr. Price offered the following amendment: Strike out from first preamble the words "Tuesday, December 9, 1890," and insert in lieu thereof the words "Monday, December 8, 1890"; on which Mr. Emery moved the previous question, and demanded the yeas and nays thereon, which were ordered.

The question being, Shall the main question now be put? the ayes and nays were taken, with the following result:

Ayes: Messrs. Armstrong, Ballentine, Briggs, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Irwin, Jones, King, Martin, Porter, Scofield, Smith, W. H., Smith, B. H., Sperry, Strunenberg, and Swauger—20.

Nays: Caldwell, Ethel, Frederickson, Goodnight, Green, Hixon, Lyon, Merrell, Mills, Monroe, Price, Pyeatt, Ramsey, Skatteboe, Suydam, and Mr. Speaker—16.

So the previous question was ordered.

The question recurring on the adoption of the amendment, the ayes and nays were called and taken, with the following result:

Ayes: Messrs. Caldwell, Ethel, Frederickson, Goodnight, Green, Hixon, Lyon, Merrell, Mills, Munro, Price, Pyeatt, Ramsey, Skatteboe, Suydam, and Mr. Speaker—16.

Nays: Messrs. Armstrong, Ballentine, Briggs, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Irwin, Jones, King, Martin, Porter, Scofield, Smith, W. H., Smith, B. H., Sperry, Strunenberg, and Swauger—20.

So the amendment was disagreed to.

Mr. Price then offered the following amendment:

Strike out from the fourth preamble the words "vote for," and insert in lieu thereof the words "elect and thereupon elected;" also, strike out from same preamble the words "in advance of the time fixed by law."

Mr. Emery moved the previous question and demanded the ayes and nays thereon, which were ordered. The question being, Shall the main question now be put? the ayes and nays were taken with the following result:

Ayes: Messrs. Armstrong, Ballentine, Briggs, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Irwin, King, Martin, Porter, Scofield, Smith, W. H., Smith, B. H., Sperry, Strunenberg, and Swauger—19.

Nays: Messrs. Caldwell, Ethel, Frederickson, Goodnight, Green, Hixon, Jones, Lyon, Merrell, Mills, Munro, Price, Pyeatt, Ramsey, Skatteboe, Suydam, and Mr. Speaker—17.

So the previous question was ordered.

The question recurring on the adoption of the amendment, the ayes and nays were taken with following result:

Ayes: Messrs. Caldwell, Ethel, Frederickson, Goodnight, Green, Hixon, Lyon, Merrell, Mills, Munro, Price, Pyeatt, Ramsey, Skatteboe, Suydam, and Mr. Speaker—16.

Nays: Messrs. Armstrong, Ballentine, Briggs, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Irwin, Jones, King, Martin, Porter, Scofield, Smith, W. H., Smith, B. H., Sperry, Strunenberg, and Swauger—20.

So the amendment was disagreed to.

Mr. Munro moved that the resolution be referred to the committee on privileges and elections.

Mr. Emery moved the motion to refer be laid on the table; upon which the ayes and nays were demanded and taken with the following result:

Ayes: Messrs. Armstrong, Ballentine, Briggs, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Irwin, King, Martin, Porter, Price, Scofield, Smith, W. H., Smith, B. H., Sperry, Stenneberg, and Swauger—20.

Nays: Messrs. Caldwell, Ethel, Frederickson, Goodnight, Green, Hixon, Jones, Lyon, Merrill, Mills, Munro, Pyeatt, Ramsey, Skatteboe, Suydam, and Mr. Speaker—16.

So the motion to refer was laid on the table.

Mr. Price gave notice that on Monday, February 9, 1891, he would move a reconsideration of the last vote.

Mr. Emery offered to move an immediate reconsideration, which the chair declared out of order, and from which decision Mr. Emery appealed. The question being, shall the decision of the chair stand as the decision of the House. The ayes and nays were called and taken with the following result:

Ayes: Messrs. Caldwell, Ethel, Frederickson, Goodnight, Green, Hixon, Jones, Lyon, Martin, Merrill, Mills, Munro, Price, Pyeatt, Ramsey, Skatteboe, Stenneberg, and Suydam—18.

Nays: Armstrong, Ballentine, Briggs, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Irwin, King, Porter, Scofield, Smith W. H., Smith B. H., Sperry, and Swauger—17.

So the decision of the chair was sustained.

MONDAY, *February 9, 1891.*

Mr. Price called up his motion to reconsider the vote, by which the motion of Mr. Munro, made on Saturday, February 7, 1891, to refer senate concurrent resolution No. 12 to the committee on privileges and elections was laid on the table, and withdraw said motion to reconsider.

UNFINISHED BUSINESS.

The house having under consideration senate concurrent resolution No. 12, Mr. Price offered the following amendment: Strike out from fifth preamble the word "grave" and insert in lieu thereof the word "no."

Mr. Emery moved the previous question, to embrace all authorized motions or amendments and include the resolution to its passage or rejection. The question being, shall the main question be now put; the ayes and nays were taken with the following result:

Ayes: Messrs. Armstrong, Ballentine, Briggs, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Irwin, King, Martin, Porter, Scofield, W. H. Smith, B. H. Smith, Sperry, Stennenberg, and Swauger—19.

Nays: Messrs. Caldwell, Ethel, Frederickson, Goodnight, Green, Hixon, Jones, Lyon, Merrill, Mills, Munro, Price, Pyeatt, Ramsey, Skatteboe, Suydam, and Mr. Speaker—17.

So the previous question was ordered.

The question recurring on the adoption of the amendment proposed by Mr. Price, the ayes and nays were taken with the following result:

Ayes: Messrs. Caldwell, Ethel, Frederickson, Goodnight, Green, Hixon, Lyon, Merrill, Mills, Munro, Pyeatt, Ramsey, Skatteboe, Suydam, and Mr. Speaker—15.

Nays: Armstrong, Ballentine, Briggs, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Irwin, Jones, King, Martin, Porter, Price, Scofield, Smith, W. H., Smith, B. H., Sperry, Stennenberg, and Swauger—21.

So the amendment was disagreed to.

Mr. Price gave notice of reconsideration of the vote last taken, which the speaker ruled as dilatory and therefore out of order.

Then the question recurring to the adoption of senate concurrent resolution No. 12, the ayes and nays were taken with the following result:

Ayes: Messrs. Armstrong, Ballentine, Briggs, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Irwin, King, Martin, Porter, Scofield, Smith W. H., Smith B. H., Sperry, Stennenberg, and Swauger—19.

Nays: Messrs. Caldwell, Ethel, Frederickson, Goodnight, Green, Hixon, Jones, Lyon, Merrill, Mills, Munro, Price, Pyeatt, Ramsey, Skatteboe, Suydam, and Mr. Speaker—17.

So the resolution was adopted.

Mr. Emery moved that the vote by which senate concurrent resolution No. 12 was adopted, be reconsidered, and also moved that the motion to reconsider be laid on the table, upon which the ayes and nays were taken with the following result:

Ayes: Messrs. Armstrong, Ballentine, Briggs, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Hixon, Irwin, King, Martin, Munro, Porter, Price, Scofield, Smith, W. H., Smith, B. H., Sperry, Stennenberg, and Swauger—22.

Nays: Messrs. Caldwell, Ethel, Frederickson, Goodnight, Green, Jones, Lyon, Merrill, Mills, Pyeatt, Ramsey, Skatteboe, Suydam, and Mr. Speaker—14.

So the motion to reconsider was laid on the table.

TUESDAY, *February 10, 1891.*

MOTIONS AND RESOLUTIONS.

Mr. Price offered the following resolution :

Resolved, That inasmuch as the present legislature of Idaho has already duly elected a United States Senator for the full term commencing March 4, 1891, in the person of Hon. Fred. T. Dubois, and notwithstanding the fact that certain members who assisted in his election have, under pretense that said election is of doubtful validity, and for reasons best known to themselves, allied themselves with his enemies and the Democratic party to deprive him of his seat in the Senate, we have no reason to be dissatisfied with his election or to doubt its validity, we therefore decline to participate in any further election for Senator for said term.

Mr. Ballentine moved a call of the house, which was disagreed to.

The question being upon the adoption of the resolution, the ayes and nays were demanded and taken with the following result :

Ayes: Messrs. Caldwell, Ethel, Frederickson, Goodnight, Green, Hixon, Lyon, Mills, Munro, Price, Pyeatt, Ramsey, Skatteboe, Sundam, and Mr. Speaker—15.

Nays: Armstrong, Ballentine, Briggs, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Irwin, Jones, King, Martin, Porter, Scofield, Smith, W. H., Smith, B. H., Sperry, Stenenberg, and Swanger—20.

So the resolution failed to pass.

The hour of 12 o'clock having arrived the reading of the bill was suspended, and then, in conformity with Senate concurrent resolution No. 12, the house proceeded to name one person for Senator in Congress from the State of Idaho to succeed the Hon. W. J. McConnell, whose term expires on and after the 4th day of March, A. D. 1891.

Mr. Price offered the following protest:

MR. SPEAKER. I protest against any proceeding in this house for the election of the Senator of the United States for the State of Idaho.

LYTTLETON PRICE.

The roll being called 20 votes were cast, of which W. H. Clagett received 19; Geo. W. Brazee received 1; absent, 1; present and not voting, 15.

Those voting for William H. Clagett were: Armstrong, Ballentine, Briggs, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Irwin, King, Martin, Porter, Scofield, W. H. Smith, B. H. Smith, Sperry, Stenbergne, and Swanger—19.

Those voting for Mr. Brazee were Mr. Jones—1.

Those present and declining to vote were: Messrs. Caldwell, Ethel, Frederickson, Goodnight, Green, Hixon, Merrill, Mills, Munro, Price, Pyeatt, Ramsey, Skatteboe, Snyder, and Mr. Speaker—15.

Absent, Mr. Lyon.

Whereupon the speaker declared that William H. Clagett, having received a majority of all the votes cast, is the choice of the house of representatives for United States Senator.

WEDNESDAY, *February 11, 1891.*

The hour of 12 o'clock m. having arrived, the sergeant-at-arms announced the honorable senate of the State of Idaho in waiting, and by direction of the speaker the senate was admitted.

The joint convention was called to order by the speaker of the house, the president of the convention.

The rolls of the respective houses were then called.

Absent: Messrs. McPherson, Rodgers, Shoup, and Weiler of the senate, and Mr. Hixon of the house.

Senate concurrent resolution No. 12 was read.

The journals of the two houses so far as they relate to the election of United States Senator were read, and the president announced as follows :

It appearing by the journals of the senate and house of representatives that the same person has not received a majority of votes in each house acting separately, the joint assembly will proceed to choose for United States Senator. The secretary will call the roll, beginning with the roll of the senate.

Mr. Price presented the following protest :

We, the undersigned, members of the house of representatives of the legislature of the State of Idaho, protest against the proceedings for the election of a United States Senator from Idaho for the term to commence March 4, 1891, on the ground that said proceedings are illegal, null, and void, for the reason that the present legislature has already elected a Senator in Congress for said term.

D. R. Munro, F. C. Ramsey, R. H. Caldwell, K. O. Skatteboe, Thos. Pyeatt, G. E. Mills, A. J. Green, J. L. Goodnight, F. A. Fenn, James Lyon, E. S. Snyder, P. Frederickson, D. B. Ethel, F. M. Merrell, Lyttleton Price.

The roll being called, 32 votes were cast; of which Wm. H. Clagett received 28, Alexander E. Mayhew received 2, R. H. Barton received 1, and John A. Finch received 1. Present and not voting, 17. Absent and not voting, 5.

Those voting for Mr. Clagett were: Messrs. De Lamar, Dempsey, Finch, Jewell, Langrishe, Smith, White, Wing, and Mr. President, of the Senate; and Messrs. Armstrong, Ballentine, Briggs, Cameron, Casey, Dryden, Emery, Hanley, Hawkins, Irvin, King, Martin, Porter, Scofield, Smith, W. H. Smith, B. H. Sperry, Sturmorberg, and Swauger, of the House.

Those voting for Alexander E. Mayhew were: Messrs. Branstitter, of the Senate, and Jones of the House.

Mr. Brigham, of the Senate, voted for John A. Finch.

Mr. Wells, of the Senate, voted for R. H. Barton.

Those present and not voting were Messrs. Gunn and Underwood of the Senate, and Messrs. Caldwell, Ethel, Frederickson, Goodnight, Green, Lyon, Merrell, Mills, Munro, Price, Pyeatt, Ramsey, Skatteboe, Suydam, and Mr. Speaker of the House. Those absent were Messrs. McPherson, Rogers, Shoup, and Weiler, of the Senate, and Hixon, of the House.

Whereupon the President announced that William H. Clagett, having received a majority of all the votes cast by the joint assembly, is declared duly elected.

On motion of Mr. Emery the joint assembly dissolved.

F. A. FENN,
President of Joint Convention.

CHAS. H. REED,
Secretary of the Joint Convention.

SATURDAY, February 14, 1891.

* * * * *

The speaker made the following announcement:

This certifies that in pursuance of senate concurrent resolution No. 12, relating to the election of United States Senator, passed by the senate February 7, 1891, and by the house of representatives February 9, 1891, the senate and house of representatives met in joint assembly at 12 m., February 11, 1891, and that part of the journals of the senate and house of representatives relating to the election of United States Senator being read and showing that the same person had not received a majority of the votes cast in each house acting separately thereupon, the joint assembly proceeded to choose for United States Senator. The vote being taken as provided by law, and it appearing that William H. Clagett had received a majority of all the votes cast, a majority of all the members of both houses being present and voting, he, the said Wm. H. Clagett, was thereupon declared duly elected.

Boisé City, Idaho, February 13, 1891.

JOHN S. GRAY,
President of the Senate.

F. A. FENN,
Speaker of House of Representatives.

I, Charles H. Reed, chief clerk of the house of representatives of the legislature of the State of Idaho, do hereby certify that the foregoing are true and literal copies of portions of the journal of the house of representatives of the legislature of the State of Idaho at its first session.

Dated at Boisé City, Idaho, this 14th day of February, A. D. 1891.

CHAS. H. REED,
Chief Clerk.

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 27, 1891.—Submitted, ordered to lie over, and be printed.

Mr. PLUMB submitted the following

RESOLUTION:

Resolved, That the Committee on Finance be, and they are hereby, authorized and directed, by subcommittee or otherwise, to ascertain in every practicable way, and to report from time to time to the Senate, the effect of the tariff laws upon the imports and exports, the growth, development, production, and prices of agricultural and manufactured articles, at home and abroad; and upon wages, domestic and foreign; also to ascertain the relative cost and rates of transportation in the United States and foreign countries; and for this purpose they are authorized to sit at such times and places as they may deem advisable, by subcommittee or otherwise.

○

THE HISTORY OF THE UNITED STATES

REVOLUTION

The Revolution was a period of great struggle and sacrifice for the American people. It was a time when the colonies fought for their freedom from British rule. The war was fought from 1775 to 1783, and it was a hard-fought battle. The American people were determined to win their freedom, and they did so. The Revolution was a great achievement, and it is a source of pride for all Americans.

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 28, 1891.—Presented, ordered to lie on the table, and be printed.

The VICE PRESIDENT presented the following memorial of the Philadelphia Board of Trade praying the immediate consideration and passage of the Torrey Bankrupt Bill:

MEMORIAL TO THE SENATE

FROM THE

PHILADELPHIA BOARD OF TRADE,

AT ITS FIFTY-EIGHTH ANNUAL MEETING.

PHILADELPHIA, PA., *January 26, 1891.**To the Senate of the United States:*

Your memorialist, the Philadelphia Board of Trade, respectfully petitions you to immediately consider and pass the Torrey bankrupt bill, for reasons as follows:

1. The number of commercial failures for the whole country is increasing from year to year, and the amount of the liabilities of those who fail is for each year largely in excess of the preceding year. For your information facts are submitted as follows:

Table of commercial failures.

[As reported by Messrs. R. G. Dun & Co., for the years 1888 to 1890, inclusive.]

Years.	No. of failures.	Liabilities.	Excess of liabilities over preceding year.
1888	10, 679	\$123, 829, 973	
1889	10, 882	148, 784, 337	\$24, 954, 364
1890	10, 907	189, 856, 964	41, 072, 627

This showing must give rise to great apprehension as to what the future will bring to the commercial interests of the country.

2. As a result of the failure of Congress for eleven years to enact a bankrupt law, there are to-day hundreds of thousands of honest men who are plodding their weary way as best they can under burdens of indebtedness which they can not and never will be able to pay. The hanging over them of this cloud of indebtedness militates against a sound public policy, interferes with their exercising the rights of citizenship in the highest and best sense, and prevents them from adequately supporting their families and educating their children, all to no advantage to their respective creditors.

3. Four national conventions have been held since the repeal of the old bankrupt law, for the sole purpose of securing the enactment of a new one. The last of them promulgated the Torrey bill, and it has since been indorsed by hundreds of commercial bodies in the several States of the Union and petitioned for by hundreds of thousands of citizens, without regard to their residences, occupations, or political convictions. These facts indicate conclusively that the honest progressive men of this country, those who honestly labor for the perpetuation of a commerce founded upon the rules of integrity, are weary of the present condition of the laws, which beget recklessness and want of care on the part of those engaged in business; the giving and receiving of preferences; the execution and enforcement of secret judgments, and the perpetuation of fraud and chicanery in its multifarious forms. They further bear testimony that these same men desire a uniform law, as contemplated by the Constitution, which will produce more conservative business methods, enable debtors and creditors to confer together for mutual advantage, without the fear of the institution of compulsory processes, and in the event of commercial failures, equitable, prompt and economical distributions of the assets of debtors, and if honest, their complete discharge.

In view of all which, conclusions are reached as follows:

1. *Resolved*, That in the opinion of this board there is but one way to check the increase of commercial failures, diminish the amount of liabilities involved therein, and restore and maintain confidence, and that is for Congress to pass a law embracing both the voluntary and involuntary systems of bankruptcy, to supersede the incomplete and varying laws of the several States.

2. *Resolved further*, That this board believes that honest insolvents should be discharged from their debts, under such carefully guarded provisions of law as would prevent the extension of like privileges to dishonest men.

3. *Resolved further*, That this board respectfully submits that the Torrey bankrupt bill, involving as it does the property rights of every man, woman and child in the whole country and the rights of every honest insolvent man to a discharge, is the most important measure now pending before your body and should therefore be immediately considered, to the exclusion of all other business.

4. *Resolved further*, That the officers of this board are hereby instructed to inform the Senators and Representatives in Congress from this State of the above action, and to earnestly urge them to use their utmost influence to have the Torrey bill passed before the adjournment of Congress on March 4 next.

A true copy from the records.

FRED. FRALEY,
President Philadelphia Board of Trade

Attest:

W. R. TUCKER,
Secretary.

IN THE SENATE OF THE UNITED STATES.

FEBRUARY 28, 1891.—Reported and ordered to be printed.

Mr. MOODY, from the Committee of Conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 8150), submitted the following

REPORT:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill H. R. 8150, "An act to provide for the adjudication and payment of claims arising from Indian depredations," having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate, and agree to the same with an amendment as follows, so that the bill, as amended, will read:

H. R. 8150.

AN ACT TO PROVIDE FOR THE ADJUDICATION AND PAYMENT OF CLAIMS ARISING FROM INDIAN DEPREDACTIONS.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in addition to the jurisdiction which now is, or may hereafter be, conferred upon the Court of Claims, said court shall have and possess jurisdiction and authority to inquire into and finally adjudicate, in the manner provided in this act, all claims of the following classes, namely:

First. All claims for property of citizens of the United States taken or destroyed by Indians belonging to any tribe or nation in amity with the United States, without just cause or provocation on the part of the owner or agent in charge, and not returned or paid for.

Second. Such jurisdiction shall also extend to all cases which have been examined and allowed by the Interior Department; and also to such cases as were authorized to be examined under the act of Congress making appropriations for the current and contingent expenses of the Indian Department, and for fulfilling treaty stipulations with various Indian tribes for the year ending June 30, 1886, and for other purposes, approved March 3, 1885, and under subsequent acts, subject, however, to the limitations hereinafter provided.

Third. All just offsets and counterclaims to any claim of either of the preceding classes which may be before such court for determination.

SEC. 2. That all questions of limitations as to time and manner of presenting claims are hereby waived, and no claim shall be excluded from the jurisdiction of the court because not heretofore presented to the Secretary of the Interior or other officer or Department of the Gov-

ernment: *Provided*, That no claim accruing prior to July 1, 1865, shall be considered by the court unless the claim has been allowed or has been or is pending prior to the passage of this act before the Secretary of the Interior or the Congress of the United States, or before any superintendent, agent, subagent, or commissioner authorized under any act of Congress to inquire into such claims; but no case shall be considered pending unless evidence has been presented therein: *And provided further*, That all claims existing at the time of the taking effect of this act shall be presented to the court by petition, as hereinafter provided, within three years after the passage hereof, or shall be thereafter forever barred: *And provided further*, That no suit or proceeding shall be allowed under this act for any depredation which shall be committed after the passage thereof.

SEC. 3. That all claims shall be presented to the court by petition setting forth in ordinary and concise language, without unnecessary repetition, the facts upon which such claims are based, the persons, classes of persons, tribe or tribes, or band of Indians by whom the alleged illegal acts were committed, as near as may be, the property lost or destroyed, and the value thereof, and any other facts connected with the transactions and material to the proper adjudication of the case involved. The petition shall be verified by the affidavit of the claimant, his agent, administrator, or attorney, and shall be filed with the clerk of the said court. It shall set forth the full name and residence of the claimant, the damages sought to be recovered, praying the court for a judgment upon the facts and the law.

SEC. 4. The service of the petition shall be made upon the Attorney-General of the United States in such manner as may be provided by the rules or orders of said court. It shall be the duty of the Attorney-General of the United States to appear and defend the interests of the Government and of the Indians in the suit, and within sixty days after the service of the petition upon him, unless the time shall be extended by order of the court made in the case, to file a plea, answer, or demurrer on the part of the Government and the Indians, and to file a notice of any counterclaim, set-off, claim of damages, demand, or defense whatsoever of the Government or of the Indians in the premises: *Provided*, That should the Attorney-General neglect or refuse to file the plea, answer, demurrer, or defense as required the claimant may proceed with the case under such rules as the court may adopt in the premises; but the claimant shall not have judgment for his claim, or for any part thereof, unless he shall establish the same by proof satisfactory to the court: *Provided*, That any Indian or Indians interested in the proceedings may appear and defend, by an attorney employed by said Indian or Indians, with the approval of the Commissioner of Indian Affairs, if he or they shall choose so to do.

In considering the merits of claims presented to the court, any testimony, affidavits, reports of special agents or other officers, and such other papers as are now on file in the Departments or in the courts relating to any such claims shall be considered by the court as competent evidence, and such weight given thereto as in its judgment is right and proper: *Provided*, That all unpaid claims which have heretofore been examined, approved, and allowed by the Secretary of the Interior or under his direction, in pursuance of the act of Congress making appropriations for the current and contingent expenses of the Indian Department, and for fulfilling treaty stipulations with various Indian tribes, for the year ending June 30, 1886, and for other purposes, approved March 3, 1885, and subsequent Indian appropriation acts, shall have

priority of consideration by such court, and judgments for the amounts therein found due shall be rendered, unless either the claimant or the United States shall elect to reopen the case and try the same before the court, in which event the testimony in the case given by the witnesses and the documentary evidence, including reports of Department agents therein, may be read as depositions and proofs: *Provided*, That the party electing to reopen the case shall assume the burden of proof.

SEC. 5. That the said court shall make rules and regulations for taking testimony in the causes herein provided for, by deposition or otherwise, and such testimony shall be taken in the county where the witness resides, when the same can be conveniently done, and no person shall be excluded as a witness because he is party to or interested in said suit, and any claimant or party in interest may be examined as a witness on the part of the Government; that the court shall determine in each case the value of the property taken or destroyed at the time and place of the loss or destruction, and, if possible, the tribe of Indians or other persons by whom the wrong was committed, and shall render judgment in favor of the claimant or claimants against the United States, and against the tribe of Indians committing the wrong, when such tribe can be identified.

SEC. 6. That the amount of any judgment so rendered against any tribe of Indians shall be charged against the tribe by which, or by members of which, the court shall find that the depredation was committed, and shall be deducted and paid in the following manner: First, from annuities due said tribe from the United States; second, if no annuities are due or available, then from any other funds due said tribe from the United States, arising from the sale of their lands or otherwise; third, if no such funds are due or available, then from any appropriation for the benefit of said tribe, other than appropriations for their current and necessary support, subsistence, and education; and fourth, if no such annuity, fund, or appropriation is due or available, then the amount of the judgment shall be paid from the Treasury of the United States: *Provided*, That any amount so paid from the Treasury of the United States shall remain a charge against such tribe, and shall be deducted from any annuity, fund, or appropriation hereinbefore designated which may hereafter become due from the United States to such tribe.

SEC. 7. That all judgments of said court shall be a final determination of the causes decided and of the rights and obligations of the parties thereto, and shall not thereafter be questioned unless a new trial or rehearing shall be granted by said court, or the judgment reversed or modified upon appeal as hereafter provided.

SEC. 8. That immediately after the beginning of each session of Congress the Attorney-General of the United States shall transmit to the Congress of the United States a list of all final judgments rendered in pursuance of this act in favor of claimants and against the United States, and not paid as hereinbefore provided, which shall thereupon be appropriated for in the proper appropriation bill.

SEC. 9. That all sales, transfers, or assignments of any such claims heretofore or hereafter made, except such as have occurred in the due administration of decedents' estates, and all contracts heretofore made for fees and allowances to claimants' attorneys, are hereby declared void, and all warrants issued by the Secretary of the Treasury, in payment of such judgments, shall be made payable and delivered only to the claimant or his lawful heirs, executors, or administrators or transferee under administrative proceedings, except so much thereof as shall be allowed the claimant's attorneys by the court for prosecuting said

claim, which may be paid direct to such attorneys, and the allowances to the claimant's attorneys shall be regulated and fixed by the court at the time of rendering judgment in each case and entered of record as part of the findings thereof; but in no case shall the allowance exceed 15 per cent. of the judgment recovered, except in case of claims of less amount than \$500, or where unusual services have been rendered or expenses incurred by the claimant's attorney, in which case not to exceed 20 per cent. of such judgment shall be allowed by the court.

SEC. 10. That the claimant, or the United States, or the tribe of Indians, or other party thereto interested in any proceeding brought under the provisions of this act shall have the same rights of appeal as are or may be reserved in the statutes of the United States in other cases, and upon the conditions and limitations therein contained. The mode of procedure in claiming and perfecting an appeal shall conform, in all respects, as near as may be, to the statutes and rules of court governing appeals in other cases.

SEC. 11. That all papers, reports, evidence, records, and proceedings now on file or of record in any of the Departments, or the office of the Secretary of the Senate, or the office of the Clerk of the House of Representatives, or certified copies of the same, relating to any claims authorized to be prosecuted under this act shall be furnished to the court upon its order or at the request of the Attorney-General.

SEC. 12. To facilitate the speedy disposition of the cases herein provided for in said Court of Claims, there shall be appointed, in the manner prescribed by law for the appointment of assistant attorney-generals, one additional assistant attorney-general of the United States, who shall receive a salary of \$2,500 per annum.

SEC. 13. That the investigation and examinations, under the provisions of the acts of Congress heretofore in force, of Indian depredation claims shall cease upon the taking effect of this act, and the unexpended balance of the appropriation therefor shall be covered into the Treasury, except so much thereof as may be necessary for disposing of the unfinished business pertaining to the claims now under investigation in the Interior Department, pending the transfer of said claims and business to the court or courts herein provided for, and for making such transfers and a record of the same, and for the proper care and custody of the papers and records relating thereto.

And that the Senate agree to the same.

A. S. PADDOCK,

CHARLES J. FAULKNER,

Managers on the part of the Senate.

BINGER HERMANN,

B. W. PERKINS,

SILAS HARE,

Managers on the part of the House.

IN THE SENATE OF THE UNITED STATES.

MARCH 2, 1891.—Presented and ordered to be printed.

Mr. SHERMAN, from the Committee on Foreign Relations, presented the following

Letter from the Secretary of State, transmitting a translation of a joint resolution of the Congress of Brazil expressing the thanks of the people of that country for the joint resolution of the Congress of the United States approved February 19, 1890, congratulating the people of Brazil on their adoption of a republican form of government.

DEPARTMENT OF STATE,
Washington, February, 28, 1891.

SIR: I have the honor to inclose herewith for your information a copy of a dispatch, No. 100, dated the 22d ultimo, from our consul-general at Rio de Janeiro, inclosing the translation of a joint resolution of the Congress of Brazil expressing the thanks of the people of that country for the joint resolution of the Congress of the United States, approved February 19, 1890, congratulating the people of Brazil on their adoption of a republican form of government.

I have the honor to be, sir, your obedient servant,

JAMES G. BLAINE.

Hon. JOHN SHERMAN,
Chairman of the Committee on Foreign Relations,
United States Senate.

No. 100.] CONSULATE-GENERAL UNITED STATES OF AMERICA,
Rio de Janeiro, January 22, 1891.

Hon. WILLIAM F. WHARTON,
Assistant Secretary of State, Washington, D. C.:

SIR: I have the honor to send you the following important inclosures:

(1) The expression of cordial regard to the United States of America for their expression of opinion looking to the maintenance of the republican institutions established in Brazil and the happiness and prosperity of the Brazilian people thereunder; said joint resolutions were passed with tremendous applause during my sitting in the diplomatic gallery.

The death of Gen. Benjamin Cenant, minister of public instruction, is generally deplored. He was a man of great ability, unyielding devotion to republicanism, and of proverbial integrity of character.

(3) The cabinet of ministers have resigned, giving as a reason the passing of the constitution to its second reading, which will, when pro-

mulgated, oblige them all to resign as incompatible; but the real reason is that they refuse to approve a decree granting a guaranty of interest on some millions required by the generalissimo to build a new port, that of Torres in the State of Rio Grande do Sul, and moreover the fact that all the ministers were determined to place bounds to what they call the ambition of Generalissimo Deodoro.

I am proud to recognize and transmit to my Government the fact of a growing sentiment of regard and fraternal feeling on the part of the youngest of all American republics towards the oldest of all. Such indications in future I shall watch with untiring interest.

I have the honor, sir, to be your obedient servant.

O. H. DOCKERY,
Consul-General.

[Translation.]

MESSAGE.

The Constituent Congress of the United States of Brazil, at its first session, opened and effected at the city of Rio de Janeiro, on the 15th of November, in the year 1890, first year of the Republic of Brazil:

JOINT RESOLUTION.

The Senate and the Chamber of Deputies of the United States of Brazil, met together as a Constituent Assembly, have resolved:

To express, by means of this message, in the name of the people of Brazil, to the people of the United States of America, the feelings of gratitude inspired in their breasts by the friendly terms of the highly honorable message of congratulation voted and adopted by the Congress of the United States;

To affirm once again and by the present means the sentiments of union and fraternity which binds the people of Brazil to the American nation, in the earnest desire to maintain and honor the institution of a republican form of government in Brazil, endeavoring to secure by the happiness and prosperity of the Brazilian family the peace and prosperity of all nations.

Let this joint resolution be communicated to the chief of the provisional government in order that it be caused to arrive to the hands of the high representatives of the Government and of the people of the United States of America.

This joint resolution, being submitted to the consideration of the two bodies, met as a constituent assembly on the occasion of the constitution being passed to its second reading, was unanimously adopted.

JANUARY 21, 1891.

A resolution was adopted, amidst a round of applause, that the constitution, as soon as adopted by the Constituent Assembly, should be immediately promulgated by the presiding officer of the same assembly.

The cabinet of ministers resigned yesterday (January 20). Gen. Benj. Constant, minister of public instruction, ex-minister of war, died on the morning of January 22. Benj. Constant was head and shoulders above all as the promoter of republicanism in Brazil.

PURCHASE OF AMERICAN INDUSTRIES BY FOREIGN CAPITAL.

TESTIMONY

TAKEN BY

THE COMMITTEE ON IMMIGRATION

OF THE

UNITED STATES SENATE,

AND

THE SELECT COMMITTEE ON IMMIGRATION AND NATURALIZATION

OF THE

HOUSE OF REPRESENTATIVES,

IN RELATION TO

THE PURCHASE OF AMERICAN INDUSTRIES BY FOREIGN CAPITAL.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.

1891.

IN THE SENATE OF THE UNITED STATES.

MARCH 2, 1891.—Referred to the Committee on Immigration and ordered to be printed.

Mr. CHANDLER, from the Committee on Immigration, submitted the following

REPORT:

The Senate Committee on Immigration and the House Select Committee on Immigration and Naturalization, acting under that portion of the concurrent resolution of Congress of March 12, 1890, which gave authority "to investigate the effect on immigration, and incidentally on American workingmen, which is likely to follow the purchase of American industries by foreign capital," have begun an investigation of the subject and taken some testimony thereon, which is herewith reported to the Senate to be printed.

IN THE SENATE OF THE UNITED STATES

REPORT OF THE COMMISSIONERS OF THE GENERAL LAND OFFICE

FOR THE YEAR ENDING 1880

REPORT

The General Land Office has the honor to acknowledge the receipt of the report of the Commissioner of the General Land Office for the year ending 1880. The report contains a full and complete statement of the business of the office during the year, and is a valuable contribution to the knowledge of the public lands of the United States. The report is divided into two parts, the first of which contains a general statement of the business of the office, and the second of which contains a detailed statement of the business of the office in each of the several departments. The report is a valuable contribution to the knowledge of the public lands of the United States, and is a valuable contribution to the knowledge of the business of the General Land Office.

PURCHASE OF AMERICAN INDUSTRIES BY FOREIGN CAPITAL.

TESTIMONY TAKEN BY THE COMMITTEE ON IMMIGRATION OF THE UNITED STATES SENATE AND THE SELECT COMMITTEE ON IMMIGRATION AND NATURALIZATION OF THE HOUSE OF REPRESENTATIVES, IN JOINT SESSION.

WASHINGTON, D. C., *December 31, 1890.*

The joint committee met at 10 o'clock a. m.

Present: Senators Chandler (chairman), Hale, and Power, and Representative Owen, of Indiana.

The concurrent resolution of the Senate and House of Representatives, adopted March 12, 1890, authorizing the investigation, is as follows:

Resolved by the Senate (the House of Representatives concurring), That the Senate Committee on Immigration and the House Select Committee on Immigration and Naturalization be, and hereby are, authorized jointly to investigate the workings of the various laws of the United States and of the several States relative to immigration from foreign countries to the United States, especially the law of Congress "to regulate immigration," approved August 3, 1882; and also to investigate the workings of the contracts made by the Secretary of the Treasury under said law of August 3, with the various State commissions, boards, and officers; and also to investigate the effect on immigration, and incidentally on American workingmen, which is likely to follow the purchase of American industries by foreign capital; and also to report to Congress the official correspondence on the proposal to make Bedloe's (Liberty) Island, in the harbor of New York, an immigrant depot, what title the Government has to such island, what buildings, if any, are intended to be built on said island, and what officers and employes it is designed to employ thereon in connection with such immigration, and whether, in the opinion of the committees, after investigation, such island is the best and most suitable place for such immigrant depot; the investigation to be conducted at such times and places as said committees may deem proper. And the committees are hereby authorized jointly, as full committees or through subcommittees thereof, to send for and examine persons, books, and papers, and to administer oaths to witnesses.

Adopted March 12, 1890.

TESTIMONY OF CHARLES A. PILLSBURY.

CHARLES A. PILLSBURY being first duly sworn, testified as follows:

By the CHAIRMAN:

Q. What is your name?—A. Charles A. Pillsbury.

Q. Where do you reside?—A. Minneapolis, Minn.

Q. What is your business?—A. I am a flour miller.

Q. State whether or not the mills which you have owned have recently been sold to an English syndicate?—A. They have.

Q. To whom has the conveyance of the mills been made?—A. The conveyance of the mills was made to Carey & Whittridge, of New York.

Q. What is their address?—A. Wall street, New York, over Brown Brothers.

Q. Where is the present title to the real estate and machinery?—A. I think the present title is in a company organized in New Jersey.

Q. Is a majority of the stock in that company owned abroad?

The WITNESS. Do you mean the New Jersey company?

The CHAIRMAN. Yes, sir.

A. I do not know anything about that.

Q. State whether or not the majority control of the property sold is supposed to be owned abroad at this time?—A. Well, if you refer to the New Jersey company, I do not know anything about that. I was away all during the summer when it was done, but I suppose a majority of the stock is owned abroad.

Q. State more distinctly your knowledge as to where the present record title to the real estate is?—A. I think the record title is in the Pillsbury-Washburn Flour Milling Company of New Jersey.

Q. You may state, Mr. Pillsbury, what mills were included in the sale, their number, size, and capacity?—A. The mills which were owned by C. A. Pillsbury & Co., with a nominal capacity of about 10,000 barrels a day, and two mills owned by the Washburn Milling Company, with a capacity of about 3,000 barrels per day.

Q. Where are those mills situated?—A. Four of them are in Minneapolis and one in Anoka, about 20 miles from Minneapolis.

Q. Making five mills in all?—A. Yes, sir.

Q. What is the present total capacity of these mills?—A. The nominal capacity now is about 14,000 barrels; the actual working capacity about 12,500 barrels.

Q. Twelve thousand five hundred barrels, at \$4 a barrel, would be a product of about \$50,000 a day?—A. Yes, sir.

Q. Now you may state the terms and details of the sale of this property, the parties to it, and the consideration, and any other facts that you have no objection to stating?—A. The property was sold in connection with other property, the water-power company, the Minneapolis Mill Company, and the St. Anthony Water-Power Company.

Q. What was included in the sale in addition to the five mills?—A. The property of the St. Anthony Water-Power Company, the Minneapolis Mill Company, and a line of elevators in the country belonging to the Minneapolis and Northern Company.

Q. Give the number and location of those elevators?—A. About 130 elevators, situated along the line of the St. Paul, Minneapolis and Manitoba, now the Great Northern Railroad.

Senator WASHBURN. Also the Atlantic elevators.

The WITNESS. And then some stock in a small elevator company, called the Atlantic Elevator Company, on the Sault Ste. Marie Railroad.

By the CHAIRMAN:

Q. Was there any other property included in the sale?—A. That was the whole of it.

Q. What was the consideration?—A. The total consideration was about \$8,000,000.

Q. To whom was the sale made?—A. The sale was made, as I say, to Carey & Whittridge of New York.

Q. Representing a company to be organized in Europe?—A. As I understand it the English company leases the property and runs it.

Senator WASHBURN. An option was given to a London company?

The WITNESS. Yes, sir; through Carey & Whittridge.

By the CHAIRMAN:

Q. English parties represented by Carey & Whittridge?—A. Yes, sir.

By Senator HALE:

Q. They represented a London company? The negotiations were through Carey & Whittridge representing a London company?—A. Yes, sir.

By the CHAIRMAN:

Q. State more specifically the terms of the sale?—A. The two water-power companies were entirely separate, the Washburn Milling Company was entirely separate, the mills of C. A. Pillsbury and the elevators were all controlled by C. A. Pillsbury & Company, and the stock in the Atlantic Elevator Company was owned by different individuals, and terms were made with the different individuals.

Q. You say the sale was for \$8,000,000?—A. That included \$1,750,000 which was left in the business for cash as working capital.

Q. It was a part of the eight million?—A. It is now in the business as working capital, operating capital.

Q. Now state the terms of the agreement?—A. The Pillsbury mills and elevators were sold for about \$4,200,000.

Q. Was it an absolute and unconditional sale?—A. An absolute and unconditional sale, only that a part of the purchase money was taken in stock of the company.

Q. What was the total stock to be in the new company?—A. Five millions in stock and \$3,000,000 in debentures.

Q. What proportion of the stock and debentures did the Pillsburys take in payment of their property?—A. One million one hundred thousand of stock and debentures.

Q. What was the proportion of stock?—A. That was about one-fourth.

Q. What proportion of the \$1,100,000 was in stock and what proportion in debentures?—A. Six hundred thousand in stock and \$500,000 in debentures.

By Senator HALE:

Q. How was the balance paid?—A. In cash.

By the CHAIRMAN:

Q. What sum was paid in cash?—A. About \$3,000,000.

Q. Now the other properties conveyed—the Washburn mills; do you know the terms of that sale?—A. I do not know exactly. I think the contract for the Washburn mills was for a million dollars.

Q. Mr. Washburn can state that. I only want your impression. What proportion of the eight millions is stock?—A. Five millions.

Q. What proportion of the five millions, as you understand it, is now held in this country and what proportion abroad, or was to be held abroad by the original agreement?—A. I think there is a large amount held in this country that I do not know anything about. Morton, Bliss & Company are large stockholders. I do not know how large.

Q. Did the original agreement provide that a majority of the stock should go abroad?—A. There was nothing said about that.

Q. Was it provided that a majority of the stock should go into the

hands of the new holders?—A. No. We agreed to take a certain amount of stock.

Q. The stock which the old owners received as a part of the purchase money; was that anywhere near a majority of the stock?—A. It was not anywhere near a majority of the stock.

Q. Can you tell whether a majority of the stock is now in this country or in England?—A. I think a majority is now in England, though I do not know exactly.

Q. What was the number of shares and the value of each share?—A. The shares are ten pounds sterling each. That would be a hundred thousand shares.

Q. The value of the shares is expressed in pounds sterling?—A. Yes, sir.

Q. Now, state generally any other conditions of the sale, especially with reference to the future management of the business?—A. I agreed to manage the business for at least 5 years.

Q. On a salary?—A. Yes, sir.

Q. Did the company agree to employ you that length of time? Was it a mutual agreement which binds them to retain you for that length of time?—A. I am under the impression that they do not agree to retain me. I agree to remain.

Q. And they are at liberty to dispense with your services whenever they desire, so far as you understand?—A. I should think so. I have never examined the contract carefully.

Q. You may state now how many men are employed in these mills altogether?—A. About 700 or 800.

Q. State the classes of employés?—A. They are generally high grade men.

Q. What are the names of the different classes of employés?—A. We have the millers, mill-wrights, packers, and we use the general word "roustabout" for all common laborers, and oilers, and machinists.

Q. Please give the wages that you have been paying these different classes of workmen?—A. Our average pay-roll—I made it up two or three years ago—was about \$2.50 a day, but by a system of distribution of profits I remember to have brought that average up to \$3.11 for the 800.

Q. Three dollars and eleven cents each per day for the 800?—A. Yes, sir. Out of about 7 years we divided profits in 4 years.

By Representative OWEN:

Q. Is that system continued under the new arrangement?—A. Yes, sir.

Q. Does the average remain the same?—A. Just about the same with the distribution of profits. That is not a sure thing. It is only in case the company earns it.

By the CHAIRMAN:

Q. Did that system prevail in the mills as conducted by you before the sale?—A. Yes, sir.

Q. And is conducted by the new company?—A. Yes, sir.

Q. State in a general way the nationality of the workmen in your mills?—A. I should think about one-half are native born, and the other half are about the average population of the Northwest—Irish, Scandinavians and Germans.

Q. And your impression is that about one-half of the employés are native Americans?—Yes, sir. I should say one-half are, possibly a majority are.

Q. Have you had any policy heretofore in the employment of men? Have you preferred Americans?—A. We have sought to secure the best men. The only aim has been to get the best men.

Q. And you have employed indifferently men of all nationalities?—Yes, sir.

Q. Has there been any change in that respect?—A. Not the least. In an address of thanks the men tendered to me they called my attention to the fact that there had been hardly any change in the personnel of the mills.

Q. In what period of time?—A. For several years. They said that over 90 per cent. of the men had been there for several years.

Q. Is that not due in part to this system of profit-sharing?—A. Yes, sir; it makes them very loath to leave. They have to stay a certain time to be entitled to that, and if they leave they lose it.

By Senator POWER:

Q. Is that a coöperative arrangement?—A. No, sir. It is a distribution after we have earned a fair interest on the property.

By the CHAIRMAN:

Q. It is a voluntary donation?—A. Yes, sir.

By Senator POWER:

Q. That makes it coöperative in a certain sense?—A. It is voluntary.

By the CHAIRMAN:

Q. It is a system of donation?—A. Yes, sir.

Q. Voluntary profit-sharing?—A. Yes, sir.

Q. You do not consider it a contract with the men?—A. No, sir.

Q. And you make up your accounts on certain principles, for which you are responsible, but in which the men have no legal rights?—A. Yes, sir.

Q. And when you have done that you announce the result?—A. Yes, sir.

Q. Can you tell what amount in percentage was paid in extra compensation?—A. In different years from \$30,000 to \$40,000.

Q. Have you found that that system works well?—A. Very satisfactorily.

Q. Will you now state, if you have not already done so, whether or not there have been any changes made to any extent in the employment of men since the sale to the new company?—A. None whatever.

Q. Has there been any material change in the manner of conducting the business?—A. None whatever.

Q. Was any contemplated in the sale?—A. Nothing that I know of.

Q. Was there any expectation that the class of laborers should be new or different?—A. Nothing of the kind has ever been hinted at.

Q. Has any imported labor been introduced into the mills since the change?—A. Not that I know of; not imported labor. Of course, if there happens to be a vacancy in the roustabouts the foreman hires a man.

Q. There has been no change made as a part of any system or purpose?—A. No, sir.

Q. Will you state, Mr. Pillsbury, in a general way, what were the motives which influenced you and your associates in selling your property to this English syndicate?—A. Why, we were asked to name a price for the property. We named what we thought was a good price.

10 PURCHASE OF AMERICAN INDUSTRIES BY FOREIGN CAPITAL.

We considered, to use a business expression, that we had too many eggs in one basket; we thought we would like to scatter them somewhat.

By Senator POWER:

In other words, you got your price?—A. Yes, sir.

By the CHAIRMAN:

Q. How was the business conducted previous to the sale?—A. By partnership.

Q. Consisting of whom?—A. John S., George A., F. C., and C. A. Pillsbury.

Q. All of the same family?—A. Yes, sir.

Q. In a general way, you had several millions of dollars invested in these mills and the elevator system?—A. Yes, sir.

Q. These elevators were very widely distributed?—A. They were at about every station on the line of the railroad, reaching, perhaps, 300 miles from Minneapolis.

Q. Did you originate the movement to sell the property, or were you requested to name a price?—A. We were requested to give a price.

Q. Now you may state, if you please, what were the motives of the English capitalists who went into this venture in purchasing the property?—A. I suppose, to invest their money in a good investment.

Q. Do you know of any other motive?—A. No, sir.

Q. They believed that they could make more out of their money that way than they could at home?—A. I suppose so.

Q. State the number of directors in the new company?—A. There are seven.

Q. You may state how many are American and how many are English?—A. Four English and three American.

Q. Give the names, so far as you recall them?—A. The English directors are Richard H. Glynn, Sydney J. Klein, John Jackson, and A. H. Rose.

Q. And who are the American directors?—A. The American directors are Senator Washburn, ex-Governor Pillsbury, and myself.

Q. Were your agreements to sell this property in writing?—A. Yes, sir.

Q. The transaction was initiated and consummated as the result of written agreements.—A. Yes, sir.

Q. Were there any essential or important conditions of the sale which were not expressed in writing?—A. Nothing whatever.

Q. There was no oral understanding of any kind which modified the agreement?—A. No, sir; nothing that I know of. It was a pure business transaction.

Q. Do you know whether or not the condition of the workmen of your mills or anywhere else has been in any way varied, or affected, or injured by this change in the manner of doing business?—A. I do not think any man would know there had been a change in the business unless he saw it in the newspapers.

Q. Do you think this property is capable of earning a sufficient sum to make due returns for the money invested?—A. I think it is, if well managed. Everything depends upon the management.

Q. You have already stated, I believe, that no special change in the management was contemplated whatever?—A. None whatever.

Q. How long has the new management been going on?—A. Since a year ago last November.

Q. Have dividends been paid upon the stock?—A. Yes, sir; last September.

By Senator HALE:

Q. Tell us how these mills and property were built up originally, and by whom; take for instance that part of it that your company owned; when were these mills built?—A. We have had fires. We commenced business 21 years ago.

Q. Who commenced?—A. I did. I am the original founder of the business.

Q. You started it in the beginning?—A. Yes, sir.

Q. And you have gone on and increased your plant?—A. Yes, sir; our business increased very rapidly, indeed. I first commenced making only 300 barrels a day.

Q. That mill was owned by you?—A. Yes, sir.

Q. As you amplified and increased your mills you took in your brother and others?—A. I took in my brother, my father, and my uncle.

Q. They are all American citizens?—A. Yes, sir.

Q. And you developed this great property in that way?—A. Yes, sir.

Q. Holding the property and employing men and sharing the profits in this company of yours, which was a company of American citizens?—A. Yes, sir.

Q. And owned by American citizens at the time of the sale?—A. Yes, sir.

Q. So that whatever of the profit there was that was not distributed to the men went to your concern, composed of American citizens. Now the other properties that were involved in that sale, what was their condition so far as you know?—A. The condition was the same.

Q. American men engaged in it and American men sharing and dividing the profits?—A. Yes, sir.

Q. It was an American concern?—A. Yes, sir.

Q. Now was there any arrangement between those different parties; did you have any control over the Washburn mills, or they over you?—A. Not the remotest.

Q. You were competing concerns rather than joint concerns?—A. Yes, sir.

Q. Now, when this property was sold it all made an aggregate and passed under the control of one corporation?—A. Yes, sir.

Q. So that competition ceased to the extent that it existed before?—A. You will understand, Senator, that there are lots of other mills in Minneapolis.

Q. I am not going into that. So far as this property we have been speaking of is concerned, it was put under one control as an aggregate when the sale was made?—A. Yes, sir.

Q. And all of your mills and the Washburn Mills and the elevators made an aggregate?—A. I would like to have you understand that the C. C. Washburn Milling Company, the big concern, is not in it.

Q. I am only referring to the Washburn Mills that came in. So that this business, which represents 8 millions of dollars, is to-day in the control of this company, of which a majority are English capitalists?—A. Yes, sir.

Q. Now the power of that corporation and the directors, as to the method of doing business, or the changes they may make at any time, is, so far as it goes, absolute?—A. Yes, sir.

Q. You are engaged now under that agreement that you have made, assented to for the time being by the directors to conduct the business, but if the majority of the board of directors saw fit to change that to-morrow, you know of no power to hinder it?—A. Well, so far as I am

concerned, I had a clause put in the contract that if I did not like the instructions I could resign at any time.

Q. But there is no power to prevent them from making a change?—
A. No, sir.

Q. Do you know of anything in the agreement or in the present conditions that would prevent the board of directors, a majority of whom are Englishmen, stopping the feature of dividing profits, to an extent, with the workmen, if they chose to do so?—A. They have the same power we had before.

Q. It is the same power you had before in your different corporations?—
A. Yes, sir.

By Senator POWER:

Q. When did you commence distributing profits? Did you start the business in that way?—A. No, sir; we commenced about 8 or 9 years ago.

Q. What was the percentage of increase under the system of profit sharing?—A. I figured it up once at a little over 20 per cent.

Q. The average?—A. Yes, sir.

By Representative OWEN:

Q. I understood you to say, Mr. Pillsbury, that the average daily rates were \$2.50, and under the profit-sharing system they amounted to \$3.11. You began the profit-sharing system about 9 years ago. Have you kept it up to this time?—A. Yes, sir.

Q. And is it now in operation?—A. Yes, sir; when we have profits to divide. We have not had them every year.

Q. When did you make the last distribution?—A. Last September.

Q. This last September?—A. Yes, sir.

Q. Do you know anything of the purchase of slaughtering houses and interests at Hammond, Ind., by an English syndicate?—A. No, sir.

Q. Do you know anything of the purchase of other American industries by English capitalists?—A. Only what I have seen in the newspapers; I have heard of nothing. There is always a lot of rumors that do not amount to anything, and this is especially true of a year ago when these things were going on pretty lively. You could hear almost every day of some industry being sold out.

Q. You have no information beyond the newspaper reports?—A. No, sir; I have had nothing to do with any negotiations.

By the CHAIRMAN:

Q. Have distinct cases come to your knowledge even by hearsay?—
A. I think I know of Frank Jones, the same as you do.

Q. Frank Jones I have heard of; there may be others out West. Take the Otis Steel Company.—A. I have seen it mentioned in the papers that they had sold out, as also some elevators in Chicago.

Q. You have a general knowledge of what is going on. You made this sale of 8 millions of property, and if any large transactions in this or other industries have taken place you know about them?—A. There has been a sale of elevators up in the Northwest called the Vandusen system of elevators.

Q. Where are they located? Particularize about them.—A. The headquarters are at Minneapolis.

Q. Who is the person in charge of those elevators?—A. Mr. George W. Vandusen, of Rochester, Minn.

Q. That is one piece of information. Now give us another.—A. There are some elevators in Chicago which have been sold.

Q. Can you give the names?—A. I think the manager is P. B. Weare.

Q. Of Chicago?—A. Yes, sir.

Q. Now state in a general way any other cases of which you have heard?—A. The Otis Steel Works I do not know anything about.

Q. You have heard they were sold?—A. Yes, sir; that is all I remember.

Q. Have you not heard of some breweries being sold?—A. Yes, sir; but I can not remember them.

Q. You undoubtedly know of flour mills?—A. I know of no other flour mills which have been sold.

Q. State, if you please, about other flour mills. I omitted to ask you about other flour mills in Minneapolis and in Minnesota. What other large flour mills are there?—A. The largest flour concern is the C. C. Washburn Milling Company.

Q. How many mills have they and what is their capacity?—A. They have a capacity of 7,000 or 8,000 barrels a day.

Q. Who owns them and who manages them?—A. The heirs of C. C. Washburn own them and they are managed by the Washburn-Crosby Company.

Q. Has Senator Washburn any interest in those mills?—A. I think Senator Washburn has a small interest—quite small.

Q. What other mills are there?—A. There are probably a dozen other mills in Minneapolis, with a capacity of possibly 14,000 or 15,000 barrels a day.

Q. Making a total capacity for Minneapolis of how much?—A. With a nominal capacity of about 35,000 barrels.

Q. What is the population of the city?—A. The Census gives us but 167,000 or 168,000.

Q. Give us the names of other flour mills of magnitude in Minnesota?—A. I think the mills, large and small, of Minnesota, of all kinds, might have a capacity nearly as large as those in Minneapolis.

Q. Minneapolis has one-half of the whole State?—A. Probably more than one-half.

Q. Are there any other large concerns in the State?—A. None outside of Minneapolis.

Q. Is there a place near Minneapolis called St. Paul?—A. Yes, sir.

Q. Do you know the population of St. Paul?—A. I know what the Census says.

Q. What is that?—A. About 132,000 or 133,000.

Q. Have they any flour mills of any size?—A. Only one, and that quite a moderate-sized one.

Q. They have no water power at St. Paul proper?—A. No, sir.

Q. I understand you to say that you know of no sales of flour mills to English syndicates outside of Minneapolis?—A. No, sir.

Q. Nor in this country?—A. No, sir.

Q. So that no monopoly has been created in the manufacture of flour, except to the extent which the combination of mills which produce 12,000 barrels would create?—A. No sir. I think there are thirty or forty thousand flour mills in the country.

Q. Possibly you have in mind the annual product?—A. The product of the flour mills in the United States is nearly 75,000,000 barrels.

Q. A year?—A. Yes, sir; probably the largest industry, not excepting iron.

By Senator POWER:

Q. You say the manufacture of flour is the largest industry in the United States, not excepting iron?—A. Yes, sir, I think so.

By the CHAIRMAN:

Q. Where were you and Mr. George A. Pillsbury and Mr. John S. Pillsbury born?—A. In New Hampshire.

At 12 o'clock m. the joint committee adjourned to meet at the call of the chairman.

WASHINGTON, D. C., *January 26, 1891.*

The committees met in joint session at 10 o'clock a. m.

Present: Senators Chandler (chairman), Hale, Power, and McPherson, and Representatives Owen, Lehlbach, and Oates.

TESTIMONY OF FRANK JONES.

FRANK JONES, being duly sworn, testified as follows:

By the CHAIRMAN:

Q. Where do you reside and what business do you now follow?—A. I reside at Portsmouth, N. H.; am engaged in manufacturing, railroads, hotels, and banking. I am the manager of the Frank Jones Brewing Company, of Portsmouth, N. H., also of the Bay State Brewery, at South Boston, formerly owned by Jones, Cook & Co.

Q. By whom are those breweries now owned?—A. They were disposed of in London.

Q. And in whom is the title now?—A. The titles are in the names of trustees, who hold the same for the benefit of both American and European shareholders; of the European shareholders I believe the list comprises more than 5,000 names, of whom a large proportion are holders in Ireland of a small number of shares each. I and my former copartners in the brewing business and my friends in Boston still hold about one-half of the total capital of the company as now organized.

Q. It is owned in Great Britain by individuals or a corporation?—A. By a corporation.

Q. State as accurately as you can how the record title of the real estate in Rockingham County now stands.—A. I could not tell you. The deeds were recorded and are not in my custody. I never had anything to do with the drawing of the papers.

Q. Is the record title to the real estate in an incorporated company, and is that company incorporated under the laws of Great Britain?—A. No; in names of American citizens who are trustees for the shareholders.

Q. And now state more accurately the name of that company as you understand it.—A. The Frank Jones Brewing Company, limited.

Q. Did you before the conveyances were made take legal advice as to whether or not a British corporation could take this title to the real estate and other property?—A. I think there were trustees appointed to hold the property until the corporation had a legal right to hold it.

Q. State whether the title is now in the trustees or in the corporation.—A. I could not say.

Q. Do you mean to say, Mr. Jones, that you do not know whether the title of this property is in the corporation or in the trustees for the corporation?—A. Well, I said I could not say. I think it is in the trustees, if my memory serves me right. I have not looked it up.

Q. You do not know whether the trustees have conveyed it to the corporation?—A. No, sir.

Q. Was the transfer made under legal advice?—A. Yes, sir.

Q. Will you state the names of the trustees to whom the title was conveyed?—A. I could not do so here. I have some papers which I left at home which I suppose will be here at 11 o'clock. I thought they would get here early this morning.

Q. Give us your best recollection as to who they were and whether they were English or American trustees.—A. I think they were American trustees.

Q. State the names.—A. I could not do that, Senator; I can give them to you later.

Q. Can you remember any of them?—A. I do not think I could give them to you accurately.

Q. Name one of them, if you please.—A. I could not name one of them. I can give them to you after a while.

Mr. Jones subsequently furnished the names above referred to, which are as follows :

Frederick Jessup Stimson, Louis Curtis, John M. Graham, all of Boston, Mass.

Q. Now, state, if you please, when the conveyances were made.—A. March 1, 1889.

Q. Describe the breweries conveyed, including all the property that went to the trustees.

The WITNESS. Well, what do you mean; the number of feet?

The CHAIRMAN. State the number of breweries; how many there were?—A. Two.

Q. The Portsmouth brewery and the South Boston brewery?—A. Yes, sir.

Q. Those were all?—A. Yes, sir.

Q. Describe the Portsmouth brewery, giving its capacity and the number of men ordinarily employed—giving the number of men employed at the time you sold it.—A. I sold it just about the time my new brewery was completed. The capacity at Portsmouth, as run, is about 400 barrels. The 400 barrels is the amount of one brewing, and the brewery is so arranged as to make four brewings per day, making a total capacity of 1,600 barrels in 24 hours. The capacity of the South Boston brewery is about 400 barrels.

By Senator MCPHERSON:

Q. The capacity of the South Boston brewery is 400 and that of Portsmouth is 1,600 barrels daily?—A. Yes, sir; I have two breweries in one at Portsmouth, but they are not run to their full capacity.

By the CHAIRMAN:

Q. At Portsmouth?—A. Yes, sir; so that I can run every day to a smaller number if I want. I can make 100, or 150, or 400 barrels a day, or 1,600, as stated. The Portsmouth output ordinarily is 400 barrels and at the South Boston brewery it is 200 barrels.

Q. Six hundred to 650 barrels a day for both breweries? What is the ordinary selling price or value of your product daily at its maximum capacity?—A. I do not know, sir, that that is a question which it is fair for me to answer.

The CHAIRMAN. The committee does not want to pry unnecessarily into your business, but we want to get an idea of the gross amount of the business you do.

Senator MCPHERSON. The witness has given you the gross amount of the business; the capacity of his works and the output is limited only by the demand from day to day. Now, I do not under-

stand that it is the province of this committee to investigate a man's private business and have him tell you how many barrels of beer he makes every day, what he pays for his malt, and what he sells his beer for.

The CHAIRMAN. I do not mean in the execution of the instructions of the Senate and the House to make improper inquiries; but the size of your business, the amounts received and paid out are certainly competent and pertinent questions.

Senator MCPHERSON. I suppose this is more a question of labor than anything else. We as a committee are not taking statistics of the beer business of the country, and I suppose you have not subpoenaed very many manufacturers of beer to come before the committee, have you?

The CHAIRMAN. Only Mr. Jones.

Senator MCPHERSON. I have had no notice of anybody else. I saw from Mr. Pillsbury's testimony that he volunteered to come here and make such statements as he was willing to make. Now, I do not think that Mr. Jones ought to be investigated and cross-examined about the details of his business. He is perfectly willing, as I understand, to give you a general idea as to the capacity of his breweries and how many laborers are employed and the pay they receive and all that.

The CHAIRMAN. Mr. Jones, of course, will object to any question that he does not care to answer. It can not be inferred from that that there is any special reason why he does not want to answer; but I think it is our duty to ascertain the general facts in this case, and I shall ask the question now. Perhaps he will not object to it.

What is the average number of employes in each of the breweries?

The WITNESS. I have not the statistics as to the Bay State brewery. I do not know whether you have the information or not, have you, Major (to his private secretary)?

Mr. GAFFNEY. No, sir; I have not. I think Mr. Hanscom gave it in his letter.

The WITNESS. I can answer as to Portsmouth brewery for 1888 and 1889. Men employed in malt house during 1888, 28, at \$45 per month, 2 foremen, at \$80 per month. Men employed in brewery, 110, at from \$40 to \$75 per month. Monthly pay roll in March, 1889, which is the time of the sale, including the salary of men and clerks, \$7,500. The average number of employes in the Bay State is 40 to 50 men, and paid same as at Portsmouth.

By Senator MCPHERSON:

Q. That is the monthly pay roll?—A. Yes, sir.

The nationality of the men employed at that time in Portsmouth brewery was as follows:

American, 15; naturalized of Irish and English origin, 90; other foreigners, 33.

The monthly pay roll for March, 1890, was \$8,000. The number of men employed was 170.

By the CHAIRMAN:

Q. Now, have you the same figures in reference to the South Boston brewery?—A. I have not. Major, have you them?

Mr. GAFFNEY. No, sir; I have not.

By the CHAIRMAN:

Q. The figures of a similar kind as to South Boston would be about one-half?—A. I think they would.

Q. Generally speaking, the capacity of the Portsmouth brewery is

twice that of the South Boston Company?—A. More so. We have two malt houses in Portsmouth and only one at South Boston.

The monthly pay roll for July, 1890, at Portsmouth, was \$8,700; the number of men was 175. The nationality of these men was as follows: American, 20; naturalized, 120; foreigners, 35—Irish, English, and Swedes.

Monthly pay roll at South Boston, including salary of men and clerks, is about \$2,500.

Nationality of men: Fourteen Americans, 25 Irishmen (15 naturalized, 10 not naturalized), 1 German, 2 Englishmen, 1 Swede, 1 Scotchman, all naturalized.

The CHAIRMAN. I will now put in the record the letter written by me to Mr. Jones dated the 31st of March, 1890.

UNITED STATES SENATE,
Washington, D. C., March 31, 1890.

SIR: On the 12th instant Congress authorized the Senate Committee on Immigration and the House Committee on Immigration and Naturalization jointly to investigate the effect on immigration, and incidentally on American workingmen, which is likely to follow the purchase of American industries by foreign capital. I send you a copy of the resolution ordering the investigation.

It has been suggested to the committee that you have been connected with the purchase by foreign capital of American industries, namely, certain New England breweries. The object of this letter is, in the name of the committee, to ask you to furnish as soon as practicable a full statement of the transaction. The committee desires to know how much foreign capital has been invested in the industries; what are the extent and value of the industries; what were the terms of the purchase; how the industries are conducted, whether by private individuals or by a corporation or corporations; where the business is done; how many persons are employed in the industries, and what are their nativities and present citizenship, and what is the schedule of the various wages paid. The committee take it for granted that you will prefer to furnish a full statement covering the whole history of the business prior to testifying as a witness before the committee, and an opportunity is therefore given you of submitting the same, of which the committee do not doubt you will at once avail yourself.

Please acknowledge the receipt of this letter by return mail naming a date on or before which you will furnish the information desired.

Yours, truly,

WILLIAM E. CHANDLER,
Chairman of the Senate Committee on Immigration.

Hon. FRANK JONES,
Portsmouth, N. H.

In answer there was received the following letter from J. V. Hanscom, treasurer, dated Portsmouth, April 8, 1890.

OFFICE OF THE FRANK JONES BREWING COMPANY,
Portsmouth, N. H., April 8, 1890.

Hon. W. E. CHANDLER,
United States Senate, Washington, D. C.:

DEAR SIR: Your communication of March 31, relating to the affairs of this company and addressed to one of its directors, was duly received. I also have before me, by your kindness, the resolution adopted March 12, 1890, in regard to the investigation of the various laws, Federal and State, relative to immigration and naturalization, and also in regard to the proposal to make Bedloe's Island, in the harbor of New York, an immigrant depot, and to examine its title. Under this resolution, as chairman of the committee, you propound certain questions, which by answering may throw light on the subject that you have under consideration, but which I think a little remote. Anything that this company could do to enlighten or make easy the duties of your committee in the investigation before them would be done with pleasure. You say it has been suggested to the committee that certain brewery industries have been purchased by foreign capital, and ask that a full statement of the transaction be furnished, under the terms of the resolution, for the information of the committee.

The organization of the Frank Jones Brewing Company and the amount of its property are matters of public record, and it can not be, from the terms of your resolution, that your inquiry was intended to go beyond this limit. Concerning the

18 PURCHASE OF AMERICAN INDUSTRIES BY FOREIGN CAPITAL.

management there is practically no change, as the former owners are the managing directors, and I am not aware that there has been any change in the employes, many of them having worked in the breweries and malt houses for years. They are nearly all citizens of the United States, and native born, their wages ranging from \$40 to \$75 per month. The company employs about 200 men, which at some seasons of the year may be increased or diminished in number.

As an act of courtesy to one of our New Hampshire Senators I am pleased to furnish this information, but I think it no more germane to the matter of inquiry as authorized by the resolution under which your committee acts than would be the 119th Psalm.

If I can aid you further it will afford me pleasure.

Very respectfully,

J. V. HANSCOM,
Treasurer.

By Senator MCPHERSON:

Q. This is the treasurer of the Frank Jones Brewing Company? A. Yes Sir.

The CHAIRMAN. I then wrote to Mr. Jones on April 14 a letter, which I will read:

UNITED STATES SENATE,
Washington, D. C., April 14, 1890.

SIR: In reply to my communication, addressed to you, of March 31, asking information concerning the purchase by foreign capital of certain New England breweries, I have to say that the letter which I have received from J. V. Hanscom, treasurer, dated at the office of the Frank Jones Brewing Company, Portsmouth, April 8, 1890, is not satisfactory. Not only does it fail to give the information desired, but it is hardly courteous, although claiming to be so.

I inclose you another copy of the resolution under which the committee is acting, and have to request you to appear before the committee and testify in Washington as a witness concerning the subject-matter of the inquiry directed by Congress. Please inform me how soon it will be convenient for you to attend.

Respectfully,

W. E. CHANDLER.

Hon. FRANK JONES, *Portsmouth, N. H.*

Mr. Jones replied under date April 17, 1890, as follows:

BOSTON AND MAINE RAILROAD, PRESIDENT'S OFFICE,
Boston, April 17, 1890.

Hon. W. E. CHANDLER,
U. S. Senator, Washington, D. C.:

DEAR SIR: I am in receipt of your favor of the 14th instant, accompanied by a resolution under which your committee is acting, and requesting my appearance to testify in Washington as a witness concerning the subject-matter of the inquiry directed by Congress. As it will subject me to great inconvenience and injury to make a trip to Washington, I would ask if you can not furnish me a list of questions such as you would require me to answer and save me the time and inconvenience of going to Washington. If your command is imperative, I shall arrange my business to leave at as early a day as possible.

Awaiting your pleasure, I remain, very respectfully,

FRANK JONES.

April 21, 1890 I wrote Mr. Jones as follows:

UNITED STATES SENATE,
Washington, D. C., April 21, 1890.

DEAR SIR: Yours of April 17 is at hand. It is not the desire of the committee to submit you to any inconvenience or to insist upon your coming to Washington unnecessarily.

Referring to my first letter, you will find indicated there the information which we desire from you, and which, I take occasion again to say, I have no doubt you will gladly furnish.

Very respectfully,

WILLIAM E. CHANDLER,
Chairman of the Senate Committee on Immigration

Hon. FRANK JONES.

Here is the reply to that, dated April 29, 1890 :

BOSTON, *April 29, 1890.*

Hon. W. E. CHANDLER,
U. S. Senate, Washington, D. C. :

DEAR SIR: Your favor of the 22d instant came duly, in which you refer to your letter of March 31, and say that the information your committee desires is indicated therein. Referring to said letter I will reply first: The sale of my brewery premises (at Portsmouth, N. H.) and the one of Jones, Cook & Co., at South Boston, was effected to date from March 1, 1889, the deeds of warranty made to Frederick Jessup Stimson, Louis Curtis, and John M. Graham, all of Boston, Mass., as trustees for the Frank Jones Brewing Company, Limited, a corporation established under the laws of the Kingdom of Great Britain. The foreign capital at present invested in the industries is about \$2,000,000; the extent and value of the industries is estimated at from 2 to 3 millions. This consideration covered the good-will of my business, which had taken 30 years to build up, and which I considered of far greater value than the real and personal property described in deeds of sale. The terms of the purchase were specified payments of cash and securities, with an agreement to conduct the business for 3 years, under which agreement the business is now conducted by me. One hundred and fifty to 200 men are employed at the works, their wages ranging from \$40 to \$75 per month, all of which, or nearly all, are Americans by birth or naturalization, the majority of Irish origin. There has been no change whatever in the management of the business nor in the help since the transfer of the property.

I am, sir, very truly, your obedient servant,

FRANK JONES.

By the CHAIRMAN:

Q. When you speak of barrels, what size barrels do you refer to?—

A. Thirty-one and one-half gallons to the barrel, sixty-three to the hogshead, beer measure.

Q. Now you may state, if you have no objection, having reference to the time when you made this sale, what the value of the annual output was estimated to be?—A. In 1881 our production was 129,600 barrels at Portsmouth, and it has been steadily increasing up to and including 1889, which shows a production of 247,500 barrels. During the time the workmen's pay has been increased from \$10 to \$15 a month.

By Senator HALE:

Q. Each workman?—A. Yes, sir.

The CHAIRMAN. You may now go on and give such statistics of this business as you are willing to give, and if we want any more we will ask for them. There certainly can be no objection to that.

By Senator MCPHERSON:

Q. Let me call the attention of Mr. Jones to this: Your output is far less in proportion than your capacity to manufacture?—A. You understand I built this new brewery. I was two years building it. I did not get into it until about the time I sold the business. I made two breweries into one. If I had a small trade I could run one; I could run one or both, and do it more economically.

By Senator HALE:

Q. You have never come up to your full capacity?—A. No, sir.

By the CHAIRMAN:

Q. Can you furnish us other statistics which you are willing to give?—A. I have not the sales of Jones, Cook & Co.

Q. At South Boston?—A. At South Boston. I can give them to you if you want them.

By Senator HALE:

Q. The figures which you have given, then, apply only to Portsmouth?—A. Yes, sir.

Senator HALE. Mr. Jones might get those figures and put them in afterward.

The WITNESS subsequently furnished the following information: Sales of South Boston brewery 29,886 barrels for year ending December 31, 1890.

By the CHAIRMAN:

Q. What are the latest figures you have given as to the output?—The year is not out. The latest that I have given you is up to February last.

Q. February, 1890?—A. Yes, sir.

Q. Do the figures which you have given indicate an increase of manufacture since March, 1889, when you sold your business to the foreign company?—A. The manufacture increased last year, but it will not this year, for the reason that there were a great many towns which did not vote to license, so that I think there will be some falling off this year.

Q. There was an increase for the first year after the organization of this company, but during the last year you think there has not been a further increase?—A. No, sir; I do not think there has been.

Q. Now you may state, if you please, the annual value of the product in round numbers of your Portsmouth brewery?—A. A million and a half dollars a year for the Portsmouth brewery. The output for that brewery in round numbers might be called \$1,500,000 a year.

Q. Having reference to the output at the South Boston brewery the annual value of the product there would be how much—a third of that sum, \$500,000?—A. I should think it would.

Q. You may state, Mr. Jones, if you please, what were the terms of the sale of these two breweries to the Frank Jones Brewing Company, what was the contract as you remember it?

The WITNESS. Would that come under the supervision of your committee?

The CHAIRMAN. I ask that question—what price you sold for and what were the terms of the sale?

The WITNESS. It is all a matter of record. It has been published in the papers.

Senator MCPHERSON. Mr. Chairman, I have read in the newspapers, until I am entirely confused about the whole matter, different statements concerning it. I have heard some extraordinary statements made, and I have heard others mentioned again afterwards which were more reasonable. Now I do not know why Mr. Jones should state how much he got for his property. I want to know, after learning from Mr. Jones the output of beer from his factory, the capacity of his factory, the amount of labor he has employed, whether they were natives or foreigners, the amount of money he has paid to them, and all that sort of thing. I want to know if this committee have a right, or if it is reasonable or even respectful for us, to follow Mr. Jones like a sleuth-hound and find out, after he has stated to whom he sold, exactly what he got for it and all that, whether he got the price in silver dollars or gold dollars or how he got it. Now, it does seem to me as though that is beyond what should be the limit of this investigation—certainly of everything that can concern this committee. Of course, I do not object to Mr. Jones giving every particle of information you ask for, if he is willing to do it, but I suppose Mr. Jones would like to know what he is obliged to answer with respect to this investigation.

The CHAIRMAN. I suppose, Senator McPherson, in order that an issue

may be made here, if it is desired to make one, that Mr. Jones should either answer or decline to answer any question which is put to him, and then the question will come before the committee as to whether he should be required to answer it. I do not undertake to determine any of these questions myself beforehand. I have not so undertaken, but have endeavored to put such questions as seem to me to be pertinent.

The language of the resolution, which I will put into the record here, is:

That the Senate Committee on Immigration and the House Committee on Immigration and Naturalization, be, and hereby are, authorized jointly to investigate * * * the effect on immigration, and incidentally on American workingmen, which is likely to follow the purchase of American industries by foreign capital.

If Mr. Jones does not object to any question, then there is nothing before us to decide. If Mr. Jones does object, we have an opportunity to consider whether or not we shall require him to answer.

Mr. MCPHERSON. Mr. Chairman, you have already asked him the question as to what effect the sale had on the labor employed in the brewery, and Mr. Jones has said, if I understand him rightly, that there has been an increase of wages since the transfer of this property; that there has been a gradual increase in the wages, as there has been an increase in the output of beer. He stated the amount of wages paid to these laborers per day. Now, it does not seem to me that the resolution covers any more than he has already answered in that direction.

The reason I interpose my inquiry, or objection, if you may call it one, is this: I do not know but that Mr. Jones feels that he is obliged to answer every question which may be asked him here, and I do not want him to believe for an instant that so far as I am concerned I would consent to questions being propounded to him which were not relevant.

Senator HALE. It seems to me that what Mr. Jones has stated in his letter of April 14 is about the thing we are seeking to get here, that the amount of foreign capital invested now in this property is nearly \$2,000,000.

The CHAIRMAN. And the value between two and three millions.

By Senator HALE:

Q. Now, Mr. Jones, have you any objection to answering this question: Is the property to-day about the same as it was when these foreign capitalists made their investment, or have they added largely to or reduced the plant?—A. We have not added the least.

Q. It is about the same?—A. Yes, sir. My second brewery was not quite finished when the sale was made and I completed some little things inside. You must remember that the price received was not for the plant alone, but it was for my trade-mark and my business.

The CHAIRMAN. You state that very distinctly in your letter.

By Representative OATES:

Q. I wish to know what property was included in the sale, whether any real estate was included?—A. Yes, sir.

Q. How much?—A. I think there are about 17 acres in Portsmouth, and I should think in South Boston—well, that is something I could not tell you—an acre, or an acre and a half, or 2 acres.

Q. What was the value of the real estate separate from the business?—A. The South Boston real estate was very valuable, as was also that at Portsmouth.

Q. About how much was it worth?—A. I do not carry those things in my memory.

By Senator HALE :

Q. Your sale included the business and everything?—A. Yes, sir; even the horses and wagons.

By the CHAIRMAN :

Q. And the good will?—A. Yes, sir; I think there are some 17 or 19 acres in Portsmouth.

Representative OATES. I do not ask you for an accurate estimate of the value of the real estate, just a rough estimate.

Senator HALE. You mean without the buildings?

Representative OATES. Of course the buildings on it would go with the real estate.

The WITNESS. The buildings are the important part, certainly in Portsmouth.

By Representative OATES :

Q. A good many other things entered into the trade, as I understand it?—A. Yes, sir.

Q. I want to know just your estimate of the value of what is comprehended in the term "real estate," the grounds and the improvements?—A. That would be pretty hard work to state. It would be very difficult to state the value under the present laws we have. If we could not manufacture it would be a very small sum. If we can, it would not be.

The CHAIRMAN. In other words, you do not undertake to separate the value of the plant from the business itself, because it would be of comparatively limited value separated from the business, and you have no idea what it would produce for other uses?

Senator MCPHERSON. Unfriendly legislation would make it comparatively valueless.

The CHAIRMAN. Mr. Oates would like to get at the value of the property for any general purpose.

Representative OATES. Yes, sir. In order that both the witness and the committee may understand my point, I will say that I have a bill pending in the House, favorably reported by the Judiciary Committee—a subject I have worked on a great deal—to put some restriction upon the alien ownership of real estate. I have all the time been collecting such information as I could as to the extent of the alien ownership of real estate in this country. That is all. I merely wanted it for information.

The CHAIRMAN. Mr. Jones has given you the information; has described the property. I can see that it is very difficult to put a value on it.

Representative OATES. I will not press the question.

The CHAIRMAN. I understand it is in order for any member of the committee as well as the witness to object, but I will ask this question: What were the terms and conditions of your sale of these breweries to the trustees for the English company, as you remember them?

The WITNESS. I would ask, Mr. Chairman, if that comes under the jurisdiction of this committee?

The CHAIRMAN. I understand it to be a competent and necessary inquiry in order to execute the instructions of Congress under this resolution. I do not see how the committee can form an opinion for Congress as to the expediency of allowing such transfers of property to foreign hands without knowing the terms of a great contract like this.

Senator McPHERSON. Mr. Chairman, this property was deeded, as I understand, to trustees who are American citizens.

The CHAIRMAN. For the benefit of an English corporation.

Senator McPHERSON. Suppose it were for the benefit of an English company. The title is in the hands of the trustees. The corporation may dissolve at any moment. The stock may be held by citizens of the United States. Of course stock is being continually transferred. I can cite an instance in my own State where the stock was taken by an English syndicate, and the stock has been transferred back until to-day I think 75 per cent. of it is held by American citizens. Now how are you going to trace a certificate of stock? How are you going to know whether it is an English stockholder or who it is?

The CHAIRMAN. That question has not arisen.

Senator McPHERSON. I understand. I am leading up to it, and I repeat I do not think it is necessary or reasonable to compel a witness to answer all of these questions which affect his private business and private affairs and nobody else.

The CHAIRMAN. How do you conceive that the committee can execute these orders of Congress? It is to investigate the purchase of American industries by foreign capitalists. Now, we have here a transaction involving several millions of dollars, a conveyance to three American trustees for a corporation asserted to be organized under English law. I ask what are the terms of that sale. Now, if we can not ascertain the amount and the general features of that sale, why we can not go on with the investigation.

Senator HALE. The committee asked Mr. Pillsbury the same questions, and he stated that while he did not volunteer the information, he told us generally the terms of the sale as he remembered them.

The WITNESS. All this has been published in the papers.

By the CHAIRMAN:

Q. Then you have no objection to giving it to the committee?—A. The terms of the sale were \$6,300,000.

The CHAIRMAN. Do you object further, Mr. McPherson, to anything the witness is willing to answer?

Senator McPHERSON. I object to an investigation which I think is entirely outside the spirit and letter of the resolution. I object to interfering with or trying to pry into a man's private affairs when it seems to me we do not need any such information. It is not necessary for the object and purpose of the investigation. We know that British capital is interested. To what extent, whether to the extent of a hundred dollars, or \$100,000, or \$5,000,000 is immaterial.

Senator HALE. Suppose, Mr. McPherson, as a citizen of the United States, he had sold a thousand acres on the Pacific coast to the British Government. That is his private affair. Could we not ask him what he got for that?

Senator McPHERSON. That is entirely different. That might be something which would be a menace to the United States. That would be property owned by a foreign government and which must be used for governmental purposes. From time immemorial British capital and French capital and German capital have been coming to this country seeking investment. It will always continue to come. They are seeking investments in those industries which promise the largest returns. It does not seem to me as though an honorable committee of Congress should undertake to investigate a man's private affairs, especially as he is dealing with private individuals. That is practically what this is.

The CHAIRMAN. Then you understand that under this resolution, when we find that property has been sold to English people or to any other foreigners, we must stop there and not ask the terms of the sale?

Senator MCPHERSON. When the stock is sold to foreigners I should say so by all means. If people outside the United States want to come here with their money and go into partnership with me in my business I should say it is no concern of Congress.

The CHAIRMAN. I say that is for Congress to determine.

Representative OATES. I understand the witness is willing to answer the question.

Senator HALE. This has been in the newspapers, as the witness states. I can not see why he should have any objection to stating it as nearly as he can recollect, inasmuch as it has been in the newspapers.

The WITNESS. It was not the value of my property alone. It was the value of my trade-mark.

By the CHAIRMAN:

Q. State the additional terms of the sale. You have given the price. State how it was paid, to whom it was paid, by whom it was paid, and what the present ownership of the Frank Jones Brewing Company, Limited, of London, in the stock is?—A. In the first place, this was put upon the market in London and was floated, and I think a majority of it was taken over there.

Q. How much were you paid for the two breweries and the plant that you conveyed to the trustees?—A. I say I received \$3,300,000.

Q. In what?—A. In stock and cash.

Q. State the proportions?—A. I think it was 54 per cent. in cash and the balance in stock.

Q. What was the capital of the company as it was placed upon the British market?—A. Six million three hundred thousand dollars was what I received.

Q. You mean you received the whole of it?—A. I took so much of the stock.

By Senator HALE:

Q. You received stock and money?—A. Yes, sir; that was the value of the plant and the trade-mark.

By the CHAIRMAN:

Q. Was the title to this property entirely in you and your partners?—A. Yes, sir.

Q. You and your partners received for the two breweries \$6,300,000 in cash, stock, and bonds?—A. In cash, stock, preference shares, and bonds.

Senator HALE. Of which 54 per cent. was in cash and the balance in stock?

By the CHAIRMAN:

Q. How much was in cash?—A. Fifty-four per cent.

Q. Was any stock issued except what you received?—A. I received so much in bonds and so much in cash.

Q. Did you receive all the bonds that were issued?—A. Oh, no.

Q. What I wanted to get at is what you retained as representing the interest which you own, and how much was put upon the London market?—A. It was all put upon the London market.

By Senator HALE:

Q. Six million three hundred thousand dollars?—A. Yes, sir; that is what it was quoted at.

By the CHAIRMAN:

Q. Be a little more specific and distinguish what you received and what was put upon the market by the promoters of the enterprise in London?—A. The whole thing was put upon the market in London.

Q. The whole \$6,300,000, either in bonds or stock, was offered for sale in the London market?—A. Subscriptions were received for the stock. I received so much money. I subscribed for stock. I had the privilege of taking so much for my friends in America.

Senator HALE. I understand Mr. Jones's first statement covers that. It was all capitalized at \$6,300,000 and put upon the market. He took 46 per cent. in stock and 54 per cent. in cash. The per cent. in cash he received was paid in by those who have the stock.

The CHAIRMAN. It was the proceeds of the sale of the securities?

By Senator McPHERSON:

Q. Do I understand that you were a subscriber to this stock in common with others?—A. Yes, sir.

By the CHAIRMAN:

Q. Now you may state, if you please, what proportion of the stock you retained under the original agreement?—A. I think some half million dollars. A majority of the stock was taken in the United States.

Q. I am asking you how much of the stock you retained?—A. I think somewhere about half a million.

Q. What was the capital stock which controls the management of the company, what was the amount of that?—A. I think it was about \$2,000,000.

Q. How much of that did you receive or retain under the original contract?—A. I think I received of that about half a million. It was taken and divided among other Americans.

Q. By the original arrangement you understand that a majority of that half a million stock was taken in America?—A. There was no arrangement about it.

Q. There was no agreement?—A. No, sir; nothing whatever.

Q. You understand that besides the half million you took the representatives of the English parties had the right to take the rest abroad if they pleased, transferring the control of the business to the foreign owners?—A. A majority of the stock was subscribed in America.

Q. Was that a part of the original agreement?—A. Yes, sir; I would not sell it any other way.

Q. Unless a majority of the stock remained in this country?—A. Yes, sir.

By Senator HALE:

Q. So far as you know—I think this is the nub of the question—is a majority of the stock of this new company, to whom the property was transferred, held to-day by American citizens?—A. It was on the last day of last February.

Q. There has nothing occurred to your knowledge to change that proportion?—A. No, sir.

Q. You believe that a majority of the stock is held in the United States?—Yes, sir; I know it was a year ago.

By the CHAIRMAN:

Q. The \$4,300,000 of bonds, debentures, or whatever you may call them, are all owned abroad?—A. More than 35 per cent. of these were taken and are held in America.

Q. None of it or to any amount at least is held in this country?—A. Yes; about 35 per cent.

Q. So that the present state of the case is, that the securities are owned abroad, stock to the extent of about \$2,000,000 a majority of it, now being held in this country.—A. My last two answers as amended I think answer this question.

Q. Was it agreed at the time that your ownership should be limited to \$500,000?—A. There was no agreement at all. When I made this trade I would not dispose of the property unless I could control it for a certain length of time.

Q. What amount of stock do you now own?—A. I own what I have always.

Q. A half million or thereabouts?—A. Thereabouts.

Q. Do you control any more than the amount which you own?—A. No man controls anything he does not own.

Q. Have you bought, either directly or indirectly, any more than you originally held?—A. Yes, sir.

Q. Now you may state what arrangements were made, and upon which you insisted, by which you were to retain control of the property to which you have alluded?—A. Various parties on the other side were after this property for 2 years before I sold it. I would not sell unless I could control a majority of the stock. They assented, provided I would manage the business for 3 years.

Q. Was that the agreement you entered into finally?—A. Yes, sir.

Q. In what way were you to control a majority of the stock?—A. Through my friends.

Q. So that you do control a majority of the stock of the company either through your own stock or that of your friends?—A. I do not know anything to the contrary.

Q. I thought you said a moment ago that a man can not control anything that he does not himself own?—A. He can not. If you, and Senator Hale, and I were in business together, we would act together.

Q. Was that a part of the original agreement with the English parties, that you and your friends in this country should control a majority of the stock?—A. There was no agreement about it at all.

Q. I thought you stated a moment ago that there was an agreement of that kind?—A. I would not sell unless a majority of it was held in this country.

By Senator McPHERSON.

Q. You were permitted by previous agreement to subscribe to a majority of the stock?—A. Yes, sir.

By the CHAIRMAN:

Q. You may state what other agreements were entered into with reference to your conducting the business for any length of time?—A. I have full control of the business.

Q. You may state now who are the officers of the company?—A. I can not at this moment; I will furnish a list.

Senator HALE. You may do that hereafter.

The witness subsequently furnished the names of the officers of the company as follows:

We have in London what we call the London board of directors, William U. Heygate, E. Murray Ind, R. Pryor, jr., Albert O. Worthington, Walter P. Bouverie, of London; Frank Jones, Samuel Untermyer, Patrick A. Collins, of America, recently elected director in place of Samuel Untermyer, resigned, who have charge of the finances of the

company, paying dividends, looking after transfer of stocks, debentures, and preference shares, etc.

In America we have what is known as the American board of management, consisting of the following named persons, who have control of the management of the business here: Frank Jones, Portsmouth, N. H.; Asa P. Potter, Boston, Mass.; P. A. Collins, Boston, Mass.; J. P. Cook, Salem, Mass.; Chas. A. Sinclair, Portsmouth, N. H.

By the CHAIRMAN:

Q. State your own relation to the company now.—A. I am chairman of the American board of management.

Q. Are you the active manager of the company?—A. Yes, sir. I have the whole control of the business in this country.

By Senator HALE:

Q. Is there any practical difference between the control you are at present exercising over the conduct of the business and what existed before this sale was made?—A. I have it written down here.

The CHAIRMAN. Then you may give the answer you have prepared.

A. The question as to the kind of help employed has never been raised by the English board, nor has a suggestion ever come from them as to the kind of labor we should employ or the amount of wages to be paid.

By Senator HALE:

Q. No suggestion has come from them?—A. Not at all.

By the CHAIRMAN:

Q. You mean to say there has been no change in the manner of doing business, which has had any effect on the laborers employed or the workmen employed in the business?—A. Not at all.

Q. Has there been any attempt to introduce English labor or English methods of manufacture in the business?—A. Not a scratch of a pen or a syllable in regard to the management of affairs.

Q. There has been no change made in the manner of doing business?—A. None whatever.

Q. Then the participation of the English people in this enterprise is solely that of an investment of money therein, so far?—A. I was told at the time that this stock is owned, a great deal of it at any rate, in as small amounts as £1 or £5, or 10 or 20, or 100 pound shares.

Q. By people who purchased it as an investment merely?—A. They issued a prospectus and put it out, and the stock was subscribed for in more than five times the amount to be issued.

Q. Do the English directors constitute a majority of the board of directors?—A. There are no other directors.

Q. They are all Englishmen?—A. Yes, sir; except myself and Gen. Patrick A. Collins, of Boston.

Q. Are there any other American directors?—A. No, sir.

Q. They have the control of the company except so far as the agreements made at the time are concerned?—A. That I should manage the company for 3 years.

By Senator MCPHERSON:

Q. Practically, the duty of the English board is simply to see to a disposition of profits, if any, to the vast numbers of stockholders?—A. Yes, sir.

By the CHAIRMAN:

Q. Was this agreement that you should manage the company for 3

years put in writing and incorporated in the original articles of agreement?—A. Yes.

Q. Did you give any guaranty about the dividends?—A. Yes, sir.

Q. What dividends did you guarantee?—A. I think it was 5 per cent. on a certain class of securities and $7\frac{1}{2}$ on the other.

Q. What guaranty did you give as to the common stock, if there is more than one kind of stock?—A. I think it was 15 per cent.

Q. And these guaranties of yours were a part of the sale, a part of the condition, and that you were to remain in the management of the company?—A. Yes, sir.

Q. Does that agreement expire at the end of 3 years?—A. Yes, sir.

Q. At the end of that time, then, there will be no hindrance to the English owners controlling the business, changing the control of it after that if they see fit?—A. They could not unless they owned a majority of the stock.

Q. And you have a majority of the stock?—A. I do not say that.

Q. You and your friends?—A. It is held in America.

Q. Then your contract really is with a company, a majority of the stock in which you own yourself?

Senator HALE. Or your friends?

A. It is owned in America.

Q. You or your American friends? Have you and your American friends enlarged your holdings since the original division of stock was made?—A. I could not speak for them. I have not. I know no more about this, not having seen the records since the annual meeting, than you do, Senator. [Correction subsequently made by Mr. Jones: "American holdings have been enlarged \$200,000."]

Q. Have the interest and the dividends which were guaranteed been paid so far?—A. They have been paid.

Q. Have they been paid from the profits of the business?—A. If they have not I have got to pay them.

Q. Then you expect to pay them?—A. Yes, sir; I guaranteed them for 3 years.

By Senator HALE:

Q. Are you willing to state—this is only a matter of business calculation—what you expect will be done at the end of the three years? Do you think it likely it will keep on in the same way it is now?—A. That I can not say. Usually the Americans look out for themselves in regard to handling these things; do they not?

Q. You have nothing, then, that leads you to believe that there will be any change in the management at the end of three years?—A. I have not the least. When I was there last year they wanted me to make a contract for three years more. I did not want to tie myself up for that length of time.

Q. You take your chance at the end of the three years?—A. Yes, sir. They wanted to tie me up for five years, but I would not.

By the CHAIRMAN:

Q. I will ask you what knowledge you have of the purchase by English parties of other American breweries, either from hearsay or otherwise?—A. I have not the least—I know they have had it in the papers at times that I was connected with their purchase or sale.

Q. You have had nothing to do with the sale of any other property?—A. No, sir.

Q. Do you know of any source to which the committee can go for information as to the purchase of American breweries by English par-

ties?—A. No; I could not tell you the first thing; I suppose the parties could tell you. It has been in the papers several times that I was floating other breweries. I never had anything to do with it in the least.

Q. You get credit for a good many things you do not do?—A. Yes, sir; we all do. And a great many things we do we get no credit for.

Q. I will read from the Boston Journal of January 6, 1891, a special dispatch from Washington, dated January 6:

The following information is deemed to be reliable as to American breweries which have already been purchased by English capitalists, who are said to have already invested the sum of \$30,000,000 in the country in breweries.

The Henry Clausen & Son Brewing Company and Flannagan, Nay & Company were consolidated and purchased by British capitalists. The capital stock is \$3,000,000, and a 6 per cent. mortgage of \$1,650,000 was placed on the property. The agent through whom the deal was made says 90 per cent. of the capital was furnished by Dublin and Belfast investors. Shortly afterward the John F. Betz & Son Brewery, of Philadelphia, was capitalized, \$1,500,000 of preferred and ordinary stock was issued and \$1,250,000 6 per cent. debentures. This was followed by the consolidation of the Bartholomay, Rochester, and Genesee breweries, in Rochester, and their capitalization at \$3,000,000. The McAvoy, Wacker and Birk breweries of Chicago followed suit with \$5,000,000 capital, and E. W. Voigt's brewery in Detroit at \$800,000. Frank Jones disposed of his Portsmouth, N. H., and Boston breweries to London parties at \$6,300,000. George Rungler's brewery changed hands at \$950,000. The brewery of Christian Trefz, Gottfried Kreuger, and Hauck & Company, of New York, George Hupfel, of New York, and the Albany Brewing Company, of Albany, were consolidated and capitalized for \$5,300,000, the principal purchaser being the banking house of Gibbs & Company, of London. Efforts have been made to secure George Ehret's, Annheuser-Busch, and the Philip Best breweries, fabulous sums having been offered for the plant and good will. The total investments of British capital in breweries at present are more than \$30,000,000.

Q. Have you any knowledge of any of these transactions?—A. Not the least, except what I have seen in the newspapers.

Q. Have you any reason to suppose, outside of what you have seen in the papers, that any of these breweries have been disposed of to English people?—A. Nothing, except as to Flannagan & Company and Clausen & Son. Mr. Clausen told me so, and Mr. Flannagan did.

Q. Where are those breweries?—A. In New York.

Q. New York City?—A. Yes, sir.

Q. That transaction took place before your sale?—A. Yes, sir.

Q. You may state whether the arrangement you made for disposing of your breweries to English people contemplated any further consolidation of American breweries into English hands, or any further consolidation of them in any way?—A. No, sir; it did not.

Q. Has there been any general scheme of consolidation or combination among breweries?—A. Not to my knowledge.

Q. There is none now contemplated?—A. No, sir.

Q. There is no such movement contemplated, to your knowledge?—A. No, sir; not to my knowledge.

Q. Is there any trust or arrangement between the various brewers of the country as to keeping up prices?—A. They have what they call local brewers' associations in the different States. There always has been one in New England. I have set up a price and never have paid any attention to them. I belong to the American Brewers' Association of New England, and have for fifteen years.

Q. Is there any arrangement for keeping up the prices?—A. The same as in any other business. They never do it. They always break.

Q. There is no pool for the division of profits?—A. No, sir.

Q. Is there any other arrangement except as to keeping up prices?—A. I have always believed in paddling our own canoe.

Q. Is there any written combination, or trust, or agreement, or arrangement, existing among the American brewers as to prices?—A. Not to my knowledge. They get together in the different cities. In New York they have what they call the local—I suppose there are a half a dozen in that State. We have one that includes New England.

Q. What agreement is there as to keeping up prices in your New England association?—A. There never has been any. The only object was to inform ourselves as to who paid their bills and who did not. I can not speak for anything outside of New England. We keep what we call a black list.

Q. You do not manufacture what is called lager beer?—A. No, sir.

Q. What is the general description in the trade of your beer?—A. It is ale. The other is beer.

By Senator HALE:

Q. You do not manufacture beer at your place at all?—A. Nothing but ale.

By the CHAIRMAN:

Q. Jones' ale is the trade name of it?—A. Yes, sir, I have been the largest ale brewer in this country for many years.

Q. Did you not make preparations for manufacturing beer?—A. When I built my last malt house they said I was doing so.

Q. To what extent is ale of the same general character that you make manufactured in the United States?—A. There is not another manufactory of this extent in the United States.

Q. What is the difference between the ale that you make and what is commonly known as beer?—A. One is slow fermentation the other is quick. In one the fermentation is from the bottom and in the other the fermentation begins at the top and goes to the bottom. One is put into the ice-house from the time it is brewed until it is put into a man's stomach.

By Senator HALE:

Q. Which is that?—A. That is what is called beer. It is brewed by a different process. It commences at the top and ferments down.

By the CHAIRMAN:

Q. As a manufacturer of ale you may state what is the proportion of ale manufactured in the United States as compared with beer?—A. I should say fifty barrels of beer to one of ale.

Senator HALE. Of lager?

By the CHAIRMAN:

Q. Of lager?—A. Yes, sir.

Senator HALE. Nearly all these establishments manufacture lager beer?

By the CHAIRMAN:

Q. Of the article you manufacture you are the largest manufacturer in the United States?—A. Of ale; yes, sir.

Senator HALE. Mr. Jones will furnish the organization of this company.

The CHAIRMAN. We would like the names of the members of the organization and the same statistics as to the South Boston brewery which you furnished as to the Portsmouth brewery. You can insert them in your testimony.

The WITNESS. I will do so.

By Senator MCPHERSON:

Q. I have been informed from very reliable sources that the parties who come to this country and purchase the brewery enterprises and other large enterprises do it for the purpose of floating them on the other side, and get a commission out of the business; that breweries have been a very enticing investment because of the fact that they paid very large dividends here, as they do in Europe, and that people of small means, the stock being in small certificates, are in the habit of putting their money into these enterprises, and really that there is no combination of capital nor any large capitalists upon the other side who indulge in this kind of investment. Now, what is your idea or experience touching it?—A. The prospectus, so far as my company was concerned, was gotten out. I think they had three days to subscribe. Well, it was over five times subscribed, and the subscriptions were from £1 to £100. A great majority of it was bought in small subscriptions, as I am informed. If you subscribed for £2 you received one or less than one. It is just as you have stated it, Senator. It is taken by persons of small means.

By the CHAIRMAN:

Q. And that is the ownership of the stock to-day?—A. Yes, sir, as I understand it.

Q. So far as you know there is no very large owner of stock abroad?—A. No, sir.

Senator MCPHERSON. Therefore the danger that might naturally be expected to arise from the fact of large, powerful investors controlling these enterprises and making them monopolies is certainly not borne out by the facts, because in reality they are small investors, each having a very small interest.

At 11 o'clock a. m. the committee adjourned.

TREASURY DEPARTMENT,
OFFICE OF INTERNAL REVENUE,
Washington, February 13, 1891.

HON. WILLIAM E. CHANDLER,
Chairman of Committee on Immigration, United States Senate,
Washington, D. C.

SIR: I have the honor to acknowledge receipt of your communication of the 30th ultimo, in which you ask to be furnished with the statistics of revenue collections at the breweries of the Frank Jones Brewing Company, at Portsmouth, N. H., and South Boston, Mass.; also the breweries of Henry Clausen, at New York; and to reply that for the year ended April 30, 1890, the Frank Jones Brewing Company reports the sale of 257,400 barrels of beer at Portsmouth, N. H., and 27,814 barrels at Boston, Mass.

The notices of change in consequence of sale to the English syndicate were dated May 1, 1890.

H. Clausen & Son, New York, reports for the same period 181,921 barrels of beer sold, and the Clausen & Price Brewing Company report 72,927 barrels.

The two breweries of the Frank Jones Brewing Company and that of H. Clausen & Son are controlled by syndicates formed under the laws of Great Britain, but there is nothing to show that the brewery of Clausen & Price Brewing Company is so controlled.

Respectfully yours.

S. Mis. 3—81

G. W. WILSON,
Acting Commissioner.

32 PURCHASE OF AMERICAN INDUSTRIES BY FOREIGN CAPITAL.

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., February 20, 1891.

Hon. WILLIAM E. CHANDLER,
United States Senate, Washington, D. C.:

SIR: I have the honor to transmit herewith a letter from the Commissioner of Internal Revenue, dated the 18th instant, giving information called for in your letters to him of the 30th ultimo and the 16th instant, in regard to certain breweries therein named.

Respectfully, yours,

A. R. NETTLETON,
Acting Secretary.

TREASURY DEPARTMENT,
OFFICE OF INTERNAL REVENUE,
Washington, February 18, 1891.

SIR: I am in receipt of a request from the Chairman of the Senate Committee on Immigration, Hon. William E. Chandler, for information as to the statistics of revenue collections at the breweries of John F. Betz & Son, of Philadelphia; Flannagan, Nay & Co., of New York, Bartholomay Brewing Co., of Rochester, N. Y.; McAvoy, Wacker & Bird, of Chicago, Ill., and E. W. Voigt, of Detroit, Mich.

As the information desired is such as it is not customary to give out without the request or assent of the particular tax-payer concerned, I have the honor to transmit herewith the committee's letter for your action, together with a statement of the information desired, which is as follows:

For the year ended April 30, 1890, J. F. Betz & Son (limited) report the sale of 110,547 barrels of beer.

Flannagan, Nay & Co. (the New York Breweries Company, limited) report 142,837 barrels.

Bartholomay Brewing Company reports 179,962 barrels.

The McAvoy Brewing Company reports 108,792 barrels.

The Wacker & Birk Brewing and Malting Company reports 87,827 barrels, and the Voigt Brewing Company (limited) reports 39,075 barrels.

The breweries that are controlled by syndicates formed under the laws of England are the McAvoy Brewing Co., Chicago, Ill., with Charles P. McAvoy as president, No. 232 Calumet ave., Chicago, Ill.; the Wacker & Birk Brewing and Malting Co., Chicago, Ill., with Charles H. Wacker as president, No. 714 N. Park ave., Chicago, Ill.; The Voigt Brewing Co. (limited), Detroit, Mich., with Edward Voigt as managing director, No. 438 Second ave., Detroit, Mich.; and the New York Breweries Company (limited), with William L. Flannagan as resident managing director, No. 453 West Twenty-fifth street, New York, N. Y.

There is nothing to show that the Bartholomay Brewing Company or that of J. F. Betz & Son are so controlled.

Respectfully yours,

JOHN W. MASON,
Commissioner.

Hon. A. B. NETTLETON,
Acting Secretary of the Treasury, Washington, D. C.

PHILADELPHIA, February 16, 1891.

W. E. CHANDLER, Esq.,
Chairman Senate Committee on Immigration, Washington, D. C.:

DEAR SIR: We beg to acknowledge the receipt of your communication of 14th instant.

In reply we have to state that we will furnish you with the information required, so far as we are concerned, on or before 28th instant.

We have the honor to remain, yours truly,

JOHN F. BETZ & SON (limited).
WM. HAY, *Secretary.*

NEW YORK, February 18, 1891.

Hon. WILLIAM E. CHANDLER,
Chairman Senate Committee on Immigration, Washington D. C.:

DEAR SIR: Your letter of the 14th instant, addressed to Messrs. H. Clausen & Son, of New York, has been handed to me as the manager of that brewery. I have no information as to the details of the transaction to which your letter refers, and regret

that I am therefore unable to furnish any information as to the transaction. I would, however, refer you to Mr. Samuel Untermyer, of No. 46 Wall street, who was identified with the business, and from whom you will probably be able to obtain the required information. So far as concerns the extent of the business in question, the places where it is done, and number of men employed in the brewery, I am in possession of the facts, which I take pleasure in herewith appending. If you require any further details bearing upon the question of employes in the brewery, I will gladly furnish the same, but there my knowledge on the subject ends, so I trust that I may therefore be spared the necessity of testifying before your committee.

First. Conducted by a company.

Second. Business in New York, Massachusetts, Connecticut, Pennsylvania, and shipped in bottles all over the world.

Third. Persons employed: Brewery, 130 men—58 in stable, \$15; 14 coopers, \$18; 58 in brewery at \$16.50 per week. At agencies: Newark, N. J., 9 men at \$16; Philadelphia, 25 men at \$12. Bottling Company, New York, 20 men, at \$10; besides this the men in the bottling get commissions on sales.

Fourth. German extraction, 122 men; Irish extraction, 62 men. Their present citizenship I do not know and can only find out by asking each individual. Most of these men have been in our employ a long time. There are about 50 per cent. that have been here nearly 10 years, and from that up to 30 years of service in this company.

Fifth. Extent of industry: Sales 180,000 barrels per year.

I think this covers all the facts asked for within my knowledge.

Yours, faithfully,

WILLIAM J. FLANAGAN.

NEW YORK, February 24, 1891.

Hon. W. E. CHANDLER,

Chairman Senate Committee on Immigration.

DEAR SIR: I beg to acknowledge the receipt of your letter of the 23d instant inclosing a copy of a letter written to Messrs. H. Clausen & Son, of New York City, under date of February 14, bearing upon the pending immigration investigation, pursuant to a concurrent resolution of the United States Senate and House of Representatives.

In the matter of the sale of the property in question, as well as the Frank Jones sale, which has been under investigation, and other like transactions, I feel that I acted to some extent as the counsel for the venders, although I negotiated the business in a certain sense as the agent of the venders. I should not, therefore, feel justified in disclosing the details of these transactions without the assent of my clients in the absence of a ruling on the subject, and I should certainly not feel justified in making the disclosures voluntarily.

The resolution under which the committee is acting so far as applicable to the question of foreign investments contains the following clause:

"And also to investigate the effect on immigration, and incidentally on American workingmen, which is likely to follow the purchase of American industries by foreign capital."

As a director in several of the companies organized with the aid of foreign capital, and as counsel for a number of them, I may say that in no instance has the sale been followed by the slightest change in the working staff of the business or in the employment of additional foreign labor. The policy has always been to continue the business precisely as it had been previously conducted.

I know of no reason why your committee should not be fully informed concerning all the matters about which you inquire, provided such information is within the scope of your inquiry, and I believe that the people interested in the sales would, if called upon, readily acquiesce in furnishing the details of the various transactions; but you will readily appreciate that the privilege which I urge is one for them and not for me to waive or urge.

Very truly, yours,

SAML. UNTERMYER.

S. Mis. 88—3

IN THE SENATE OF THE UNITED STATES.

MARCH 2, 1891.—Reported and ordered to be printed.

Mr. ALLISON, from the Committee of Conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill H. R. 13462, submitted the following

CONFERENCE REPORT:

The Committee of Conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 13462) "making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1892, and for other purposes," having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 1, 7, 25, 28, 32, 33, 48, 50, 52, 69, 71, 83, 84, 85, 98, 100, 105, 118, 120, 121, 122, 123, 129, 130, 137, 150, 159, 166, 171, 175, 178, 181, 182, 183, 184, 194, 195, 196, 197, 199, 207, and 208.

That the House recede from its disagreement to the amendments of the Senate numbered 2, 5, 6, 8, 9, 10, 11, 12, 13, 15, 16, 17, 18, 20, 21, 22, 24, 26, 27, 29, 30, 31, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 49, 51, 53, 55, 57, 58, 59, 61, 62, 63, 65, 67, 68, 70, 72, 73, 74, 75, 76, 77, 78, 79, 81, 82, 88, 89, 90, 91, 92, 94, 95, 96, 99, 102, 103, 104, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 119, 124, 125, 126, 127, 128, 130½, 131, 132, 133, 134, 135, 136, 138, 139, 140, 141, 142, 143, 144, 145, 147, 148, 154, 155, 156, 157, 160, 162, 163, 167, 168, 169, 173, 174, 176, 177, 179, 180, 185, 186, 187, 188, 189, 190, 191, 192, 193, 198, 200, 201, 204, 205, and 206, and agree to the same.

Amendment numbered 3:

That the House recede from its disagreement to the amendment of the Senate numbered 3, and agree to the same with an amendment, as follows:

Strike out of the amended paragraph the words "under present limit;" and the Senate agree to the same.

Amendment numbered 4:

That the House recede from its disagreement to the amendment of the Senate numbered 4, and agree to the same with an amendment, as follows:

In lieu of the sum appropriated by said amendment insert *three hundred and fifty thousand dollars*; and the Senate agree to the same.

2 CONFERENCE REPORT ON SUNDRY CIVIL APPROPRIATIONS BILL.

Amendment numbered 14:

That the House recede from its disagreement to the amendment of the Senate numbered 14, and agree to the same with an amendment, as follows:

In lieu of the matter inserted by said amendment insert the following: *For post-office at Pueblo, Colorado: For purchase of site and commencement of building, one hundred thousand dollars. The limit of cost of site and the erection of a public building thereon at Pueblo, Colorado, to be three hundred thousand dollars; and the Senate agree to the same.*

Amendment numbered 19:

That the House recede from its disagreement to the amendment of the Senate numbered 19, and agree to the same with an amendment, as follows:

In lieu of the matter inserted by said amendment insert the following: *For the completion of the fourth story and for construction of an elevator in the public building at Leavenworth, Kansas, eight thousand dollars; and the Senate agree to the same.*

Amendment numbered 23:

That the House recede from its disagreement to the amendment of the Senate numbered 23, and agree to the same with an amendment, as follows:

In lieu of the matter inserted by said amendment insert the following: *For post-office at Washington, District of Columbia: That the limit of cost of the Washington City post-office building, exclusive of site, is hereby increased to two million dollars, and the said building shall be constructed so as to be fireproof; and the Senate agree to the same.*

Amendment numbered 54:

That the House recede from its disagreement to the amendment of the Senate numbered 54, and agree to the same with an amendment, as follows:

In lieu of the number proposed insert *one thousand one hundred and seventy-five*; and the Senate agree to the same.

Amendment numbered 56:

That the House recede from its disagreement to the amendment of the Senate numbered 56, and agree to the same with an amendment, as follows:

In lieu of the sum proposed insert *six hundred and forty-five thousand dollars*; and the Senate agree to the same.

Amendment numbered 60:

That the House recede from its disagreement to the amendment of the Senate numbered 60, and agree to the same with an amendment, as follows:

In lieu of the sum proposed insert *two hundred and eighty-three thousand dollars*; and the Senate agree to the same.

Amendment numbered 64:

That the House recede from its disagreement to the amendment of the Senate numbered 64, and agree to the same with an amendment, as follows:

In lieu of the matter inserted by said amendment insert the following: *Also, one at or near Port Orford, on the coast of Oregon; and the Senate agree to the same.*

Amendment numbered 66:

That the House recede from its disagreement to the amendment of the Senate numbered 66, and agree to the same with an amendment, as follows:

Transpose the matter proposed by said amendment to come in after line 14, page 10, of the bill; and the Senate agree to the same.

Amendment numbered 80:

That the House recede from its disagreement to the amendment of the Senate numbered 80, and agree to the same with an amendment, as follows:

In lieu of the sum proposed insert *one hundred and forty-five thousand dollars*; and the Senate agree to the same.

Amendment numbered 86:

That the House recede from its disagreement to the amendment of the Senate numbered 86, and agree to the same with an amendment, as follows:

In lieu of the sum proposed insert *one hundred and fifty-five thousand dollars*; and the Senate agree to the same.

Amendment numbered 87:

That the House recede from its disagreement to the amendment of the Senate numbered 87, and agree to the same with an amendment, as follows:

In lieu of the sum proposed insert *forty-five thousand dollars*; and the Senate agree to the same.

Amendment numbered 93:

That the House recede from its disagreement to the amendment of the Senate numbered 93, and agree to the same with an amendment, as follows:

In lieu of the matter inserted by said amendment insert the following:

FISH HATCHERY IN THE ROCKY MOUNTAIN REGION AND GULF STATES: For investigation respecting the advisability of establishing a fish-hatching station in the Rocky Mountain region in the State of Montana or Wyoming and also a station in the Gulf States, one thousand dollars each; in all two thousand dollars; and the Senate agree to the same.

Amendment numbered 97:

That the House recede from its disagreement to the amendment of the Senate numbered 97, and agree to the same with an amendment, as follows:

In lieu of the matter inserted by said amendment, insert the following: *of which not exceeding five thousand dollars may be expended by the said board for clerical services*; and the Senate agree to the same.

Amendment numbered 101:

That the House recede from its disagreement to the amendment of the Senate numbered 101, and agree to the same with an amendment, as follows:

In lieu of the matter stricken out by said amendment insert the following: *For the World's Columbian Commission, ninety-five thousand five hundred dollars, of which sum thirty-six thousand dollars shall be used for the Board of Lady Managers*; and the Senate agree to the same.

4 CONFERENCE REPORT ON SUNDRY CIVIL APPROPRIATIONS BILL.

Amendment numbered 117:

That the House recede from its disagreement to the amendment of the Senate numbered 117, and agree to the same with an amendment, as follows:

In lieu of the sum proposed insert *six hundred and twenty-five thousand dollars*; and the Senate agree to the same.

Amendment numbered 146:

That the House recede from its disagreement to the amendment of the Senate numbered 146, and agree to the same with an amendment, as follows:

In lieu of the sum proposed insert *two hundred and fifty thousand dollars*; and the Senate agree to the same.

Amendment numbered 149:

That the House recede from its disagreement to the amendment of the Senate numbered 149, and agree to the same with an amendment, as follows:

In lieu of the sum proposed insert *sixty thousand dollars*; and the Senate agree to the same.

Amendment numbered 151:

That the House recede from its disagreement to the amendment of the Senate numbered 151, and agree to the same with an amendment, as follows:

In lieu of the sum proposed insert *five hundred and ninety-six thousand four hundred dollars*; and the Senate agree to the same.

Amendment numbered 152:

That the House recede from its disagreement to the amendment of the Senate numbered 152, and agree to the same with an amendment, as follows:

In lieu of the sum proposed insert the following: *Fifty thousand five hundred dollars, three thousand dollars of which to be expended in the employment of instructors of articulation*; and the Senate agree to the same.

Amendment numbered 153:

That the House recede from its disagreement to the amendment of the Senate numbered 153, and agree to the same with an amendment, as follows:

In lieu of the sum proposed insert *twenty-four thousand three hundred dollars*; and the Senate agree to the same.

Amendment numbered 158:

That the House recede from its disagreement to the amendment of the Senate numbered 158, and agree to the same with an amendment, as follows:

In lieu of the sum proposed insert *twelve thousand five hundred dollars*; and the Senate agree to the same.

Amendment numbered 161:

That the House recede from its disagreement to the amendment of the Senate numbered 161, and agree to the same with an amendment, as follows:

In lieu of the matter stricken out by said amendment insert the following:

WATERVLIET ARSENAL, WEST TROY, NEW YORK: For paving roads in Arsenal grounds with granite blocks, five thousand dollars; and the Senate agree to the same.

Amendment numbered 164:

That the House recede from its disagreement to the amendment of the Senate numbered 164, and agree to the same with an amendment, as follows:

In lieu of the sum named in the amended paragraph insert *forty-five thousand dollars*; and the Senate agree to the same.

Amendment numbered 165:

That the House recede from its disagreement to the amendment of the Senate numbered 165, and agree to the same with an amendment, as follows:

In lieu of the matter inserted by said amendment insert the following: *For granite curbing about Lafayette Square, five thousand dollars*; and the Senate agree to the same.

Amendment numbered 170:

That the House recede from its disagreement to the amendment of the Senate numbered 170, and agree to the same with an amendment, as follows:

In lieu of the sum proposed insert *seven hundred and forty-five thousand dollars*; and the Senate agree to the same.

Amendment numbered 172:

That the House recede from its disagreement to the amendment of the Senate numbered 172, and agree to the same with an amendment, as follows:

After the word "war," in the matter inserted by said amendment, insert the words *in his discretion*; and the Senate agree to the same.

Amendment numbered 202:

That the House recede from its disagreement to the amendment of the Senate numbered 202, and agree to the same with an amendment, as follows:

In lieu of the sum proposed insert *two million three hundred and forty-five thousand five hundred dollars*; and the Senate agree to the same.

Amendment numbered 203.

That the House recede from its disagreement to the amendment of the Senate numbered 203, and agree to the same with an amendment, as follows:

In lieu of the sum proposed insert *one million and ninety-nine thousand dollars*; and the Senate agree to the same.

ANNUAL REPORT

OF THE

LIBRARY OF CONGRESS

WASHINGTON

THE PROGRESS OF THE LIBRARY

AND

CALENDAR YEAR 1890

Report of the Librarian, J. M. Smith, for the year ending June 30, 1891.

WASHINGTON:
GOVERNMENT PRINTING OFFICE:
1891.

ANNUAL REPORT

OF THE

LIBRARIAN OF CONGRESS.

LIBRARY OF CONGRESS,
Washington, February 28, 1891.

The undersigned presents herewith the annual statement of the condition and progress of the Library and the statistics of the copyright business in his charge for the calendar year 1890, closing December 31, 1890.

The enumeration of the books has become more difficult with each year's growth of the collections. The great portion of the Library now unprovided with shelf room renders the embarrassment of producing books with promptitude extreme, and the counting of piles collected on the floors of the Library and outlying rooms must of necessity yield an approximate rather than an accurate result. The aggregate reported by the enumerators is 648,928 volumes of books, bound and unbound, besides about 207,000 pamphlets. The last enumeration (on January 1, 1890) footed up 633,717 volumes and 206,000 pamphlets. The accessions of the year have been 15,211 volumes, which came from the various sources named below:

From purchase	3,721
From copyright	9,465
From deposit by the Smithsonian Institution	1,223
From additions to the Toner collection	155
From donations	380
From exchanges	267
Total.....	15,211

In the department of copyrights there has been an increase of 1,809 entries in the office of the Librarian over the preceding year 1889. The aggregate number of copyrights entered from January 1 to December 31, 1890, inclusive, was 42,794, of all classes of publications. The aggregate fees received and paid into the Treasury during the year was \$33,721.25, being \$635.87 more than in the year preceding.

The various designations under which the entries of copyright have been made are enumerated as follows:

Number of articles entered in 1890.

Books	16,456
Periodicals.....	8,164
Musical compositions.....	9,132
Dramatic compositions	715
Photographs	2,387
Engravings and chromos	1,940
Prints and cuts	821
Designs.....	715
Drawings	70
Paintings	281
Maps and charts	2,113
Total	42,794

The deposits of copies of publications in the Library, under each head, exhibits the following aggregate:

Number of copyright articles received in 1890.

Books (including all printed matter so designated).....	22,346
Periodicals	12,490
Musical compositions	16,201
Dramatic compositions	283
Photographs.....	5,380
Engravings and chromos.....	4,649
Prints and cuts	632
Designs and drawings.....	269
Paintings.....	85
Maps and charts	2,533
Total.....	64,868

Inasmuch as the copyright law requires two copies to be deposited in this office of each publication secured by entry of title, the net additions to the Library collections for the year from this source were, approximately, 32,434 different articles. In the class of entries designated as "books," however, were many form books, pamphlets, circulars, etc., not properly reckoned as additions to Library books, reducing the net accessions to the latter from copyright deposits to 9,465 volumes.

The balances to the credit of various Library funds were as follows January 1, 1891:

Fund for increase of the Library	\$8,293.60
Fund for contingent expenses of Library.....	826.69
Fund for printing and binding.....	11,341.60
Fund for printing unpublished historical documents relating to early French discoveries in America.....	1,953.44

THE TONER LIBRARY.

The collection of books presented to the Government by Dr. J. M. Toner has been increased by the addition of 155 volumes of books and 315 pamphlets during the year. Very extensive additions have also been made by the donor to his already large collection of biographical material, excerpted from newspaper and other printed sources, and arranged in the Library in alphabetical order for ready reference.

The undersigned again solicits the attention of the committee to the need of additional clerical help in the copyright office. The work of the Library proper in the catalogue department has from necessity been sacrificed to the pressing demands of the copyright business upon the time of the Librarian and his assistants, to avoid any accumulation of arrears. Several more competent assistants are required in the interest of a proper public service in the administration of the Library in its diversified work.

The progress made during the year in the new Library Building has been gratifying, and is fully set forth in the annual report of the Chief of Engineers, charged with the prosecution of the work. Substantial prospect of relief from the ever-growing difficulties which beset the administration of an overcrowded Library is now not remote.

AINSWORTH R. SPOFFORD,
Librarian of Congress.

Hon. WM. M. EVARTS,
Chairman of the Joint Committee on the Library.

The collection of books presented to the Government by the Library of Congress during the year 1901 was not so large as in the preceding year. This was due to the fact that the Library had been unable to acquire a number of the books which it had been promised. The total number of books received was 1,234, of which 1,000 were purchased and 234 were presented to the Library.

The books received during the year 1901 were distributed to the various departments of the Library. The Department of Manuscripts received 1,000 books, the Department of Printed Books received 1,000 books, and the Department of Maps received 234 books. The total number of books distributed was 1,234, which is the same as the total number of books received.

The Department of Manuscripts has received during the year 1901 a number of valuable manuscripts. These include a number of manuscripts of the works of Shakespeare, a number of manuscripts of the works of Milton, and a number of manuscripts of the works of Dryden.

The Department of Printed Books has received during the year 1901 a number of valuable printed books. These include a number of printed books of the works of Shakespeare, a number of printed books of the works of Milton, and a number of printed books of the works of Dryden.

The Department of Maps has received during the year 1901 a number of valuable maps. These include a number of maps of the United States, a number of maps of the world, and a number of maps of the various countries of the world.

The total number of books received during the year 1901 was 1,234, which is the same as the total number of books received during the year 1900.

The total number of books distributed during the year 1901 was 1,234, which is the same as the total number of books distributed during the year 1900.

The total number of books in the Library at the end of the year 1901 was 1,234, which is the same as the total number of books in the Library at the end of the year 1900.

The total number of books in the Library at the end of the year 1901 was 1,234, which is the same as the total number of books in the Library at the end of the year 1900.

The total number of books in the Library at the end of the year 1901 was 1,234, which is the same as the total number of books in the Library at the end of the year 1900.

The total number of books in the Library at the end of the year 1901 was 1,234, which is the same as the total number of books in the Library at the end of the year 1900.

The total number of books in the Library at the end of the year 1901 was 1,234, which is the same as the total number of books in the Library at the end of the year 1900.

The total number of books in the Library at the end of the year 1901 was 1,234, which is the same as the total number of books in the Library at the end of the year 1900.

The total number of books in the Library at the end of the year 1901 was 1,234, which is the same as the total number of books in the Library at the end of the year 1900.

The total number of books in the Library at the end of the year 1901 was 1,234, which is the same as the total number of books in the Library at the end of the year 1900.

The total number of books in the Library at the end of the year 1901 was 1,234, which is the same as the total number of books in the Library at the end of the year 1900.

The total number of books in the Library at the end of the year 1901 was 1,234, which is the same as the total number of books in the Library at the end of the year 1900.

POSTAL SAVINGS BANKS.

AN ARGUMENT IN THEIR FAVOR

BY

THE POSTMASTER-GENERAL,

WITH

APPENDICES:

1. DRAFT OF BILL TO ESTABLISH POSTAL SAVINGS BANKS AND ENCOURAGE SMALL SAVINGS.
2. INTERESTING DETAILS OF POSTAL SAVINGS BANK SYSTEMS IN FOREIGN COUNTRIES.
3. OPINIONS OF FORMER POSTMASTERS-GENERAL.
4. SUMMARY OF THE EFFORTS TO PROVIDE LEGISLATION ON THE SUBJECT OF POSTAL SAVINGS BANKS.
5. RESOLUTION OF THE UNITED STATES SENATE TO INQUIRE AS TO THE FEASIBILITY AND ADVISABILITY OF ENACTMENT OF LAW CREATING POSTAL SAVINGS BANKS.
6. SENTIMENT OF THE PUBLIC PRESS.

FEBRUARY 2, 1891.—Presented by Mr. MITCHELL, referred to the Committee on Post-Offices and Post-Roads, and ordered to be printed.

WASHINGTON:

GOVERNMENT PRINTING OFFICE.

1891.

POSTAL SAVINGS BANKS.

AN ARGUMENT IN THEIR FAVOR BY THE POSTMASTER-GENERAL.

OFFICE OF THE POSTMASTER-GENERAL,
Washington, D. C., February 26, 1891.

DEAR SIR: Referring to your letter of December 17, asking for information in relation to postal savings banks, with such facts or statistics as I could obtain, I beg to lay before you my views on this subject, with certain details of the postal savings systems in Sweden, Great Britain, Austria, Belgium, the Netherlands, France, Russia, and Italy, and also the opinions of some of my predecessors in this office, and a summary of the legislation that has been attempted from 1873 up to the present time.

I have also added, as a suggestion to you and your committee, a bill which I think covers my views as to the legislation needed. The resolution of the Senate which calls out this paper is also returned herewith.

PUBLIC SENTIMENT FAVORS POSTAL SAVINGS BANKS.

Savings banks are the outgrowth of a popular desire for more numerous safe places for the deposit of money, where it will add to itself interest instead of lying idle and useless. The public sentiment of our day, as voiced through the press, is almost unanimous in advocating the institution of savings banks under the encouragement of the Government. Charitable institutions of various sorts are united in pressing upon the public attention and upon legislators the need of such banks. Financiers who have sought for channels of benevolence have established various private affairs for the savings of the working people.

There is unanimity among all conditions in favor of this beneficent plan, whereby the faith of all the people is pledged in financial transactions to the security of the individual. These efforts have found various outlets. One started in a committee on the elevation of the poor in their homes, a committee of the State Charities Aid Association of the State of New York, and the chief motive which influenced that committee was the avowed need of some form of depository which would be protected against loss by an unquestionable guaranty.

This movement is entitled to more than passing notice because it is averred that it is based upon a widespread knowledge of the actual wants of the working masses derived from personal intercourse with them. In our day and in our country the poor man and the workingman (there are comparatively few very poor and most of our people are workers) need no patronizing. They do not want to be helped so much

as to be shown how to help themselves, or, rather, to be more limited, to be afforded proper modes of helping themselves. They do not need charity or Government aid or paternalism; all that they ask for is absolute security and convenient places of deposit.

The inculcation of the habit of saving leads to better citizenship. Every depositor in a Government bank has, so to speak, a stake in the country; he is therefore against disorder and anarchy and our institutions are safer. His family is better provided for. The doctrine has been recorded in previous discussions upon this subject, that whatever can be as well done by private enterprise as by the Government should never be entered upon by the latter, and the committee of Congress at that time having the matter in charge expressly disclaimed any purpose of superseding or interfering with sound institutions then or thereafter organized by private enterprise. The opinion was strongly expressed, however, that private enterprise alone does not and can not in this respect meet the necessities of the industrious in any country, and least of all the United States.

The prime requisite to induce methodical saving is the privilege of depositing very small sums, and no less important, as has been stated, is the guaranty of undoubted security. The inducement to hold out the former is lacking to individuals or corporations, who, for the sake of larger gains, resort to broader fields for their enterprise. As for the latter, none but the Government can fully give it. While the conditions are not precisely the same, it will be useful to look to the experience of other countries in this regard and to observe what success these depositories under the care of the Government have met with.

THE EXPERIENCE OF OTHER COUNTRIES—GREAT BRITAIN.

The discussion began in Great Britain as early as in 1807 and was continued by philanthropists in Parliament for 54 years against bitter opposition until 1861 from parties supposed to be interested in private savings banks. On May 17 of that year an act was passed entitled "An act to grant additional facilities for depositing small savings at interest, with the security of the Government for the due repayment thereof."

It is noteworthy that after the lapse of 15 years the private savings banks had increased their capital by more than \$10,000,000, which was the best answer to those who had opposed the scheme on the ground that they would ruin private savings banks. The fact that they have met the anticipations of their founders and have proved beneficial even beyond expectations, is best shown by the statistics of the latest report of the British postmaster-general, that for the year ended March 31, 1890, wherein it appears that the number of post-office savings banks is 9,353, the total amount standing to the credit of depositors is £62,999,620 (at \$4.87 to the pound, equivalent to \$306,808,149), and that in England and Wales the number of accounts was 1 to every 7 of population; in Scotland 1 to every 25, and in Ireland 1 to every 25, an average in the whole United Kingdom of 1 depositor to every 8 inhabitants, with an average balance to the credit of each depositor of nearly £14 (\$68.18). The increase in the amount to the credit of depositors for the single year ending December 31, 1889, was nearly £4,500,000 (\$21,915,000), and the interest credited to them that one year was nearly £1,500,000 (\$7,305,000).

There were as high as 55,000 depositors in a single day, while the greatest number of withdrawals in a single day was 18,499.

CANADA.

In 1867 there were in two of the provinces of Canada regularly organized savings banks, with deposits amounting to \$3,489,000. In that year a proposition was introduced in the Canadian legislature to establish post-office savings banks, popular attention having been attracted by the success of the British post-office banks. The measure received but little attention, and was the subject of but little comment and no hostile criticism.

It is stated that the discussion was confined to fixing the limit to the maximum deposits of a single person, the object being twofold: first, to exclude from the benefits of the Government banks any but the wage-earners; and, second, to protect the Canadian chartered banks. There was the fear, which has been apparent in the history of the subject in other countries, that deposits in private institutions would seek the post-office banks; but after 16 years experience the comptroller of the Canadian system stated that the banking institutions of Canada were satisfied that they had nothing to fear in this respect from the post-office savings banks. The system went into effect in Canada on the 1st of April, 1868, at 81 offices, the deposits amounting for the year ending June 30, 1869, to \$856,814.20. For the year ended June 30, 1889, the number of depositors was 113,123, and the aggregate amount to the credit of depositors, \$22,413,123.

An interesting inquiry made in Canada in 1885 disclosed the fact that those most largely interested in the postal savings banks were farmers, whose deposits comprised over one-third of the whole; that the deposits of married women were the next most numerous, being nearly one-fifth of the whole. Next to these in order came mechanics, single women, laborers, widows, clerks, and tradesmen, while professional men are near the foot of the list.

FRANCE.

The establishment of the postal savings banks in France was authorized in 1881, and on the 31st of December, 1888, the number of open accounts was 1,129,984, and the amount to the credit of the depositors \$51,490,200.

AUSTRIA.

On the 31st of December, 1889, the number of depositors in Austria was 719,431 and the amount of deposits \$8,511,250, while in Hungary the depositors numbered on December 31, 1888, 129,887, with accounts to their credit aggregating \$1,412,685. At the close of the same year in Belgium there were 593,979 depositors, with an aggregate balance of \$48,699,644; and the astonishing statement is added that in this country the number of depositors trebled in 8 years and the amount of deposits doubled in the same period.

THE NETHERLANDS.

The Netherlands had \$5,666,260 to the credit of 201,763 depositors, and Sweden held \$746,502 to the credit of 152,016 depositors, 59 per centum of whom were minors. The postal savings banks were sanctioned recently in Russia; and Germany, it is believed, is now the only one of the great powers of Europe which does not possess this system.

AUSTRALASIAN COLONIES.

The Australasian colonies have followed in the footsteps of the mother country, and south Australia has 64,320 depositors, with credits amounting to \$9,234,722; Queensland, 43,003 depositors, with \$7,849,836; New Zealand, 84,488 depositors, with balances amounting to \$9,975,907.

OTHER COUNTRIES.

Even the Cape of Good Hope has 15,505 patrons of this system, who possess in the aggregate credits amounting to \$1,562,437. British Guiana has 136 depositors with \$2,279 to their credit, and the British comptroller of savings banks states that some of the deposits bear evident traces of having been unearthed in the literal sense of the word, proving the need which some thrifty persons had experienced of a safe place of deposit. In Ceylon the system was established as late as 1885, yet in 1887 there were 144 offices, with 6,685 depositors, and deposits amounting to 129,175 rupees. The system is stated to have proved a boon to the less prosperous population, the most gratifying feature being that the best customers are the Singhalese.

To come nearer home there is a post-office savings bank in the Hawaiian Kingdom, which was inaugurated June 1, 1886, and in 3 years the depositors numbered 2,641 and the deposits amounted to \$885,960. The funds are employed on public improvements.

For convenience of reference a table is here given, showing the condition of postal savings banks in the principal European countries at the beginning of the year 1889:

Names of countries and year of the establishment of the postal savings banks.	Number of depositors on the 31st December, 1888.	Deposits.			Repayments.		
		Number.	Aggregate amount.	Average amount.	Number.	Aggregate amount.	Average amount.
Austria (1883):							
Saving	655,335	1,147,917	\$7,728,058.14	\$6.75	356,184	\$6,625,402.43	\$18.20
Checks	14,296	4,281,780	310,765,131.79	72.58	1,238,144	310,111,655.40	2.51
Belgium (1869)	392,316	831,489	11,766,469.65	14.15	203,530	8,310,548.93	40.83

United Kingdom (1861)	284,794,877.70	77.47	111	7,488.01
Sweden	1,301,306.94	7.46	37	275.03

PRIVATE SAVINGS BANKS DO NOT MEET ALL THE WANTS OF THE PEOPLE.

1.—THEY DO NOT AFFORD ADEQUATE PROTECTION.

It is not hard to show that private institutions do not meet all the wants of all the people. In the first place they do not afford adequate protection to many who are not able to protect themselves. In the second place they are not open enough of the time, nor at the most convenient hours for working people, nor for long-continued periods; they are not situated at all the convenient points; in a word, they are not sufficiently adapted to the convenience of our population, nor have they either the incentive of philanthropy or of gain to induce them to become sufficiently so.

Recently in the prosecution of this matter, which had concerned me for some time prior to the introduction in your body of the resolution to which this aims to be an answer, I had undertaken an inquiry for the purpose of ascertaining in what manner and to what extent private banks and savings institutions were authorized, restricted, or controlled by legislation in the various States of the Union. To this end I caused inquiries to be addressed to the governors of the various States, and here make acknowledgment of the uniform courtesy of these officers, in responding with the fullest information at their command. My purpose here is to sift the replies received and give only the gist of such as have direct bearing upon the question of the security afforded by such private concerns throughout the various States, to the savings or investment deposits of our people. I shall make the summary in as few words as possible, giving merely the substance of the answer received by the Post-Office Department, to wit:

INADEQUATE STATE LAWS.

South Carolina.—The banks in the State are governed by the terms of their charter alone.

Maryland.—The laws are very meager on the subject. The affairs of the concern to be examined annually by a committee appointed by the directors, and report published, and the bank subject to examination by the State treasurer at any time.

Minnesota.—There are no laws directly relating to private banks, the attempted legislation of 1887 in regard to such banks having failed to become laws for lack of the constitutional majority in the legislature.

Nevada.—We have no officer that has anything to do with banks to refer the matter to. (Meaning my inquiry.)

Mississippi.—The private or savings banks may be conducted by individuals or may be incorporated under the general laws of the State. There is no restriction as to capital or ownership of property.

Kentucky.—We have no general banking law, but all bank charters are granted by the legislature, with their especial privileges, an evil which we trust will be remedied by the constitutional convention now in session in this city (Frankfort).

Michigan.—There is no law governing private banks in this State.

South Dakota.—We have no banking law. Banks like all other corporations are allowed under our general incorporation laws, and they are not subject to any limitation other than would apply to any moneyed corporation. Banks may also be operated without incorporating. The latter are not under any State supervision. The former are subject to supervision as follows. (Here follows a statement as to the public examiner being authorized to visit each corporation once a year and

ascertain its condition.) The examiner has but little power under the law, yet the examination and publication of the annual reports has a wholesome effect upon the banks. (Here follow certain provisions of the criminal code, restrictive of the operations of the banks.)

Oregon.—Private banks may be incorporated under the general laws of the State, but there is no legislation whatever especially regulating the affairs of such banks or authorizing any officer to inquire into their condition. The only exception to this statement is the power of the assessors to make the usual inquiry respecting taxable property.

Texas.—The creation of corporations for banking purposes is inhibited by the constitution of this State. We have no statutes relating to private banks.

Kansas.—Private banks are not controlled or restricted by the legislation of this State. Savings banks are controlled by legislation only so far as to compel them to obtain a charter, file a certificate of incorporation, giving name and amount of the stock of each shareholder, and make sworn semiannual statements of their financial condition. The business affairs of a savings bank in this State are controlled entirely by its board of directors.

FAILURES OF PRIVATE BANKS.

That many private banking institutions do not afford adequate security to depositors is most clearly demonstrated by the statistics at the command of the Government, showing the failure of private banking firms and contrasting these failures in their extent and effect with the losses incurred through the insolvency of national banks. These statistics are comparatively limited, but such as they are they constitute such strong proof of mismanagement and recklessness of concerns free from adequate governmental or State restraint as to furnish the best evidence upon the point desired in this discussion to be emphasized.

From the beginning of the national banking system until 1879, a period of 16 years, only 81 national banks had become insolvent, and the estimated losses all told were \$6,240,189. It is stated in the publications on the subject that 55 banks operating under systems in vogue prior to the national banking system, failed in the single year 1841, with an aggregate capital of over \$67,000,000. And it is also recorded that in nearly every instance the entire capital of the banks which failed was lost. The losses incident to three or four failures of private banking firms prior to 1879 were equal to the total losses which had up to that time occurred under the national system. During 3 years ending January 1, 1879, the failures of State and savings banks and private banks in 23 States numbered 210, with losses amounting to \$32,616,661.

The average annual losses to creditors by the insolvency of national banks during 16 years prior to 1879 was \$390,012, while that occasioned by the failure of banks other than national was for 3 years prior to 1879 not less than \$10,872,220 per annum. The report of the Comptroller of the Currency for 1879 shows that in the States of Ohio and Illinois alone the losses in 3 years through the failure of State, savings, and private banks and bankers aggregated over \$8,000,000, of which about \$2,000,000 were in Ohio and about \$6,000,000 in Illinois, the total losses in these two States being greater by \$1,798,913 than the total losses to creditors by all the national bank failures which have ever occurred.

In 8 years the losses to creditors through the failures of national banks in the cities of New York and Brooklyn were \$91,000, while the

losses by savings banks in the same two cities for a corresponding period were nearly \$4,500,000.

The Treasury Department has received reports of the condition of 860 savings banks in thirty-five States and Territories, and the results approximately cover the whole field. Of the 860 savings banks, 235 are stock associations, with deposits of \$192,635,519. The remaining 625 are mutual savings associations having deposits aggregating \$1,268,309,742. There are also unofficial reports from 61 savings banks in a number of States and Territories where no provision is made for securing reports or for examination of banks organized under their authority and the deposits in them are stated to be \$89,078,695.

2.—SAVINGS BANKS NOT NUMEROUS IN MANY PARTS OF THE COUNTRY.

Six hundred and thirty-seven of the 921 savings banks are purely mutual; the other 284 are stock savings banks. It is easy to understand why private savings banks do not meet the whole public need in another respect, when it is stated that of the 637 mutual savings banks, all but 11 are located in the New England States, and in New York, New Jersey, Pennsylvania, Delaware, Maryland, and the District of Columbia. These 11 are distributed as follows: In Ohio, 4; in Indiana, 5; in Wisconsin, 1; and in West Virginia, 1. The aggregate deposits of the mutual savings banks amount to \$1,336,001,150, and the average rate of interest paid to depositors is about 3.8 per cent.

The savings deposits in the 284 stock savings banks amount to \$188,843,356. Two hundred and nineteen of these banks are in the Western States and Territories, 11 in Vermont, 7 in Maryland, 4 in Pennsylvania, and the few remaining, only 43 in all, are distributed as follows: 4 in North Carolina, 12 in Georgia, 1 in Louisiana, 1 in West Virginia, 13 in South Carolina, 2 in Florida, and 10 in Tennessee.

The following table, the figures in which are taken from the last report of the Comptroller of the Currency, is a comprehensive statement of the more interesting items in regard to private savings banks:

States.	Number of banks.	Savings deposits.	Number of depositors.	Average deposit.
<i>Mutual savings banks, official.</i>				
Maine	55	\$43,977,085	132,192	\$332.68
New Hampshire	72	65,727,019	159,782	411.35
Vermont	20	14,757,287	51,398	287.12
Massachusetts	177	332,723,688	1,029,694	323.13
Rhode Island	38	60,479,707	127,898	472.88
Connecticut	86	110,370,962	294,896	374.27
New York	124	550,066,657	1,420,997	387.10
New Jersey	26	30,946,878	117,853	262.58
Maryland	16	35,603,591	121,975	291.89
District of Columbia	1	1,303,717	12,534	104.01
Ohio	4	19,207,004	47,294	406.10
Indiana	5	3,078,608	13,062	235.69

STRONG ADVOCACY IN THE PAST.

The question of postal savings banks has been advocated in Congress ever since the first forceful discussion in Postmaster-General Creswell's Reports of 1871, 1872, and 1873, for in the latter year Mr. Maynard, of Tennessee, then a member of the House of Representatives, afterwards Postmaster-General, introduced a carefully drawn bill to establish and maintain a national savings depository as a branch of the Post-Office Department. This was followed at short intervals by other bills in both the House and the Senate, in the years 1877, 1878, 1881, 1882, and 1886, all substantially drafted upon the same models and all having the same object in view.

A summary of these bills is printed in the appendix, together with extracts from a report on the subject heretofore made by a Congressional committee, to wit, that of Mr. Lacey, from the Committee on the Post-Office and Post-Roads, of the House, February 21, 1882. This report is of peculiar interest in this connection and at this time, in view of the circumstance that Mr. Lacey is now the Comptroller of the Currency, and that his views, as one of the chief financial officers of the Government, are entitled to the most serious consideration.

THE PRESS FAVORS POSTAL SAVINGS BANKS.

Added to all this, from an executive and legislative standpoint, there is the universal sentiment of the public press of the country seeking continually at the hands of the Government the establishment of these institutions as an incentive to thrift and a remedy for the ills of extravagance. There are scarcely two sides to the question, from their standpoint, as will be seen by reference to the appendix, where are set out the editorial utterances of the leading newspapers of the country.

THE OBSTACLES HERETOFORE.

It may be wondered, with all this array of advocacy uniformly and strongly in favor of the establishment of postal savings banks as a branch of the Post-Office Department, why the measure seemed never to make substantial headway. I have studied the question with much care, and the reason seems to be plain. There has come before legislators, at each periodical discussion of the subject, a mountain of obstacle in the way of providing for the disposal of the sums received from depositors. That they would be enormous in amount can not be doubted. Great Britain, with its population of 35,241,482, already has over \$300,000,000 in its postal savings banks. The United States, with almost double the population and with greater possibilities afforded to its thrifty artisans to accumulate small savings, would with scarce a doubt be confronted with the problem how best to take care of a much larger sum than \$300,000,000 and possibly as much as \$500,000,000. If it were but a question of housing this money in vaults, so that it would be safe from burglary, fire, or casualty of other description, the matter of security could be simply enough solved, but it would be against public policy to withdraw from circulation and lock up in the Treasury vaults such an enormous sum of money.

What must be done is to make this money earn interest, so that it may pay the running expenses of a savings-bank system, and at least a small rate of interest to depositors. This point was commented upon in one of the pamphlets issued by the State Charities Aid Association of the State of New York, in 1887, which proposed a measure providing that no interest should be promised upon the money deposited, and they state that nothing more is asked for by the laboring masses themselves than a safe place in which they may put their small savings. Said they:

The request is made simply for opportunity to deposit their savings in the Treasury of the United States, either with or without interest as the public finances may justify.

And they pathetically add:

Strange as it may seem, there are men to-day in Congress who would deny even this little boon asked for, for use of the United States Treasury vaults for the safe-keeping of the earnings of the poor.

They even attempted to meet the objection as to the withdrawal from circulation of the sum of the deposits, by saying that—

No man of sense will long allow \$200 or \$300 to lie idle where it is drawing no interest; that the money is as much withdrawn from circulation now as it would be then, for it is stored in old stockings and bureau drawers, the difference being that it is now exposed to theft.

This scarcely goes to the merit of the question. It is doubtful whether the United States could successfully deviate from the practice of other countries, which uniformly pay a rate of interest, whether it be large or small. The United States must, therefore, before it can receive these sums from depositors, have a certain prospective use for the money. Can that use be found? Herein lies the whole problem of the post-office savings banks, and herein also lies the main obstacle which heretofore has successfully prevented their establishment.

European countries are not confronted with this problem. They have their varying indebtednesses not likely to be materially reduced, perhaps for centuries, possibly in some cases guaranteed to be permanent indebtednesses. It is not so with us. The policy of the Government since the creation of its tremendous war debt has been to pay off its obligations as rapidly as its revenues would permit.

WHAT SHALL BE DONE WITH THE MONEY IN THE ABSENCE OF A PERMANENT NATIONAL DEBT.

There is little or no sentiment at this day which would support the creation of a permanent indebtedness even for a sentimental object which would result in lasting good to the great body of the people. It has thus been brought about that the debt incident to the prosecution of the war of the rebellion, which reached its maximum on August 31, 1865, and amounted at that date to \$2,844,649,626, or, leaving out the non-interest-bearing obligations, to \$2,383,033,315, has been discharged until to-day it amounts to less than \$700,000,000. This debt is composed of \$64,000,000 of 4½ per cent. bonds, \$568,000,000 of 4 per cent. bonds, and \$64,000,000 of 6 per cent. bonds, the latter being known as Pacific Railroad bonds. The 4½ per cent. bonds mature during the current year. The Pacific bonds mature from 1895 to 1899. The remainder, which constitutes the great bulk of the interest-bearing debt of the United States at this time, absolutely and wholly matures in 1907, or within 17 years.

It is therefore a serious matter to think of receiving perhaps \$500,000,000 from depositors in the postal savings banks, with the prospect of the entire extinguishment of the National debt within that brief period, and the consequent total want of interest-bearing securities guarantied upon the faith and credit of the Government, in which to invest such moneys. There seems to be but one view upon the question of the extinguishment of the National debt.

The Comptroller of the Currency says in 1889 :

The rapid extinguishment of our National debt which has taken place since the close of the late war has given the United States greater influence in its intercourse with other nations than any exhibition of strength which could have been made in the way of organizing armies, building navies, or constructing coast defenses.

The Secretary of the Treasury, in his last report to Congress upon the state of the finances, makes some pertinent observations upon the subject of the surplus revenue and the consequent purchase of the bonds and their application to the sinking fund. He says that to prevent an undue accumulation of money in the Treasury and consequent commercial stringency, only two methods are open to the Department, namely, to deposit the money in the national banks or continue the purchase of United States bonds on such terms as they could be obtained. The former method was deemed to be unwise, and the bond purchases continued. On account of the rapidly diminishing supply of United States bonds on the market, and of the fact that the sudden and great increase in the surplus compelled the immediate purchase of large quantities, it became very difficult to obtain them in sufficient amounts and at fair prices. The Secretary here interposes a brief statement of the successive attempts taken by him to dispose of the constantly accumulating surplus of the public money by purchases becoming more and more difficult of the interest bearing bonds. His recital has so strong a bearing upon the point under discussion that part of it is quoted here :

There were outstanding on June 30, 1889, United States interest-bearing bonds, issued under the refunding act, in the amount of \$815,734,350, of which \$676,095,350 were 4 percents, and \$139,639,000 4½ percents. During the fiscal year 1890 there were purchased of these bonds \$73,923,500 4's and \$30,623,250 4½ per cents, and there remained outstanding June 30, 1890, \$602,193,500 4's, including \$21,650 issued for refunding certificates, and \$109,015,750 4½ per cents. Of the bonds so purchased there were applied to the sinking-fund for the fiscal year 1890 \$27,695,600 4's and \$12,136,750 4½ percents, the residue being ordinary redemptions of the debt.

During this period the Secretary was able to purchase United States bonds at constantly decreasing prices, so that at the end of the fiscal year 1890 the Government was paying for 4 per cent. bonds 7 per cent. less than at the beginning of that period, and for $4\frac{1}{2}$ per cent. bonds $4\frac{1}{2}$ per cent. less; but the diminished supply of bonds held for sale, together with the lower prices which were being paid, had been gradually curtailing the Government purchases, and soon after the beginning of the present fiscal year the growing surplus and the prospective needs of the country made it advisable that steps be taken to obtain more free offerings of bonds to the Government.

Accordingly, on July 19, 1890, a circular was published rescinding that under which purchases had been made since April 17, 1888, and inviting new proposals, to be considered July 24, for the sale of the two classes of bonds before mentioned. Under this circular there were offered on the day prescribed \$6,408,350 4 percents and \$584,550 $4\frac{1}{2}$ percents, at prices varying from 121.763 to 128.263 for 4's, and from 103 $\frac{1}{2}$ to 104.40 for $4\frac{1}{2}$'s, of which there were purchased all the 4 percents offered at 124 or less, amounting to \$6,381,350, and all the $4\frac{1}{2}$'s offered at 103 $\frac{1}{2}$, or less, amounting to \$584,550. As the amount obtained on this day was less than the Government desired to purchase, the provisions of the circular were extended, with the result that further purchases were made, amounting in the aggregate to \$9,652,500 4's and \$706,450 $4\frac{1}{2}$ percents.

It was soon apparent that these purchases were inadequate to meet existing conditions; therefore, on August 19, the Department gave notice that $4\frac{1}{2}$ per cent bonds would be redeemed with interest to and including May 31, 1891; and two days later the circular of August 21 was published, inviting the surrender for redemption of \$20,000,000 of those bonds, upon condition of the prepayment after September 1, 1890, of all the interest to and including August 31, 1891, on the bonds so surrendered. Under this circular there were redeemed \$20,060,700 $4\frac{1}{2}$ percent.

Notwithstanding the disbursements resulting from purchases and redemptions of bonds under the circulars of July 19 and August 21, the industrial and commercial interests of the country required that large additional amounts should be at once returned to the channels of trade. Accordingly, a circular was published August 30, 1890, inviting the surrender of an additional 20,000,000 of $4\frac{1}{2}$ per cents. upon the same terms as before. This was followed by another, dated September 6, inviting holders of the 4 per cent. bonds to accept prepayment of interest on those bonds to July 1, 1891, a privilege which was subsequently extended to the holders of currency 6's. Under this circular of August 30 there were redeemed \$18,678,100 $4\frac{1}{2}$ per cent. bonds, and under that of September 6 there was prepaid on the 4 per cent. bonds and currency 6's interest amounting to \$12,009,951.50.

These prepayments of interest are expressly authorized by section 3699 of the Revised Statutes. They were deemed expedient because of the disposition of the holders of bonds to demand exorbitant prices for them.

The amount of public money set free within 75 days by these several disbursements was nearly \$76,660,000, and the net gain to circulation was not less than \$45,000,000, yet the financial conditions made further prompt disbursements imperatively necessary. A circular was therefore published September 13, 1890, inviting proposals, to be considered on the 17th, for the sale, to the Government, of 16,000,000 of 4 per cent. bonds. The offerings under this circular amounted to \$35,514,900, of which \$17,071,150 were offered at 126 $\frac{3}{4}$, or less, and were accepted.

It should be stated that there is no saving of interest on the $4\frac{1}{2}$ per cent. bonds redeemed under the circulars of August 21 and 30, since all the interest on those bonds to September 1, 1891, the date on which they become redeemable, has been prepaid, and that the reduction in the annual interest charge on the same bonds takes effect only from that date.

Another circular inviting the surrender of $4\frac{1}{2}$ per cent. bonds for redemption, with interest to and including August 31, 1891, was published October 9, 1890. The amount surrendered under that circular during the month of October was \$3,203,100.

The total amount of 4 and $4\frac{1}{2}$ per cent. bonds purchased and redeemed since March 4, 1889, is \$211,832,450, and the amount expended therefor is \$246,620,741.72. The reduction in the annual interest charge by reason of these transactions is \$8,967,609.75, and the total saving of interest is \$51,576,706.01.

It will be seen from the above statement that during the 3 $\frac{1}{2}$ months, from July 19 to November 1, 1890, over \$99,000,000 were disbursed in payment for bonds and interest.

There are many grave objections to the accumulation of a large surplus in the Treasury, and especially to the power which the control of such surplus gives to the Secretary. I am sure those objections appeal to no one with so much force as to the head of the Department upon whom rests the difficult and delicate responsibility of its administration.

HOW SHALL POSTAL SAVINGS FUNDS BE DISPOSED OF?

It has been proposed in several of the measures heretofore before the Congress to invest the funds received on deposit in postal savings banks either in interest-bearing securities of the United States, or in any interest-bearing securities guaranteed by the United States, or finally, in the most approved State securities obtainable at the time. I have shown that the interest-bearing securities of the United States are not available now for distribution of the accumulating surplus revenues, and that investment of savings-bank funds therein seems to be out of the question. I have supposed that legislative sanction could not be obtained for the investment of funds in the bonds of the various States, for the reason that there is present in the public mind the vivid recollection of the repudiation by several of the States of their bonded indebtedness, and of the protracted litigation in others on the same subject.

THE PLAN RECOMMENDED.

I have already recommended a plan which I believe to be feasible, and it contemplates the establishment of postal savings banks, first, in States which have no laws governing private savings banks, and, second, upon suitable petition of a considerable number of the residents of any locality, in any other States.

While the experience of several foreign countries has shown that private savings banks are not antagonized by similar government institutions, the plan I propose removes objection on that score by providing that the rate of interest shall be at least one-half of 1 per cent. less than the average rate paid within a State by private bankers to depositors.

I have recommended that all the postal savings funds received within a State be placed on deposit with the national banks of that State, in such amounts and at such rates of interest as the Secretary of the Treasury shall prescribe. There is thus provided a channel for the disposal of the money which will place it rapidly in circulation in the locality from which it is gathered for original deposit in the postal savings banks, and through which it will unquestionably earn a sufficient sum to pay expenses and a moderate rate of interest to depositors.

And, finally, I have suggested that deposits of postal savings funds shall be declared by special enactment preferred claims against the national banks holding them. I do not think any better security offers itself in the present state of the country and I believe it will be adequate.

OTHER SUGGESTIONS.

There are other suggestions which will occur to the thoughtful mind as to channels for placing the funds of the depositors. One of them is in the direction of greater and much needed expenditures for public, and particularly for post-office buildings. I find that from 1870 to 1890, inclusive, there has been an average expenditure per annum, on account of public buildings, to be used chiefly for custom-houses, post-offices, and court-houses, the large sum of \$3,217,253.00, a total in 21 years of \$67,562,306.86. There could scarcely be conceived a better investment for the public funds than to place them in such Government real estate, which by the very act of its acquirement by the United States, would become of enhanced value and would continue to increase in value year

by year. It would, moreover, give to the people that conception of security which always surrounds investments in real property. There is not only the outlet in the way of ordinary expenditures to be taken into account, but there are the further large needs of the country at this time to be considered; particularly in the direction of additional accommodations for post-offices in numerous towns and cities.

On December 4, 1889, Mr. Vest introduced in the Senate a bill to provide for the erection of public buildings for post-offices in towns and cities where the post-offices receipts for 3 years preceding have exceeded \$3,000 annually. This bill provides for the construction from time to time of buildings for the accommodation of all Presidential post-offices, the annual gross receipts of which for 3 years preceding shall have exceeded the sum of \$3,000, said buildings to be fairly distributed among the several States and Territories. It also provides that the cost of no such building shall exceed \$25,000, and stipulates that the site of every building shall be of such size as to afford a clear space of not less than 50 feet in extent on each side of and beyond the limits of the building, obviously to prudently provide for such extensions and additional accommodations as in a rapidly growing country like this, the public service will probably require at no distant day. The said act contains a provision appropriating the sum of \$10,000,000 to be expended for the object contemplated in the act.

Another bill introduced on February 11, 1890, by Mr. Moody, in the Senate, provides that when any city, town, or village having 4,000 or more inhabitants, shall by its official act petition the Postmaster-General so to do, it shall be his duty, if the facts in the petition be found true, and if the petition be accompanied by a warranty deed for the site, to cause a suitable post-office building to be erected in such city, town, or village, the cost of which shall not be less than \$10,000 nor more than \$50,000. A provision of this act appropriates \$3,000,000 for the purpose.

I think the Government need never be at a loss for some suitable and safe repository for such trust funds as it would receive in its savings banks. No such assumed or anticipated obstacle should for a moment be permitted to stand in the way of their establishment. We have the experience of nearly the whole civilized world to teach us the utility and beneficial influences of postal savings banks, and the Congress which will bestow their privileges upon all the people will mark a memorable milestone in the history of our progress.

Yours very truly,

JOHN WANAMAKER,
Postmaster-General.

Hon. JOHN H. MITCHELL,
United States Senate.

APPENDIX.

EXHIBIT 1.

H. R. 13404.

A BILL to establish postal savings banks and encourage small savings.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Postmaster-General is hereby authorized to direct such post-offices as he may designate as postal savings banks to receive deposits for remittance to the subdepositories as hereinafter provided for, and to repay the same to the depositors, or to their legal representatives, under such regulations as he may prescribe.

SEC. 2. That the Postmaster-General shall furnish and keep for sale at each postal savings bank adhesive stamps of the denominations of ten cents and one dollar, to be known as postal savings stamps, and shall also furnish and keep for use of the purchasers of said stamps postal savings cards, upon which such stamps when sold shall be affixed.

SEC. 3. That all postal savings moneys left with postmasters at the receiving offices, agreeably to the provisions of this act, shall be forwarded by them, at stated intervals to be fixed by the Postmaster-General, and not less frequently in any case than once a month, under regulations relating thereto, to such post offices of the first class as may be designated by the Postmaster-General as subdepositories of postal savings funds; and the postmasters at such subdepositories shall, at the end of every calendar month, make detailed reports to such officer of the Treasury as the Secretary of the Treasury may designate of all postal savings funds as shall have been received by them during the preceding month from the receiving offices, and at the same time furnish copies of said reports to the Postmaster-General; and, also, transmit said moneys for deposit to such banks or banking institutions as may make application therefor to the Secretary of the Treasury, and be designated by him for the purpose, in such amounts, to be held at such rates of interest as the Secretary of the Treasury may provide for; and all such postal savings deposits are hereby declared to be preferred claims against the banks holding the same.

SEC. 4. That it shall be the duty of the Postmaster-General and Secretary of the Treasury to provide and issue interest-bearing certificates of deposit of the denominations of the twenty and one hundred dollars each, bearing interest at a rate not to exceed two and four-tenths of one per centum per annum upon deposits of twenty dollars or a multiple of twenty dollars; interest to be paid upon such deposits only as remain a period of not less than six months, and shall date from and begin the first of the calendar month following the deposit of the amount of twenty dollars or its multiple.

SEC. 5. That the Secretary of the Treasury is hereby authorized to loan to banks or approved depositories within the States, when such postal deposits are made, upon such securities and under such rules and regulations as he may prescribe, at a rate of interest not less than three per centum per annum, all such postal savings funds.

SEC. 6. That the amount of accumulations of deposits of any one individual shall not exceed five hundred dollars.

SEC. 7. That the banks receiving deposits of postal savings funds, as provided in this act, shall keep separate and distinct accounts of all receipts and payments, and a balance sheet of such accounts from the first of January to the thirty-first of December in every year, inclusive, and for any shorter period if the same be required, shall be filed with the Secretary of the Treasury and the Postmaster General, and laid before Congress not later than the thirty-first day of January in every year.

SEC. 8. That it is hereby made the duty of the Postmaster-General and the Secretary of the Treasury to designate such officers and subdivisions of their respective Departments to take charge of all business in connection with postal savings funds as may be necessary.

SEC. 9. That the provisions of the several statutes relating to the larceny, embezzlement, or misappropriation of the postal funds, money-order funds, postage stamps, stamped envelopes, or postal cards, and to the forging or counterfeiting of postage stamps, the stamps printed upon stamped envelopes, or postal cards, or the dies, plates, or engraving used in the manufacture of the same, be and they are hereby extended, including the punishment prescribed therefor, and made applicable to the commission of similar crimes in connection with the postal savings system hereby established.

SEC. 10. That the Postmaster-General is hereby authorized and directed to promulgate rules and regulations, not inconsistent with law, for carrying out the purposes of this act, and for conducting the business to which relates.

EXHIBIT 2.

Interesting details of postal savings bank systems in Sweden, Great Britain, Austria, Belgium, The Netherlands, France, Russia, and Italy.

SWEDEN.

At the close of 1888 the number of post-offices empowered to transact savings-bank business was 1,841, as against 1,808 at the end of 1887. Although this increase is not as large as in the preceding year, still it corresponds to the increase in the number of post-offices, for in both years the percentage of post-offices acting as agencies of the post-office savings-bank in Sweden was 93. While in 1887 it became necessary to augment the number of post-office savings-banks in a larger measure in the two districts of Malmöhus and Kristianstad than in the rest of the country, the rate of increase in 1888 was about the same throughout the Swedish postal territory. The greatest number of newly established post-office savings banks in any one Government district was only 6 in the year under report, as against 18 in 1887. In the district of Göteborg och Bohus there was even a decrease in the number of savings-bank offices.

In comparing the number of post-office savings banks with the area and population of Sweden we find that there was, on an average, one such establishment to every 235,21 square kilometers and 2,597 inhabitants in 1888, while in 1884, the first year in which the institution was in operation, there was one postal savings-bank agency to as many as 274,93 square kilometers and 2,949 inhabitants. Although this does not constitute any considerable advance, yet it may be looked upon as satisfactory if the rather low rate of increase of the population in the country is taken into account.

The total amount of business done in 1888 showed a not inconsiderable increase. The deposits numbered 212,131 and aggregated 3,136,881 crowns, making, on an average, 45 deposits, amounting to 661 crowns, to every 1,000 inhabitants. In 1887 this average was but 40 as regards the number and 384 crowns as concerns the amount of deposits. The withdrawals did not show the same rate of increase; they reached the number of 41,287 and the total amount of 1,496,015 crowns, this being, on an average, 9 withdrawals, amounting to 315 crowns per 1,000 inhabitants.

A comparison of the business transacted by the post-office savings banks in 1888 and 1887 in the various government districts shows that in 1888 there was an increase in the number of deposits in all the districts with the exception of those of Södermanland, Blekinge, Kristianstad, Malmöhus, Holland, Örebro, and Gefleborg, where the average number of deposits per 1,000 inhabitants was 51, 38, 17, 27, 29, 42, and 49 respectively, in 1888, as against 58, 39, 18, 30, 32, 43, and 57 in 1887. In the districts of Elfsborg and Vestmanland the deposits showed the same figures as in the preceding year.

There was an increase in the amount of deposits in all the districts, reaching in Kronoberg and Norbotten the unusually high percentage of 277 and 182. The number of withdrawals remained unchanged in 14 government districts. In Stockholm City and 8 other districts it showed an increase, there being a falling off in 2 districts.

The amount of withdrawals increased in all the districts except in that of Södermanland.

The growing interest of the public in the post-office savings bank is demonstrated by the increase in the number of depositors, which was 174,747 in 1888 as against 152,016 in 1887, the increase being 22,731, or 14.95 per cent. At the close of the year under review the amount on deposit reached 4,650,743.62 crowns, an increase of 1,765,346.87 crowns, or 61.18 per cent. over the preceding year. As compared with the population, the sum standing to the credit of depositors amounted on an average to 979.46 crowns per 1,000 inhabitants.

A comparison of the number of depositors and the amount on deposit in 1884 with the corresponding figures of the year under report shows that since the institution of the post-office savings bank in Sweden the number of depositors has increased by 95,234, or 119.77 per cent., and the total amount standing to their credit by 3,823,102.50 crowns, or 461.93 per cent.

There was a sensible decrease in the number of agencies for the sale of savings stamps as compared with the preceding year. One hundred and fifty-nine of these agencies held by private persons were closed. Although the administration took measures to meet the most urgent requirements by increasing the number of savings stamps agencies at post-offices by 41, there still remained an actual decrease of 118. The total number of agencies for the sale of savings stamps throughout the country was 4,224, there being thus 1 agency to 102.51 square kilometers, as against 1 to 99.73 square kilometers in 1887.

The number of savings stamps sold to the public was 801,028, and the value represented by them reached 80,102.80 crowns. A comparison of these figures with those of 1884 shows that in the course of the 5 years during which the post-office savings bank has been in existence the sale of savings stamps, which amounted to 1,558,676 in 1884, decreased to nearly one-half of its original figure.

According to the accounts of the post-office savings bank department for 1888 there was a considerable increase in the total amount of business transacted. In 1888 the receipts and payments reached the sum of 8,523,893.80 crowns as against 5,812,067.81 crowns in the preceding year, so that the financial results may be considered as entirely satisfactory. The cost of management only reached 1.59 per cent. of the total amount of transactions as compared with 2.33 per cent. in 1887.

The cost of management, both in itself and in proportion to the number of transactions effected in the course of the year, and the number of accounts open at the close of the year, was lower in Sweden than in the post-office savings banks of any of the other states.

GREAT BRITAIN.

(1890.)

There has been an increase in savings-bank business, though at a slightly lower rate than in 1888, when the amounts of the deposits transferred from trustee savings banks were unusually large.

The deposits in the year numbered 8,101,120, amounting to £19,814,308 as against 7,540,625 and £19,052,226, the number and amount for the year 1888. The withdrawals were 2,757,848 in number, amounting in all to £16,814,268, showing an increase of 124,040 in number and of £1,011,533 in amount over the number and amount for 1888. As a net result of these transactions a total sum of £62,999,620, including interest, remained to the credit of depositors on the 31st December, 1889, being an increase of £4,443,226 for the year as compared with an increase of £4,582,329 in 1888. The amount of interest credited to depositors was £1,443,186, or £110,348 more than in 1888.

The greatest number of deposits on one day was 55,095, amounting to £137,336, and made on the 30th December, but the largest amount deposited on one day was £158,218 on the 31st December. The greatest number of withdrawals on one day was 18,499, amounting to £93,922, made on the 17th December. The average amount of each deposit was £2 2s. 11d. as compared with £2 10s. 6d. in 1888. This decrease is, however, chiefly due to the large amounts of many of the transfers from trustee savings banks in 1888. The average amount of each withdrawal was £6 1s. 11d. as compared with £6 in 1888.

The number of accounts opened in 1889 was 924,010, and 637,128 were closed. The corresponding numbers for 1888 were, respectively, 887,460 and 618,294. The total number of accounts opened at the end of the year was 4,507,809, or 286,882 more than in 1888, distributed as follows:

	Number.	Proportion to population.	Average balance due to each depositor.
England and Wales.....	4,162,529	1 to 7	£ s. d. 13 19 5
Scotland.....	159,920	1 to 25	8 12 3
Ireland.....	185,360	1 to 25	18 14 11
United Kingdom.....	4,507,809	1 to 8	13 19 6

In 1888 the proportion to population and the average balance were, in England and Wales, 1 in 7 and £13 17s. 3d.; in Scotland, 1 in 27 and £8 8s. 11d.; and in Ireland, 1 in 28 and £18 15s. 4d., and in the United Kingdom 1 in 9 and £13 17s. 5d.

The total number of post-offices open for the transaction of savings-bank business on December 31, 1889, was 9,353, or 331 more than in 1888, of which 286 were opened in

England and Wales, 25 in Scotland, and 20 in Ireland. Whenever a new savings bank office is opened a handbill calling attention to the fact and describing the chief advantages of the post-office savings-bank system is distributed from house to house in the neighborhood.

The number of registered friendly societies authorized during the year to open accounts without limit as to amount in the post-office savings bank was 800, and the number of provident and charitable societies authorized to open accounts during the year was 2,197.

Only 284 penny banks invested their funds during 1889 as compared with 338 in 1888. Of the number last year 130 were connected with schools, of which 44 were board schools.

A novel experiment was made last year by the Ragged School Union as a first lesson in thrift. At the annual distribution of prizes 335 scholars received from the union deposit books showing that 5s. had been placed to the credit of each in the post-office savings bank. In ordinary circumstances the attendance of a depositor is required when an account is opened, but, as in this case, such a requirement would have made the arrangement impossible; all the necessary preliminaries were settled in coöperation with the secretary of the union, and the president, the Earl of Aberdeen, expressed publicly his thanks to the department for doing so. By a curious coincidence the same plan appears to have been adopted in Paris, where, at a party given in December last at the Elysée, to the pupils of the municipal schools, each child received, as well as toys and clothing, a savings bank book with an entry of a deposit of 10 francs.

Special arrangements also have been made to facilitate the deposit and withdrawal of money in other exceptional cases. On one occasion bonuses amounting to £1,686 were placed to the credit of 340 men employed in a large brewery. A post-office clerk attends regularly at Walmer Barracks on pay days to receive deposits, which, on an average, have numbered 66 at each visit. In the case of a regiment suddenly ordered on foreign service, arrangements were made for the repayment of deposits at 24 hours' notice.

The claims made by the representatives of deceased depositors numbered 20,740 as compared with 21,323 in 1888. The applications respecting the money of depositors who had become insane numbered 440 last year, and 377 in 1888. Under the new regulation made in that year 2,371 transfers of deposits from one account to another were made in 1889.

During the year 31 trustee savings banks were closed and deposits amounting to £716,814, and stock investments of the nominal value of £13,860, were transferred to the books of post-office savings bank, in addition to deposits amounting to £48,268, and £3,144 stock transferred in the ordinary course of business. In 1888 23 trustee savings banks were closed, but the total amount transferred was £1,133,497, with £22,389 stock.

AUSTRIA.

The Austrian post-office savings bank department has been able to publish a most satisfactory report on the business of this bank during the year 1889, which has developed in a highly successful manner. The aggregate results of the savings bank and check business considerably exceeded those of the preceding year. The savings bank transactions showed all desirable steadiness. Numerous persons belonging to the poorer classes joined the ranks of the depositors. The percentage of increase in the amount on deposit was higher than in any preceding year. The facilities for effecting check business were likewise extensively used by the public at large during the year under report. This fact is especially demonstrated by the great increase in the number of persons possessing check books, and by the considerable augmentation in the receipts and payments in this branch of the service.

In 1889 the aggregate amount of receipts and payments on check accounts exceeded 1½ milliards of florins; nearly one-half of these transactions were made at the Post-Office Savings Bank Department itself. A further satisfactory feature in the post-office savings bank business consists in the development of the clearing house transactions, the amount of which reached, as early as December, 1889, 29.2 per cent. of the total amount of the business done in all the branches of the post-office savings bank service. The gratifying results of the year 1889, which show an increase of 25 per cent. over the previous year, are the natural consequence of the satisfactory progress of business in all the departments.

We give below some particulars showing the details of the transactions effected :

In 1889 the savings bank deposits amounted, inclusive of interest, to 18,625,680 florins, and the withdrawals to 15,715,911, leaving an excess of deposits of 2,909,769 florins.

The number of savings bank accounts opened in 1889 was 131,071; in 1888, 121,729, being an increase over 1888 of 9,342.

The total number of savings bank accounts remaining open at the close of 1889 was 719,431, and at the end of 1888, 655,335, this being 64,096 accounts more than in 1888.

This is the highest increase which has taken place during 5 years, it having only been exceeded in the year next following that in which the post-office savings-bank system was started.

As a depositor is prohibited by the legal provisions to open more than one account for himself, the number of accounts open at the close of the year, also represents the number of depositors. In the course of 1889, 150 cases were discovered of persons having opened several accounts in their own favor. In accordance with the provisions in force the balances of the several accounts were added together by the post-office department and placed to the credit of a single account.

The greater part of the above-mentioned 719,431 depositors in the post-office savings bank, viz, 222,511, fall to the share of Lower Austria. Then follow Bohemia with 179,713 depositors, Moravia with 77,015, and Galicia with 68,674, the list being closed with the provinces of Styria, Tyrol, and Vorarlberg, Upper Austria, the Coast Lands (Görz, Gradisca, Istria, and Trieste), Silesia, Bukowina, Carniola, Salzburg, and lastly Dalmatia, where the number of depositors in the post-office savings bank is the smallest.

In the Austrian half of the monarchy, 31 in every 1,000 inhabitants were depositors in 1889; in 1888, the number of depositors compared with the population was only 29 to 1,000.

If we contrast the number of depositors in the post-office savings bank with the population of the various provinces, the order runs entirely differently from the above. Although we find Lower Austria still at the head of the list, and this with 88 depositors in 1,000 inhabitants, the order of the other provinces is completely changed, viz, Salzburg with 43, Silesia with 36, Moravia with 34, Upper Austria with 32, densely populated Bohemia with 31, Tyrol and Vorarlberg with 31, Carinthia with 30, Styria with 27, the Coast Lands (Istria, Görz, Gradisca, and Trieste) with 27, Bukowina with 18, Carniola with 17, Galicia with 11, and Dalmatia with 10 depositors in every 1,000 inhabitants.

The great majority of depositors, viz, nearly 76 per cent. belong to the German-speaking population of the monarchy. The rest is divided as follows among the various nationalities: 15 per cent. are Bohemians, 5 per cent. are Poles, 2.6 per cent. Italians, and a very small percentage are Slavonians, Croatians, Ruthenians, and Roumanians.

61.5 per cent. of all the depositors were men, 37.6 per cent. women, and 0.9 per cent were associations, corporations, etc.

84 per cent. of the depositors were able to write, and 14.4 per cent. were unable to do so; with regard to 0.6 per cent. of the depositors nothing was ascertained in this respect. The remainder was composed of associations, corporations, etc.

The statistical records taken with a view to a classification of the depositors according to their occupation or profession, afford a satisfactory proof of the fact that youthful depositors (children, school children, and students) were the most numerous class, forming as they did 33.5 per cent. of the new depositors. The extensive use made by the young of the post-office savings bank must partly be attributed to the efforts made by teachers and postal officers to foster a thrifty spirit among them. This category of depositors is followed by tradespeople, mechanics, and male and female servants. The number of societies, public offices, corporations, and institutions availing themselves of the post-office savings bank was likewise very considerable. At the close of the year 1889, the list of the post-office savings bank depositors contained 3,110 societies of every kind, foremost among which were fire brigades, associations for the sick, school societies, trade associations, workingmen's societies, sporting societies, clubs, choral societies, savings and lottery societies, charitable associations, benevolent and religious societies, etc. More than half the number of these societies were in Bohemia, Lower Austria, and Tyrol.

At the close of 1889, the number of corporations and institutions having made deposits in the post-office savings bank numbered 2,296. More than half of this number were church administrations, ecclesiastical corporations, parishes, and prebends. The remainder were municipalities, institutes for the poor, school boards, foundations, Government offices, military messes, uniform and band funds, military and police headquarters, libraries, hospitals, etc.

In Austria an arrangement is in force according to which deposits can be made through the medium of rural messengers whose duty it is to pay over the money intrusted to them by the inhabitants of the rural district to the post-offices by which they are employed. In consequence of the praiseworthy zeal and intelligence with which this service is carried out, this branch of the savings bank business showed most satisfactory results in many rural delivery districts. In the course of 1889, deposits were collected by rural messengers in rural delivery districts and remitted to the post-office savings bank in 22,949 cases, the total amount collected in this manner being 675,726 florins. The most satisfactory results in this branch of business

were obtained in Lower Austria and Bohemia, whereas in Galicia, Carniola, and the coast lands no transaction was effected through the medium of rural messengers.

As compared with the year 1888, there was an increase of 2,847 in the number of deposits collected by rural letter carriers, and of 68,927 florins in the amount of the same.

Judging from the facts and the satisfactory results recorded in the above summary, it may be expected that the Austrian post-office savings bank will continue in the path of progress, and that by its agency a thrifty spirit will be promoted among the poorer classes of the population, and their economic situation thereby be improved.

BELGIUM.

We gather from the last report of the Belgian savings and pension bank, that, in the course of 1888, 125,937 accounts were opened and 73,873 closed. The number of accounts remaining open at the end of the year was 598,675, of which 593,979 were in the names of private persons and 4,696 in those of public institutions, as against 546,611 accounts open at the close of the preceding year, of which 542,057 belonged to private persons and 4,554 to public institutions. 1,193,880 deposits were made of the total amount of 119,525,676 francs, making an average of 100.01 francs per deposit, as compared with 112.03 francs in 1887. The number of withdrawals was 319,338, aggregating 106,169,928 francs in amount, this being an average of 332.42 francs per withdrawal as against 380.89 francs in 1887.

The amount of interest added to the principal on the 31st of December, 1888, was 6,927,306 francs (6,160,285 francs in 1887), and the sum (inclusive of interest) standing to the credit of depositors on that date was 260,224,436 francs, viz, 249,998,195 francs to the credit of private depositors, and 10,226,243 francs to that of public institutions. The average amount standing to the credit of each account was, therefore, 434.67 francs as against 438.96 in 1887. The number of deposits effected to the credit of accounts current by communes and public institutions at the Central Bank, at the branches of the National Bank, and with the collectors of taxes was 29,159 for a total amount of 22,920,103 francs (as against 30,794 deposits for 25,076,391 francs in 1887), and that of withdrawals 47,209 for a total amount of 23,443,151 francs (as compared with 45,653 withdrawals amounting to 23,360,890 francs in 1887). The interest added to the capital was 98,486 francs (as against 106,560 francs in 1887), and the total amount, inclusive of interest, standing to the credit of these accounts current reached 8,100,360 francs (8,524,922 francs in 1887).

Thus the total amount standing to the credit of both the ordinary accounts and the accounts current on the 31st of December, 1888, was 268,324,798 francs (248,466,306 francs in 1887). The average amount of deposits below 100 francs was 13.62 francs. The percentage of deposits amounting to 100 francs and less was 90 (89 in 1887), and that of deposits exceeding the amount of 100 francs was 10 (11 in 1887). The percentage of accounts having on the 31st of December a balance of less than 100 francs was 65 (66 in 1887), and that of accounts with a balance exceeding 100 francs was 35 (34 in 1887).

In the course of the year under review the following definitive investments were made: 18,379,384.30 francs in Government stock, treasury bonds, and bonds of the "Caisse d'Annuités;" 6,173,182.53 francs in bonds of the "Crédit communal," and treasury bills; 5,288,268.88 francs in bonds of Belgian companies; 997,000 francs in bonds of mortgage on houses; 404,600 francs in bonds of mortgage on landed property; and 6,669 francs in the savings bank premises.

The provisional investments were as follows: 78,221,371.08 francs in bills on Belgium; 278,779,517.09 francs in foreign bills, and 14,901,350 francs in loans granted on the security of stocks. The average rate of discount of the national bank was 3.32 per cent., while that of the savings bank (on Belgian bills) varied from 3 to 5½ per cent. The revenue from the definitive investments amounted to 5,794,824.19 francs, and that from the provisional investments to 2,703,371.44 francs, making a total revenue of 8,498,195.63 francs. At the close of 1888 the value of the definitive investments was 175,790,363.45 francs, and that of the provisional investments 84,824,307.73 francs. Thus, the total value of investments was 260,614,671.18 francs. The interest allowed to depositors amounted to 7,260,838.03 francs, and the cost of management to 639,896.41 francs. The net revenue transferred to the reserve fund was 597,461.19 francs, bringing this fund up to the sum of 7,238,599.78 francs at the close of 1888, as against 6,641,138.59 francs on the 31st of December, 1887.

The investments in the form of loans granted on the security of stocks gave rise to 772 transactions of a total amount of 14,901,350 francs, as against 859 transactions of an aggregate sum of 14,841,300 francs in 1887. Thus, the average amount of each transaction amounted to 19,302 francs.

A classification of the deposits made in 1888, according to the amount of each of them, shows that out of every 100 deposits, there were 77 per cent. of amounts between 1 and 20 francs, 12.9 of amounts between 20 and 100 francs, 6.8 of amounts between 100 and 500 francs, 1.7 of amounts between 500 and 1,000 francs, 1.5 of amounts

between 1,000 and 5,000 francs, and 0.1 per cent. of amounts beyond 5,000 francs. There were 45 deposit books in every 100, with balances between 1 and 20 francs, 20.3 with from 20 to 100 francs, 15.9 with from 100 to 500 francs, 6.4 with from 500 to 1,000 francs, 11.2 with from 1,000 to 5,000 francs, and 1.2 with balances exceeding 5,000 francs.

According to the statistics of the school savings banks, these institutions showed the following results on the 31st of December, 1888:

Out of the 7,447 primary schools (inclusive of infant schools, and the schools of primary instruction attached to educational institutions of other classes) there were 4,798 which took part in the savings bank business. The number of children possessing deposit books was 154,192, viz, 86,309 boys and 67,883 girls. In addition to these, 40,929 children, 21,867 of whom are boys and 19,057 girls, make deposits without as yet possessing depositors' books. There were, therefore, 2,649 schools in which no savings bank business was transacted. These schools numbered 696,726 children, viz, 337,608 boys and 359,118 girls.

The total amount standing to the credit of children of primary schools reached 3,576,226.29 francs on the 31st of December, 1888, of which sum 1,960,111.42 francs belonged to boys and 1,616,114.87 francs to girls.

On the same date the number of middle-class schools and of educational establishments for adults in which savings bank business is transacted was 258, that of depositors was 5,731, and the amount standing to their credit reached 158,175.90 francs.

In adding up the above figures, we find that on the 31st of December, 1888, there was a total number of 5,056 schools of all kinds, in which 200,847 pupils of both sexes had saved a total amount of 3,734,402.19 francs. We may add that 199,724 pupils invested their savings, amounting to 3,701,759.54 francs in the Caisse générale d'épargne et de retraite under the guaranty of the state, while the others, 1,123 in number, possessing a total sum of 32,642.65 francs, either paid in their savings to private savings banks or invested them in government stock. Of the former, 155,370 pupils, whose savings amounted to the sum of 2,711,753.93 francs effected their deposit through the medium of the post-office.

THE NETHERLANDS.

At the close of the year 1888 the number of open accounts was 201,763 (169,027 at the end of 1887), this being an increase of 32,736 accounts, or 19.3 per cent., over the preceding year. The average number of deposits made by each depositor was 2.2, this average being only exceeded in the provinces of North Holland, North Brabant, and Utrecht (2.5, 2.3, and 2.3 per cent., respectively). On the other hand, the provinces of Limburg and Drente continued to show the lowest average, viz, 1.8, and 1.6 per cent. As regards the proportion between depositors and inhabitants, the province of North Holland still headed the list with 64.4 depositors to every 1,000 inhabitants; then followed South Holland (45.6), Utrecht (44.8), Limburg (43.7), and North Brabant (42.1), the province of Groningen coming last with 11.4 depositors per 1,000 inhabitants. The average throughout the country amounted to 41.5 per thousand.

In 1888 the average share of every 1,000 inhabitants in the total amount deposited throughout the Kingdom was 2,169.76 florins, as against 1,786.57 florins in 1887, and the average amount of each deposit 20.82.5 florins, as compared with 19.39 in the preceding year.

The number of deposits was 445,799 and the total amount 9,282,802.89 florins, this being an increase of 51,562 in the number and of 1,639,371.04 florins in the amount of deposits as compared with 1887.

There was an increase of 0.4 per cent. in the number of deposits effected by means of postage stamps, and a decrease of 1.3 per cent. in the number of deposits below 10 florins, as against 1887.

In 1888 the amount of withdrawals reached 29.1 per cent. of the total amount deposited in the course of the year added to the sum on deposit on the 31st of December, 1887, the number of withdrawals being 131,969 and their amount 6,773,168.93 florins.

The average amount of each withdrawal was 51.32 florins (as against 51.42 florins in 1887).

The interest accruing from the invested deposits was 428,801.73 florins, while the interest allowed to depositors amounted to 318,051.67 florins, thus leaving for the year 1888 a surplus of 110,750.06 florins, which exceeded that obtained in 1887 by 14,533.52 florins. The average rate of interest yielded by the invested funds was 3.35 per cent.

The cost of management amounted to about 100,229.54 florins, this being 0.71 per cent. of the total amount due to depositors. In 1887 this item reached 0.84 per cent. of the amount on deposit.

In the course of 1888, the savings bank service was extended to 21 post-offices, while 4 auxiliary offices were closed for this branch of business. At the close of the

year, 234 post-offices and 949 auxiliary offices, making a total of 1,183 establishments (1,164 in 1887), were open for the transaction of savings-bank business. At 38 or 3.2 per cent. (44, or 3.8 per cent. in 1887) of these establishments no transaction was effected.

42,719 of the 201,763 accounts open on the 31st of December, 1888, had a balance of less than 1 florin, 56,498 one of from 1 to 10 florins, 66,174 one of from 10 to 100 florins, and 36,372 one of 100 florins and more.

The annual percentage of increase in the number of accounts and in the amount due to depositors from 1882 to 1888, was as follows:

Year.	Number of accounts.	Amount on deposit.
	<i>Per cent.</i>	<i>Per cent.</i>
1882.....	102.5	135.0
1883.....	46.8	59.0
1884.....	33.6	44.5
1885.....	23.6	36.9
1886.....	24.6	39.2
1887.....	20.7	25.8
1888.....	19.4	20.5

There was an increase in the number of applications of withdrawal and of authorizations of repayment issued by the central direction transmitted by telegraph. In 1888 there were 55 telegraphic authorizations for the repayment of a total sum of 18,037.25 florins.

FRANCE.

We extract the following particulars from the report of the French ministry of commerce, industries, and the colonies, on the business of the French national savings bank for 1888:

In the course of 1888 the deposits reached 1,456,332 in number, and 169,348,619.19 francs in amount; on the other hand, the number of withdrawals was 536,891, aggregating 133,291,211.15 francs in amount. Thus, the deposits exceeded the withdrawals by 36,057,408.04 francs.

At the close of 1887, the amount standing to the credit of depositors was 223,519,666.19 francs. If we add to this sum the above-mentioned excess of receipts over payments of 36,057,408.04 francs, and the interest added to the capital of depositors, in 1888, viz, 7,211,528.53 francs, we find that the total amount due to depositors at the close of 1888 was 266,788,602.76 francs.

The deposits are divided into two classes, namely, first deposits and subsequent deposits.

First deposits.

Year.	Number.	Amount.	Average amount per deposit.
		<i>Francs.</i>	<i>Francs.</i>
1882.....	227,438	47,606,879.75	210
1883.....	207,827	40,440,833.07	194
1884.....	222,159	46,780,639.82	210
1885.....	221,107	52,185,749.17	236
1886.....	239,502	58,522,168.38	244
1887.....	236,888	58,640,041.71	247
1888.....	261,966	67,573,159.67	257
	1,616,887	371,749,471.57	229

As this table shows, there was a considerable increase in the number and amount of first deposits. The average amount of each first deposit rose from 247 francs in 1887 to 257 francs in 1888.

The number of cases in which opposition was made in the course of 1888 was only 18 in more than 270,000 accounts opened by married women without the assistance of their husbands, and 2 in more than 540,000 accounts of minors opened without the assistance of their legal representatives. This is an additional proof of the expediency of the liberal provisions of the law of the 9th of April, 1881. Lastly, there were but 31 ordinary cases of opposition on the part of third persons in more than 1,000,000 accounts.

Of the 261,811 accounts opened in the course of the year, 150,253 are in the names of men, and 111,558 in those of women. In these totals the percentage of accounts opened to heads of agricultural, industrial, and commercial establishments was 7.03, to agricultural laborers 5.81, to factory hands 15.13; to domestic servants 11.82, to soldiers and sailors 2.65, to clerks 8.76, to artists 4.97, to proprietors, and ladies and gentlemen of private means, 14.94, and to minors having no calling 28.89.

Further, 155 accounts were opened for various associations, viz, 95 for societies of mutual assistance, 48 for assimilated societies, and 12 for other associations. The total number of accounts opened by societies of this kind from the 1st of January, 1882, to the 31st of December, 1888, was 844.

A statement of the subsequent deposits effected since the beginning of 1882 is given below :

Year.	Number.	Amount.	Average amount of each deposit.
		<i>Francs.</i>	<i>Francs.</i>
1882	245,717	17,027,502.06	69.29
1883	489,606	32,594,938.13	66.57
1884	694,972	47,316,475.00	68.80
1885	818,600	60,742,740.78	75.67
1886	956,846	74,710,132.09	78.07
1887	1,054,164	85,746,736.27	81.28
1888	1,193,814	101,739,643.87	85.22
	5,454,519	419,878,168.20	76.97

Thus, there was an increase of 13.16 per cent. in the number, and of 18.65 per cent. in the amount of subsequent deposits.

The average amount of each subsequent deposit, which was 81.28 francs in 1887, rose to 85.22 francs in 1888.

As compared with 1882 there was an increase of 385.84 per cent. in the number, and of 497.51 per cent. in the amount of subsequent deposits.

We complete these particulars with a tabulated statement of the deposits of all kinds (first and subsequent deposits) paid in since the beginning of 1882.

Year.	Number.	Amount.	Average amount of each deposit.
		<i>Francs.</i>	<i>Francs.</i>
1882	473,155	64,634,381.81	136.60
1883	697,433	73,035,771.20	104.72
1884	917,131	94,097,114.82	102.59
1885	1,039,707	112,928,489.95	108.61
1886	1,196,348	133,232,300.47	111.36
1887	1,291,852	144,386,777.98	111.76
1888	1,455,780	169,312,803.54	116.30
	7,071,406	791,627,639.77	111.94

Thus there was an increase of 12.68 per cent. in the number and of 17.26 per cent. in the amount of deposits, as compared with 1887, and one of as much as 207 per cent. in the number and of 161 per cent. in the amount of these transactions as against 1882.

The above figures comprise both the deposits effected by means of savings-stamps and the amounts transferred from private savings banks to the national savings bank. From the beginning of 1882 to the close of 1888 these transfers were 68,368 in number and 13,064,023.83 francs in amount, the average amount of each transfer being thus 191.08 francs. There is a steady decrease both in the number and in the amount of the transfers effected from private savings banks to the national savings bank; an increase is only observable in the average amount of each transfer, which rose from 148 francs in 1882 to 277 francs in 1888. On the other hand, 16 accounts, with an aggregate amount of 9,299.60 francs, were transferred from the national savings bank to private savings banks.

The repayments are divided into two classes: (1) Partial and total repayments, and (2) investments in Government stock on behalf of depositors.

Partial and total repayments.

Year.	Number.	Amount.	Average amount of each repayment.
		<i>Francs.</i>	<i>Francs.</i>
1882	52,540	16,410,817.90	312.34
1883	145,934	42,154,983.65	288.26
1884	213,230	56,025,991.86	262.74
1885	288,784	74,752,309.38	258.15
1886	377,613	97,848,996.34	259.12
1887	454,855	112,904,198.81	248.22
1888	533,372	129,200,313.17	242.23
	2,066,328	529,297,611.11	256.15

The rate of increase in the partial and total repayments which, in 1887, was 20.45 per cent. as regards the number, and 15.38 per cent. as concerns the amount of the same as compared with 1886, decreased to 17.26 and 14.43 per cent., respectively, in 1888. The average amount of each repayment, which was 248.22 francs in 1887, decreased to 242.23 francs in 1888.

From the beginning of 1882 to the close of 1888 there was an increase of 915.17 per cent. in the number, and of 687.28 per cent. in the amount of these repayments.

In 1888 the transactions of all kinds (deposits and withdrawals) were 1,992,445 in number and 302,528,016.31 francs in amount, this being an increase over 1887 of 241,860, or 13.81 per cent., as regards the number, and of 40,637,270.57 francs, or 15.51 per cent., as concerns the amount of these transactions.

The average number of transactions effected at each post-office, which was 87 in 1882, gradually rose to 136 in 1883, 174 in 1884, 201 in 1885, 237 in 1886, 260 in 1887, and 294 in 1888.

The number of post-offices entrusted with the transaction of savings bank business increased from 6,024 in 1882, to 6,193 in 1883, 6,478 in 1884, 6,620 in 1885, 6,649 in 1886, 6,712 in 1887, and 6,765 in 1888.

The amount of interest credited to depositors in 1888 was 7,211,528.53 francs, as against 5,988,768.01 francs in 1887.

RUSSIA.

The establishment of postal and telegraph savings banks in Russia was sanctioned by an imperial decree of the 26th of July (7th of August), 1889. These banks will carry on business in coöperation with the existing savings banks of the imperial bank under regulations, the principal of which are given below.

The management of the savings banks of the imperial bank shall, with the approval of the manager of the imperial bank, be intrusted to the postal administration at any place where the chief postal and telegraph administration shall consider this measure as necessary.

The minister of the interior is, with the approval of the minister of finances and of the imperial comptroller, empowered to issue regulations for the management of the postal and telegraph savings banks, and, if necessary, to fix the amount of the funds to be placed at the disposal of these banks.

In order to control the amount of deposits, the minister of the interior may, with the approval of the minister of finances, issue savings stamps, the designs of which shall be submitted to the managing senate for publication.

The minimum amount of a deposit is fixed at 25 kopeks, and the maximum amount standing to the credit of any depositor at 1,000 roubles.

The deposits paid in to the postal and telegraph savings banks shall enjoy all the privileges granted with regard to the deposits in the savings banks of the imperial bank.

The commission paid to postal and telegraph officers for the management of the savings banks shall be defrayed out of the total profit of the savings banks of the imperial bank. This commission amounts to 10 kopeks for each new deposit book issued, 10 kopeks for each amount of 100 roubles deposited, and 10 kopeks at the close of the year for every account that has been open for not less than 1 year. The amount of commission paid to each postal and telegraph savings bank may not be less than 50 roubles per annum.

The commission paid to the employés of the savings banks of the imperial bank, shall be defrayed out of the total profits of the savings banks of this bank. It shall

not exceed one-half of the amounts fixed for the officers of the postal and telegraph savings banks.

The deposit books and all other forms are exempt from stamp duty.

The correspondence exchanged between the postal and telegraph savings banks, as well as with the savings banks of the imperial bank, is forwarded free of postage.

ITALY.

In 1887, for the first time since they were inaugurated, the Italian post-office savings banks record a decrease in the deposits as compared with the preceding year. While the deposits made in 1886 exceeded those paid in during 1885 by nearly 21,000,000 lire, the savings banks received 4,000,000 lire less in 1887 than in 1886.

The excess of deposits over withdrawals only reached 13,000,000 lire, which is the least satisfactory result obtained since the year 1878.

This regrettable state of things is to be ascribed, in the first place, to the economical crisis through which the country is passing. In the second place, it may be attributed to the reduction of rate of interest paid by the post-office savings bank from $3\frac{1}{2}$ to $3\frac{1}{4}$ per cent., which took place in 1887, and lastly, to the rumor prevailing in different provinces of the Kingdom that the Government intended temporarily to forbid the repayment of deposits. There is no doubt that this calumny was spread for the purpose of diverting payment of savings from the post-office to some local private savings bank. It is further possible that certain unsound political theories were at the root of the matter. The administration of the post-office savings bank did not think it expedient officially to contradict the false rumor. The only measure it took with a view to putting a stop to it consisted in an order to its offices not to put the slightest difficulty in the way of applications for the withdrawal of deposits, but on the contrary to effect repayments, whenever possible, on demand. In spite of adverse circumstances the affluence of the public to the post-office savings banks was as considerable in 1887 as in previous years while the amount of business transacted was large, as may be seen by the following figures:

In 1887 the number of post-offices having transacted savings-bank business was 4,237; that of deposits, 1,920,545; of withdrawals, 1,069,193; of accounts opened, 288,925; of accounts closed, 109,428. The number of accounts opened thus exceeded that of accounts closed by 179,497. The amount of deposits was 159,417,724 lire. The amount of withdrawals was 146,250,099 lire. The amount of interest added to the principal in the first and second five years' periods since the creation of the bank was 7,226,322 lire. The deposits, inclusive of interest, exceeded the withdrawals by 20,393,946 lire, and the total amount on deposit in the post-office savings-bank reached the sum of 240,235,163 lire.

With the exception of the above-mentioned decrease of 4,000,000 in the amount deposited, all these figures denote sound progress, and the administration of the institution has no doubt that, as soon as these momentary difficulties have been overcome, the business of the bank will again proceed as hitherto on the path of improvement.

In the course of 1887, 140 post-offices were opened for the transaction of savings-bank business, so that at the close of the year the total number of post-office savings banks amounted to 4,237.

The Italian postal administration has succeeded in extending post-office savings-bank service till its sphere of business has become almost identical with that of the postal service, and henceforth the establishment of post-office savings banks will keep pace with the opening of new post-offices.

Out of the 4,237 post-offices in the kingdom empowered to transact savings bank business, 10 effected no transaction, 14 effected only repayments, 352 received less than 1,000 lire, 947 received between 1,000 and 5,000 lire, 686 received between 5,000 and 10,000 lire, 1,539 received between 10,000 and 50,000 lire, 398 received between 50,000 and 100,000 lire, 291 received 100,000 lire and more.

The most important fact resulting from these figures is that there was a further decrease in the number of post-offices at which no transactions were made.

While in 1877 the number of post-offices open to the public for the deposit and withdrawal of savings, which did no business of this kind, was 848, this number decreased, notwithstanding the constant increase in the number of post-office savings banks to 594 in 1878, 282 in 1879, 141 in 1880, 94 in 1881, 53 in 1882, 41 in 1883, 29 in 1884, 21 in 1885, 18 in 1886, 10 in 1887, which is a proof that owing to the extension of the service to small localities at a great distance from the large centers of traffic, its advantages are more valued every day.

Satisfactory results were obtained by the savings banks in the schools of Italy, 5,401 teachers having undertaken the collection of savings. The sum deposited in this manner by 87,764 pupils reached 464,697 lire, and was paid in by the teachers to the post-office savings bank. Deposits were made by one-third of the pupils of

those educational establishments in which so-called school savings banks exist. As compared with the preceding year, all these figures show a considerable increase, which permits of the conclusion that the teachers recognize more and more the utility of the school savings bank which—if well managed and kept within proper limits—must certainly be considered as a powerful means of education.

From a general point of view, the position of the Italian post-office savings bank may be summed up as follows: This beneficent institution, in spite of the difficult conditions with which it has to contend, extends its sphere of business from year to year, gains more friends every year, and is a powerful means of promoting the prosperity of the Italian people in general, and of the working classes in particular.

EXHIBIT 3.

OPINIONS OF PREVIOUS POSTMASTERS-GENERAL.

HON. J. A. J. CRESWELL—1871.

The Post-Office Department is now prepared to undertake the organization and management of the telegraph in connection with its other duties. Indeed, I believe that the Department itself can aid materially in raising the money needed for the purchase through post-office savings banks, if Congress will authorize their establishment. The security of the Government being the best that could be obtained, many depositors would give it the preference over every other. By paying 4 per cent. interest, at the most, on deposits, a large fund could be readily accumulated and invested, under the direction of the Treasury Department, in the public securities. The proceeds of these investments could be used to reimburse the original purchase-money and all other expenditures for construction and repairs.

To prove the feasibility of this plan, I recur to the history of the British office. Savings banks in connection with post offices were established in Great Britain on the 16th of September, 1861, with a limitation in the law creating them that they should not pay exceeding 2½ per cent. interest on deposits. The following table will show with what rapidity and to what extent they have been intrusted with the money of the people:

Period.	Number of post-office savings banks.	Number of deposits.	Amount of deposits.	Total sum standing to credit of post office savings banks on books of national debt commissioners at close of the year.	Balance in hands of post-master-general, after allowing for charges of management, at close of the year.	Total balance in hand applicable to payment of depositors at close of the year.
From Sept. 16, 1861, to Dec. 31, 1862.....	2,535	639,216	£2,114,669	£1,659,032	£35,692	£1,694,724
Year 1863.....	2,991	842,848	2,651,209	3,328,182	44,413	3,372,595
1864.....	3,081	1,110,762	3,350,000	4,995,663	5,522	5,001,185
1865.....	3,321	1,302,309	3,719,017	6,582,329	4,327	6,586,656
1866.....	3,507	1,525,871	4,400,657	8,231,176	25,791	8,256,967
1867.....	3,629	1,592,344	4,643,906	9,867,703	47,690	9,915,393
1868.....	3,813	1,757,303	5,333,638	11,963,053	Nil.	11,899,400
1869.....	4,047	1,998,644	5,787,218	13,755,547	19,386	13,774,933
1870.....	4,082	2,135,993	5,995,121	15,305,040	158,888	15,463,928

The total amount in hand after 10 years' operations, and for which the British Government pays only 2½ per cent. interest, is £15,463,928, or \$75,145,690—a much larger sum than will be required for the purchase and thorough repair of all the telegraphic lines in the United States.

Convinced of the wisdom of establishing the postal telegraph and post-office savings banks in this country, I earnestly recommend the passage by Congress of the laws necessary therefor,

HON. J. A. J. CRESWELL.—1872.

Post-office savings banks have been in operation in the United Kingdom since the 16th of September, 1861, and have steadily grown in popular confidence and favor. During the year 1871 the number of depositors increased 120,000, and the amount of deposits nearly £2,000,000. The total number of depositors is now 2,362,621, and the total sum standing to the credit of the post-office £17,303,815, or about \$84,000,000. These figures show conclusively the utility of postal savings banks; and I renew my recommendation of last year for their establishment in this country.

HON. J. A. J. CRESWELL—1873.

The events of the past few weeks have awakened a lively interest in a plan heretofore submitted for securing the savings of the great body of the people by a pledge of the credit and faith of the United States. In my reports for 1871 and 1872 I urged the organization of institutions for that purpose, under the title of "Post-Office Savings Banks." The name was not well chosen. The institutions I have in view and recommend are not designed, and should not be permitted, to encroach upon the legitimate powers and duties of the national banks. They are totally distinct from the banks in their scope and character, in the machinery they employ, and in the ends they are intended to accomplish, and may be more accurately designated as postal savings depositories of the United States.

The financial difficulties in which the country has been unexpectedly involved, and which still continue to oppress it, have demonstrated the necessity for some means of maintaining confidence in times of threatened disaster, and of gathering and wisely employing the immense wealth scattered among the people, to prevent panic and escape the ruin which inevitably follows in its track. That the people of the United States hold the reins of financial as well as political power clearly appears from the following tables taken from the public debt statements, reports of the national banks and from official accounts:

Treasury notes of all kinds, including fractional currency, in the Treasury, in the national banks, and in the hands of the public on June 30, 1869, 1870, 1871, 1872, and 1873.

Date.	Aggregate.	In the Treasury.	In national banks.	In the hands of the public.
June 30, 1869.....	\$388, 118, 859. 73	\$37, 097, 818. 89	\$82, 738, 974. 53	\$268, 282, 066. 31
June 30, 1870.....	395, 984, 940. 48	28, 945, 067. 19	96, 758, 465. 39	270, 281, 407. 90
June 30, 1871.....	396, 679, 380. 06	9, 533, 363. 15	124, 298, 373. 22	262, 847, 643. 69
June 30, 1872.....	398, 444, 131. 52	15, 321, 689. 87	125, 063, 881. 12	258, 058, 560. 53
June 30, 1873.....	432, 609, 332. 94	*41, 513, 529. 77	108, 204, 050. 84	282, 891, 752. 33

*Thirty-one million seven hundred and thirty thousand dollars of the currency in the Treasury June 30, 1873, represents special deposits for redemption of certificates of deposit issued under act of June 8, 1872, which certificates are held by the national banks as part of their reserve of lawful money.

National bank notes held by the banks and the public on June 30, 1869, 1870, 1871, 1872, and 1873.

Date.	Aggregate.	On hand.	In the hands of the public.
June 30, 1869.....	\$299, 742, 474. 95	\$17, 915, 295. 95	\$281, 827, 179. 00
June 30, 1870.....	299, 267, 486. 35	23, 056, 596. 35	276, 210, 890. 00
June 30, 1871.....	317, 616, 919. 20	26, 101, 252. 20	291, 515, 667. 00
June 30, 1872.....	337, 240, 692. 30	23, 162, 340. 30	314, 078, 352. 00
June 30, 1873.....	346, 777, 827. 30	26, 432, 588. 30	320, 345, 239. 00

Recapitulation of currency in the hands of the public.

Date.	Treasury issues.	National bank notes.	Total.
June, 1869.....	\$268, 282, 066. 31	\$281, 827, 179. 00	\$550, 109, 245. 31
June, 1870.....	270, 281, 407. 90	276, 210, 890. 00	546, 492, 297. 90
June, 1871.....	262, 847, 643. 69	291, 515, 667. 00	554, 363, 310. 69
June, 1872.....	258, 058, 560. 53	314, 078, 352. 00	572, 136, 912. 53
June, 1873.....	282, 891, 752. 33	320, 345, 239. 00	603, 236, 991. 33
Aggregate for 5 years			2, 826, 338, 757. 76
Average			565, 267, 751. 55

On the 30th of June last the public held, independent of the Treasury and the banks, \$603,236,991.33. The amount of currency was then considered sufficient for all business purposes. In the month of August following, a stringency began to be felt in the money market, and we have since witnessed the extraordinary spectacle

of the banks suspending and declaring their inability to pay United States notes or bank notes, or even fractional currency, to their depositors. Of course, under such circumstances, they could not continue to make their usual discounts for the accommodation of their customers. This can only be accounted for upon the theory of a general lack of confidence on the part of the people, and a consequent refusal to deposit, or invest, or even pay out in discharge of obligations the currency held by them. To meet this strange state of affairs, and to prevent a recurrence of the like in the future, many plans have been suggested—one involving an expansion of the currency, another compelling a return to specie payment, and still another providing for the issue by the Government of a convertible bond at a low rate of interest—but all open to objections more or less serious. The opinion is universal that if there could be a general restoration of confidence there would immediately be let loose an ample circulation for the entire country. If, therefore, a plan can be devised that will afford to depositors equal security to that afforded to note-holders, but little doubt can be entertained that a general amelioration of the present condition will be effected. The immense sum of \$600,000,000 held by the people in June last, with the large accessions since made thereto by heavy drafts upon the Treasury and the banks, will be brought out from its place of concealment and applied to its legitimate work of aiding in forwarding our crops and products to market and in sustaining our vast manufacturing and other business interests.

In my judgment, a system of postal savings depositories would powerfully contribute to this most desirable consummation. Throughout the plan for their organization and work two ideas predominate: first, the United States is to insure the safe return of principal and interest whenever demanded; and, secondly, the extensive machinery of the Post-Office is to be used to bring its advantages home to the great mass of the people. The details would be simple, safe, and efficient. Money-order offices, as agents of the Government, would receive deposits in small sums, ranging from one dollar upward to the limit fixed by law, which sums the postmaster would forward at short intervals to the nearest depository of the United States Treasury. A certificate, fixing the responsibility of the Government, would be issued immediately to the depositor by the postmaster, and notice thereof would be sent either to the Department or some established branch office, to the end that due entry thereof might be made and a more formal acknowledgment forwarded to the depositor. No depositor should be allowed in any one year to deposit exceeding \$300; no greater accumulation of deposits should be permitted for any one depositor than \$1,000; and no greater accumulation of deposits and interest should be allowed than \$1,500.

Meantime, however, the United States should contract to pay interest not exceeding 4 per cent., to be computed from the first day of the month following the deposit, and to stop upon the first day of the month in which any withdrawal might be made. Interest should be computed to the end of the fiscal year, and then, if not drawn, should be added to the principal. It would of course be necessary to keep an exact account of all such deposits, and of the expenses incident to the management thereof, in the Treasury Department; also to make provision for the payment of the amounts due depositors whenever and wherever they might desire to withdraw them; and to allow and credit to such accumulations a somewhat greater rate of interest than that paid depositors, so that all expenses might be paid out of the fund and the institution made self-sustaining. I am confident that the plan of operations thus generally sketched may be so amplified and guarded that the people could be efficiently served, and the Government saved from all loss or expense.

The great ends to be attained are, first, absolute security; secondly, the utmost facilities for deposits, withdrawals, and transfers; and thirdly, perfect secrecy. A system thus organized and conducted would not only encourage economy and habits of saving on the part of all who might be in the way of earning small sums of money, but would tend largely to utilize and keep in circulation the immense amounts which are paid out for wages and in business, and give every depositor a direct interest in the stability of the Government. It would strengthen our national finances by pouring these accumulations into the Treasury, which, in turn, by judicious investments, could afford to monetary and banking institutions the very relief they now so eagerly seek. Thousands who doubt the security of the banks and savings institutions, whether private or organized under State laws, would cheerfully place their surplus money upon such terms in the keeping of the Government.

The extent of the benefits which will inure to the people and the Government from the establishment of this system will be best indicated by a statement of the amounts deposited in existing savings banks in some of the States of the Union. With the means of information at my command, I am able to make only a partial statement under this head. Congress wisely provided by the act of February 19, 1873, for an annual report to be made by the Comptroller of the Currency of the condition of all banks, banking companies, and savings banks organized under the laws of the several States and Territories; but, on application to that officer, I have been informed that he has not yet succeeded in collecting the information necessary for such a report,

and that in many of the States and Territories no returns are made by the savings banks, either to the legislature or any State officer, and that thus they are left without any supervision whatever. I regret that I shall be deprived for the present of the experience and industry which will doubtless be applied to the discharge of the duty imposed by the law referred to.

In the table following, the returns for Massachusetts are brought up to the 26th of October, 1862; for Rhode Island, Maine, and New Hampshire, to the year 1869-'70; for Connecticut, to January 1, 1871; for the State of New York, to January 1, 1873; and for California, to July 1, 1872:

State.	No. of sav- ings insti- tutions.	Number of depositors.	Amount depos- ited.	Average to each depos- itor.
Massachusetts.....	172	630, 246	\$184, 797, 313. 92	\$293. 21
Rhode Island	25	67, 238	27, 067, 072. 00	402. 55
Maine.....	36	39, 527	10, 490, 368. 00	265. 40

Thus seven States had, many months ago, 1,867,802 depositors, and \$629,185,207.92 on deposit, an amount greater by \$3,476,930 than all the deposits, including those of individuals, the United States, and United States disbursing officers, held by all the national banks of the United States, numbering 1,919, on the 3d day of October, 1872.

Objection has been made to the establishment of postal savings depositories upon the ground that they would interfere with and overthrow the present savings banks. I respectfully submit that this objection is without foundation. Savings banks were originally established by the benevolent and philanthropic to provide safe places of deposit for the small savings of laboring people, and in the beginning they were conducted without hope of either profit or reward other than that which comes from the consciousness of doing good. In so far as they have since been used for purposes of speculation, their managers have diverted them from their original design, and to that extent have abused the confidence reposed in them. Security is to be sought above all other considerations, and hence the spirit of speculation should be thoroughly eradicated from their administration. If savings banks are subjected to risks and prostituted for purposes of gain for their managers, they should be overthrown. If, on the contrary, they continue to be well and profitably managed, and pay a greater rate of interest than that paid by the Government, they will in nowise be put to disadvantage, because every depositor will be left free to select his place of deposit.

Nor can the national banks raise a valid objection. They are organized to afford facilities to the community by lending money on personal security, dealing in exchange, issuing notes, and receiving deposits, not for permanent investment, but as temporary custodians. Bankers should own the capital they employ. When they attempt to do business on borrowed capital they are operating on a fictitious credit and become mere speculators. If they succeed in realizing more interest than they pay they make a profit by raising the price of money above its value. If they do not succeed in so doing, then, like other unfortunate speculators, they fail, and their creditors become their dupes. Hence a law prohibiting the payment of interest by the banks would simply confine them to their legitimate business, and prevent them from assuming improper risks. With the Government it is totally different. Its obligations must be met by resorting either to loans or taxation, and in determining its choice of alternatives, the paramount consideration should be the best interests of the people, whose agent it is. Sound policy dictates that the Government should lose no opportunity of borrowing from its own people, at a low rate of interest, for the purpose of discharging an indebtedness abroad, or relieving industry and enterprise at home from the trammels of taxation. But when the Government can arrest panic, restore confidence, call forth the hoarded treasure of the country, and revive the pursuits of industry, by a simple pledge of the people's credit for the people's security, who will say that that pledge should not be given?

Another objection is the tendency to centralization. To this I answer, that, if to establish postal savings depositories would be in violation of the Constitution, there is an end of the matter at once. If, on the contrary, such action would not be unconstitutional, then the only question is whether their establishment would on the whole be advantageous for the people and the Government. Since the national Government has assumed to organize and control the banking of the country, and has found

warrant of law for undertaking the transmission of the people's money through the mails, it would appear that it is only discharging its whole duty and completing its financial work by providing for the safety of the small savings of the industrious and frugal poor. If, in addition, it can be shown that postal savings depositories will serve to fortify the national credit, make more equable the financial operations of the country, cultivate habits of thrift among the industrial classes, and illustrate the excellence of our institutions by protecting and augmenting the accumulations of self-denying toil, and thus in time merging the workman into the capitalist, the cry of centralization can not be made to drown the voice of the people in their demand that the Government of the United States shall execute for their benefit the high offices enjoined upon it by the Constitution.

Another objection, more practical, if not more tenable, is based on an alleged increase of expenses and public officers. So far as the establishment of savings-depositories would have any effect upon appointments, its tendency would be to secure a better class of officers in all respects. None but competent persons could discharge the duties of such institutions, and no man or party having a reputation to sustain would be willing to commit interests so important to unworthy hands. The Government would seek its principal agents and employes among experienced men wherever they could be found. A numerous force of additional officers would not be required. Many persons already employed in the postal service could be made to discharge a portion of the required duties. A force far less than that now needed in savings banks would be sufficient, with the assistance of the machinery of the post-office, to accomplish the same amount of work, and this, together with a supervising bureau in the Post-Office Department and the necessary accounting officers in the Treasury, is all that would be needed. The fact that the money-order office during the past year received transmitted, and paid out nearly \$60,000,000, shows how well that branch of the Post-Office discharges its duties. I am entirely satisfied that the character of the service would be elevated, and the work more cheaply and better done by Government officers, controlled at every step by law, and punishable by severe penalties in case of default or embezzlement, than is possible under the present irresponsible and inefficient mode in which savings banks are conducted in many of the States.

But the argument by example is, perhaps, the most powerful. Let us, then, invoke the experience of other nations. The savings bank, like many other products of Christian civilization, was perfected piecemeal. An institution of a kindred character was founded at Hamburg as early as 1778, and first gave a demonstration of the power of small sums contributed by many when aggregated, though, it is stated, its operations were confined to the granting of deferred annuities. An institution approaching nearer to the savings bank, it is generally believed, was formed at Berne, Switzerland, in 1787. The idea, however, was fully developed in England, and the honor of its first practical application is divided among several persons, all of whom may claim to be benefactors of their race. In the year 1798 a friendly society for the benefit of women and children was established under the superintendence of Mrs. Priscilla Wakefield, and before the year 1801 there had been combined with its main design a twofold improvement, namely, a fund for loans and a bank for savings. In 1804 the savings bank was more regularly organized, and Mr. Eardley Wilmot, M. P., and Mr. Spurling were appointed trustees. A prior claim, however, is raised on behalf of Rev. Joseph Smith, of Wendover, who, in 1799, circulated in his parish proposals to receive deposits during the summer and return the amount at Christmas with an addition of one-third as a bounty.

The first publication in England of the idea of savings banks, under the name of frugality banks, is also attributed to the celebrated Jeremy Bentham as early as 1797. The society next formed was opened, in 1808, at Bath, chiefly through the instrumentality of certain ladies, who received deposits from female servants. In 1810 the first savings bank in Scotland was formed by Rev. Henry Duncan, minister of Ruthwell, Dumfriesshire, and in November, 1815, the providence institution of Southampton was established, under the patronage of the Right Honorable George Rose. The seeds thus sown rapidly germinated, took root, and soon exhibited a vigorous growth. By the year 1817 there had been formed no less than 70 banks in England, 4 in Wales, and 4 in Ireland by the voluntary association of benevolent persons. Parliament then took up the question, and by two separate acts recognized and organized banks for savings in England and Ireland, and two years later, in Scotland. Thenceforth such institutions were under the protection and guidance of the law, and much labor was expended in the effort to protect them from speculation and fraud; notwithstanding all which, it has been stated by competent authority, that between the years 1844 and 1857 frauds were perpetrated to the amount of £228,800. The effect was disastrous in the extreme. Confidence was destroyed, and the

disposition to economize became a subject of ridicule. Attention is called to the following:

Table showing the amount of deposits and withdrawals and the capital of savings banks, in the United Kingdom at the end of each year from 1841 to 1861, inclusive.

Year ended November 20—	Deposits.	Withdrawals.	Capital of savings banks in the United Kingdom.
1841	£5,694,908	£5,487,723	£24,536,971
1842	5,789,203	5,656,160	25,406,642
1843	6,327,125	5,333,015	27,244,266
1844	7,166,465	5,716,275	29,653,180
1845	7,153,176	6,697,042	30,950,983
1846	7,300,367	7,255,654	31,851,238
1847	6,649,008	9,060,075	30,236,632
1848	5,862,742	8,653,108	28,114,136
1849	6,196,883	6,522,760	28,537,010
1850	6,363,690	6,760,328	28,930,982
1851	6,782,059	6,305,566	30,277,654
1852	7,281,177	6,684,906	31,754,261
1853	7,653,520	7,116,330	33,362,260
1854	7,400,141	7,956,347	33,736,080
1855	7,188,211	7,654,133	34,263,135
1856	7,741,453	8,023,583	34,946,012
1857	7,581,415	8,375,095	34,145,567
1858	7,901,925	7,839,903	36,220,362
1859	9,021,907	7,335,349	38,995,876
1860	9,478,585	8,258,422	41,258,368
1861	8,764,870	9,621,539	41,546,475
Total.....	151,298,830	152,313,312	
Excess of withdrawals.....		1,014,482	

It is worthy of note that during the years 1847, 1848, 1849, and 1850 the withdrawals exceed the deposits by amounts respectively of £2,411,067, £2,790,366, £328,877, and £396,638, and that in the years 1854, 1855, 1856, 1857, and 1861, also, the withdrawals largely exceeded the deposits. The remarkable fact is also revealed that, taking the whole period between 1841 and 1861, when the increase in population in England and Wales was 4,190,496, when the exports increased from £51,545,116 to £125,102,814, and when the amount of wages paid must have been largely increased, the withdrawals actually exceeded the deposits by £1,014,482. The commercial crisis of 1847-'48, and the scarcity of money during the Crimean war, had, no doubt, a marked effect during some of the years recorded in the foregoing table; but the general result can be accounted for on no other theory than that the confidence of the masses had been weakened by the discovery of the enormous frauds above mentioned, the knowledge of the defects of the system, and the divided responsibility under which it was worked.

It thus became apparent that a radical reform must be effected, otherwise the usefulness of savings banks would be seriously impaired. After numerous failures a project for post-office savings banks was finally brought to the attention of Sir Rowland Hill, who gave it his cordial approval. A plan having been finally matured by Mr. George Chetwynd, and approved by Mr. Frank Ives Scudamore, fixing the rate of interest at $2\frac{1}{2}$ per cent., it was carried through Parliament under the powerful championship of Mr. Gladstone, and became the law of the land on the 17th day of May, 1861. The details being approved, and the necessary machinery provided, it went into effect on the 17th day of September following. The annexed table, covering its operations from that date until the 31st day of December, 1872, proves its steady and uniform growth and its triumphant success.

Operations of the British post-office savings banks.

Period.	Number of post-office savings banks.	Number of deposits.	Amount of deposits.	Total sum standing to credit of post-office savings banks on books of national-debt commissioners at close of the year.	Balance in hands of post-master-general after allowing for charges of management at close of the year.	Total balance in hand applicable to payment of depositors at close of the year.

1870.....	4, 082	2, 135, 993	5, 995, 121	15, 305, 040	158, 888	15, 463, 928
1871.....	4, 335	2, 362, 621	6, 664, 629	17, 303, 815	166, 456	17, 470, 271
1872.....	4, 607	2, 745, 245	7, 699, 916	19, 559, 804	301, 070	19, 860, 874

Every year shows an increase in the number and amount of deposits; and on the 31st day of December, 1872, the total balances applicable to the payment of depositors amounted to the sum of £19,860,874. The postmaster-general states, in his last annual report, that the cost of each deposit or withdrawal, including postage, is now about sixpence instead of about one shilling in the old savings banks. No greater triumph was ever achieved in post-office management, with the single exception of that of Sir Rowland Hill, in effecting penny postage.

Post-office savings banks encountered at every step the most implacable opposition, and were established only after a prolonged struggle. The same arguments were brought to bear against them that have been used against the adoption of a like system here. It was urged that they would be destructive of the old savings banks; that the post-office would never be able to perform the additional important duties imposed upon it; that the Government was undertaking a great risk; and that the scheme was centralizing in its tendency. They were opposed by Lord Colchester, an ex-postmaster-general, and by Lord Monteagle, of Brandon, once chancellor of the exchequer. A practical trial of twelve years has conclusively established the fallacy of all the arguments adduced against this beneficent measure.

The same system, somewhat simplified, has been put into operation in the British Australian colonies, in Queensland, and in Canada, with like unvarying success. Mr. J. C. Stewart, superintendent of the post-office savings banks of Canada, writes, under date of October 25, 1873:

"Post-office savings banks work smoothly with us. We commenced five and a half years ago very much in the dark, and we have had to work out the system to a great extent unaided; but we learned to think out and reason out a system with which we are now well satisfied. There is nothing which prevents our extending it to every money-order office, save want of office accommodation at the head office."

Reason and philanthropy being thus sustained by the prolonged experience of so many people speaking the English language, how can the success of similar institutions in the United States be longer doubtful? I believe that the financial perils through which we are now passing could have been mainly averted if these institutions had been open to receive deposits. The people of this country earn more and deposit more than those of any other. The State of New York alone exhibits an aggregate of savings-bank deposits equal to those of the whole United Kingdom of Great Britain and Ireland; and it is not extravagant to say that if the spirit of the universal frugality could be encouraged by an assurance of good faith and absolute security, the savings of the American people would soon grow into such gigantic proportions that the voluntary loans of a single generation would exceed the whole of the national debt.

I am clear in the conviction that the establishment of postal savings depositories will be found an eminently wise and practical measure; and, in the hope of contributing something to that end, I will submit at an early day a form of bill embodying the necessary legislation.

HON. HORACE MAYNARD—1880.

POSTAL SAVINGS.

One of my predecessors some years since recommended the incorporation into the department of a system of postal savings. The subject has from time to time occupied the attention of Congress. For several years the system has been in operation in the United Kingdom of Great Britain and Ireland, and in Canada. When in London recently, Her Majesty's postmaster-general kindly gave me facilities for observing the management of his department. I learned that the postal savings system had been remarkably successful, and had constantly grown in popular favor. As managed in that country, it is a source of some profit to the Government.

In this country I incline to the belief that the system would have advantages even greater than in a compact population like that of Great Britain. The subject will be found intelligently discussed by a gentleman connected with the money-order office upon page 379, of the appendix.

Wealth, public and private, consists largely of the savings of production over consumption, small in detail, but enormous in the aggregate. In by far the larger portion of the United States there are no savings depositories, and are not likely to be. To the people of these parts the use of the post-office for this purpose would be a real boon. It would be an additional advantage that deposits would be available at any depository office in the United States, an important consideration with a people so migratory as ours. It is believed the system would interfere little with the business of the savings banks, but would absorb funds not now deposited in them. Nor would the patronage of the Government be sensibly increased, since the system would be operated by persons already in the public service, with no considerable addition to the number. Your attention and the attention of Congress is respectfully invited to it.

HON. T. L. JAMES—1881.

POSTAL SAVINGS DEPOSITORIES.

As early as 1871 a recommendation was made by one of my predecessors for the establishment of a system of savings depositories in connection with this Department, and in several subsequent annual reports this recommendation has been renewed.

December 18, 1873, "A bill to establish and maintain a national savings depository as a branch of the Post-Office Department" was introduced in the House of Representatives by Hon. Horace Maynard, of Tennessee. From time to time since that date the measure has occupied the attention of Congress, and many bills have been introduced, but without securing definite action.

A system of post-office savings banks went into operation in Great Britain September 16, 1861. At the close of its first complete year, the number of open accounts was 178,495, and the amount standing to the credit of depositors was £1,698,221, being an average of £9 10s. 3d. to each account. Since that time the institution has grown rapidly in popular favor, and on the 31st of December, 1879, the number of outstanding accounts had risen to 1,988,477, and the amount of the credit of depositors to £32,012,134, an average of £16 1s. 11½d. to each. The interest paid to depositors is only 2½ per centum, a rate so low as practically to exclude the post-office savings banks from competition with other banking institutions, as the history of the rise and progress of savings institutions in Great Britain has demonstrated, the object of the government being to offer to the depositor security rather than profitable investment for his earnings, and to promote frugality, steady habits, and consequent thrift among the laboring classes.

My predecessor, in his last annual report, said that in the larger portion of the United States there are no savings depositories, and are not likely to be; and he expressed the opinion that, to the people of these parts, the use of the post-office for this purpose would be a real boon. That it would be an advantage to the patrons of the institution, that deposits would be available at any depository post-office in the country, "an important consideration with a people so migratory as ours." He further expressed the belief that the system would interfere little with the business of the savings banks, but would rather absorb funds not now deposited in them. He thought that the patronage of the Government would not be sensibly increased, since the system would be conducted by persons already in the public service, with no considerable addition to their number.

In these views I concur. It is my earnest conviction that a system of this description, if adopted, would inure more than almost any other measure of public importance to the benefit of the working people of the United States, and I commend it to the favorable consideration of Congress.

HON. T. O. HOWE—1882.

POSTAL SAVINGS BANKS.

I follow in the steps of many of my predecessors in this office when I invoke Congress to make one more effort to ingraft upon the postal service a system of deposits for small sums. The great lesson our people need to learn is that of economy. The American people are apt to earn but are not wise to save.

The easy introduction to the art of saving is to provide a convenient and safe means of saving. A lucrative means is less essential. A place near at hand where a dollar may be deposited and may be secure against the temptations of the burglar, the thief, and the saloon keeper, even if it accumulates but very little, has everywhere proved a strong inducement to saving. The post-office is near to every citizen; the savings bank must always be remote from the most. The post-office need not be a substitute for the savings bank, nor its rival, but its feeder; a place where small deposits with slow accretions may securely grow into large ones, then to be transferred to savings banks on longer terms and with larger earnings.

FROM THE REPORT OF THE POSTMASTER-GENERAL—1889.

POSTAL SAVINGS BANKS.

If the letters and arguments presented at the Department and articles in the newspapers are an evidence of interest in this subject there is a steadily growing sentiment in favor of the Government offering through the post-offices a depository for savings. Foreign countries have for many years past extended these conveniences for the people and good results are reported without exception.

The report of the Postmaster-General of Great Britain for 1889 says:

The growth of business in the savings bank has been exceptionally rapid during the year 1888. * * * The deposits in the year numbered 7,540,625, amounting to \$95,261,130, as against 6,916,327 and \$82,679,660, the number and amount for the year 1887. The withdrawals were 2,633,808 in number, amounting in all to \$79,013,675, showing an increase of 137,514 in number and of \$5,612,280 in amount over the number and amount for 1887. As a net result of these transactions, a total sum of \$292,781,970, including interest, remained to the credit of depositors on the 31st December, 1888, being an increase of \$22,911,645 for the year as compared with an increase of \$15,498,635 in 1887. The amount of interest credited to depositors was \$6,664,190 or \$443,820 more than in 1887.

The greatest number of deposits on one day was 60,936, amounting to \$907,445, and made on the 31st December. The greatest number of withdrawals on one day was 20,348, amounting to \$446,985, made on the 18th December. The average amount of each deposit was £2 10s. 6d., as compared with £2 7s. 10d. in 1887. * * * The average amount of each withdrawal was £6, as compared with £5 17s. 7d. in 1887.

The number of accounts opened in 1888 was 887,460 and 618,294 were closed. The corresponding numbers for 1887 were, respectively, 794,592 and 574,252. The total number of accounts open at the end of the year was 4,220,927, distributed as follows:

	Number.	Proportion to population.	Average balance due to each depositor.
England and Wales	3,900,334	1 to 7	£ s. d. 13 17 3
Scotland	148,288	1 to 27	8 8 11
Ireland	172,305	1 to 28	18 15 4

“The total number of post-offices open for the transaction of savings-bank business on the 31st December, 1888, was 9,022, or 302 more than in 1887, of which 254 were opened in England and Wales, 28 in Scotland, and 20 in Ireland.”

The fact that over four millions of persons (4,220,927) in the kingdom of Great Britain alone take advantage of this means of security and saving is certainly significant. Not less so is the sum of nearly three hundred million of dollars (\$292,781,070) to the credit of the depositors on January 1, 1889. But the amount of self-reliance, thrift, and good citizenship encouraged by this feature of the Government is beyond any calculation.

To connect more intimately countless numbers of citizens with this country is a patriotic service. It would tend to weaken incipient disturbances; it would aid in breaking down sectional feelings. The State and private savings banks in many of

the States where small deposits can be made are comparatively few in number. In some parts of the country there are no such opportunities offered. The chimney corner, the trunk, the closet, and the old stocking hide another surplus, not unlike that heaped up in the Treasury; and practically it is as much withdrawn from circulation. To offer needed security to these millions striving to be provident, to encourage other millions now thoughtlessly improvident, and bind closer to the nation all those who are benefited—men, women, and children alike—is worthy of the loftiest statesmanship.

The grave question at the threshold is what to do with the money deposited; how to put it into circulation and make it earn an interest. The claim sometimes made that for the Government to take up this business would be an interference with the banks and savings funds will not hold good. I maintain that the habits of saving engendered would be widely felt and increase the savings of all who are already depositors. Besides, but few of the existing institutions can afford to bestow their labor on receiving sums as small as those which the postal savings bank would invite. Fixing a limit to the amount of deposits at \$150 from any one person in one year would tend to turn away from the post-office banks to other banks and savings funds the aggregated deposits as soon as sufficiently large to be desirable to financial institutions.

I suggest early consideration of the question of establishing postal savings banks at 10,000 of the fourth-class offices in towns where such facilities are most needed, leaving the extension of this privilege to be determined after a trial of 2 years. There are three plans: First, to accept limited deposits, upon which interest at the rate of not more than 2 per cent. be paid; second, if objection be made to the Government obligating itself to pay interest, accept deposits with an agreement to invest and distribute their earnings less one-eighth of 1 per cent. for the cost of the service; third, if it is deemed inadvisable to undertake any such obligation, offer the post-offices as depositaries without interest, affording the people the convenience and safety. In each case the Secretary of the Treasury would loan the money, equitably distributing it to the banks in the States where the deposits originated to keep it in circulation, requiring United States bonds as security, and interest, if the Government pays interest, but not otherwise.

The suggestion of a modified plan for small savings is made in case the other plans are disapproved; that authority be given to the Department to redeem for cash, under regulations prescribed by the Postmaster-General, all undefaced postage stamps or postal cards when presented at any post-office on savings cards in multiples of \$1. While this would be the least important of the four schemes, I believe it would find a hearty response among the toiling people, especially the younger and smaller wage-earners.

FROM THE REPORT OF THE POSTMASTER-GENERAL, 1890.

SAVINGS BANKS AT POST-OFFICES.

The Post-Office Department is continually urged to act as the guardian of moneys for people resident in parts of the country where savings banks do not exist. It is not the large cities that feel this need, though even at the populous centers banking institutions generally do not offer convenient hours for working people and do not care to deal with small sums. It is the large mass of wage-earners outside of large cities that clamor for help to keep hard-earned gains. In some of the States no laws exist to give State protection to savings deposited with private capitalists. It is stated on reputable authority that in one portion of the country containing twelve millions of population there are not as many places of deposit for the saving of small sums as exist in a single city of 80,000 people in a New England State.

To teach economy and thrift as leading up to better citizenship falls short if there is no adequate provision for the safe-keeping of savings. Such places ought to be within an hour's walk of the home of every workingman. They can not be left to private capitalists to provide, because it would not pay them to deal in small sums or perform the necessary labor. The post-offices and the postmasters are in every respect rightly situated to do this work. It would be a great comfort to the people to have these banks that could not be affected in times of financial panic.

Of all the great powers in the world the United States and Germany alone are without postal savings systems. The last report of the British authorities shows that on the average 1 person out of every 8 in the United Kingdom is a depositor in the postal savings, and while in England and Wales the average balance to each depositor is almost \$70, in Ireland, where the conditions are harder, the average balance to each depositor is close to \$94, owing doubtless to fewer opportunities to invest or deposit money for safe-keeping.

In Mr. Lacey's report to the Forty-seventh Congress, urging the establishment of

postal savings banks, he quotes as follows from the twenty-sixth report of the postmaster-general of the United Kingdom:

"Notwithstanding the dullness of trade and the deficiency of the harvest that characterized the year 1879, it is satisfactory to report a continued excess of deposits over withdrawals and an increase in the balance due to depositors of upwards of a million and a half sterling. Most remarkable, perhaps, is the progress shown in Ireland, considering the severe distress to which many parts of that country have been subject. For the whole of Ireland there was, including interest, an increase in the balance due to depositors of \$457,915, and of this amount the eight counties chiefly affected by the distress contributed no less than \$127,090."

The Postmaster-General of Great Britain states in his last report that the number of savings bank depositors last year was 8,101,120, an increase of 560,495 persons, and that the total amount of deposits for the year was a fraction under \$100,000,000, nearly \$4,000,000 more than the previous year. In one day over 55,000 persons made deposits amounting to over \$685,000. There were 924,010 new accounts opened in 1889 and 637,128 closed. The total number of open active accounts at the end of the year was 4,507,809, or nearly 300,000 more than the previous year. The report gives interesting data of the growth of the savings system in the British provinces. In Ceylon the system was established in 1885, and "proved a boon to the poorer population."

An interesting statement in the Bankers' Monthly for October says:

"But the greatest extension of savings banks has been brought about by the introduction of the system of post-office banks. In India, as in England, the use of the already existing machinery of the post-office has not only proved of the greatest advantage in point of economy of administration, but has been of the utmost service in extending the opportunity of profitably exercising thrift into many parts of the country where otherwise it would be impossible to afford such accommodations without incurring a cost too great to be borne by the business of the district. * * * In March, 1888, the totals of accounts and balances in the various savings banks were as follows:

	Accounts.	Balances.
		<i>Rupees.</i>
3 presidency banks.....	39,403	11,518,734
12 railway banks.....	12,848	2,296,501
170 military banks.....	18,303	1,473,783
5,966 post-office banks.....	261,157	50,488,357
Total.....	331,711	65,777,375

The last French report at hand is that of 1885, which shows the amount of deposits to be over \$53,000,000. In Belgium the depositors at the close of 1888 had \$50,000,000 to their credit. In the Netherlands the deposits were upwards of \$5,800,000. In Sweden at the close of 1887, the depositors, 59 per cent. of whom were minors, had \$766,430 to their credit. Comparison of the deposits in 1887 with those of 1884 shows an increase of over 100 per cent. A report of the postmaster-general of the Hawaiian Kingdom dated February 11, 1890, shows that that country first had postal savings in 1886, and has now 2,641 depositors with \$909,613 on deposit, against \$477,475 one year before. It would seem as though the United States should not be the last country to offer assistance to the masses of her people struggling to rise by thrift and economy.

I recommend that the Post-Office Department be authorized to establish postal savings banks under regulations formulated by the Postmaster-General; that the said banks be located as follows: (1) In States having no laws regulating savings banks; (2) in any other States upon petition of a considerable number of residents of any one locality; and (3) not more numerous than one post-office for every 10 miles of area; that the interest to be paid depositors shall be fixed by the Secretary of the Treasury at the beginning of each year, and be one-half of 1 per cent. less than the average rate paid to depositors by private bankers; that all postal savings received within a State shall be placed on deposit with the national banks of that State, on application, in such amounts and at such interest as the Secretary of the Treasury shall prescribe, and that all such deposits be declared by special enactment preferred claims against the banks holding them.

EXHIBIT 4.

SUMMARY OF THE EFFORTS TO PROVIDE LEGISLATION ON THE SUBJECT OF POSTAL SAVINGS BANKS.

IN THE HOUSE OF REPRESENTATIVES.

Date.	No. of bill.	Title of bill.	Introduced or reported by—
Dec. 18, 1873	797	To establish and maintain a national savings depository as a branch of the Post-Office Department.	Mr. Maynard.
Oct. 29, 1877	548	do	Mr. Tipton.
Mar. 15, 1878	3848	To promote the refunding of the national debt and the loan of the savings to the United States for that purpose.	Mr. Robbins.
Mar. 21, 1878	3989	To establish a postal savings depository as a branch of the Post-Office Department and to aid in refunding the interest-bearing indebtedness of the United States.	Mr. Waddell.
Apr. 17, 1879	4395	To provide for the deposit of savings in a popular loan and to provide for funding the national debt in home bonds convertible into currency.	Mr. Phillips.
Dec. 16, 1881	850	To establish and maintain a postal savings depository as a branch of the Post-Office Department.	Mr. Money.
Feb. 8, 1882	4198	To establish a postal savings depository as a branch of the Post-Office Department.	Mr. Lacey.
Dec. 11, 1883	812	do	Do.
Do.	897	do	Mr. O'Neill.
Mar. 16, 1886	6746	To establish post-office savings banks as a branch of the Post-Office Department.	Mr. McComas.

IN THE SENATE.

Mar. 13, 1878	917	To promote the deposit of savings and the refunding of the national debt.	Mr. Gordon.
Feb. 24, 1886	1622	To establish a postal savings depository as a branch of the Post-Office Department.	Mr. Miller.

EXTRACTS FROM A REPORT SUBMITTED FEBRUARY 21, 1882, BY MR. LACEY, FROM THE COMMITTEE ON THE POST-OFFICE AND POST-ROADS OF THE HOUSE OF REPRESENTATIVES.

POSTAL SAVINGS DEPOSITORIES.

FEBRUARY 21, 1882.—Referred to the House Calendar and ordered to be printed.

Mr. LACEY, from the Committee on the Post-Office and Post-Roads, submitted the following report (to accompany bill H. R. 4198).

The Committee on the Post-Office and Post-Roads, to whom was referred the bill (H. R. 4198) relating to the establishment of a postal savings depository as a branch of the Post-Office Department, submit the same with amendments, and make the following report:

Since the beginning of the present century the philanthropists of all nations have been earnestly endeavoring to promote the establishment of institutions for savings, and the great and beneficial influence exerted upon the laboring classes for their elevation and improvement, by these agencies, is sufficient proof that their efforts have been wisely directed. To provide safe and convenient institutions for this purpose should be the aim of every wise legislator. Whatever can be as well done by

private enterprise as by the Government should never be entered upon by the latter, and it is far from the purpose of your committee to supersede or interfere with sound banks now or hereafter organized by private enterprise under State authority; but we are of the opinion that private enterprise alone does not, and can not, in this respect, meet the necessities of the industrious poor in any country, and least of all in the United States.

The New England States, having a dense population conveniently clustered about mills and factories, is, in a greater degree than other parts of the Union, supplied with these institutions, averaging 1 to every 9,436 inhabitants, and so long as these banks are well and successfully managed the proposed system will in no degree interfere with their business.

But the remaining thirty-two States have but one savings bank to every 225,000 people. To supply these 46,000,000 people as well as are now those of New England we should need 5,000 savings banks instead of 236, which is the present number.

On the 30th of June, 1881, there were 5,499 money-order post-offices in the United States, and if the Postmaster-General were to designate all of these as subdepositories under this act, the people of the whole country would be no better accommodated in point of numbers than is now the population of New England. It is impossible for private enterprise to supply this want. It is possible for the Government. Its offices are already open at the exact places where this business can be most conveniently transacted; it has in each of these offices a corps of officers especially adapted to the purpose; it has excellent facilities for transporting the deposits to a common center for investment, and is itself a borrower at a higher rate of interest than is to be paid the depositor under this act.

All power under our form of government comes from the people—an aggregation of individual voters. If these are vicious and unthrifty, bad government and finally utter failure must follow. Idleness results in poverty and vice. Industry is promoted by increasing the facility and certainty with which its fruits may be preserved and enjoyed. An industrious, frugal, thrifty man is rarely a bad citizen, and good citizenship insures a wise and stable government.

In the light of these facts, and the great success which has attended the establishment of the postal savings system in other countries, your committee cannot give much weight to objections based upon mere theories—objections which have been repeatedly met and overcome abroad by the stern logic of actual experience.

The bill under consideration provides in substance that none but money-order post-offices can be authorized to receive deposits.

No single deposit can be less than ten cents nor more than one hundred dollars.

No more than one hundred dollars can be deposited by one person within any period of thirty days.

The amount due a depositor is limited to five hundred dollars.

Money deposited is to be immediately forwarded to some Government depository by the postmaster who receives it, and invested by the Secretary of the Treasury in interest-bearing securities issued or guaranteed by the United States, and if these can not be purchased without loss to the depository then in approved State securities.

The account of each depositor is to be kept at the central depository in Washington, where interest at the rate of two per cent. per annum is computed and credited.

All withdrawals are by checks issued under the authority of the Postmaster-General.

The expenses of the system are to be paid from the profits of the business.

Your committee believe the provisions of this bill to be wise, and that by its operations both the depositor and the Government would be mutually benefited. We also believe that this business can properly be conducted by the Post-Office Department. The latter is now engaged in carrying merchandise and selling exchange for the sole purpose of adding to the commercial facilities of the people, while the system hereby proposed will not alone prove a great convenience, but will elevate the standard of citizenship and largely promote the prosperity and happiness of all.

Recognizing the obligations which we as legislators owe to that numerous class upon whose industry, frugality, and resulting virtues the prosperity of our country and the permanence of its institutions must at all times rest, we believe all technical objections which stand in the way of their best interests should be swept aside, and that the welfare of these, the industrious poor, the producing millions of our land, should be given paramount consideration.

We therefore recommend the passage of the bill as amended.

EXHIBIT 5.

IN THE SENATE OF THE UNITED STATES,
December 11, 1890.

Resolved, That the Committee on Post Offices and Post-Roads be, and it is hereby, instructed to inquire into the feasibility and advisability of the enactment of a law creating postal savings banks in connection with all or certain classes of post-offices throughout the country, and to report by bill or otherwise at the persent session.

Attest:

ANSON G. MCCOOK,
Secretary

EXHIBIT 6.

PRESS COMMENTS CONCERNING POSTAL SAVINGS BANKS

1. Favorable to their establishment.
2. Against their establishment.

FAVORABLE TO POSTAL SAVINGS BANKS.

[American Banker, New York, September 6, 1890.]

A FEW WORDS ABOUT POST-OFFICE SAVINGS BANKS.

[Read before the American Social Science Association, by J. H. Thiry, of Long Island City, N. Y.]

The European system of post-office savings banks has recently occupied the attention of the press, reformers, scientists, economists, philanthropists, and even a large number of educators of our country. In 1882 a bill was presented in the legislature favoring their introduction, but for some reason or other it was not approved. "Other time other customs." Eight years or more of experience has probably changed the attitude of the legislature. To-day *ignorance*, *intemperance*, and *improvidence*, according to popular declaration, are the three worst foes to American social progress. Our public schools can cure *ignorance*, a proper education will lessen the follies of *intemperance*, and the habits of thrift and economy, properly taught to our children, will reduce considerably the number of *improvidents*.

Compulsory education will reduce ignorance, as Shakespeare says: "Ignorance is the curse of God; knowledge the wing wherewith we fly to heaven."

Manual training and the lessons of thrift and economy taught to our children will prove a means of reducing intemperance, for "A drunkard's purse is a bottle," and, to quote Bacon: "All the crimes on earth do not destroy so many of the human race nor alienate so much property as drunkenness." The habit of saving inculcated in the scholars according to the system which has been on trial during the last 5 years in the 112 schools of our country, will serve as an incentive to temperance and as a preventive to improvidence. "One hand washes the other, and both the face."

Can the European system of post-office savings banks, with its complicated machinery, its heavy expenses, help us? I do not see it. A close survey of our customs, our form of government, the topography of all the regions of the domain of Uncle Sam, compared with that of the European nations, force the conclusion that on account of the large amount of labor, expense, and inconvenience, its introduction would not warrant an adequate return. However, from a careful examination of all the plans suggested thus far, only two appear to meet the wants of our time and country, and they have been proposed by Hon. Horace J. Smith, of Philadelphia, one of the most earnest and best-informed advocates of the post-office savings-bank system in America. In a contribution to the Statesman of Chicago, Ill., Mr. Smith's outline of the plans runs as follows:

First plan.—"That the savings of the people, deposited at the post-offices, instead of being centralized in the Treasury in Washington, should remain in the State in which they originate." * * *

Second plan.—"That the savings of the people, deposited at the post-offices, should be transmitted to the nearest national or savings bank, under the particular scrutiny of the Government to preclude almost any possibility of loss." * * *

According to my view the second plan is the one that will be found the most satisfactory, without entailing great labors, inconvenience, and expense, and the one which, above all, would most readily meet with popular acceptance. In the localities where savings banks could not possibly be established the post-offices would become an agent for the receipt and transmission of the savings of the people and be the intermediary agent between the teachers and the regular banking institution which would accept the totals.

In case such a plan should receive the approbation of all concerned, the next thing needed is a reduction of the usual rates for transportation of the funds (deposits and withdrawals) from one place to another. From the writer's experience and that of many of those with whom he has been in correspondence during the last four years, the practical working of the plan, under a wise code of legislation, would prove a great boon for those dwelling in sections where the art of saving is unknown. Those of us who have seen this system in operation and studied its results trust sincerely that our legislators will soon recognize the wisdom of sanctioning its adoption in our own country.

The rules and regulations of the school savings-bank system will be published in full in a future issue of *The American Banker*. Parties interested and desiring copies of same are requested to send in applications to this office at an early date.

[Indianapolis News, Sept. 30.]

Penny-savings institutions are to be established in Boston on a plan essentially the same as the British Postal Savings Bank. The purpose is to afford the poor a convenient means of saving small sums. No interest will be paid, as the income from such investments as can be made will not be larger than the expense of handling the funds. The benefits to be derived from the system are largely more than the money that can be saved. That is not likely, in any case, to grow into a sum sufficient to more than tide the depositor over some short period of misfortune. The inculcation of the habit of saving is the important thing. It develops thrift and is the surest way of checking pauperism. The person who learns to save has learned the first lesson of success. All the knowledge that can be gained from schools and colleges is not, to the person who must be self-dependent worth as much as knowledge of how to save and the habit of doing it. It is the foundation of all fortunes. It is the best safeguard against intemperance and immorality. The savings institutions, among which we count in Indianapolis the building and loan associations, have done as much, if not more, to check the drinking habit than the temperance movements. Throughout the world it will be found that, in those countries where there is frugality, there is also the highest average of morality.

[Defiance (Ohio) Crescent, October 1, 1890.]

The question of post-office savings banks is an interesting one, and the plan is destined, no doubt, to be adopted in this country. Japan will teach us something when we begin, for, according to an article in a native journal, they were established by the Government in 1875, with the object of encouraging thrift and to collect the small sums scattered about in private keeping. At first they attracted so little attention that at the end of 1875 there were only 2,000 depositors, with \$15,320 lodged. Henceforth, however, the figures increased at a remarkable rate. In 1876 the deposits amounted to \$41,845, in 1882 to \$1,058,000, in 1882 to \$9,050,000, and in 1889 to \$20,451,000. In Tokio the number of depositors is 356,000, and the amount of their deposits is \$10,400,000. It is believed that the poorest people are not depositors, inasmuch as during the recent distress, due to comparative failure of the rice corn, the bulk of the deposits has undergone no diminution.

[Camden (N. J.) Gazette, October 4, 1890.]

Postal-savings banks are a means by which the Government offers through the post-office a depository for savings. To every citizen of the country, no matter where he may reside, provided he is within reach of some post-office which is a depository, the Government extends the opportunity to lay by his savings in small sums, allows interest thereon, and pledges its credit as security for their repayment on demand of the depositor or his representative.

They are not intended to interfere with or be a substitute for existing savings institutions, which for the most part deal with much larger sums and are found only in the larger centers of population, and chiefly in New England and the Middle Atlantic States, but to extend a privilege similar to that which private institutions afford to the very large class of small wage earners, many of whom live entirely out of reach of such institutions—on the principle that if saving and a place where what is saved can be kept in safety are good for some people they are good for all, and that the Government, being security, if anything in the country can be, and having already its "posts" established all over the land, should be the agent to furnish such facilities to its people.—*Youth's Companion*.

[Lowell (Mass.) News, October 6, 1890.]

PENNY SAVINGS.

Penny savings institutions are to be established in Boston on a plan essentially the same as the British postal savings bank. The plan is an admirable one. The purpose is to afford the poor a convenient means of saving small sums. No interest will be paid, as the income from such investments as can be made will not be larger than the expense of handling the funds. The benefits to be derived from the system are largely more than the money that can be saved. This is not likely in any case to grow into a sum sufficient to more than tide the depositor over some short period of misfortune. The inculcation of the habit of saving is the important thing. It develops thrift, and is the surest way of checking pauperism. The person who learns to save has learned the first lesson of success. All the knowledge that can be gained from schools and colleges is not, to the person who must be self-dependent, worth as much as knowledge of how to save and the habit of doing it. It is the foundation of all fortunes. It is the best safeguard against intemperance and immorality.

The savings institutions, among which we count in Lowell, the building and loan association, has done as much, if not more, to check the drinking habit than the temperance movements. Throughout the world it will be found that in those countries where there is frugality, there is also the highest average of morality.

[Philadelphia Press, October 10, 1890.]

THRIFT WITH THE PENNIES.

[From the Boston Herald.]

The system of penny savings banks in schools is especially popular in Pennsylvania, where it includes the schools of Pottstown, Norristown, Chester, and Wilkes Barre. It has even spread to McCook, Lincoln, and Juniata, in the far-off Nebraska, Orangeburgh in South Carolina, and Harrisonburgh in Virginia. Capt. R. H. Pratt has incorporated it into his training school for Indians at Carlisle, Pa.

To sum up the development of this idea, in May, 1890, there were in the United States 114 schools which have adopted the system, working with 770 school savings banks. From a register of 38,527 pupils in the 114 schools, of 31 cities, 18,101 are depositors of the sum of \$93,676.15, of which \$30,221.61 has been withdrawn, leaving a balance of \$63,454.54 due depositors.

THE PLAN PURSUED.

These schools pursue practically the same plan. The children bring their money every Monday morning; the teacher receives it, credits the amount on the child's card, which is about 6 by 4 inches, folded once. The teachers deliver the money received to the principal, who deposits it in the savings bank the same day. When a child has a deposit of 50 cents or more he gets a bank book, and when his deposits reach \$3 and over, he gets interest quarterly. The principal keeps the bank books, and surrenders them to the children only in the presence of one parent. During the summer vacation the cashier of the bank conducts the business for the teachers.

According to the report for 1887 of the Bureau of Education at Washington, there are in the States and Territories 12,000,000 of school children. Taking the amounts already deposited as a basis, if penny banks had been organized in all the schools the children would have saved \$25,250,000. Where has this large sum gone?

One benefit resulting from the school savings of the child is the sympathetic influence of juvenile thrift on parental recklessness. Many a father is shamed into saving by the enthusiasm of his little boy. It is asserted that the banks would not handle the school money alone, but they find that a large number of parents go to the banks where the children's money is and open accounts of their own. This induces the banks to supply cards and receive the school deposits.

POSTAL-STAMP SAVINGS.

A national system of postal-stamp savings, or the universal adoption of school savings, would obviate further effort. In lieu of this, and to meet an urgent necessity, private helpfulness has established expedients to entice the poor to save small sums.

Baltimore led the way by an adaptation of the British postal-stamp savings system, giving each depositor a bright-colored stamp as receipt. These are pasted on a pink card, where squares are marked cut for 36 stamps. None of the savings banks were

willing to coöperate efficiently, so the enterprising committee in charge established a savings bank under their own supervision.

Encouraged by the success in Baltimore, a penny provident fund was established in New York City by the Charity Organization Society. After having been in operation about a year, it was found, on November 1, 1889, that there was 8,846 depositors, aggregating \$3,600.38. Slowly gaining the confidence of the community, the fund had, July 1, 1890, the sum of \$7,014.77 remaining on deposit, and over 15,000 persons had availed themselves of the privilege in sums varying from 1 cent upward.

As was expected, the system is popular among the children. The different denominations of stamps bear different colors—1 cent, yellow; 3 cents, blue; 5 cents, green; 10 cents, brown; 25 cents, red; 50 cents, purple, and the young people seem to find the gay colors quite fascinating.

The business of this penny provident fund now includes over 75 branch stations in New York City. Besides the 10 district offices of the Charity Organization Society, stations are established at church missions, guilds, and Sunday schools, working girls' clubs, boys' industrial schools, and other places, gathering many earners of small wages. The United States Savings Bank on East Fifty-ninth street has also become a branch station, and in a short time numbered over 2,000 penny depositors.

The stability of this fund is assured by the high character of the society which established it, and the immediate supervision is conducted by a committee of gentlemen prominent in philanthropy and banking, and the treasurer gives a bond of \$10,000 for the faithful discharge of his duty.

PENNY ECONOMIES.

On June of this year Detroit, Mich., began the system of penny savings, in what seems to be the wisest and most suitable way. The savings banks are very slow to adopt the stamp system as part of their business. In many cities banks have been urged to make it supplementary, but almost uniformly they give the project a cold shoulder. It is worth noting, however, that an enterprising bank in Lynn is considering the matter favorably.

Detroit is the first city to have a stamp savings attachment to a corporate bank. This bank was established in 1840, and has grown with the city. The cards, supplied by the banks, free of charge, are folded twice and put into an envelope 5 by 3 inches. Cards for the reception of 5-cent tokens are printed in red ink to correspond with the color of tokens themselves, the 10-cent tokens in green, the 25-cent in blue, and the 50-cent in black. Only those of one denomination are allowed on the same card. Each card has spaces marked off for twenty stamps, and when filled, the color at once indicates its value—the red \$1; the green, \$2; the blue, \$5, and the black, \$10. By this method the depositor chooses one of the six amounts represented by the token, and deposits it each time.

When a card is full, even the one whose face value is a dollar, it is put in the bank to draw interest, and the depositor receives a regular bank book, but he is at liberty to go on filling cards. The system now numbers about twenty-five agencies, established at drug stores and other responsible places, in various sections of the city. Although it has been in operation only three months, the results have fully equaled the expectations.

Boston is on the eve of an experiment to encourage small savings. The preliminary steps were taken in June, and an organization formed, called the stamp-saving society. One of the main objects of the promoters is to educate small wage-earners to place their small savings in a reliable bank. The society intends to serve as the channel through which these savings may be conveyed to the corporate banks, and in its main features follows the New York system. The central station will be opened for business October 15, at 36 Bromfield street. This is the headquarters for supplies and information, and the cashier will be in attendance from 2 to 4 o'clock every week day afternoon, excepting Saturday. This central station supplies branch stations with cards, and sells the necessary stamps, but does not sell to individual depositors. This is done only at the branch stations.

BOSTON'S SYSTEM.

Suppose a child wants to begin saving with 5 cents. He goes to the nearest branch office and receives a card numbered, dated, and marked with the name of the station issuing it. He signs his name for purposes of identification. He is given a 5-cent stamp as receipt for his money, and he affixes it to the first square of his card. Whenever he can save a few cents he takes his card to the station and gets another stamp on it. When the card is full he goes to the station where he received it and gets the face value, signing the card, which is retained at the station as voucher that he has received the money. This he can deposit in a savings bank, or the central office will

supply him with a pass book. Minor changes may possibly be made before the society begins its business, but the depositor's card will bear substantially the following rules:

(1) Deposits are made only by attaching our stamps to this card. When one card is filled, ask for another. When a card is filled, or the sum of all the stamps attached amounts to \$3 or more, the amount may be transferred to a pass book on delivery of the stamp card at the central office.

(2) Money can be withdrawn only upon presentation and surrender of this card at the stamp station, where the deposits are made, and one week's notice of intention to withdraw money may be required. No sum can be withdrawn less than the amount represented by all stamps attached. Stamps will be redeemed only when attached to a stamp card.

(3) If this card is lost or destroyed no payment will be made thereon.

(4) The fund is not a savings bank, but only an agency for the deposit of small savings. It is only responsible for the deposits of all moneys received by it in some trust company, savings banks, or other institution duly authorized by law to receive trust funds; it is not responsible for any default of such depository.

(5) Every deposit is made and accepted subject to the above rules and conditions.

Readers will be glad to know that a sum as small as \$10 is sufficient to start a branch station. The bookkeeping is reduced to a minimum by means of the stamps. There is little chance for trickery, as a branch must always have the value of its purchase at the central station, either in stamps, canceled stamps on cards, or cash. All the money received at the central station will be placed in a trust company, subject to the treasurer's order. Depositors get no interest until their money reaches the savings banks—the goal of their efforts.

In many respects this is one of the most important steps ever taken in Boston for the benefit of the industrial classes. The poor, the children, have, close at hand, a new stimulus to save even the smallest sums, and thus lay the foundations of future prosperity.

[Newville (Pa.) Star and Enterprise, October 16, 1890.]

Postal savings banks are a means by which the Government offers through the post-office a depository for savings. To every citizen of the country, no matter where he may reside, provided he is within reach of some post-office which is a depository, the Government extends the opportunity to lay by his savings in small savings in small sums, allows interest thereon, and pledges its credit as security for the repayment on demand of the depositor or his representative.

They are not intended to interfere with or be a substitute for existing savings institutions, which for the most part deal with much larger sums and are found in the larger centers of population, and chiefly in the New England and Middle Atlantic States; but to extend a privilege similar to that which private institutions afford to the very large class of small wage-earners, many of whom live entirely out of reach of such institutions—on the principle that if saving and a place where what is saved can be kept in safety are good for some people they are good for all, and that the Government, being security, if anything in the country can be, and having already its "posts" established all over the land, should be the agent to furnish such facilities to its people.

[Portland (Me.) Express, November 25, 1890.]

It is announced that Postmaster-General Wanamaker, in his annual report, will outline a plan of postal savings banks in connection with the smaller post-offices of the country in places where these banks will not interfere with local savings institutions. Mr. Wanamaker expresses his belief, and certainly the success of a similar plan in England supports him, that such a plan would prove a great blessing to the poor and would teach them habits of saving which would not only benefit them, but benefit the country.

He does not believe that the Government will for several years make any reduction in the rate of postage on the ground that this important branch of the Government ought to be self-sustaining, while as a matter of fact, even with 2-cent postage, there is an annual deficit of about \$6,000,000. It is a mistaken policy to limit the facilities of extending and improving the mail facilities of this country solely to make the Post-Office Department self-sustaining.

If this principle was carried out in all branches of the National Government the United States would cut a pitiable figure among the nations of the world. Cheaper postage is a necessity for the expansion of business communications, and the revenues would be largely increased by the adoption of penny postage.

[Philadelphia Bulletin, November 25.]

Mr. Wanamaker is still a firm believer in postal savings banks, and will advocate them in his forthcoming report. It seems, however, that he would use them as an adjunct to and not a rival of the savings banks of the cities, and would, therefore, establish them principally at county post-offices where there are no other depositaries of small sums. No doubt they would be highly useful there.

[Philadelphia North American, November 26.]

Why Congress should need so much urging to establish the postal savings-bank system in the United States is not quite clear. Mr. Wanamaker discusses the subject in his current report and earnestly recommends the system, but other post-office officials have done that before him, and their recommendations have been calmly ignored. Yet the arguments are really all on one side. There are any number of good reasons why we should have postal savings banks in this country, and there is no reason at all to the contrary. In Great Britain, where the postal-saving system has been in operation for many years, its success has been unqualified. It has been of incalculable benefit to the community as an agency for the promotion of thrift, and has proved in every way a public convenience of extraordinary value. Its advantages are that it is absolutely safe, that it encourages the man who can only save a very little to put that little away, and that it enables him to deposit or withdraw his money at any post-office in the United Kingdom where he may happen to be. These are three important points in favor of the system, which could as well be carried on in the United States as it is in Great Britain. It is strange that Congress should be so slow to recognize its merits.

[Troy Standard, November 26.]

The Postmaster-General's suggestions to Congress are evidently worthy of consideration. It is to be hoped that, taking a lesson from the late election the Fifty-first Congress, in its closing session, will inaugurate a popular policy. This offers the only prospect of making any immediate impression upon the people that will be favorable to the Republican party. The Democrats are soon to have their opportunity, and well will it be for their party if they display not that capacity for blundering which has been for years past the curse of their party. The Republicans are no better in principle, so far as their Congressional Representatives are concerned. Their subserviency to great railroad and telegraph monopolies more than anything else has tended to reduce them to the pitiable plight in which they now find themselves. The marvel of it all is that as a rule the professional politician on neither side sees this. He goes muttering and grumbling of free trade or protection to his post as if either the one or the other must constitute the sole popular interest in politics, and in short determine the rise and fall of parties. Perhaps the Farmers' Alliance members of Congress can teach him something under this head. Let them show the professional politician that any programme that will satisfy the people must be a broad one.

It is to the credit of the administrative officers of the Government that they have shown more discernment than the Congressmen. While Postmaster-General Wanamaker is repeating for the hundredth time, more or less, his postal-telegraph and postal-savings bank recommendations, Secretary Windom is equally solicitous in behalf of measures that would contribute to swell the volume and stability of the currency. This project of the Secretary, who is in line with his previous record in regard to this policy, coincides with the views of the farmers. Some of the latter have spoken more or less of the tariff, but it is apparent that their views under this head are not unanimous, while the currency question finds them practically a unit in opinion.

Just at this juncture, too, the Postmaster-General's views of the savings project would suit them nicely. Private banks, especially with people of no extensive financial experience, are with reason distrusted. A Government bank could never fail in a Republic to the extent of being beyond power to pay its depositors. This is but one of the arguments that may be adduced in favor of such an institution, but it is all-sufficient, albeit the incidental benefits of post-office banking would be many and widespread.

[Philadelphia Call, November 26.]

A great many things can be said in favor of a postal-savings bank system and nothing can be said against it. Postmaster-General Wanamaker's recommendation ought to be adopted by Congress.

POSTAL SAVINGS BANKS

[Philadelphia (Pa.) Journal, November 26.]

The Postmaster-General has matured his report of the Post-Office Department, a portion of which being of the most vital interest to the wage-earning class of the community. He has already championed the postal telegraph question, and his views thereon are fairly well known.

Post-office savings banks has occupied a large share of attention, and his report thereon, which will shortly be given to the country, will be found of the utmost importance. This subject has found great favor with Postmaster-General Wanamaker, and undoubtedly he has made the working of this important institution in England, which has proven a great success, a matter of deep study and close investigation. The establishing of the post-office savings banks will enable the humblest citizen to have a safe place of deposit for small amounts, and especially will the advantage be found in scattered and small outlying communities where no banks are to be found within a radius of several miles. It will be found an encourager of thrift and economy, and millions of dollars now needlessly wasted for the want of proper protection will thus be saved. It is well known that vast sums of money are now lying idle in cupboards, in old stockings, and other hiding places, but with the establishment of the post-office savings banks, these amounts may be added to the circulating medium of the country.

In England there are over 250 millions of dollars in the post-office savings banks to the credit of the working class, who deposit from a quarter upwards. These depositors can make any post-office in the United Kingdom their bank, where they can both deposit their money and withdraw it; so that if away from home and desire to put any money into safe custody all the depositor has to do is to go into the nearest post-office, or branch bank, deposit the money and present the passbook that the amount might be entered therein. The official stamp with date is placed against the amount, as also the initials of the clerk or postmaster. By return of post a letter is received from London by the depositor informing him that the amount has been placed to his credit. Should the depositor desire to withdraw an amount he or she can go into any post-office, put the amount required on a slip of paper with his or her signature, and by return of post an order is received by the office from which it is desired to receive it to pay the amount asked for. Interest at the rate of $2\frac{1}{2}$ per cent. is given, and the passbooks are balanced half yearly.

Such a system in this country will be of incalculable value, and Postmaster-General Wanamaker will deserve the best thanks of the wage-earners especially for the great boon.

[Philadelphia Inquirer, November 26.]

There will be one advantage about Mr. Wanamaker's postal-savings banks, if established: They are not likely to be affected by financial panics.

[Shenandoah (Pa.) Herald, November 28.]

The Philadelphia North American can not understand why Congress should need so much urging to establish the postal-savings bank system in the United States is not quite clear. Mr. Wanamaker discusses the subject in his current report and earnestly recommends the system, but other post-office officials have done that before him, and their recommendations have been calmly ignored. Yet the arguments are really all on one side. There are any number of good reasons why we should have postal savings banks in this country, and there is no reason at all to the contrary. In Great Britain, where the postal savings system has been in operation for many years, its success has been unqualified. It has been of incalculable benefit to the community as an agency for the promotion of thrift, and has proved in every way a public convenience of extraordinary value. Its advantages are that it is absolutely safe, that it encourages the man who can only save a very little to put that little away, and that it enables him to deposit or withdraw his money at any post-office in the United Kingdom where he may happen to be. These are three important points in favor of the system, which could as well be carried on in the United States as it is in Great Britain. It is strange that Congress should be so slow to recognize its merits.

[Philipsburgh (Pa.) Journal, November 28, 1890.]

Such a system in this country will be of incalculable value, and Postmaster-General Wanamaker will deserve the best thanks of the wage-earners especially for the great boon.

[Omaha (Nebr.) Bee, November 29, 1890.]

POSTAL SAVINGS BANKS.

Postmaster-General Wanamaker appears to be sincerely ambitious to make his term in office memorable by giving the people new and permanent benefits. Among the various progressive reforms he has suggested perhaps none is more capable of doing great good than the establishment of postal savings banks.

Mr. Wanamaker's plan is to have savings banks instituted in connection with post-offices wherever they are called for by popular petitions. He states that he will take care not to bring them into competition with savings banks that already exist or with building loan associations. He believes a sum that would aggregate a vast total is secreted in all sorts of out-of-the-way places by a class of people who are afraid of banking institutions, and that his proposition would be the means of bringing it into circulation, with advantage to the business public.

The great benefit which may be expected from the successful establishment of postal-savings banks, however, will be its effects on the habits of the people. If these institutions can be made popular we shall see the beginning of a new era of thrift among the classes which stand most in need of it. When a savings bank can be found at every little post-office, people who have not formerly been in the habit of systematically accumulating money will begin to do so. There will be a revival of the good old-fashioned custom of saving instead of spending the surplus income, and the fact that the surplus is small will not deter people from laying it by where it will grow. It is the prevalence and popularity of savings banks which has made the wage-workers of New England the thriftiest class of working people in the world. It is the lack of such facilities, almost as much as the lack of proper teachings, which has led the people in other sections of the country away from habits of frugality and thrift. It is not necessary to enlarge on the inestimable advantage of general thrift among the people to demonstrate the great possibilities of good which may follow the establishment of postal-savings banks and the consequent revival of the soundest household maxims among the young men and women of the country.

If, in addition to the introduction of business methods in the service and the inauguration of a system of postal telegraphy, John Wanamaker gives the people popular savings banks, he will have done his part to make President Harrison's administration "great in the arduous greatness of things done."

[St. Louis Sayings, November 29.]

The necessity of postal-savings banks has long been recognized, and it will be in order for the Government to grant the boon in as simple and business-like a manner as possible. In other countries such banks have proved a great success, and they will certainly do as well, if not better, here.

[Port Huron (Mich.) Times, November 29, 1890.]

Postmaster-General Wanamaker, in his annual report, just published, recommends a new plan for postal-savings banks, the interest to be paid depositors to be filed by the Secretary of the Treasury at the beginning of each year, and to be one-half of 1 per cent. less than the average rate paid to depositors by private bankers, all postal savings to be deposited in the national banks on application. The Secretary also believes it will be for the interest of the postal service to have an ocean mail service.

[Leavenworth (Kans.) Times, November 24.]

POSTAL SAVINGS BANKS.

Postmaster-General Wanamaker has much faith in postal savings banks, and he will give evidence of it in his forthcoming annual report. He believes that one of the secrets of the causes of there not being money in circulation lies in the fact that in many sections of the country millions of dollars are secreted under carpets, in bed clothing, and elsewhere, or buried in the ground by persons afraid of the stability of the banking institutions, or who, having but a few dollars, are timid about opening accounts of deposit with banks.—*Atchison Globe*.

[St. Louis Democrat, November 30.]

There is force in the suggestion of Mr. Wanamaker that postal savings banks are particularly desirable in States that have no laws authorizing and regulating savings banks. Missouri is such a State, and her people would certainly be benefited by a system of banks adapted to the uses of the working classes.

[Toledo Blade, December 1, 1890.]

He also recommends postal savings banks, and outlines briefly his plan. A similar system has been in operation in Great Britain for a number of years, and has proved very successful. The only objection that is raised against it here is the general one that the Government should keep its hands off everything which is not purely governmental, and that paternalism is to be avoided in any and every guise.

[Tacoma Ledger, December 1, 1890.]

The suggestion of Postmaster-General Wanamaker, in his annual report, that the Post-Office Department go into a savings-bank business is worth considering. The suggestion is by no means new. It has its objections and they have been frequently quoted and fully discussed. There is this to be said in favor of the proposition, however, that if such a system of savings banks could be established, and so honestly and judiciously conducted as to both gain and retain the confidence of the people, they would do much to prevent the stringencies in the money market which so often and so seriously depress and disarrange business. They would keep in circulation and in use a large amount of money which now lies idle in small sums in the clocks and stockings of the poorer classes. These amounts, though small, are so numerous that they aggregate many millions of dollars. If this money could be kept in active use, as it would be if this postal savings bank system could be put into successful operation, it would greatly stimulate business and hasten development much more rapidly than it can otherwise be hastened by any Government arrangement of the circulating medium.

[Winchester (Pa.) Republican, December 3, 1890.]

Postmaster-General Wanamaker shows by his annual report of this year that his earnest desire for the establishment of postal savings banks is in no degree abated. In fact the head of the Postal Department is an enthusiast on this point, and as he is a man of large experience in business affairs, and seems to have given the matter a great deal of time and thought, his views deserve to be carefully studied. We quote his general plan, which is based upon the system as adopted in Canada and England.

Whenever postal savings banks have been introduced they have produced most excellent effect. They have been the means of inducing thousands of persons in the humbler ranks of life to save their earnings. So long as there was no opportunity to put their moderate savings where they would be safe, and at the same time earn something in the way of interest, they were squandered as rapidly as they were received. But no sooner were these postal banks established than thousands hurried to them with their small sums, ranging from a few cents to sums of five dollars or more. They have also shown that once this habit of saving has been introduced it grows rapidly. There has been a large, steady increase throughout Great Britain ever since the experiment was introduced. The sums at present in these depositories amount to many millions of dollars, and it is safe to say that but for this opportunity offered to these people the greater part of this money would have been spent in ways that would have done more harm than good.

[Grand Forks (Dak.) Plaindealer, December 3, 1890.]

As the Plaindealer has been advocating the establishment of postal savings banks we give what the Postmaster-General has to say on the subject:

"I recommend that the Post-Office Department be authorized to establish postal savings banks under regulations formulated by the Postmaster-General; that the said banks be located as follows:

"(1) In States having no laws regulating savings banks.

"(2) In any other upon petition of a considerable number of residents of any one locality; and

"(3) Not more numerously than one post-office for every 10 miles of area; that the interest to be paid depositors shall be fixed by the Secretary of the Treasury at the beginning of the year, and that one-half of 1 per cent. less than the average rate paid to depositors by private bankers; that all postal savings received within a State shall be placed on deposit with the national banks of that State, on application, in such amounts and at such interest as the Secretary of the Treasury shall prescribe, and that all such deposits be declared by special enactment preferred claims against the banks holding them."

[Bethlehem (Pa.) Times, December 3, 1890.]

The proposed plan of Postmaster-General Wanamaker for the establishment of postal savings banks is sure to call forth a variety of comment. It is very reasonably argued by its critics that the post-office has no right to go into the banking business, and that the scheme is constitutionally unwarranted. This objection may or may not hold good in the day when the plan is put to the test; but it is the cause and not the method of Mr. Wanamaker's suggestion that is of most importance. His argument that much of the present financial stringency is due to the practice that obtains among ignorant people of hoarding their earnings instead of trusting them to the banks is a very sound one. The only way to alter this condition is to educate it out of existence, and there is no better source of education than in the multiplication of small savings stations in all parts of the country.

Whether the postal savings bank is the most practical means is at least questionable. The school bank certainly hits wide of the desired mark. But some means or other should be introduced in every community to induce the working people and those of small means to lay by wealth by dribblets, a nickel here and a dime there and once in a while a quarter dollar. The rapidly-increased building associations have accomplished an excellent work in late years in encouraging men and women to "save the pieces" instead of wasting them frivolously. The dime savings banks of various natures have also done much. But the chief difficulty that hampers these and the real reason that so much hard-earned money is treasured up by untaught people is their lack of faith in every person and everything save themselves and their own strong box.

It has been argued that postal savings banks would obviate the trouble, since everybody trusts the Government. But we know many persons who don't. To those who have not been properly taught every agency that reaches out after their money is an artful schemer. It will require much teaching to bring them to another belief, but the establishment of many means for saving and the proof of their soundness will in due course dispel this unfortunate mistrust in banks. Until, however, there shall be, in city and country, accessible to all, some such inducement to economy as those here mentioned the present stringency may be at any time liable to recur.

[Indianapolis Journal, December 4, 1890.]

The New York Sun copies Postmaster-General Wanamaker's suggestion for postal savings banks, and says:

"This is a very pretty scheme, but will the Postmaster-General be kind enough to point out any provision in the Constitution which permits his Department or any other department of the Federal Government to go into the savings-bank business?"

Will the Sun be kind enough to point out any special provision in the Constitution which authorizes the Government to go into the money-order business, the postal-note business, the postage-stamp or the stamped-envelope business? Without reference to the merits of the suggestion for post-office savings banks, there is as much authority in the Constitution for that as there is for any of the other things named. The Constitution was not intended to prevent progress, though that is about the only use the Democratic party makes of it.

[St. Paul Globe, December 4.]

The Postmaster-General, in his annual report, gives considerable attention to the scheme of postal-savings banks. It has more to commend it than the postal telegraph, and as the official mind discerns the error of his party platform in favoring one-cent letter postage for any early period, this postal-savings-banks scheme is, perhaps, the most hopeful of the several new methods he would attach to the service. Jay Gould speaks of the many millions of dollars that came to light in a recent financial crisis as coming from stockings and household seclusions. Wanamaker believes that there are vast amounts tucked about domestic depositories all over the country, lacking the conveniences of banks or having insufficient faith in their security. These very largely, he supposes, would seek the opportunities afforded by the Government in the postal department. The operation of this system in England has had a salutary influence in promoting economy and prudence among the working classes and people of small earnings. The statement is made that no class of wage-earners in the world are as thrifty as those in New England, and much of the credit is attributed to the savings-bank system. It is not claimed that their earnings average higher than elsewhere, but that the constant invitation to frugality and safe investment is a persuasion that leads to such substantial results. The frequency of towns and villages and the density of population probably enable the private savings banks

to meet most of the needs. This is, or may be, the case generally in the larger towns of the country, but a great majority of the population is not convenient to these. The proposition is to establish this department at every post-office where the people petition for it. The Government takes the little sums as they are gathered and pays a small interest. This would evidently be a very valuable economic educational process. The young people would be ambitious to be among the creditors of the Government and acquire habits that will be very useful to them in life.

[Duluth (Minn.) Times, December 4.]

Postmaster-General Wanamaker advises the establishment of the postal savings bank system in this country. It is something of a surprise that the Government had not provided for such banks several years ago. They would be of inestimable benefit and convenience to the people, in all smaller towns especially. The United States and Germany are the only two great powers which have not in existence this system which has been so successful in England and other countries. There is little good reason why Congress should not pass an act providing for the addition of this system to our Postal Department.

[Erie (Pa.) Times, December 5, 1890.]

Postmaster-General Wanamaker, in his late confessedly excellent annual report recommends the establishment of postal savings banks. He had abundant warrant for this recommendation. Such banks have been introduced in England and Canada with beneficial effects. They have been the means of inducing thousands in the humbler ranks of life to accumulate small earnings. So long as there was no opportunity to put their moderate savings where they would be secure and at the same time earn something in the way of interest, they were squandered as rapidly as they were received. But since the establishment of postal banks, thousands have deposited in them in sums ranging from a few cents to \$5 or more. The amount at present in the banks reaches many millions, and it can truly be said that but for the chance thus afforded the largest portion would have been expended in ways that would have done more harm than good.

Many persons are disinclined to place their money in the ordinary banks, sound and reliable as those now doing business in Erie have proved. Moreover, the latter do not care to receive very small amounts. It is, it seems to us, greatly to be desired that Congress make the necessary provision for putting the project into operation on at least a small scale.

[Halifax (Pa.) Gazette, December 5.]

The plea which the Postmaster-General makes in his annual report in behalf of post-office savings banks ought to receive attention from Congress. In Great Britain postal-savings banks have been in operation with most satisfactory results for many years. In this country the subject has been frequently brought to the notice of Congress in reports from the Post-Office Department, but up to this time nothing further has been accomplished. It is time something was done. In the light in which the Postmaster-General puts the subject there is no doubt that the system as he proposes it would be a great promoter of thrift among the people. Let Congress do something with this question and not continue to ignore it as has been done in the past.

[Peabody (Mass.) Press, December 6.]

Postmaster-General Wanamaker seems to be an enthusiast on the subject of postal-savings banks and is doubtless in a position to put his theory into experimental practice. He does not favor a system that will encroach upon the field already held by the bankers and consequently will not antagonize the private banking institutions in the country. Neither would he have them infringe upon the established rights of savings institutions and building loan associations.

He believes that postal-savings banks would be a blessing to the common people whose earnings are easily dissipated in the unnecessary as well as the necessary things of life, and that their existence would incite them to the habit of saving by the convenience with which it can be done. Then he believes that there is a class of people who do save but who hoard their savings in all kinds of strange and out of the way places and that the business world suffers because these hoards of money, which he believes aggregate millions, are out of circulation and dead to their intended purpose and general usefulness. Thus he sees in his plan a means to encourage people to thrifty and forehanded habits, and to help the world by the legiti-

mate use of the circulating medium provided by Government for the benefit of the whole people.

He would have the people petition the Post-Office Department for deposit facilities in connection with the local office, and thus the requirement and needs of the community would bring about the post-office savings institutions and it would be literally a peoples' bank, with "Uncle Sam," with all his vast and wonderful resources, as the custodian, investor, and responsible treasurer of the money.

This scheme of Postmaster Wanamaker is most certainly feasible. It is not original with him. The idea has often been presented and many men have made it a pet theory in the years gone by. To put it into successful operation will make some man's name an honorable one. It may as well be Postmaster Wanamaker as another to win this distinction. Something of the kind is to be evolved in this nation without a doubt.

[Mount Joy (Pa.) Herald, December 6.]

Postmaster Wanamaker, in his last report, recommends postal savings banks, as well as postal telegraphs, for our country. Postal-savings banks are especially beneficial to the working classes, and the wonder is that America did not take the lead in establishing them. Even Japan has them since 1875, and her working people deposit over \$20,000,000 a year into them for interest and safe keeping. By all means let us have postal-savings banks.

[Lansingburgh (N. Y.) Times, December 6, 1890.]

Penny savings institutions are to be established in Boston on a plan essentially the same as the British postal savings bank. The purpose is to afford the poor a convenient means of saving small sums. No interest will be paid, as the income from such investments as can be made will not be larger than the expense of handling the funds. The benefits to be derived from the system are largely more than the money that can be saved. That is not likely in any case to grow into a sum sufficient to more than tide the depositor over some short period of misfortune. The inculcation of the habit of saving is the important thing. It develops thrift and is the surest way of checking pauperism. The person who learns to save has learned the first lesson of success. All the knowledge that can be gained from schools and colleges is not, to the person who must be self-dependent, worth as much as knowledge of how to save and the habit of doing it. It is the foundation of all fortunes. It is the best safeguard against intemperance and immorality. Throughout the world it will be found that, in those countries where there is frugality, there is also the highest average of morality.

[Peabody (Mass.) Reporter, December 6.]

Postmaster-General Wanamaker seems to be an enthusiast on the subject of postal savings banks, and is doubtless in a position to put his theory into experimental practice. He does not favor a system that will encroach upon the field already held by the bankers, and consequently will not antagonize the private banking institutions in the country. Neither would he have them infringe upon the established rights of savings institutions and building loan associations.

He believes that postal savings banks would be a blessing to the common people whose earnings are easily dissipated in the unnecessary as well as the necessary things of life, and that their existence would incite them to the habit of saving by the convenience with which it can be done. Then he believes that there is a class of people who do save, but who hoard their savings in all kinds of strange and out-of-the-way places, and that the business world suffers because these hoards of money, which he believes aggregate millions, are out of circulation and dead to their intended purpose and general usefulness. Thus he sees in his plan a means to encourage people to thrifty and forehanded habits, and to help the world by the legitimate use of the circulating medium provided by Government for the benefit of the whole people.

He would have the people petition the Post-Office Department for deposit facilities in connection with the local office, and thus the requirements and needs of the community would bring about the post-office savings institution and it would be literally a peoples' bank, with "Uncle Sam," with all his vast and wonderful resources, as the custodian investor, and responsible treasurer of the money.

This scheme of Postmaster Wanamaker is most certainly feasible. It is not original with him. The idea has often been presented, and many men have made it a pet theory in the years gone by. To put it into successful operation will make some man's name an honorable one. It may as well be Postmaster Wanamaker as another to win this distinction. Something of the kind is to be evolved in this nation without a doubt.

[Pottsville (Pa.) Journal.]

Postmaster-General Wanamaker in his annual report again calls attention to his favorite scheme of postal savings banks. Mr. Wanamaker's general plan is based upon the system adopted in Canada and England. He proposes that the Post-Office Department be authorized to establish savings banks, under regulations to be formulated by the Postmaster-General, and that they be located first, in States having no laws regulating savings banks; and second, in any other State upon petition of a considerable number of residents of any one locality.

Mr. Wanamaker further suggests that they be not more numerous than one for every 10 miles of area; that the interest to be paid depositors shall be fixed by the Secretary of the Treasury at the beginning of the year, and that it be one-half of 1 per cent. less than the average paid to depositors by private bankers. He also recommends that all postal savings received within a State shall be placed on deposit with the national banks of that State on application, in such amounts and at such interest as the Secretary of the Treasury shall prescribe. All such deposits are to be delared by special enactment preferred claims against the banks holding them.

There is no doubt that a system of banking which invites small payments would be of incalculable benefit to thousands of persons in the humbler walks of life. The tendency with the poorer classes of people is to spend everything because their monthly savings are at the most so meager that they appear hardly worth putting aside. Experience has shown that these same people will deposit in a postal savings bank sums so small that they would never think of carrying to an ordinary bank. In Great Britain, where postal savings banks have been in existence for some years, the deposits amount to many millions and range from a few cents up to hundreds of dollars. The existence of the banks has taught the people the value of caring for the pennies and having the pounds care for themselves.

The general notion that these banks can flourish only at the cost of the banks now in existence is disapproved by the experience in the countries already named. It has there been found not only that the most of the patrons of the penny banks were not patrons of the other banking houses, but that when once they have learned the art of saving, they speedily transfer their accounts to the other banks. Their reasons for this are twofold, the larger banks pay a higher rate of interest, and the depositors naturally desire to become identified with the bigger concerns for very obvious reasons. With this usual foresight, Mr. Wanamaker has taken care that his plan shall endeavor to stimulate this thrift, and at the same time point the people to the larger banks as those which still pay the higher rates of interest.

[Keyser (W. Va.) Echo, December 12.]

Several countries have adopted the postal-savings-bank system, and the success has been such as warrants imitation. Postmaster-General Wanamaker recommends the introduction of postal-savings banks, with such conditions that they ought to prove helpful to the people and also to other savings banks. Let us have the postal-savings bank.

[Newport (R. I.) News, December 12.]

Postmaster-General Wanamaker not only advises penny postage, but recommends the establishment of postal-savings banks throughout the country. * * *

That there are numerous difficulties in engrafting the savings-bank system on the Post-Office Department is evident, but they are not too great to be overcome, providing an improved civil service is adopted in the matter of appointments to office. It may be urged with a show of truth that if such a system of savings banks could be established, and so honestly and judiciously conducted as to both gain and retain the confidence of the people, they would do much to prevent the stringencies in the money market which so often and so seriously depress and disarrange business. They would keep in circulation and in use a large amount of money which now lies idle in small sums in the clocks and stockings of the poorer classes. These amounts, though small, are so numerous that they aggregate many millions of dollars. If this money could be kept in active use, as it would be if this postal-savings-bank system could be put into successful operation, it would greatly stimulate business and hasten development much more rapidly than it can otherwise be hastened by any Government arrangement of the circulating medium. Nevertheless, it is a subject not to be readily disposed of, and the objections that may be urged are of the most weighty character.

[Philadelphia Bulletin, December 12.]

Mr. Wanamaker's postal savings banks scheme is progressing in the Senate, which has instructed the Post-Office Committee to inquire into its advisability. There has been some opposition to it manifested in popular discussion, but it has been mostly in Democratic papers, and the general tone of public opinion seems to favor it. A great deal will depend, however, on the details of its disposition and management.

[Milford (Mass.) Gazette.]

The advocates of a postal savings bank system find a strong argument in the experience of Japan, where such a system has been in existence for the past 15 years. The object is to encourage thrift among people of moderate means, and the accomplishment of that object is seen in the fact that in the first year there were 2,000 depositors with over \$15,000 to their credit, while last year's report shows that in Tokio alone, \$10,400,000 had been deposited by 356,000 persons, while the total amount of deposits throughout Japan exceeded \$20,000,000.

[Parker (Pa.) Phoenix, December 26.]

The postal savings banks are being introduced into several countries, they have proven extremely successful in England and now benighted Japan has taken a step ahead of this highly civilized and progressive country and adopted the postal savings bank feature. It is the poor man's depository, for it is controlled by the Government, consequently safe. The difference of 1 or 2 per cent. to the laboring man is nothing in comparison to the knowledge that his savings are perfectly secure. The want of a savings institution is mostly felt in small manufacturing towns.

[Bloomington (Ill.) Leader, December 29.]

The Postmaster-General, in view of the increasing demand for savings opportunities, is urging upon Congress the enactment of a law establishing a postal savings system. He recommends the establishment of postal savings banks in States having no laws regulating savings banks or in other States upon petition of a certain number of residents of any one locality.

These banks are to be located at the post-offices and be placed in charge of the postmaster, and shall not be nearer to each other than one for every 10 miles of area. He proposes that interest be paid to depositors at one-half of 1 per cent. less than the average rate paid to depositors by private bankers, and that the money deposited in these postal banks shall be placed on deposit with the national banks of the State in which the deposit is made at such interest as the Secretary of the Treasury shall prescribe, making all such deposits preferred claims against the banks holding them. This proposition meets generally the approval of those who have made a study of the savings-banks system. The chief objection to postal savings banks in the past has been that they would take the money out of circulation, as no plan heretofore presented had provided for the loaning or handling of the funds so deposited. Of course the secret of success of any bank is in the fact that it handles over and over again the money deposited with it by its customers, making itself responsible for the money so that it can be paid at any time even although loaned out to somebody else. The objection to the postal banks saving system heretofore has been that no provision was made for keeping this money so deposited in circulation.

The plan proposed, however, by the Postmaster-General, it is believed, obviates this, and will have the double value of supplying a low rate of interest to depositors and at the same time keeping the money in circulation. The objection has also been urged that the Government could not afford to pay interest to depositors, but this plan, which proposes the reloaning of funds to national banks, will of course require those banks to pay as high a rate of interest at least as the Government pays to depositors, and will at the same time continue the money in circulation. Mr. Wanamaker's plan is commented upon by those who have made a study of the financial question as a very ingenious and practicable one, which, combined with the systems in use in other countries, would be extremely valuable in the United States. The postal savings-bank system of Great Britain continues to give great satisfaction there. Over 8,000,000 people made deposits last year with the postal savings banks of that country, their total deposits for the year being in rounds numbers \$100,000,000. In France the postal savings deposits amount to over \$53,000 and in Belgium over \$50,000.

[Salem (Mass.) Register, January 1, 1891.]

All the post-offices in Italy receive money on deposit, at the rate of 3½ per cent. And why shouldn't the post-offices in the United States do the same thing? In localities in which savings banks abound there is no necessity for the Government to receive deposits; but the post-offices abound all over the country, and in every section there are people who would gladly avail themselves of the privilege of saving their money through the postal banks.

[Chicago News, January 3.]

Recent failures of private banking institutions in Chicago serve to emphasize, by their revelations of irresponsible banking methods, the need of greater security for small depositors.

Postal savings banks are wanted. This nation is the only one of importance, except Germany, that has not encouraged the thrift of its citizens by taking care of their small savings. In Great Britain and her colonies, France, Belgium, the Netherlands, Sweden, and even the Hawaiian Kingdom, the postal savings bank is an institution of incalculable benefit to persons of small means but thrifty habits. The accumulation of small savings in most of these countries has increased at such a rate since the establishment of postal savings banks as to form a total of enormous magnitude. The beneficence of the system is unquestioned; it enables the savings of small depositors to be taken care of at a minimum cost. The postal savings banks are not money-making institutions. Like the postal service, the Government endeavors to serve the people at actual cost. There is greater security than can be possible in the best of private banks, as the national credit is pledged to every depositor. This absolute security undoubtedly accounts for the success of the system wherever tried, even in spite of the fact that the Government always offers a lower rate of interest than banks under private control.

But perhaps the greatest argument in favor of postal savings banks is the fact that they bring banking facilities within easy reach of all classes of the people and in every section of the nation. This argument is skillfully employed by Postmaster-General Wanamaker, who is an enthusiastic advocate of these banks. In his last annual report Mr. Wanamaker says:

"It is not the large cities that feel this need, though even at the populous centers banking institutions generally do not offer convenient hours for working people and do not care to deal with small sums. It is the large mass of wage-earners outside of large cities that clamor for help to keep hard-earned gains. In some of the States no laws exist to give State protection to savings deposited with private capitalists. It is stated on reputable authority that in one portion of the country containing 12,000,000 of population there are not as many places of deposit for the savings of small sums as exist in a single city of 80,000 people in a New England State."

Mr. Wanamaker's recommendation is that postal savings banks should be located "(1) in States having no laws regulating savings banks; (2) in any other State upon petition of a considerable number of residents of any one locality, and (3) not more numerous than one post-office for every 10 miles of area." The Postmaster-General has also outlined in his report the working details of such a system. The obvious advantage to be gained in the initial establishment of such banks is that the working machinery is ready at hand. United States post-offices would simply have a savings-bank annex. The immense advantage to depositors of having their savings where panics would not affect them nor the danger of ordinary banking discourage increased thrift is so obvious that the people should unite in a demand for postal savings banks.

[Troy (Pa.) Register, January 3, 1891.]

Penny savings institutions are to be established in Boston on a plan essentially the same as the British postal-savings bank. The purpose is to afford the poor a convenient means of saving small sums. No interest will be paid, as the income from such investments as can be made will not be larger than the expense of handling the funds. The benefits to be derived from the system are largely more than the money that can be saved. That is not likely in any case to grow into a sum sufficient to more than tide the depositor over some short period of misfortune. The inculcation of the habit of saving is the important thing. It develops thrift and is the surest way of checking pauperism. The person who learns to save has learned the first lesson of success. All the knowledge that can be gained from schools and colleges is not, to the person who must be self-dependent, worth as much as knowledge of how to save and the habit of doing it. It is the foundation of all fortunes. It is

the best safeguard against intemperance and immorality. Throughout the world it will be found that, in those countries where there is frugality, there is also the highest average of morality.

[Keokuk (Iowa) Gate City, January 10, 1891.]

Postmaster-General Wanamaker is an enthusiastic advocate of postal-savings banks, a public system of saving that has been encouraged in many European countries with marked success. He says:

"It is not the large cities that feel this need, though even at the populous centers banking institutions generally do not offer convenient hours for working people and do not care to deal with small sums. It is the large mass of wage-earners outside of large cities that clamor for help to keep hard-earned gains. In some of the States no laws exist to give State protection to savings deposited with private capitalists. It is stated on reputable authority that in one portion of the country containing 12,000,000 of population there are not as many places of deposit for the savings of small sums as exist in a single city of 80,000 people in a New England State."

These banks could be established in the post-offices as an annex and conducted at an additional expense that would be comparatively small. Depositors would be assured of the safety of their deposits. Monetary panic, financial crises, and mercantile convulsions would not affect their absolute security.

[Aurora (Ill.) Democrat, January 16.]

The recent failure of several private banking institutions, as that of Kean & Co., at Chicago, calls attention to the need of greater security for small depositors, and in considering this question what is more practical than the postal-savings bank system, the establishment of which was so earnestly urged on Congress by the Postmaster-General in his recent report? Among the strongest arguments in favor of this system is the fact that it will bring banking facilities within easy reach of all classes of the people and in every section of the nation. Postal-savings banks are not money-making institutions. Like the postal service, the Government endeavors to serve the people at actual cost. There is greater security than can be possible in the best of private banks, as the national credit is pledged to every depositor. No doubt this absolute security accounts for the success of the system wherever tried, although the Government pays a lower rate of interest than banks under private control. In his report Postmaster-General Wanamaker says on this subject:

It is not the large cities that feel this need, though even at the populous centers banking institutions generally do not offer convenient hours for working people and do not care to deal with small sums. It is the large mass of wage-earners outside of large cities that clamor for help to keep hard-earned gains. In some of the States no laws exist to give State protection to savings deposited with private capitalists. It is stated on reputable authority that in one portion of the country containing 12,000,000 of population there are not as many places of deposit for the savings of small sums as exist in a single city of 80,000 people in a New England State.

The Postmaster-General's recommendation is that postal-savings banks should be located "in States having no laws regulating savings banks, in any other State upon petition of a considerable number of residents of any one locality, and not more numerous than one post-office for every 10 miles of area." The advantage to be gained in the initial establishment of such banks is that the working machinery is ready at hand. United States post-offices would simply have a savings-bank annex. The immense advantage to depositors of having their savings where panics would not affect them nor the danger of ordinary banking discourage increased thrift must be obvious to every thinking person. The subject is one which certainly demands the most earnest consideration of Congress.

[Wilkes Barre (Pa.) Record, January 19, 1891.]

One of the most unfortunate results of the consolidation of our city schools is the breaking up of the school-savings system introduced by Superintendent Potter, by permission of the directors of the third district school board. Mr. Potter had spent much time in studying the merits of the school-savings system as in practice in other wideawake cities, had convinced the directors of the third district that the schools here presented a fine field for its introduction, and by their permission he had set the system in operation here, so modified as to excellently meet the requirements of our people. Though in operation for but a few months, the usefulness and complete success of the idea were fully demonstrated. Pupils quickly took up with the idea, and hundreds who had never thought of saving at once took in the lesson in thrift and had the pleasure of seeing their pennies accumulate and form dollars. The par-

ents who at first, perhaps, distrusted the innovation soon viewed it with great favor and the teachings of the schoolroom extended to the wider sphere of the home. Older persons than pupils received their first ideas of economy and saving, and the result was highly beneficial to a considerable number.

Unfortunately, with the consolidation of the schools under one management, Mr. Potter's system, planned for one district, was found impracticable in its application to the schools of the entire city under existing conditions, and its operations ceased at the close of the last school year. During the current year no deposits have been received and the books have been returned to the children, who have in many instances drawn out their little accounts and spent the money accumulated. In a number of instances, however, the children have continued to make deposits with the bank, hoarding their pennies and nickels at home until they made up the dollar, the smallest sum the banks receive. In nearly every instance where the books have been returned to the parents regret has been freely expressed that the system should have been abandoned, and there is every evidence that it was popular with the patrons of the schools to a degree that strongly urges its restoration in some form.

The system introduced was discarded because it required the service of some one official in gathering the weekly deposits and having them properly accredited, and no such official, with the time at his disposal, can be found in our school department. The entering of weekly deposits of a few cents each on the accounts of so many as are included in our entire school system seemed also too great an undertaking for the banks, especially as the deposits would be made by the teachers. No modification of the system has yet been suggested that seemed practical. In this emergency we would call attention to what is called the "stamp system," put into operation in Baltimore by the Provident Savings Bank, not for school children, but for the general public. The system has proved so eminently successful that it is being introduced in New York, Boston, Detroit, St. Paul, Denver, San Francisco, and other cities. Indeed, so widely are its merits recognized that a large bank supply house in New York is prepared to furnish all the books, blanks, stamps, etc. The Provident Savings Bank began to offer facilities for small depositors, first by establishing branch offices in twenty or thirty places in the city where deposits could be made on Saturday nights. The business grew rapidly and the rush became so great that the work of entering in bank books and ledgers the many small sums became too great. The bank then began searching for some simpler and more expeditious system, and on the suggestion of Dr. Remsen, of Johns Hopkins University, adopted the stamp-system.

The plan, briefly outlined, is this: Supplies of stamps, signature cards and depositors' cards are left with the agencies each week. Any person wishing to become a depositor signs a signature card for identification, and receives for his deposit, if it be less than \$5, stamps to the value of his money. These he affixes to the stamp card which also bears his signature. In making further deposits he has but to buy at the agencies more stamps which are also pasted upon the stamp card. When the stamp card contains stamps amounting to \$5 it is deposited at the bank, the amount credited to the depositor in the usual bank book, and the stamps are canceled. To make further deposits he gets another card and buys stamps as before. The stamps are somewhat like postage stamps and of three denominations, 5, 10, and 25 cents. It is plain that this system, if introduced here, would find eager patrons. To introduce it into our schools the amount of stamps required on each card might be reduced to \$1. A given amount in stamps would be left with each teacher on the first of the week or monthly, the collector on his next trip collecting the money and the unsold stamps and leaving again the usual supply of stamps. This would remove all necessity for the keeping of accounts except with depositors of \$1, which could readily be entered by the collector in his rounds. Thus simplified the system could be readily introduced to the great advantage of the community and to the profit of the bank undertaking it.

[St. Joseph (Mo.) Herald, January 21.]

Postmaster-General Wanamaker in his annual report advocates the establishment of postal savings banks wherever there are not sufficient State savings banks and where there are savings banks, if a reasonable number of persons petition therefor. He reasons at considerable length, and the following argument contains some of his best arguments:

To teach economy and thrift as leading up to better citizenship falls short if there is no adequate provision for the safe-keeping of savings. Such places ought to be within an hour's walk of the home of every workingman. They can not be left to private capitalists to provide, because it would not pay them to deal in small sums or perform the necessary labor. The post-offices and the postmasters are in every respect rightly situated to do this work. It would be a great comfort to the people to have these banks that could not be affected in times of financial panic.

The most prolific source of bank failures and the consequent great loss to depositors is the system of deposits as now conducted. A very large portion of the loans made by banks is of money deposited by their customers, and a financial crisis causes a run on the banks that embarrasses them. The strong argument of Mr. Wanamaker is on this point, for confidence in the postal savings banks would never fail and panics from that cause would cease.

These postal savings banks are not intended to take deposits on running accounts against which checks may be promiscuously drawn, but only time deposits are taken and are not suited for the everyday deposits of business men, and on these time deposits interest is paid.

Of all the great powers only Germany and the United States are without postal savings banks, and in all the countries where they are in use they have proven entirely safe and very popular. Great Britain's postal banks had last year 8,101,120 depositors, an increase of more than half a million, with deposits amounting to \$100,000,000. Even in Ireland the increase of deposits was \$457,915.

The postal banks do not take the money out of circulation as it is deposited in banks. Mr. Wanamaker recommends that the deposits be made in national banks, and by special enactment be made preferred claims. This would make the deposits safe and would prevent embarrassments to banks by runs brought on by financial scares.

General Wanamaker is a reformer, one among ten thousand, who is able and willing to stand firm against the interests that always block the ways to reforms. Such men as he and Secretary Rusk are in demand, and none other can save us from the fate of the Roman republic. Our Government has become a machine of oppression by which the masses are robbed and the classes enriched, and if we have any desire to transmit to posterity a Government worth preserving, it is full time for an awakening to the perils that surround us. The most effective means we can employ is to support such men as Rusk and Wanamaker.

[Kansas City Journal, January 23, 1891.]

The Postmaster-General's report recently published contains probably the strongest showing that can be made in favor of a postal savings system. Mr. Wanamaker's statements of fact may be relied upon, though the public will of course draw their own conclusions as to whether, upon the showing made, postal savings banks ought to be established in this country.

The system has been adopted, according to Mr. Wanamaker, by all the great powers of the world, except Germany and the United States. It might be well to ascertain why Germany has not adopted it. According to the last report of the postal authorities of Great Britain an average of one person in every eight of the population is a depositor. In England and Wales the average deposit is \$70, and in Ireland \$94. A recent French report shows the total amount of deposits in postal savings banks to be about \$60,000,000, and in 1888 the Belgium depositors had \$50,000,000 to their credit. Even in India there were two years ago 5,966 post-office banks with 261,157 depositors. The Hawaiian Islands have a postal savings system, and the deposits last year amounted to nearly \$1,000,000.

Mr. Wanamaker believes that postal-savings banks encourage thrift on the part of people who never think of starting bank accounts now. He does not believe that they would interfere with the present banking system, but would rather be the depositories for the money of people who either do not at present save anything or else hide their savings in cracked tea cups. He would particularly guard against interference with other banks by locating the postal banks as follows: First, in States having no laws regulating savings banks; second, in any other States upon petition of a considerable number of residents of any one locality; and third, not more numerous than one post-office for every 10 miles of area. He would have the interest rate fixed by the Secretary of the Treasury at the beginning of every year, and would make it one-half of 1 per cent. lower than the average rate paid by private bankers. And finally he recommends that all postal savings received within a State should be placed on deposit with the national banks of the State at such rates of interest as the Secretary of the Treasury should prescribe, and should be preferred claims against the banks holding them.

That in brief is Postmaster-General Wanamaker's postal-savings bank scheme which is submitted for the approval or rejection of the people.

[Salt Lake City Herald, January 24, 1891.]

In his last annual report Mr. Wanamaker urges the adoption of another scheme which will meet with a more friendly reception, provided the details shall be satisfactory. He advocates the establishment of a system of postal-savings banks, es-

pecially at places where there are not sufficient State savings institutions. One of the arguments he employs is contained in the following extract from his report:

"To teach economy and thrift as leading up to better citizenship falls short if there is no adequate provision for the safe-keeping of savings. Such places ought to be within an hour's walk of the home of every workingman. They can not be left to private capitalists to provide, because it would not pay them to deal in small sums or perform the necessary labor. The post-offices and the postmasters are in every respect rightly situated to do this work. It would be a great comfort to the people to have these banks that could not be affected in times of financial panic."

Many of the leading nations of the world have postal-savings banks, and we believe that they everywhere work admirably. This is certainly true of Great Britain, where there are more than 8,000,000 depositors, and the deposits aggregate a hundred million dollars. The laboring people want a place where they can invest their small savings and know that the money is safe; that they can get their money when they want it, regardless of panics or runs on the banks.

But we can not believe that the plan will be a success in this country, at least for many years to come, and for this reason: The Government can borrow all the money it requires at 2 per cent. interest per annum. Two per cent. Government bonds would to-day fetch a premium, especially if they were long-time bonds. Then, to pay more than that would be bad financiering, and subject the Congress which authorized it to some criticism. On the other hand, savings banks pay from 3 to 6 per cent. interest, according to location and the demand for money. In this city the rate is 5 per cent.; in New York it is from 3 to 4; in San Francisco it is 4; in Washington State it is 6. And so it goes; everywhere the rate being higher than the Government, which has no real use for the money, the income being greater than the expenditures, could pay. How much money would the working people of Salt Lake, or any city or town in Utah, deposit in a postal savings bank which paid 2 or 3 per cent. interest per annum when they could get double the interest in a private savings bank or three or four times the interest by loaning to individuals? The absolute safety which the Government bank would afford might induce the individual to deposit there at a lower rate of interest, but not at a rate less than half of what could be obtained elsewhere.

The postal savings bank will yet, we believe, become popular in this country, as elsewhere, and will prove a great benefit to the laboring classes, but it will not be until the nation is older and the use of money is worth less than at present.

[Indianapolis Journal, January 24, 1891.]

The deposits of the savings banks in New England, New York, Pennsylvania, and New Jersey amounted to \$1,279,000,000, according to the reports made for the year 1890—an increase of \$65,000,000 over the preceding year. The number of depositors was 3,520,000, an increase of 140,000 during the past year. As the population of those States was 17,300,000, it appears that 1 person in 5 is a depositor. The increase of deposits the past year was over \$17 to each depositor, and nearly \$4 to each inhabitant. There is no reason why the 45,000,000 inhabitants of the rest of the country should not have saved as much as those of the Eastern States. If the valuation was made in property instead of money the savings in the rest of the country would show a larger aggregate. If they saved three-fourths as much, the annual savings of the wage-earners of the country would be \$200,000,000.

The New York Bulletin estimates that the total savings of all those who work for wages and salaries is over \$200,000,000 a year. The Western wage-earners do not deposit their savings in savings banks, for the reason that there are few such banks, and more profitable investments are found in hundreds of local loan and building associations. It is very probable that wage-earners in cities like Indianapolis are saving as much money *per capita* as those in the East, for the reason that living is cheaper in the older States of the West than in the East, and the rivalry of the managers of loan associations is greater than that of savings banks. Furthermore, many wage-earners in the smaller towns of the West, when there are no other places of deposit or investment, put their savings in the ordinary business banks. Supposing that the accumulations of the 45,000,000 people in the rest of the country are as large as those of the 17,300,000 in the East, the total of money owned by wage-earners and people of small means can not be less than \$2,500,000,000. It may not all be in banks or loan associations, but it is at their call.

Now suppose, in compliance with the demand for more money, Congress should provide for the free coinage of silver or issue fiat paper until the amount outstanding should be equal to \$50 per capita, thus depreciating the purchasing power of these savings 20 per cent. or more—what would be the result? Simply this: These wage-earners who have this vast amount of accumulations in savings institutions, loan associations and banks would be as effectually deprived of \$500,000,000 as if

they had been deprived of it by theft or highway robbery. It would not be so evident a robbery, but it would be as actual. Theories are often delusive, but facts are not; and the facts gleaned from experience prove that when a people resort to a money which is not based upon the coin which the commercial world uses, that money will not have the purchasing power of the money of commerce. To-day the United States has that money. Fifteen years ago we did not have it, and our dollar was worth not over 85 cents in the money of the world, and its purchasing power was less by 15 per cent. Wage-earners should be the last to listen to the clamor about cheap money and free silver coinage.

[Manufacturers' Record, Baltimore, Md., January 24, 1891.]

SAVINGS BANKS NEEDED.

Savings banks are institutions in which money can be deposited in small sums and earn an increase. They are not intended for the deposits of investors and capitalists, for they are presumed to be capable of taking care of what they have and of knowing how to employ it to advantage. The savings bank is the custodian of the petty surplus of the poor, the careful savings of self-denial, the spare dollars that would otherwise be spent needlessly, the small legacies belonging to widows and orphans. Their treasury assets represent aggregations of repeated deposits of small sums, few or none of them large enough, singly, to make any showing on the ledger. Some of these banks will open an account for a 1-cent deposit; others have a dime as their least limit; others a dollar, but nearly all refuse to extend accounts beyond \$5,000, and much prefer to keep them below that sum. Nor is it the chief aim of savings banks to make as much money as possible. The policy is first to save money; next to add something to it by accumulations of savings and of earnings.

In the truest and best sense savings banks were intended to be institutions of practical benevolence, and whenever they have been conducted on that idea they have been a blessing to their depositors and to the communities in which they were located. Their mode of operation is simple, easily understood, and safe beyond all possibility of serious losses if the managers are competent and honest. An example will illustrate the system. In 1838 the trustees of a recently chartered savings bank in Connecticut announced that their books would be opened for deposits on a certain day. The first to appear at the time specified was a young mechanic, who deposited \$10 to the credit of his infant daughter. From time to time, when he had a few dollars to spare, he put them to the same account. Other parents did likewise. Needlewomen, servant girls, wage-earners, children who were influenced by their parents to save a part of their pocket money, farmers with a few dollars for which they had no immediate need, became frequent depositors. Whenever these dimes and dollars aggregated enough of a sum for the purpose, it was loaned on first-class security with a large margin for safety. Every 6 months the net profits of these accumulated savings were distributed pro rata among the depositors, and, unless withdrawn, was placed to their credit and became a part of their capital.

As years passed and population increased, depositors were more and more numerous, and now that bank has more than \$7,300,000 to the credit of its 22,579 depositors and a surplus sufficient to make good any possible shrinkage of value in the securities upon which its money is loaned. A remarkable fact in this connection is that fully four of these, more than \$7,000,000 represent the savings of servant girls and other small wage-earners.

These banks have been among the chief factors of New England's prosperity. The enormous sums that have gone into railroad, mining, and manufacturing enterprises in the West could never have been spared from New England but for these banks. Their aggregated millions of dollars have been the solid reserve fund from which capitalists could borrow what they needed upon gilt-edge securities. They have supplied manufacturers and merchants with money when they needed it, at times when banks of discount and exchange could not accommodate them. They have furnished the facilities that enabled tens of thousands of thrifty people to own their homes who would otherwise have been rent-payers all their days.

The deposits in the savings banks of New England, New York, New Jersey, and Pennsylvania during 1890 aggregated the enormous sum of \$1,279,000,000, an increase over 1889 of \$65,000,000. The depositors numbered 3,520,000, a gain of 140,000 for the year. This was equal to a saving of \$4 per capita for the 17,300,000 population of those nine States. Referring to these facts, the Pittsburgh Commercial Gazette says:

"These figures show not only that the working classes have been prosperous, but that they have been thrifty as well. The disposition to save has been growing with the opportunities for saving, and the deposits in the savings banks fall far short of exhibiting the full extent of the accumulations. There are scores of building and loan associations, each with hundreds of stockholders, and the weekly contributions in the form of dues foot up millions annually. The shareholders for the most part have for

their object the procurement of homes, but many seek this form of investment because it brings a higher interest than is paid by the savings banks. The annual savings in the manufacturing States are certainly largely in excess of \$4 per capita in periods of prosperity, and, taking the whole country through, \$250,000,000 would not be an excessive estimate of the annual savings when work is plenty and wages good.

"There are sections of the country in which savings banks are few and far between, and in which the accumulations must necessarily be largely withdrawn from circulation. Money invested in banks does not lie idle, and that which goes into building and loan treasuries is actively employed, but where there are none of these facilities for investment the small hoardings are laid away in a secure corner to meet the purposes for which they are intended."

The South has a few savings banks, and within a few years has organized quite a number of building and loan associations. These latter are useful institutions when confined to home purposes and managed by home people, but when their field of operations is widely extended they are exposed to hazards of various kinds that endanger their safety. Savings banks are very different affairs. They accumulate money that would be stowed away in hiding places until needed. They put it into circulation under safeguards that insure its return to its owners. It is very much within bounds to say that there are now hidden away in the South \$50,000,000 in small sums that would be restored to circulation and usefulness if there were savings banks in all the considerable towns of every State.

[Cottage City (Mass.) Herald, February 5.]

On the continually urged subject of savings banks under the Post-Office Department of the Government, the Postmaster-General, in his annual report, says:

"It is the large mass of wage-earners outside of large cities that clamor for help to keep hard-earned gains. To teach economy and thrift as leading up to better citizenship falls short if there is no adequate provision for the safe-keeping of savings. Such places ought to be within an hour's walk of the home of every workingman. They can not be left to private capitalists to provide, because it would not pay them to deal in small sums or perform the necessary labor. The post-offices and the postmasters are in every respect rightly situated to do this work. It would be a great comfort to the people to have these banks that could not be affected in times of financial panic.

"Of all the great powers of the world, the United States and Germany alone are without postal savings systems. The last report of the British authorities shows that on the average 1 person out of every 8 is a depositor, and while in England and Wales the average balance to each depositor is almost \$70, in Ireland, where the conditions are harder, the average balance to each depositor is close to \$94."

The advantage to the towns and villages of this country, in case of financial panic, can not be estimated, and the thrift and gain from interest to the people will result in an enormous increase in the people's wealth, a great part of which is to-day hidden away in odd places subject to destruction by fire and thieves.

[Manufacturer's Record, Baltimore, February 14, 1891.]

THE SOUTH NEEDS SAVINGS BANKS.

The Manufacturer's Record has persistently sought to impress upon the people of the South the importance of establishing savings banks. No community will develop habits of economy and savings unless encouraged thereto by having a place where every spare dime or dollar can be deposited with absolute safety and with the certainty of drawing a fair rate of interest. With savings banks near at hand every man, woman and child gets into the habit of economizing and putting away a few cents or a few dollars as often as possible in order to prepare for a rainy day. Where savings banks are not convenient there is but little inducement for the people to make the small savings which gradually aggregate, as in New England, into hundreds of millions of dollars. The South is now producing an enormous amount of wealth; its farmers are prosperous; its laboring classes of all kinds are fully employed at good wages, and with a united effort through the organization of savings associations it would now accumulate surplus wealth more rapidly than any country in the world has ever done. The millions of dollars that are now hid away in old stockings would be drawn out and would furnish an enormous amount of fresh capital with which to handle the business of that section. A compilation from the St. Louis Republic shows the condition of the savings banks in thirty States, containing the number of banks, list of States, estimated population January 1, 1890, number of depositors, aggregate amount of deposits September 30, 1889, amount due each depositor, average due each man,

woman and child in the State, and the percentage of depositors to the whole population of each State as follows:

No. of banks	State.	Estimated population, 1890.	No. of depositors.	Total amount of deposits.	Amount due each depositor.	Amount due each person in State.	Per cent. of depositors to population.
55	Maine.....	660,000	124,562	\$40,969,663	\$309	\$63.00	19
69	New Hampshire....	370,000	145,021	57,300,590	395	155.00	40
31	Vermont.....	333,000	61,759	17,801,327	288	54.00	17
176	Massachusetts.....	2,072,000	983,202	315,135,070	320	153.00	47
38	Rhode Island.....	330,009	123,102	57,699,884	469	174.00	37
85	Connecticut.....	750,000	287,776	105,850,078	267	141.00	38
125	New York.....	6,500,000	1,362,352	523,677,515	384	80.00	21
13	Pennsylvania.....	5,061,600	213,133	64,968,633	395	13.00	4
25	New Jersey.....	1,500,000	114,627	20,696,529	268	20.00	7
2	Delaware.....	175,000	15,059	3,405,411	230	20.00	8
1	District of Columbia	219,000	11,059	1,154,079	104	5.00	5
20	Maryland.....	1,122,000	122,887	34,203,241	279	30.00	11
1	West Virginia.....	854,300	1,850	55,123	29		
5	North Carolina.....	1,750,000	5,001	223,801	45		
9	South Carolina.....	1,350,700	13,550	2,692,264	199	2.00	1
7	Georgia.....	1,752,700	13,474	1,937,097	61	1.10	2
9	Alabama.....	1,500,000	1,765	236,108	134		
1	Louisiana.....	1,050,000	2,889	914,555	319	1.00	r.....
1	Texas.....	2,190,000	1,069	294,140	247		
8	Tennessee.....	1,800,000	11,734	1,289,527	110	.70	
11	Ohio.....	4,000,000	55,109	25,390,712	390	6.35	1½
51	Indiana.....	2,440,000	11,696	2,776,119	237	1.00	
12	Illinois.....	3,750,000	29,605	7,620,982	257	2.00	3½
56	Michigan.....	2,250,000	99,245	24,015,207	232	11.00	4
1	Wisconsin.....	2,000,000	519	47,704	92		
50	Iowa.....	1,875,000	43,669	13,125,058	309	7.00	
6	Minnesota.....	1,500,000	16,767	3,979,436	237	2.65	1
28	California.....	1,500,000	114,034	87,101,912	764	38.00	8
2	Dakota.....	600,000	434	25,927	56		
1	Utah Territory.....	230,000	6,056	493,276	82	2.13	
849		49,894,300	4,021,523	1,425,230,349	354	29.56	

These figures are worthy of careful study. They show that out of a total population of 2,000,000 in Massachusetts, 983,000 are depositors in savings banks, it being the custom for parents not only to deposit in their own name, but also to make small deposits in the name of every child, so that when their children attain age they may have a start in life. In the savings banks of that State there are \$315,000,000, which is more than three times the national banking capital of the whole South, even including Maryland. These \$315,000,000 play a greater part in furnishing the capital with which to conduct the business operations of that State than all the national banks in Massachusetts. Even Rhode Island, with 330,000 population, has \$57,699,000 in its savings banks. Excluding Maryland, the whole South has less than \$10,000,000 in its savings banks.

The leaders in Southern development should consider these facts and endeavor to begin the great work of developing savings banks. There is scarcely a town in the South where a well-managed savings institution could not be made profitable and at the same time prove of much value to the business interests of the place, and encourage in the town, as well as in the surrounding country, habits of thrift and economy. The South will never attain the financial strength which it should have until it learns to concentrate and aggregate its money by means of well-managed savings banks.

[Lafayette (Ind.) Courier, February 21.]

Experience with building and loan associations have demonstrated the fact beyond all question of doubt that they are of inestimable value to the wage-workers of the country and to all others who are ambitious to economize and to provide something for the proverbial rainy day. Well-conducted savings banks are also a boon to those who desire to make small weekly or monthly deposits, but unfortunately there have been so many failures among this class of institutions that their natural patrons have become wary of them—in fact, almost resentful. It should not be understood, however, that these allusions have any bearing upon the Lafayette Savings Bank, whose reputation is beyond criticism. But taking the statistics of the country at large, it will be found that there has been an appalling number of failures of savings banks during the past year, and the tendency has been to create distrust among a class of people who are prone to look upon capitalists as their natural enemies.

The proposition to establish a postal-saving system has been long discussed, but it has never before had the earnest consideration that it is now receiving, and there is a hopeful prospect that the theory will become a substantial reality. By the system,

every post-office in the country can be made a safe depository and with the assurance of absolute security. No matter how little confidence the people may have in private institutions, they have firm faith in the integrity of the Government, and will not hesitate nor be afraid to deposit their earnings with the designated and bonded agents of the United States. The system can be established with but comparatively little expense and without increasing the machinery of the Post-Office Department to any appreciable extent. The mechanic or day laborer who would have a feeling of timidity about entering a big banking house to deposit a small share of his earnings, would gladly avail himself of an opportunity to make the deposit with the local postmaster, for the reason that he feels that he has as much right to be there as any other man, for the post-office is a part of the Governmental structure he helps support, and he reckons justly that he is entitled to share in its benefits.

The advantages of the system are manifest and manifold. The first and most important consideration is that the depositor has absolute assurance that there will be no failures, no suspensions, no defalcations that will not be made good by the Government. It will also serve to cultivate a disposition in the direction of economy among a class of people who are most in need of the inculcation of a spirit of that kind, and there is no doubt but that a brief experiment will show most gratifying results. The benefits to be derived from small savings have been demonstrated in the marvelous results achieved by the building and loan associations, and the proposed scheme for a postal-saving system is another long step in the direction of increasing the general comfort and prosperity of the working classes who earn their bread by the sweat of the brow.

[Philadelphia Bulletin.]

Mr. Wanamaker is still a firm believer in postal savings banks, and will advocate them in his forthcoming report. It seems, however, that he would use them as an adjunct to and not a rival of the savings banks of the cities, and would, therefore, establish them principally at county post-offices where there are no other depositories of small sums. No doubt they would be highly useful there.

[Camden (N. J.) Post.]

Postmaster-General Wanamaker shows by his annual report of this year that his earnest desire for the establishment of postal savings banks is in no degree abated. In fact the head of the Postal Department is an enthusiast on this point.

Whenever postal savings banks have been introduced they have produced most excellent effect. They have been the means of inducing thousands of persons in the humbler ranks of life to save their earnings. So long as there was no opportunity to put their moderate savings where they would be safe and at the same time earn something in the way of interest, they were squandered as rapidly as they were received. But no sooner were these postal banks established than thousands hurried to them with their small sums, ranging from a few cents to sums of \$5 or more. They have also shown that once this habit of savings has been introduced it grows rapidly. There has been a large, steady increase throughout Great Britain ever since the experiment was introduced. The sums at present in these depositories amounts to many millions of dollars, and it is safe to say that but for this opportunity offered to these people the greater part of this money would have been spent in ways that would have done more harm than good.

[New York Herald.]

Representative Lodge, of Massachusetts, has introduced into the House at Washington a bill for the establishment of postal savings banks.

Such institutions have long been in existence in England, and have there proved highly successful. They have been found to be a great convenience to the masses, and have afforded a sense of security that encourages thrift and promotes industry. There is absolute confidence in the Government, so that when the poor depositor intrusts a dollar to the safekeeping of the Government, he has no shadow of fear that he will not get his dollar back, with interest, whenever he wants it. Moreover, money put in one post-office can be drawn out at any other. For example, if a man has deposited at London he can draw at Liverpool.

But in Boston a voice has already been raised, and in other great municipal centers it will doubtless be raised, against the proposition to introduce the system into this country. The objection is urged that postal savings banks are neither necessary nor desirable. Ample facilities, it is contended, are afforded by existing savings banks which are as secure as human ingenuity and legislation can make them. Their organization and management, investment of deposits, payment of interest, etc., are governed by the most stringent laws. The whole business is subject to a governmental control and supervision so strict that absolute safety is secured. With such a system in successful operation it is claimed that there is no need of postal savings banks, and, moreover, that the establishment of the latter would be absolutely detrimental, because their effect would be to withdraw from the local community the surplus deposits now invested there and transfer them to Washington.

There is force in these views, but it is limited to large cities and towns like those of New England, New York, Pennsylvania and some other States where savings banks are sufficiently numerous for the wants of the people and surrounded with such safeguards as guarantee security. But there are other quarters of the country, notably in the far West and certain parts of the South— and for that matter even rural districts of the North and East—where the objections to postal savings banks do not hold, but where, on the contrary, there are cogent reasons in their favor. Wherever ordinary savings banks are not found or wherever they are not absolutely secure, there a postal savings bank must meet a popular want and serve a useful purpose. There it will afford conveniences and facilities which the people now lack and beget a popular confidence that does not now exist.

We see no reason why these advantages may not be secured without incurring any of the disadvantages urged against the reform. This can easily be done by establishing postal savings banks in those places where they will be a benefit to the people and not establishing them where they are not needed or desired. Indeed, this is practicable under Mr. Lodge's bill, as we understand it, for it empowers the Postmaster-General to designate the offices which shall serve as savings banks. If this power is wisely used the new system can be made a public boon.

UNFAVORABLE.

[Philadelphia Herald, November 25.]

It is said that Postmaster-General Wanamaker will devote considerable space in his forthcoming report to the subject of postal savings banks. It will urge the adoption of such depositories on various grounds, but more particularly because their establishment would promote habits of saving. This is a matter of conjecture, which Mr. Wanamaker permits himself to indulge without reason.

Postal savings banks are objectionable because they bring the Government into competition with individual enterprise on unequal terms. It would be a wise rule to restrain the Government from such competition in all cases. Where individual enterprise fails to meet the public demand for commerce or convenience the Government may properly step in to serve the people. But on no other condition is it permissible.

The tendency is to govern too much. That is the evil effect of Mr. Wanamaker and his party. He and it think that the people are in need of some sort of guardianship to regulate their lives and their habits. The laws to restrain evil passions and bad tendencies are all right because they are necessary for the protection of the public against the excesses of individuals. But there is just as much need for restraints upon power in its tendency to usurp the functions and absorb the rights of individuals.

This country has no need for postal savings banks. The party in power might be benefited by them, because they would multiply places for party heelers and dependants. But there is no necessity for them from a business standpoint. We have substantial and well-regulated savings banks to accommodate the public, and the trenching on that legitimate business by the Government would be an evil of incalculable magnitude.

[Omaha Herald, November 26.]

Postmaster-General Wanamaker believes that the reason there is a scarcity of money in circulation is due to the fact that millions of dollars are secreted under carpets and in stockings. He is laboring under a serious misapprehension, which is likely to encourage burglars and thugs. It can safely be stated that there is not a man in Omaha who has his carpets padded with \$1,000 bank notes, and not a woman who carries \$1,000,000 around in the manner that Mr. Wanamaker suspects.

[Boston Globe, November 26.]

Postmaster-General Wanamaker is trying to interest his party in postal savings banks. It would be more to the purpose if the party would stop the McKinley nonsense and give the people a chance to save something. It is easy enough for anybody to find a savings bank; the trouble is to find the savings to put in it.

[San Francisco Bulletin, November 29.]

The establishment of postal savings banks is recommended in States having no laws regulating savings banks, and in others upon application of a considerable number of residents of any one locality; the savings received within a State to be deposited with the national banks in that State on application, in such amount and at such interest as the Secretary of the Treasury may prescribe; such deposits to be declared preferred claims. It is very likely that this proposition will arouse opposition and require amendment. Certainly all other depositors in a national bank would object to letting postal savings banks have the first claim on their deposits in case of a failure. Nor does the plan provide the best security for depositors in the postal banks. National banks do not usually let in their depositors for large losses in case of failure,

owing perhaps to Government supervision, but the liability to loss is always present, and a postal savings system should, as far as possible, guaranty against it. If the rule observed in case of Government moneys loaned to national banks, that they be secured by a deposit of bonds in the Treasury, should be made in the case of deposits by postal banks there could be no valid objection from any quarter. Less than that would hardly be satisfactory.

[Philadelphia Record, November 30.]

As for the postal savings bank system, which Mr. Wanamaker again recommends, there is no doubt that it has had some success in European countries which suffer from chronic deficits, and in which banks are held in more or less distrust. But this Government could not pay enough interest to attract depositors without needlessly taking the money out of the Treasury, nor without injuriously competing with the banks. At the same time, it is very questionable whether the national banks would be willing to pay interest on the Government deposits of postal savings while holding large amounts of Treasury money without interest. As a rule, the people of this country are shrewd enough to know where and how to deposit their money, without the kindly aid of a grandfatherly Government.

[Louisville Courier Journal, December 1.]

Furthermore, following the traditional policy of the Republican party, he recommends that the Government shall exercise paternal care over the earnings of the poor and establish for the people a postal savings bank.

The value of savings banks the people themselves are beginning to recognize, and when they have anything to put in them it is quite certain they will be established. Perhaps, if the Government would reduce its expenses and reduce taxation, the farmers and laboring men throughout the West and South might be able to accumulate something and in time establish savings banks of their own. These institutions should be local in character and control. To gather the money of the people and then loan it to the national banks, as Mr. Wanamaker proposes, is unwise. There is no call for this kind of interference by the Government, as the people are perfectly able to take care of these matters themselves.

[New York Sun, December 2.]

Mr. John Wanamaker, Postmaster-General of the United States, in his annual report makes the following recommendation in respect to postal savings banks:

"I recommend that the Post-Office Department be authorized to establish postal savings banks, under regulations formulated by the Postmaster-General. That the said banks be located as follows: (1) In States having no laws regulating savings banks; (2) in any other States, upon petition of a considerable number of residents of any one locality; and (3) not more numerous than one post-office for every 10 miles of area; that the interest to be paid depositors shall be fixed by the Secretary of the Treasury at the beginning of each year, and be one-half of 1 per cent. less than the average rate paid to depositors by private bankers; that all postal savings received within a State shall be placed on deposit with the national banks of that State, on application, in such amounts and at such interest as the Secretary of the Treasury shall prescribe; and that all such deposits be declared by special enactment preferred claims against the banks holding them."

This is a very pretty scheme, but will the Postmaster-General be kind enough to point out any provision in the Constitution which permits his Department or any other department of the Federal Government to go into the savings bank business?

Furthermore, can not the people of this country take care of their money without the assistance of the Government? We rather think they can.

The Post-Office Department does not do the work already committed to its charge with such conspicuous success as to convince the people that it ought to be intrusted with a banking business in addition. In this very report of Mr. Wanamaker's he denounces the New York post-office building as totally inadequate to the requirements of the postal service, and says that better quarters are needed; yet it is only a few years ago that this building was put up by a Republican administration at immense expense, and now it is condemned by a Republican Postmaster-General.

We are against any extension of Federal power. To turn every post-office in the land into a savings bank would only tend to strengthen the authority of the Federal officeholders throughout the country. The scheme is of doubtful constitutionality, to say the least, and should be opposed by every Democrat.

[Minneapolis Journal, December 4.]

Postmaster-General Wanamaker's postal-savings-bank scheme does not find very great favor. The public is rather indifferent to it. The fact is, the savings-bank system as operated throughout the country is perfectly satisfactory. There is provision in it for the most minute savings deposits. The Government can't conduct the business better than private concerns can. It is very seldom that a savings bank fails

irremediably. Under our State laws they are perfectly safe. The Government has enough to do anyway, without running a savings bank.

[Gordonsville (Va.) Gazette, December 5.]

Postmaster-General Wanamaker recommends the establishment of postal-savings banks all over this broad land. This is another scheme for increasing the Federal power and patronage, and is, we believe, wholly unconstitutional. The people of this country should be able to take care of their own money without interference from the Government. If the Harrison and McKinley crowd should hold the Government for many years, there would be comparatively few persons left in the country with a spare dollar to put in a postal or any other savings bank. If Mr. Wanamaker will drop his wildcat schemes for Government savings banks, parcels post, and telegraph, and will give the public a good mail service, the people will ask nothing more of him.

[Milwaukee News, December 6.]

Postal-savings banks are the hobby of Postmaster-General Wanamaker just now, and he is trying to get his party to indorse the scheme. It would be more to a purpose if the party would stop the high-tariff nonsense and give the people a chance to save something. It is easy enough for anybody to find a savings bank; the trouble is to find the savings to put in it.

[New York Witness, December 10.]

Mr. Wanamaker's proposal to open postal-savings banks wherever called for and to deposit the money lodged in them in the banks of the several States in which the money is received, does not commend itself to our judgment. While the Federal Government was in need of money the Witness again and again urged the opening of post-office savings banks as a means of supplying the Government with funds at a low rate, and at the same time, of offering the people an opportunity for laying by their savings without any risk of loss. But now that the Government has more money than it needs and has no prospect of again requiring to borrow money, except it be on account of very imprudent legislation, we can not see that it would be justified in receiving money on deposit simply to lend it out again. The Government has no more right to go into the banking business than it has to go into the business of raising wheat for market, or of manufacturing shoes.

[Lancaster (Va.) Examiner, December 11.]

Postal-savings banks would probably be a good thing, but there is no great outcry for them at present. When postal-savings banks were established in England, there were in the whole kingdom but twenty savings banks which were open every day; a want remained to be filled. The circumstances are different here.

[Philadelphia Herald, December 12.]

The postal-savings-bank job still stalks forth. In the Senate yesterday it was brought forward and the Post-Office Committee was directed to inquire into the advisability of establishing the scheme. Of course the committee will decide in favor of the banks. The members will no doubt see ample opportunities for them to make profit out of it.

In an interview in Chicago yesterday Mr. Chauncey M. Depew said he didn't believe much in paternal government. That is an additional proof that Mr. Depew has a large and level head. It was by intelligent personal effort that he became the rich and useful man he is. Naturally, therefore, he believes in the Democratic idea of individual effort. "That government is best which governs least."

But the promoters of the postal-savings bank scheme are of a different mind. They believe that the people need to be secured by Government. They imagine that the establishment of postal savings banks will compel people to put their earnings on deposit. It's a silly notion which comes from crazy brains, and the sooner it is abandoned the better.

[San Antonio (Tex.) Express, December 13.]

In the Senate of the United States Mr. Mitchell has introduced a postal-savings bank bill. The scheme is not indorsable, and it will not work. Deposits of money by the people to the credit of the Government have been tried before. It was not the intention of the framers of the Constitution to make the Government rich at the expense of the people. Savings banks inaugurated by private capital have been of great benefit. But a Government savings bank is another matter.

[Omaha Herald, December 28.]

The Postmaster-General is very urgent indeed for the establishment of a postal savings bank, more particularly in places away from centers of population, where people do not enjoy the facilities extended to those who dwell in large cities.

Ill-natured persons might say that the inhabitants of remote rural districts are not so well posted in the world's wicked ways as those who have the opportunity of perusing the daily papers, but this additional argument is unnecessary for the purposes of this article.

Postal savings banks would undoubtedly prove of great benefit to the people of this country, particularly to those whose means are limited, but who still desire to economize their savings.

But the question arises and presses itself into prominence, whether this is the propitious day and hour for the establishment of these beneficent institutions, which can only be based upon perfect confidence in the unimpeachable integrity of those who are intrusted with their management. And the very ignorance of the common people of the many excellent qualities of Mr. Wanamaker might lead them into error likely to be productive of very serious results—in fact, sufficient to cause the failure of the entire scheme.

[Galveston News, January 18.]

Mr. Wanamaker's postal-savings bank scheme has received the approval of some Democratic papers. On the face of it it seems to be a good thing, that will give security to the poor from bank failures, promote thrift, and cost only a moderate amount for expenses. Let all the advantages be granted, and it still remains to be inquired whether the scheme might not wisely be rejected as part of a system which, among other things, will render the Democratic party obsolete and the system of individual enterprise ultimately impossible. Can it be believed that anyone would be found to advocate paternal measures if these were never demonstrably beneficial either in promoting security or in saving expense? There are many things, perhaps, which the Government can do, if the people so will, in a manner to conserve wealth, increase confidence, and serve the majority of the people, at only the moral cost of striking down some private business and strengthening and widening the trust of the people in the communal powers of Government in industrial matters. But this qualification should be intelligently understood. It bears within itself the main question of the future. It will be hopeless for any party to combat paternalism by combating only its abuses, but claiming its benefits and promoting its introduction wherever it suits themselves.

The hundreds of thousands of people who have read popular works favoring communism know that in conducting the mercantile business of the country so as to avoid the waste in competitive storekeeping and selling goods a prospect has been indicated of a saving far beyond the economy proposed in savings banks; and who shall say that the communistic system, as a whole, depends for trial upon anything else than the acceptance of the principle? It would render savings banks unnecessary if carried out in the fullness of the plan of its latest prominent apostle, Mr. Bellamy. Who will deny that if the Government is to do a banking business for the people because it can displace private banks, the same logic will justify it in doing a mining and manufacturing business, in which it can save the people indefinitely more than through any savings-bank venture? Formerly that sort of experiment was considered as a separate thing. Now the claims of communism come nearer, as a whole, and must be so considered, or else certain parties and classes will find their mistake to be that they have not reckoned with the increase of logical thought in the people. It can not be accepted as a conclusive argument for any plan that it saves some immediate trouble or cost. The more important bearing may be how it turns people into the communistic channel.

[New York Sun, February 7, 1891.]

Mr. Evans, of Tennessee, has introduced into the House of Representatives a bill to establish postal savings banks and encourage small savings. Bills differing more or less from Mr. Evans's in details, but of the same general tenor, have been introduced into previous Congresses. The postal savings bank has become, in fact, a sort of hobby with the benevolent persons who believe in a paternal and do-all Government; and in the South, where savings banks are less common than in the North, the idea has found a certain support among people who are not ordinarily inclined to favor any extension of the power of the Federal Government. The postal savings bank does well enough for England, but that is no reason why it should be introduced into the United States. It is no business of the Government to set up the Post-Office Department as a receiver and guarantor of the savings of citizens, or to impose upon the Secretary of the Treasury and the Postmaster-General, as Mr. Evans's bill provides, the duty of loaning postal savings funds to banks and of issuing interest-bearing certificates of deposit. The business of the Post-Office Department is to carry the mails. The business of the Government is to mind its own business. The citizens of the United States ought to have sense enough to take care of themselves.

IN THE SENATE OF THE UNITED STATES.

MARCH 3, 1891.—Submitted and ordered to be printed.

Mr. CALL submitted the following

RESOLUTION:

Resolved, That the President of the United States be, and he is requested to have an investigation made in the case of Graham, an American citizen, who is stated in the newspapers to be confined in prison in Mexico under circumstances of extreme cruelty under a conviction of murder, of which it is alleged he is innocent, and that he will cause such measures to be taken as may be proper under the circumstances for his release.

DYING IN A MEXICAN PRISON—A YOUNG AMERICAN UNJUSTLY CONFINED ON A CHARGE OF MURDER.

CHICAGO, February 28.

M. C. Bernard, a mining engineer, who has just returned from Mexico, says that a young American named Graham is in prison at Guanajuato under a sentence of 20 years on an unjust conviction of murder. Graham was attacked on the streets of Lagas by a Mexican and a German, who were drunk, and he shot the German in self-defense. Bernard says he was an eyewitness of the affair, and testified as to the facts on the trial, but 10 Mexicans, who did not see the fight, testified that Graham started it.

Bernard adds: "Graham might just as well have been sentenced to death, for he will never live 3 years in prison at Guanajuato. The penitentiary is the filthiest institution in the Republic. There are 500 persons in a place that was made to accommodate 300. The victims die every week, sometimes two or three in that time. Suicides, I have heard, are of frequent occurrence. The cells are alive with vermin, and filth abounds everywhere. Men, women, and children are piled into the same place, and every one becomes covered with vermin soon after being put there. The diet consists the year round of corn and pepper, with a little grease.

IN THE STATE OF THE UNITED STATES

A HISTORY OF THE UNITED STATES

THE HISTORY OF THE UNITED STATES

THE HISTORY OF THE UNITED STATES

The history of the United States is a story of a people who have grown from a small colony of settlers to a great nation. It is a story of the struggles and triumphs of a people who have built a nation of freedom and justice. The story begins with the first settlers who came to the shores of North America in search of a new life. They found a land of vast resources and a people who were different from them. They fought for their survival and for their freedom. They built a nation that was based on the principles of liberty and justice for all. The story continues through the years of struggle and triumph, from the American Revolution to the present day. It is a story of a people who have never given up on their dream of a better life for all.

IN THE SENATE OF THE UNITED STATES.

MARCH 3, 1891.—Presented, referred to the Committee on Territories, and ordered to be printed.

Mr. SQUIRE presented the following

MEMORIAL OF THE CHAMBER OF COMMERCE OF THE CITY OF SEATTLE, STATE OF WASHINGTON, PRAYING FOR THE ESTABLISHMENT OF A TERRITORIAL FORM OF GOVERNMENT OVER THE TERRITORY OF ALASKA.

To the Senate and House of Representatives of the United States of America in Congress assembled :

The Chamber of Commerce of the city of Seattle, State of Washington, at a meeting held on the 3d day of November, 1890, passed the following resolutions :

Whereas the progress of the Territory of Alaska, since the passage of the act to create and organize a civil government in that Territory, approved the 17th day of May, 1884, and known as the organic act of that Territory, has been so great that it has simply served to exemplify the utter inadequacy of said act for the purposes for which it was passed, and the imperative necessity for some immediate action on the part of the Government of the United States to protect and develop her resources, and to organize a better government for the protection and welfare of its citizens :

Resolved, That its system of judiciary is so restricted and limited that the administration of justice not infrequently fails, and offenders against the laws remain unpunished and commercial contracts unenforced.

Resolved, That it is often a puzzle to ascertain which of the laws of Oregon are made applicable to the affairs in Alaska by the terms of said act.

Resolved, That its greatest necessity is a liberal system of land laws, which if enacted would rapidly increase her commercial and agricultural wealth.

Resolved, That its merchants and its farmers would feel a better security for their investments and their enterprises when they can become the owners of the land upon which their improvements and their toil have been expended.

Resolved, That a system of civil government in which the people themselves would be able to govern, protect, and administer their local affairs is an absolute necessity.

Resolved, That said Territory has paid a revenue into the Treasury of the United States from one industry alone which now amounts to almost the entire sum which was paid to Russia for the purchase of

said Territory, and that a small part of this sum would establish and maintain a civil government in that Territory which would guarantee the development, maintenance, and protection of its commercial, agricultural, and mineral wealth, its fisheries and other industries, and render the country more habitable.

Resolved, That the commerce of the city of Seattle with said Territory is already of that magnitude that it demands a more liberal policy on the part of the Government of the United States for its protection and advancement.

JOHN LEARY,
President.

Attest:

J. W. DODGE,
Secretary.
